Q. For example, the plane miles includes charter miles and the transatlantic flights do not?

A. That is correct.

Q. Yet you divide one into the other to get this ratio you call uniform?

A. That is correct.

Q. Just before we recessed at noontime, I had asked you what study you had made as to the routes flown and the equipment used by foreign flag carriers, and my question, I believe, was related to the statistics of foreign flag carriers on the top of page 21.

You stated generally, if I recall rightly, that you made some examination of timetables and so on.

A. That is correct.

[Tr. 5536] Q. Did you make any real study of the actual number of flights being offered by these foreign carriers and on what routes they were?

A. I did not make a detailed, extensive study.

Q. Do the results of any examination you made appear anywhere in your report?

A. They do not.

Q. Do the data that you developed still exist?

A. Well, the basic data that we used are available in the Official Airline Guides.

The results of our abbreviated analysis have been discarded long since.

Q. They no longer exist?

A. That is correct.

Q. Would the same be true with respect to any study of equipment which the foreign carriers had?

A. I made no detailed study of equipment foreign carriers used in the preparation of this report.

Q. At page 21 you state in the text in the middle of the page that IATA statistics are not available for charter flights for 1958—I don't know whether that means up to 1962 or through 1962.

A. I believe it is intended to mean through 1962.

Q. Do you have before you Defendants' Exhibit 214?

[Tr. 5537] A. Which is?

Q. Your February 16, 1962 report.

A. I do.

Q. I direct your attention, if I may, to Exhibit A attached to that report.

A. I have it.

Q. The table on the right-hand side of that page covering the years 1959 through 1961 preliminary, and the heading "Transatlantic Passengers" over the first three columns to the right of the years—do you see it?

A. Yes, I do.

Q. I direct your attention to a footnote marked by an asterisk which reads:

> "Includes nonmilitary charter traffic of IATA carriers as well as military MATS on-scheduled flights, but excludes carriage by nonscheduled airlines as well as miscellaneous carrying on cargo vessels and military transports."

A. Yes.

Q. Are those IATA figures?

A. Yes, but I call your attention to the fact that these are travel between Europe and U.S.A. and Canada, whereas the figures we have used in our other report are limited to travel between Europe and U.S.A.

[Tr. 5538] Q. By the other report, you mean the report that you submitted in this proceeding?

A. Dated May 2, 1966.

Q. It concludes no Canadian traffic?

A. That is correct.

Q. So charter traffic data was available, at any rate, from IATA?

A. Yes.

Q. What did you mean when, they say that the IATA statistics are not available for charter flights, when you used them in Defendants' Exhibit 214?

A. I have forgotten the exact details, but for the purposes of this particular report, which is dated May 2, 1966, it was our conclusion that the charter traffic statistics that might have been available, were not appropriate to be included in these—in this particular tabulation and particular analysis.

Q. Did you—

A. I expect that one of the factors was that as noted on Exhibit A that the traffic on nonscheduled airlines was excluded and nonscheduled airlines carry a considerable amount of this North Atlantic charter traffic.

Q. Are nonscheduled airlines members of IATA?

[Tr. 5539] A. Some are.

Q. Did not the IATA statistics which were available show the number of flights, the origin and destination and the number of passengers?

A. I do not remember.

Q. Did you examine to determine whether or not such statistics were available to you?

A. We examined in general available IATA statistics.

Q. Are you testifying in substance that IATA's charter statistics were not available?

A. I am testifying that we elected to not use separate charter flights and passenger statistics for this particular analysis.

It is my recollection that one of the factors in arriving at that decision was the matter of availability of figures that we would consider meaningful for this particular analysis.

Mr. Hayes: I ask that there be marked as Defendants' Exhibit 232, as a sample, a six-page document headed "International Air Transport Association Compiled by New York Branch Office, December 1959," three pages called "Eastbound," three pages called "Westbound."

[Tr. 5540] • • • Mr. Hayes: So as not to clutter the record, I will state, and counsel can correct me if it is incorrect, this which I have marked as a sample was a set of monthly statistics put out by IATA during the period mentioned by Mr. Wemple, 1958 to 1962.

By Mr. Hayes:

Q. I show you, Mr. Wemple, Defendants' Exhibit 232 for identification. Do you recognize it as a regular report made by IATA to its members?

A. I believe I have seen it before.

• • • • •

[Tr. 5541] • • • Q. Defendants' Exhibit 232 for identification shows, does it not, by airlines, charter flights for the month with number of flights and number of passengers, among other information?

A. There is some information labeled charters on here.

[Tr. 5542] Q. It gives the origin and destination which would permit the elimination of Canadian traffic, does it not?

A. I call your attention to the third line under "British Overseas Airways Corporation," 16 flights, Chicago—

Detroit—Montreal—London, revenue passengers 139 first, 129 tourist, 631 economy for a total of 899.

I have no idea how to determine those which were the U. S. to Europe passengers and those which were Canada to Europe passengers.

Q. Those are the scheduled flights, are they not? The charters I think you will find below them.

A. Oh, I misunderstood your point.

I—well, do you want me to examine all of the references to charter here in order to answer your question?

Q. You may do it any way you please.

I am asking you whether or not charter statistics were not, in fact, available for—

The Special Master: I think the question was whether or not you could separate out the Canadian passengers.

Mr. Hayes: And he could separate out the Canadian, that's right.

[Tr. 5543] The Witness: On the charter statistics that are here?

Mr. Hayes: That is right.

The Witness: I am not sure of the significance of that symbol on the westbound flights under "Charters" which is apparently for BOAC. It says "LAJES-Boston."

I don't know what that LAGES means.

Q. Are not those designations of airports?

A. I just don't happen to recognize them and I don't know whether one is Canada or one is U. S. or something else. The Boston is clearly—

Q. That information could be readily obtained, could it not?

A. Oh, as to what the symbols mean, absolutely.

In looking at these figures quickly, with the exception of the one I just mentioned, I see none that could not be classified as either U. S. or Canadian termini for a charter flight.

Q. As a matter of fact the Canadian designations are preceded by a "Y" in each instance, are they not?

A. A number of the Canadian terminals are identified by a "Y".

Q. Do you know that that was the routine that IATA [Tr. 5544] used to designate Canadian?

A. I did not know that there are none without a "Y" on them.

Q. The table on page 23 of your report, Mr. Wemple, you set forth the number of seats available, transatlantic seats for the years 1958 through 1963 by TWA, Pan American, foreign carriers, total IATA and TWA percentage, and then on the top of page 26 you calculate a revised TWA percentage which you arrive at by stating first the total IATA seats, and I am thinking now of 1958 and—

A. Excuse me. The top of what page?

Q. 26.

Mr. Williams: 26.

A. Thank you.

Q. For the years 1959 and 1960, you take the total IATA seats, you take TWA's actual seats, which you got from page 23, you add your estimated increases, you come to a revised total of TWA seats, you restate the IATA seats as revised, and they do not change for 1959 and 1960, and then you get a revised percentage of IATA for TWA.

A. That is correct.

Q. In the years 1961 to 1962, before calculating [Tr. 5545] the TWA percentage, you revise the total of IATA seats—

A. That is correct.

Q. —by adding to the actual IATA seats the number of additional seats you estimate TWA would have available?

A. That is correct.

Q. Then you calculate a percentage which you call TWA's revised percentage, which is the percentage arrived at by dividing your revised TWA seats by your revised IATA total?

A. That is correct.

Q. You followed the same procedure, did you not, in Chapter III?

A. That is correct.

Q. On page 26 your revised percentage for TWA of 12.5% becomes 13.4 when Chapter III is added in, and your revised percentage for 1960 of 19.7 on page 26 becomes 20.8 when Chapter III is added in, is that correct?

A. What page is that on, Chapter III?

Q. 48, I believe. The top of page 48, 20.8.

A. That is correct.

Q. For 1959 and 1960, you are assuming that the total of IATA seats would not change, and that the totals of other foreign carriers would not change?

[Tr. 5546] A. That is correct.

Q. But you are assuming a transfer of the additional TWA seats from Pan American?

A. That is correct.

Q. For the years 1961 through 1963, you are assuming that the total of IATA seats would be increased by your estimated increase in TWA seats—

A. That is correct.

Q. —but that the total seats made available by all other carriers, foreign and Pan American, would remain unchanged?

A. That is correct.

Q. Except for the shift from Pan American to TWA which you indulge for the years 1959 and 1960, you, in effect, are assuming, are you not, that the available seats offered by all other carriers remain unchanged throughout the period?

A. I selected that method of calculation—

Q. Just answer the question first, please.

A. Yes.

Q. Only TWA would have changed under our approach?

Mr. Williams: He said so.

Mr. Hayes: I think you are right, Mr. Williams. I guess he did.

[Tr. 5547] Q. In your text at page 25, you mention the assumption that the additional seats offered by TWA would have been a transfer from Pan American because TWA's aircraft would have been a transfer from Pan American was supplied to you by counsel?

A. Yes.

Q. Who also advised you that Pan American could have obtained replacements in the spring of 1961?

A. Yes.

Q. Then you go on, for the remaining years you selected the premise that the annual total number of transatlantic seats available would have been increased by the number of additional TWA seats.

What other premises did you consider before you made that selection?

A. I considered reducing the total number of IATA seats for other carriers by the amount that TWA's seats would have been increased. That is essentially the only other system I considered.

Q. Did you make any calculations based on that premise?

A. I don't believe I did.

Q. What did you do by way of considering it? What does that mean, you consider it?

[Tr. 5548] A. We are working here with a percentage, TWA's percentage of the IATA total. That percentage is the result of arithmetic with a numerator and denominator, the numerator being TWA's seats.

With the additional aircraft we have TWA's number of seats being increased. If we allow that increase in the fraction we would get a certain higher percentage.

If we at the same time reduced the denominator which would be in effect selecting the assumption that IATA seats would have been reduced by the number that TWA increased, the percentage would go still higher.

I elected to use the intermediate course whereby TWA's seats are increased but the IATA total is presumed to have not changed.

Q. Is that what you mean by considered?

A. That is correct.

Q. When you made the selection of which premise to use in 1961, 1962 and 1963, did you base it at all on a study of the equipment the foreign air carriers had available in those years?

A. No.

Q. Or on the routes the foreign carriers were flying in those years?

[Tr. 5549] A. No such study.

Q. Or on the number of passengers they were carrying by routes in those years?

A. No such study.

Q. The same would be true of Pan American, you made such study in those years?

A. In making that selection of this particular form to use for analysis, that is correct.

Q. Let us look again at the table at the top of page 19 where for the year 1961 you show 987 additional flights. Dividing that number by 52, one arrives at 19 one way flights or 9½ round trip flights.

As a practical matter, is it not a fact that since you are using a yearly average here, if those 19 additional flights would be scheduled there would be more in the summer during the peak season and less in the off-peak season?

A. I am using a yearly total, not a yearly average.

Q. I know that. I know what you are doing.

A. Now, could you please ask me your question on that basis?

Q. I am asking you whether if you or TWA were faced [Tr. 5550] with the task of putting on an average of 19 flights per week, it would actually schedule more per week during the peak season and less per week during the non-peak season.

A. I can't imagine TWA being faced with the proposition to put on an average of 19 additional flights per week for a one year period. So, therefore, I cannot answer your question.

Q. You supplied the figure of 987 added flights.

A. For a year, that is correct.

Q. Right. That comes out as I say to an average of 19 per week.

Mr. Williams: If you do it that way.

Mr. Hayes: Just be patient, please, Mr. Williams.

Mr. Williams: I am trying to understand what you want the witness to say.

Mr. Hayes: I asked this question, assume, as he does here, that TWA had these additional flights to schedule.

Q. Assume that. You made this assumption. You arrived at this calculation.

If TWA were scheduling 987 additional flights in the year 1961, would it schedule more of those flights [Tr. 5551] in the peak season and less in the off-peak season?

A. I would have to examine TWA's detailed flights pattern for the year 1961 to be able to answer that correctly, and I cannot do it extemporaneously.

Q. Didn't you make any study, I thought you did, of their flight pattern, their existing flight pattern.

A. I reviewed it.

Q. As a matter of fact around the same time or just shortly before, you were engaged to prepare this report, you had made quite a review in connection with Defendants' Exhibit 214, I think it is, of—

The Special Master: Here you are not asking for a review of management decision, though, Mr. Hayes.

Mr. Hayes: I know I am not.

The Special Master: You are asking him to make a management decision, it seems to me, and I don't think—

Mr. Williams: I object to the line of questions. I don't think it is productive of anything and is relevant here.

The Special Master: I will sustain the objection.

[Tr. 5552] Mr. Hayes: Mr. Brownell, if I may for a moment—

The Special Master: You may state your position.

Mr. Hayes: —we are faced here with a fantastic figure which is used as a basis for calculating damages of 987 flights in the course of a year.

The Special Master: Would it have made any difference on damages whether more of them had come in the summer season and less in the winter season?

Mr. Hayes: I think it would, because the summer season would have the higher load factors and the off-peak season would have the lower load factors.

The Special Master: You are entitled to point that out, but I don't see how the witness can tell you how he would have scheduled them. He is not an expert on scheduling.

So far his only comments in that area have been to review management decisions.

Mr. Hayes: So far as determining the realistic or lack of realism in this figure—would seem to me that this witness who comes up with [Tr. 5553] this additional number of flights and I think it is obvious that if the flights were being flown they would have been flown more in the peak season than in the non-peak season—

The Special Master: So do I.

Mr. Hayes: —how many actual flights he would be putting on TWA during that peak season, supposed flights rather than actual, and how much traffic there would be because he is talking about a static market here to fill the seats on those additional flights —he is not talking about a growing market—

The Special Master: Are the monthly figures there for the actual?

Mr. Hayes: I am sorry.

The Special Master: Are the monthly figures for the actual in his report?

The Witness: No, sir.

Mr. Hayes: No. But the IATA statistics are

monthly which he uses as a base here to get into this table 19. They are monthly figures.

The Special Master: You can certainly question him about them but I won't allow any further questions which would require him to make [Tr. 5554] a statement as to how he would have scheduled them hypothetically.

Q. As I understand it—I think I have asked that question—I won't repeat it—you had the IATA monthly statistics available to you, did you not?

A. Yes.

Q. You knew from the IATA statistics or you would determine how many flights were flown by each of the IATA members during each month?

A. That is correct.

Q. And how many passengers were carried by them?

A. That is correct.

Q. You could determine roughly at least the load factors at which they operated for each month?

A. I could have.

Q. You did none of that?

A. I did none of that.

Q. You are treating this figure of 987 additional flights on the same basis exactly as the actual flights that were flown, are you not—

A. That is correct.

Q. —for your damage calculation?

A. That is an annual figure and it is compared with an annual figure.

[Tr. 5555] Q. The same is true of your 1793 flights in 1962, is it not?

A. That is correct.

Q. And of the 311 in 1963?

A. That is correct.

Q. Take the peak of 1961, July 1961.

Do you know how many schedules TWA actually flew to Europe?

A. No.

Q. According to the Official Airline Guide, and I am relying on it, for July 1962—

A. I thought you had just said July 1961, but—

Q. 1961. I am sorry.

A. —it is immaterial to my answer.

Q. The question had to do with flights in July 1961. The Airline Guide I mentioned was published in July 1962. That should be 1961. I am sorry. It is a typo in my notes. It should be Airline Guide for July 1961 also.

• • • • •

[Tr. 5557] [Mr. Hayes:] I ask that there be marked for identification as Defendants' Exhibit 233 a work paper of Mr. Wemple's from Folder 9B headed "Jets, All Gateways" and then in the center headed "TWA-Hughes, TWA International Division, Summary of All Eastbound Weekly Transatlantic Jet Flights and Jet Service to Gateway Cities and Beyond," consisting of two pages.

• • • • •

Q. Are you acquainted with Defendants' Exhibit 233 for identification?

A. I am.

Q. Can you tell me from Exhibit 233 for identification how many jet flights TWA flew to gateway cities on April 30, 1961, effective April 30, 1961?

A. This particular schedule lists 40.

Q. The same number on July 1st, effective July 1, 1961?

A. That is correct.

Q. And also on August 2, 1961?

A. That is correct.

Q. That was to all gateways, if I recall rightly?

A. No, sir.

[Tr. 5558] I call your attention this is to the London, Paris and Iberian gateways alone.

Q. I am sorry. London—where do I find that?

A. At the top—first page.

Q. I see. London, Paris and Iberian gateways?

A. That is correct.

Q. Do you know how those flights were split by gateways?

A. I can read the numbers on this first page if that's the answer to your question.

Q. I don't know. You tell me if that is the answer, Mr. Wemple.

A. I am puzzled by your question. Please expand.

Q. How many of the weekly eastbound jet flights did TWA operate, say, in July 1961 to London, Paris and Iberian gateways?

A. 40.

Q. How many to each?

A. 16 to London, 19 to Paris and 5 to the Iberian Peninsula.

Q. These figures were obtained according to the footnote from the employees' timetables?

A. That is correct.

Q. You do not have Rome here. Have you any work [Tr. 5559] paper disclosing how many non-stop jet flights TWA had to Rome in July 1961?

A. The second sheet of this exhibit has a listing of weekly jet flights to Rome.

Q. Your first sheet is my second sheet and the other way around. I see. Now I am straight.

This is really to all gateways, is it not, practically, and to other cities as well?

A. That's what the title says.

Q. That shows for August 1961, as I understand it, two to Shannon, fourteen to London, seven to Frankfurt—

A. You are just a little too fast for me. Okay, I am with you.

Q. Four to Lisbon, five to Madrid, sixteen to Paris, two to Geneva, two to Zurich, three to Milan, sixteen to Rome, two to Athens, and one each to Dhahran and Bombay. They both couldn't be non-stop, could they?

A. The others are not necessarily non-stop.

The Special Master: No, I doubt it.

Mr. Hayes: I was wondering.

Q. There is no question in your mind, is there, Mr. Wemple, as to the accuracy of the number of flights to have been operated by TWA as of any of the dates set forth in Defendants' Exhibit 233 for identification?

[Tr. 5560] A. I have no reason to question this exhibit.

Mr. Hayes: I offer it in evidence.

Mr. Williams: No objection.

The Special Master: Received.

(Defendants' Exhibit 233 for identification, received in evidence, as of this date.)

Q. In 1962, TWA increased its schedules to those same gateways and others, did it not, to a total of 46? I am speaking of the peak season.

A. Yes.

Q. In 1963, it made a further increase, did it not, to a total of 61?

A. Yes.

Q. In connection with your methodology here of increasing TWA seats and leaving TWA's competitors unaffected except your transfer of seats from Pan American to TWA in 1959 and 1960, are you assuming that both the foreign carriers and Pan American would not have reacted to the additional competition offered them by the additional flights you set forth on the table on page 19?

A. I am not making that assumption.

Q. You are assuming their number of seats are remaining the same, are you not?

A. I selected that system for the calculation.

[Tr. 5561] Q. By assuming their number of seats remained the same, are you not assuming that they would not have put on additional capacity?

A. I make no assumption as to respect what they would have done in their flight operations. I simply selected the method for calculation that the total seats would have remained unchanged.

Q. Isn't there an unspoken assumption in table 19, Mr. Wemple, that they would not have increased in the available seats they were offering the public? Isn't that basic to it?

A. No, sir. I answered your question as to assumptions respecting the method of calculation, and I absolutely did not make an assumption respecting what the other airlines would have done in flight schedules, et cetera, if TWA had had these additional aircraft.

Q. On what basis then did you just use exactly the same number of figures for the flights and passengers—take the flights—for the flights that TWA's competitors, including Pan Am, would not have changed?

A. I believe I described why I made that particular selection in holding the denominator of the fraction which is used for the calculation of TWA's percentage constant, because on balance, it would give a slightly lower state-
[Tr. 5562] ment of results.

Q. Are you saying in substance, Mr. Wemple, that by leaving the number of foreign flights unchanged, you are not operating on the premise that there would have been no competitive reaction by the foreign carriers?

A. I have no intention and I do not make that claim, statement or assumption.

Q. The question is, is that not inherent in your tabulation?

The Special Master: That has already been answered.

Mr. Williams: He said no.

Q. If, in fact, the foreign carriers or Pan American or both had offered more seats in more flights to meet this supposed increased competition from TWA, your percentages would change to the extent to which such added competition was put into the market, would they not?

A. That is correct.

[Tr. 5563] • • • Q. When, Mr. Wemple, did Pan American put into transatlantic service any one of the six jets which you transferred to it in your Chapter II? By "commercial service," I mean Pan American's revenue service.

A. I have dates here. If you like, I will just read them off as to when Pan American—

The Special Master: You just want the first one, don't you?

The Witness: The first one was October 26, 1958.

Now, whether that specifically went into transatlantic service at that particular time, I do not know.

By Mr. Hayes:

Q. What is the number of that plane?

A. N711.

Q. No, I am referring—

A. I see what you mean.

Q. (Continuing)—to planes that you—

A. 701, 2, 3, 4, 5, and 6. One moment, please. I find a plane here, Plane 702 which was January 27 1960. [Tr. 5564] Plane 701 was December 8, 1959.

Q. You might as well give me the rest.

A. This table does not go beyond that point. Those are the only two of those particular planes that happens to be on this table.

Q. The rest were at later dates, were they not?

A. I would presume so.

Q. So, in fact, Pan American put one of the six jets with which Chapter II is concerned into revenue service on December 8, 1959?

A That is correct.

Q. Which would be 24 days for the year 1959?

A. That is correct.

Q. Or to speak for the month of December, it would be 8/10 of a plane for the month of December; is that right?

A. Yes.

Q. On Exhibit D, you transfer, as revised, 3/10 of a plane from Pan American to TWA in November 1959, and 1.6/10 of a plane in December 1959, do you not?

A. That is correct.

Q. How did you get those figures for November and December when Pan American's, the first of these six jets that went to Pan American did not go into service until [Tr. 5565] December 8, 1959, and couldn't generate any revenue?

A. The date I gave you before, which is what I understood your question related to, was the date the plane went into revenue service.

Q. That is right.

A. The numbers which you have just quoted me, the 3/10 and the 1.6 are aircraft available for commercial serv-

ice calculated as I have described so many times for aircraft on hand after other aircraft of that particular fleet had been placed in operation.

Q. Until you transfer seats from Pan American, Pan American must first have the seats, must they not?

A. I call to your attention that the seats calculation is based on plane miles which, in turn, is based on ratios of average number of aircraft available for commercial service, which ratios are set forth on the top of page 14, and that in both the numerator and denominator of those particular ratios are in terms of planes available for commercial service, rather than planes available for revenue service

Q. Would you mind answering the question, Mr. Wemple?

* * * * *

[Tr. 5572] * * * Q. Let us take a transfer of seats, Mr. Wemple.

craft on hand after other aircraft of that particular fleet have been placed in operation.

Q. I understand that, but on page 25, you used the premise that the additional seats offered by TWA would On what basis do you transfer the seats in plane N-701 from Pan American to TWA at a date prior to the time when Pan American actually used that plane in revenue service?

A. My answer is straightforward there cannot be any such transfer of seats.

Q. Will you explain that in the light of your language n page 25?

The Special Master: I don't want to interfere with this. I think I see what Mr. Hayes wants to get in the way of an answer.

Let me make this comment and then you can strike it from the record if anyone wants to.

He has explained to my mind at some length and evidently to everyone's satisfaction at the time the basis on which his statistical study was made.

As I understand the purport of Mr. Hayes' present line of questioning, he is questioning whether or not it was a realistic basis on which to calculate damages in view of the fact that the [Tr. 5573] actual history is different from the statistical study in ways that you have previously explained.

I would think maybe it would help to get the two of you together here if a question such as this were asked: In view of the fact that the date of actual service of the first Pan American plane was different than the date when you start computing the damages in your statistical study, do you think that it was a realistic basis—that your statistical basis is a realistic basis on which to calculate the measure of damages?

As I say, if anybody objects to this statement of mine, I will be glad to strike it physically from the record.

Mr. Hayes: I have no objection.

Mr. Williams: I think you stated it exactly and I would like to have the answer or explanation.

The Witness: I believe our system of analysis and calculation is solid, legitimate and proper, and the cornerstone is this chart on page 24 which shows TWA's remarkable correlation between percentage of seats offered and percentage of passengers obtained.

[Tr. 5574] If I were rewriting page 25 today, I would delete or modify that reference to transfer of seats.

The Special Master: That appears to be connected with actual history, I think is the trouble with that.

Mr. Hayes: That's right. I am concerned with the history.

The Special Master: You are saying now that you did not intend——

The Witness: Our system of calculation is not actually based on the transfer of seats, that is correct.

There were, of course, in the year 1960, a substantial number of seats transferred from Pan American to TWA, but the fragment of 1959 that is under discussion now does not have the indicated transfer of seats that is implied—does not have the transfer of seats that is implied by the last part of the statement on page 25. Or I should say by the statement in the last part of page 25.

Q. Are you telling us in substance by your last answer that in making your damage calculations you have not considered the historical facts based upon when Pan [Tr. 5575] American actually put the six planes with which you are concerned into revenue service on the Atlantic?

A. That is correct.

Q. You did not consider it important to look into this history of the actual useage of those planes by Pan American?

A. Yes, I considered the history of—no, let me withdraw that.

I did not consider it important as to where Pan American used those particular six planes, since Pan American had a substantial fleet of that type of aircraft.

Q. I am talking about transatlantic service.

A. So am I.

Q. I will try it again.

In making your damage calculation for the International Division of TWA insofar as the six aircraft that went to Pan American were concerned, and in making your transfer of seats which forms part of the basis for your damage calculations, did you disregard the dates when Pan American actually put those six planes into service, revenue service?

A. I don't know whether disregard is the right word. We did not consider it. We did not intention- [Tr. 5576] ally disregard it. We just did not consider it.

Q. I don't want to quibble in semantics, Mr. Wemple, about the meaning of the word disregard.

Did you in your calculations as to the number of seats to be transferred, consider the dates when the six planes that went to Pan American were actually put into revenue service?

The Special Master: Would it express your view more clearly to say "utilize" rather than "consider"? Did you utilize it in your formula?

Mr. Hayes: Maybe it would. You know what I am trying to get here and I can't get it.

The Special Master: I think that would be more understandable.

The Witness: There is another aspect of your question which relates to calculation of seats that were transferred. We did not calculate the number of seats that were transferred.

We did consider that if Pan American had not had these six B-707 long range intercontinental aircraft, Pan American's seats offered on transatlantic would have been reduced until it could have gotten replacements for those aircraft.

We did not make a quantitative determina- [Tr. 5577] tion of exactly how much they could have been reduced.

Mr. Hayes: Let me try it this way: I am afraid that did not help, Mr. Brownell. And no fault of yours, I will add.

Q. All of Chapter II leads up to a calculation of additional seats—I am speaking particularly of 1959 and 1960 now I should say—Chapter II leads up to a calculation of the number of additional seats TWA would have had if it had six particular Boeings, does it not?

A. That is correct.

Q. Then you proceed to put passengers in those seats?

A. That is correct.

Q. You also transferred the additional seats from Pan American, did you not?

A. No, sir, we did not make a specific transfer of additional seats from Pan American.

Q. I don't understand page 25 then.

That the additional seats offered by TWA would have been in effect a transfer of seats from Pan American because the aircraft would have been transferred from Pan American.

What does that mean if it does not mean what I [Tr. 5578] said?

A. As I mentioned before, if I were rewriting that page today I would rewrite it differently.

Q. However you would rewrite it, what does that mean?

A. It means that in my opinion Pan American would have offered fewer transatlantic seats during 1960 than it did actually offer, and, in effect, Pan American seats would have been reduced, TWA's would have been increased, and this would have effectively been a transfer of seats.

I do not represent that the number of seats that Pan American would not have offered would have been exactly the number of additional seats that TWA would have offered.

[Tr. 5579] Q. So that we are clear, the additional seats you are talking about are the additional seats that TWA could get from the six planes, are they not?

A. Which were assigned to International Division service, that is correct.

Q. So we are back to those six planes?

A. A portion of those six planes.

Q. Basically the six planes and then you make an allocation to International. Let us start with six planes.

A. That is correct.

Mr. Williams: So counsel wants to know why you didn't pick the same dates for going in service for TWA.

Mr. Hayes: That is not what I asked.

Mr. Williams: No? I am sorry. I withdraw it.

Mr. Tenney: We had some history last week.

Mr. Williams: I missed the history. As a matter of fact, I missed the point if that isn't it.

Q. I am trying to learn from you—Mr. Wemple, and maybe it is my fault—I don't know—maybe my questions are unclear—

Mr. Williams: Don't philosophize. Just ask a question. We are trying.

[Tr. 5580] Mr. Hayes: I am trying harder than I thought I would have to, Mr. Williams.

Q. So far as the seats in those six planes are concerned for the years 1959 and 1960, have you not trnasferred to TWA the additional seats that TWA would have had if TWA had received those planes?

A. That is correct.

Mr. Williams: All right, he answered it. I think it is repetitive.

Q. Are you not taking those seats away from Pan American? Everything else remains unchanged, remember, during those years.

A. I am taking those seats away from the—no, wait a minute. I withdraw that statement.

By the calculation at the top of page 26, I have taken those seats away from the total of Pan American and the foreign flag carriers, and I was thinking of taking them away primarily from Pan American. I should say—let me correct that last part—I was primarily taking those seats away from Pan American.

So the answer to your question is probably yes.

Q. Since those are the seats we are talking about, I want to know what basis there was for making a transfer from Pan American to TWA of those seats in those planes [Tr. 5581] prior to the time Pan American actually used those planes in revenue service.

A. And I cannot justify that.

Q. You cannot justify what?

A. What you had just said.

Q. I did not ask you to justify anything I said.

* * * * *

Q. Let me put it to you this way, Mr. Wemple: On Exhibit D you show for the year 1959—and I am taking [Tr. 5582] 1959 because of its simplicity—an addition to TWA of 2/10 of a plane.

If you had taken the date when Pan American actually put Plane 701 into revenue service, you would have, according to my calculation, only 6/100 of a plane in 1959.

Does that suggest anything to you?

A. In consideration of this line of discussion, if one is to ignore completely any transfer of seats from Pan Ameri-

can to TWA in the year 1959, or to eliminate any such possibility—let me change that from the word "ignore"—the table at the top of page 26, the third from the right column labeled "IATA Seats Revised" should be not 1823, but 1824, which represents TWA's increase, and that obviously would have no material effect on the percentages that are shown there.

I believe that is pertinent to the—I think that is the pertinent bit of information in answer to your question.

Q. I hope somebody else can make some sense out of that answer. I frankly can't. It has nothing to do with the question I addressed to you about Exhibit D as to whether or not you had any comment on the fact that under your Exhibit D you have 2/10 of a plane there whereas if [Tr. 5583] you took the date that Plane No. N701 actually went into service with Pan American you would get only 6/100 of a plane?

A. And that would not be as we have identified Exhibit D, average number of aircraft available for commercial service.

That would be some different figure called aircraft in revenue service.

Q. I guess I will give up.

Let me try it another way.

On page 20 of your report, you add 1100 seats in 1959?

A. That's correct.

Q. That's as a result of some mathematical calculations of yours?

A. That is correct.

Q. Are you telling us that those 1100 seats came from Pan American?

A. No, I am telling you that those 1100 seats came from TWA's operation of some of the six additional jet aircraft which are listed on page 10.

Q. It could come from only one of them, couldn't it, so far as Pan American's operation was concerned?

A. I'm not treating with Pan American's operation. [Tr. 5584] I am treating with TWA's operation of those aircraft.

Q. I am trying to find out about this transfer.

A. I am trying to explain about this transfer.

Q. Have you anything else to add?

A. No, sir.

Q. Thank you.

If I asked you the same questions with respect to the other six planes—

Mr. Williams: The other five.

Mr. Hayes: Thank you, Mr. Williams.

Q. —the other five planes of the six that you have assumed would have been delivered to TWA as I did with respect to the first of them concerning a consideration by you or to adopt your word a utilization by you of the dates when they actually were operated by Pan American in revenue service, would your answers be the same?

A. That is correct.

* * * * *

[Tr. 5593] * * * Q. The part of the report which deals with the transfer of seats, as specifically stated on page 25, and you gave testimony on it on Friday last.

A. Yes.

Q. In connection with this transfer of seats from Pan American or TWA, were you in effect assuming that Pan

Am allocated the six 331s which it received to its Atlantic Division in precisely the amount you estimated that TWA would have allocated them to its International Division?

A. No. sir.

Q. In the absence of such an assumption, how do you arrive at a transfer of the seats to the International Division from Pan Am's Atlantic Division which were accounted for by the six planes?

A. Pan Am would have been short six B-331 aircraft during the 1959-60 period that we are discussing. The shortage would have been a fractional shortage of the six during the last part of 1959, and corresponding shortages for various months in 1960.

Pan Am operated its B-331 aircraft primarily on transatlantic service, and we believe it is completely [Tr. 5594] reasonable to assume that they would have been able to provide fewer jet transatlantic seats during that period if they had not had the six B-331 aircraft that we are discussing.

As to whether this difference in Pan American's jet transatlantic flights would have been precisely what we assume TWA would have operated, is not the point.

The point is that there would have been a reduction, a general reduction in Pan Am seats and a general increase in TWA seats.

One can make several assumptions. That Pan Am's reduction would have been smaller than TWA's; that Pan Am's reduction would have been greater than TWA's additional.

I chose the middle ground as being most reasonable for this particular calculation.

To illustrate with reference, for example, to December of 1959, our calculation, as set forth on the top of page 20, and further after in our report to the revenue estimate

which is at the top of page 32 for the year 1959, as an element, a reduction of Pan Am's seats by 1100—that is set forth at the top of page 20—and a TWA increase in seats of 1100. If Pan Am, for instance, [Tr. 5595] had put—correction—Pan Am put one of its B-331 aircraft into revenue service on December 8, 1959. There would have been 24 operating days to the end of the month with that aircraft, and that aircraft carries something over 100 seats—let me use just 120 for round figures—let me use 110 for round figures. 1100 seats at 110 seats per aircraft would be 10 transatlantic flights or five transatlantic round trips within 24 days.

I offer that calculation to illustrate the type of changing seats that might have taken place.

Q. Could I have that arithmetic at the end again? I didn't quite get it.

The Special Master: Yes.
Do you want to read it back?
(The record was read.)

By Mr. Hayes:

Q. By this illustration, you are not testifying, are you, that Pan Am used that particular 331 in the Atlantic Division, for any particular number of flights between December 8th and December 31st, are you?

A. That is correct.

Q. You have made no inquiry as to where Pan Am used that particular 331, have you?

A. That is correct.

[Tr. 5596] Q. So you do not know whether it was in the Atlantic Division or one of its other divisions?

A. That is correct.

By Mr. Hayes:

Q. If you are saying that seats are being transferred from other Pan American planes rather than from Plane N701, which you identify on page 10, what factual [Tr. 5599] basis have you for that transfer?

A. To repeat, the majority of Pan American's use of the B331 aircraft in the 1959-60 period was on transatlantic service.

I believe that if Pan American had had six fewer B331 aircraft, it would have been obliged to have offered fewer B-331 aircraft seats on transatlantic service, and I chose for this particular calculation what I believe is the most reasonable assumption, and that is, that the additional seats that we have calculated for TWA's international transatlantic operation would have been approximately the same amount by which Pan American's transatlantic operation would have been reduced.

Q. Have you made any study or inquiry as to how Pan American, in fact, deployed the six 331s which you have identified on page 10 of your report?

A. No inquiry.

Q. None at all?

That is correct.

Q. You are not able to testify that any portions of any one of those six planes was, in fact, used in the Atlantic Division of Pan American?

A. I am not able to testify as to specific use of [Tr. 5600] any of those specific planes.

Q. Did you, for example, examine or consider or study, whether it went into your report or not, any data which Pan American reported to the CAB with respect to the use of this fleet in the years covered by your report?

A. I did.

Q. Did you specifically make any study of what jets it used in the Atlantic Division?

A. I did.

Q. What did you find for the year 1959, for example, as to what jets were used by Pan American in the Atlantic Division?

The Special Master: Would someone explain to me what bearing on our objective here it would have to know what the historical use of those six planes was by the time Pan American—

Mr. Williams: Especially, your Honor, in view of the fact that the witness said—

The Special Master: He did not use them in his calculation.

Mr. Williams: He did not use them, no.

Mr. Hayes: My point is a very simple one. We are talking about six particular identified planes. [Tr. 5601] If they were not used in the Atlantic Division, they could hardly have had their seats transferred to TWA.

The Special Master: The transfer is a mathematical or theoretical one. There is no assumption at any time that a physical transfer of those planes to TWA enters into this calculation. The witness has testified that he believes his calculation is a reasonable one, based on general experience, but there is no—I am sure he is not going to say regardless, if we spend all day, that the historical experience by Pan American, the actual use of these six planes has any effect whatsoever on his calculation.

Mr. Hayes: Then I submit there is no factual basis for his calculation.

The Special Master: That, I think you have made quite clear, and I would say to a point of exhaustion of the Special Master.

Mr. Hayes: I did not mean that.

The Special Master: So if there is some other line of inquiry, I believe it would be more useful to our objective.

By Mr. Hayes:

[Tr. 5602] Q. Let us get away into some other matters, then.

Does your transfer of seats involve some further assumptions? For example, implicit in your study, is there an assumption that the 331s that went to Pan American produced the same number of plane miles per year in the Atlantic Division that you estimate they would have produced for TWA in the International Division?

A. No such assumption.

Q. Is it implicit? I don't mean an express assumption. I asked is it implicit.

A. It's not implicit.

Q. Is it implicit in your calculations that Pan American, without those six jets, would have retained the same number of piston plane miles in its Atlantic Division over and above those that actually had been in it, as you estimate that TWA would have deleted?

A. I did not make a specific assumption on that matter.

Q. Are you, in effect, transferring to Pan American the piston planes that you are eliminating from TWA?

A. I am not.

Q. Or the piston plane miles that you are eliminating from TWA?

A. I am not.

[Tr. 5603] Q. Is it implicit in your calculations that there would have been a net decrease in Pan American's Atlantic Division plane miles in the same amount as your estimated net increase of TWA International Division plane miles?

A. No such assumption.

Q. Is there implicit in your study that the ratio of the number of Pan American transatlantic flights to its Atlantic Division plane miles was the same as the ratio of TWA's transatlantic flights to its International Division plane miles?

The Witness: Please read that question.

Mr. Williams: Read the question.

(The question was read.)

A. No.

Q. Are you implicitly in your study concluding that there was a decrease in Pan American's transatlantic flights?

A. No.

* * * * *

[Tr. 5608] * * * The Special Master: I think I understand this, if this will shortcut it a bit, that Pan American's history of flights and history of the actual number of seats flown by Pan American during this time would be immaterial—

The Witness: That is right.

The Special Master: (*continuing*)—to the calculations shown on page 47.

The Witness: That is correct.

Mr. Hayes: I suppose they could be, Mr. Brownell, What I would like to know is whether they are.

The Special Master: The witness said so, and you

have pointed out that you think they are. I suppose that in the summing up, I will hear quite a bit about that, but we tested the witness on a number of approaches to that and he maintains consistently that they are in his opinion immaterial to it. So I just raised the question of whether we have not covered it, so far as this witness is concerned.

Mr. Hayes: I would like a statement from him as to why it is immaterial.

[Tr. 5609] The Special Master: I think you are entitled to that.

The Witness: With reference to page 47 in Chapter III, if TWA had received the eighteen B-331 aircraft on the earlier dates set forth on page 40, Pan American would not have had as much opportunity to fly transatlantic services with B-331 aircraft.

As I mentioned before, I believe this would have resulted in Pan American having offered fewer transatlantic seats in jet aircraft and probably fewer total transatlantic seats. So that it seemed to me proper and reasonable to make the assumption that the total number of IATA seats in these two years, 1959 and 1960, would not have been changed as a result of TWA's having received eighteen B-331 aircraft on the earlier dates.

That is my statement as to the reason I believed it was immaterial as to exactly what Pan American operated during those years.

• • • • •

[Tr. 5616] • • • Q. Under Chapter III, Mr. Wemple, you added 17,000 [Tr. 5617] additional seats in 1959 and 27,000 additional seats in 1960. The question I would like to have answered is whether those seats to which I have

just called your attention are also considered by you as a transfer from Pan American.

Special Master: That has been covered.

Mr. Hayes: I don't think it has, Mr. Brownell. I think I directed myself entirely to Chapter II up to now with respect to the transfer, not Chapter III.

The Special Master: I think it has been sufficiently covered.

Mr. Hayes: Could I have an answer? My recollection is that it has not been covered. He can either answer it yes or no. That is all I want to know.

Mr. Williams: I will object unless the witness has something additional to add to that testimony he has already given.

The Witness: Nothing additional.

Q. With respect to the planes which you assume to have been transferred from Pan American to TWA, are you making any assumption that Pan American in fact put those planes into service on the dates it received them?

[Tr. 5618] Mr. Williams: I object to that.

The Special Master: Sustained.

Q. On your table at the bottom of page 19, Mr. Wemple, you show as 130.51 number of seats per 331 aircraft for 1960. You do not show any figure for 1959.

What is the reason for the failure to show the figure for 1959?

A. No useful purpose would have been served because our calculation is based on a switch of jet aircraft for piston aircraft for a certain number of plane miles, and the seats per B-331 aircraft was not used anywhere in that calculation for 1959.

Additional seats calculated for 1959 are set forth at the top of page 20 based on the differences in TWA's average

number of seats in the B-331 aircraft and the L-1649A aircraft for the year 1959.

Q. In making this additional seats per jet aircraft at the top of page 20, what number of seats did you use for the 331s?

A. I do not remember.

Q. Because I noticed there is quite a variation from 1959 to 1960 in the additional seats, 7.2 per aircraft. You have told us what number of seats you used for 1960 for the jets but you don't tell us what number [Tr. 5619] you use in 1959 for the jets.

A. I do not set it forth in the report because I believed no useful purpose would have been served.

Q. How did you arrive at the figure of 68.7 additional seats per jet aircraft for 1959 which appears at the top of page 20?

A. As set forth in Note B directly under that table, we reviewed TWA's statistics in Schedules 3-71M, and for the year 1959 calculated the average number of seats per aircraft offered in the B-331 operation and in the L-1649A operation and subtracted the two averages.

Q. That was an annual average, is that right?

A. That is correct.

Q. Did you make any inquiry as to variations in seating capacities during the period of operation?

A. We used monthly figures to calculate the annual average.

Q. Did you give effect to the monthly figures with respect to the months that you were determining that the increase in number of seats would take place?

A. No.

Q. Carrying through on your methodology, at the top of page 26—and check me if I am incorrect, please, [Tr.

5620] Mr. Wemple—the thousand seat increase in TWA's seats brings about as revised by you, an increased percentage of TWA's share of total IATA, and then you use that percentage in relation to the historical to bring about a revised percentage of TWA's share of total IATA passengers, is that correct?

A. That is correct.

Q. Do you follow the same methodology in Chapter III?

A. That is correct.

Q. In Chapter II you show as revised—the table at the top of page 26—227,000 transatlantic seats that would have been offered under your assumptions by TWA, and to that figure is to be added, is it not, the 17,000 you show on page 47. So we get a total of 244,000?

A. That is correct.

Q. When you bring in the 17,000 from Chapter III, you increase TWA's share of IATA from an actual of 12.4% to 13.4%, is that correct?

A. No, sir. Chapter III is based on the change from the estimates of Chapter II, plus the actual. So that the percentages involved are 13.4 and 12.5 rather than 12.4.

Q. 12.5 is a revised percentage. The 12.4 is the [Tr. 5621] actual, is it not?

A. That is correct.

Q. That increase you calculate in Chapter III at page 47 produces according to your calculations a 7% increase in transatlantic passengers and 4.2 million additional revenue?

A. That is correct.

Q. You do not show anywhere, as I recall it, Mr. Wemple, under Chapter III, or anywhere else, how many flights would be required to produce 17,000 additional seats?

A. That is correct.

Q. Have you made a calculation?

A. No.

Q. You did—

A. Correction on that. The calculation may be set forth in our Chapter IV on expenses. I would be pleased to report back as to whether or not I could find it in there.

Q. In Chapter II, you did tell us, at page 20, that—

A. Excuse me, Mr. Hayes. I said Chapter IV. I mis-spoke myself. Volume IV is what I meant to say.

Q. I would appreciate it if you would let me know.

[Tr. 5622] A. I will.

Q. In Chapter II, you do set forth for 1959 sixteen additional jet flights replacing pistons.

Could one obtain the number of additional flights that Chapter III covers by dividing the 17,000 additional seats by the number of additional seats per jet aircraft which you show at the top of page 20?

A. I would have done it differently. I would have taken the first line of the calculation at the top of page 17 and simply multiplied the number of flights by the ratio of jet plane miles.

Q. Wouldn't the way I suggested be an accurate way of doing it, since you are adding seats at a rate of 68.7 additional per jet aircraft?

A. It would come out with approximately the same answer.

Q. I have made the calculation, Mr. Wemple, and I come out to 247 additional jet flights in 1959.

You showed in page 41, you are assuming for Chapter III that B-331 service would start on August 19, 1959, which is 131 days of assumed operation during 1959, or an average of two additional flights per day which you assumed under Chapter III. Is that correct?

A. I made no assumptions as to average number of [Tr. 5623] flights per day.

Q. Did you consider that, too, irrelevant to your report?

A. I did not consider it in making the calculation.

• • • • •

[Tr. 5644] Mr. Hayes: My last question was on what facts, hard facts, he bases what he calls his ideas.

Mr. Williams: Have you anything to add to what you have already testified?

The Witness: I don't believe I have anything to add.

Q. At page 20, the table at the top, after doing some arithmetic you arrive at TWA flying 16 jet flights which are replacement flights.

Have you made any calculation to determine how many jet aircraft other than the six which have been assigned to Pan American with which you are dealing in this chapter Pan American would have had to place in the North Atlantic service or the transatlantic service in order to meet those 16 jet flights? To match them, I mean.

A. I have not made that specific calculation.

Q. Have you made any general calculation along those lines?

A. No.

Q. If I asked you the same question with respect to the additional flights that will be necessary to take care of the 17,000 seats in Chapter III, would your [Tr. 5645] answers be the same?

A. The 17,000 additional seats in Chapter III are calculated for TWA having eighteen B331 aircraft on a certain earlier delivery date set forth on page 40.

Q. Yes. And my question is have you made any calculation to determine how many aircraft Pan American would have had out of its reservoir of jets other than the six to offer 17,000 more seats to match TWA's offering in 1959?

A. I have made no such calculation.

Q. If I asked you the same questions with respect to the 964 additional flights you show on page 20 for 1960, would your answer be the same?

A. If I understand that your question relates to calculations of how many aircraft Pan American would have required to make a duplicate increase in number of jet flights, I have made no such calculation.

Q. The same would be true of Chapter III for 1960?

A. Respecting the TWA additional seats and whether or not I have calculated what Pan American would have done to have offered that many more, I have not made such a calculation.

Q. Did you at any time make a study of the number of jets that Pan American used in its divisions other than [Tr. 5646] the Atlantic Division during the period covered by your study?

A. Yes, I reviewed Pan American's use of its different types of jet aircraft in divisions other than the Atlantic Division at one point.

Q. Are the results of that study in existence?

A. No, they have been discarded.

Q. No longer in existence?

A. That is correct.

Q. Do you recall what that study showed?

A. Yes. This was a study of Pan American operations by type of jet aircraft at various principal cities throughout the world.

The Special Master: As to which you previously testified?

The Witness: That is correct.

Q. I asked you if you recalled the results of the study. What did it show?

A. I previously said that Pan American's use of those B331 type aircraft was on Atlantic Division service.

Q. Aside from that generality, you cannot give us the results of the study?

A. That is correct.

[Tr. 5661] Q. Do you know what service Pan American scheduled eastbound, jet service, I mean, in 1960?

A. I cannot tell you that from memory.

Q. I am sorry?

A. I cannot tell you that from memory.

Q. Did you examine to determine how many eastbound schedules Pan American was offering as of the same dates that you have on Exhibit 233?

A. Not in connection with a calculation of this report.

Q. Whether you used it in connection with the calculation or not, did you examine the Pan American schedules to determine what schedules it was offering?

The Special Master: Other than that to which you have already testified.

The Witness: I think—not being sure exactly what I have testified, I have looked at Pan American schedules a number of times over the period 1957 to 1962. I rather expect I have looked at the Pan American schedule for the summer time 1960.

Q. Did you ever compare a columnar comparison?

A. Not in connection with the preparation of this report.

[Tr. 5662] Q. No. At any time while you were working on this report, did you ever prepare a comparison?

A. I do not recall having done so.

Q. You know the comparison that I have in mind of Pan American and TWA scheduled flights?

A. Similar to Exhibit—

Q. 233.

A. I presume.

Q. If Pan American had added jets to its Atlantic Division to compensate in whole or in part for the additional flights that can be determined from your report that TWA would have been offering in 1959 and 1960, there would necessarily have to be a change in your calculation to allow for the additional seats on those additional jets, would there not?

A. That is correct.

Q. The same would be true, would it not, to the extent to which foreign carriers offered additional service in the North Atlantic on jets?

A. That is correct.

Q. Any such increase of service under your approach would have increased IATA's total seats available and decreased TWA's percentage?

A. That is correct.

[Tr. 5663] Q. You made no such calculation?

A. That is correct.

Q. At pages 26 and 27 of your report, Mr. Wemple, you arrive at percentage increases, Chapter II, of the number of seats and in turn for the number of transatlantic passengers which you say TWA would have carried showing a per cent increase, and then you applied that amount on the top of page 27 to the International Division passenger revenues?

A. That is correct.

Q. Is the effect of that treatment to increase the number of passengers by the same percentage that you increased the number of seats?

A. No.

Q. It is not? Maybe I misunderstood you then. I thought it was.

At any rate, whatever procedure you use in Chapter II is used also by you in Chapter III, is it not?

A. That is correct.

[Tr. 5676] • • • Q. This chart on page 24, it purports to set forth what happened over a period of years during which both the capacity and the market were growing?

A. That is correct.

I beg your pardon. TWA's capacity went down in 1959. Other than that, each year of this period TWA had a—I believe had a larger capacity than the previous year. That is correct.

Q. And Pan American's went down in 1959, too?

A. Yes.

Q. But generally speaking is not what I said true, that what the chart on page 24 purports to record is what happened during those years so far as TWA's percentage of certain totals were, and that during those years both the capacity, overall, and the market were growing?

A. That is a very correct generalization.

Q. The percentages which you apply in accordance with your statement on page 25 at least for 1959 and 1960 assumes no growth in the market; is that correct?

[Tr. 5677] A. We assumed no increase in the total number of passengers for any of the years, 1959 through 1960 for our calculations that follow.

Q. But in the years after 1960, you do revise the number of seats, do you not?

A. That is correct.

Q. Your revision of number of seats and TWA's percentage carries through to your revision of TWA's percentage of passengers, does it not?

A. That is correct.

Q. Except for adding to IATA totals for the years 1961 through 1963 your estimates of increased TWA capacity, you are assuming what could be described, as a static market?

A. No, sir, as a static capacity.

Q. All right, static capacity.

A. That is correct.

Q. Your table on page 21 showing the increase of passengers does describe the market, does it not?

A. That is correct.

Q. There are substantial increases in each year of the number of people who traveled transatlantically, is that correct?

A. That is correct.

[Tr. 5678] Q. That increased number of passengers was to be shared among the various IATA carriers who were offering additional capacity; is that correct?

A. No, I make no assumption on that point.

Q. Isn't that common sense, Mr. Wemple, without an assumption, that the additional passengers would have to fly in the planes of some one of the IATA members?

A. That is correct.

Q. When you add seats to TWA, and you have passengers following those seats into TWA's revenue, aren't you assuming that TWA is capturing those passengers from its IATA competitors?

A. That is correct.

Q. But you made no determination as to how much it is getting from any competitior.

A. That is correct.

• • • • •

[Tr. 5703] • • • Q. In 1959, Mr. Wemple, on the tables which appear there—at page 26 I should say—you increase TWA's seats by 1000 in the upper table?

A. That is correct.

Q. You increase TWA's passengers by 1000 in the lower table.

Does this indicate your opinion that all of the thousand additional seats would be filled?

[Tr. 5704] A. No.

Q. What does it indicate?

A. You will recall that the thousand increase in seats is a net increase, the result of larger jet aircraft replacing smaller piston aircraft.

TWA's number of jet seats is, of course, increased more than 1000. I have made no calculation to determine the loading of the additional jet seats that were offered.

Q. But it is a fact that you are adding 1000 seats in 1959 and you are adding 1000 passengers in 1959; is it not?

A. And we are changing roughly 1000 piston seats to jet seats as well.

Q. However you do it, that is what you are accomplishing, isn't it?

A. And the net result would be a 1000 increase in the number of passengers.

Q. So that for those 1000 seats we have 100 per cent load factor in effect?

A. The answer—that is not what the facts would have been.

Q. I know it isn't, but it is what your estimate is, is it not?

[Tr. 5705] A. No, sir.

The load factor is determined by the number of seats that exist in an aircraft, divided into the number of passengers that are seated in that aircraft.

Q. I took just these thousand additional seats and divided them into the thousand additional passengers and I got 100 per cent.

A. But there were more—

Q. I am talking about the addition, just the addition.

A. I cannot accept your load factor designation as applied to those additions.

Q. Project it then. That is your privilege You are also concluded, are you not, in 1959, with those same 1000 passengers, that they would have been carried on sixteen flights that would have replaced 1649As?

A. Do you have a page reference for that?

Q. I believe it is page 20, if I remember rightly. Maybe I am wrong on the page.

A. That is correct.

Q. Yes.

A. Sixteen jet flights replacing sixteen piston flights.

Q. Sixteen into 1000 gives 62½ additional passengers on the average?

[Tr. 5706] A. Yes.

Q. So your calculation is based on your determination that the sixteen additional flights would have an average of 62½ additional passengers per flight?

A. That is correct.

Q. Aside from your calculations did you determine any facts upon which to base that conclusion?

The Special Master: Other than those to which you have already testified.

A. No further facts to report.

Q. All of those additional flights with the 62½ additional passengers per flight that would have been carried would have occurred in late November and December of 1959, would they not?

A. That is correct.

Q. That consideration does not cause you to change the number of additional passengers per flight?

A. It does not.

Q. If we turn to Chapter III for 1959 where you added 17,000 seats for a total of 18,000, you come up with—page 47, I believe—

A. Yes.

Q. —I think it is 11,500 additional passengers, if I can find it. Pardon me. 10,500 additional [Tr. 5707] passengers. 157,500 minus the 147,000 you have already estimated in Chapter II.

Do you see it, Mr. Wemple?

A. That is correct.

Q. All of those passengers would have been carried on jet flights which replace 1649As; is that correct?

A. That is correct.

Q. You do not have this figure in your report, as I recall it, but your total of added seats for Chapters I and II is 18,000 and when that is divided by, I think it is 68.7—yes—68.7 additional seats, we arrive at a total of 262 flights for the two chapters; is that correct?

A. Approximately.

Q. If we divide the total increase in passengers of 100 under Chapter II to the 10,500 in Chapter III, by the number of 262 to represent the flights, one arrives at practically 44 additional passengers, on an average, per flight? I think it is 43.9.

A. Yes.

Q. Those are all additional passengers now?

A. That is correct.

Q. All of those passengers, additional passengers, [Tr. 5708] would have been carried in the period between August 19th and December 31, 1959, unless I misread your report?

A. That's correct.

Q. Most of the flights would have occurred after October 1, 1959, would they not?

A. That is correct.

Q. In the light of the time of the year and the number of passengers that you are putting on these flights, do you still believe that your approach here is realistic?

A. I do.

The demand for places on the jets that were flying in those days was quite high.

Q. All through the winter months?

A. Through the winter months.

Q. Other than anything you have already told us, can you give me any facts upon which you base that answer?

A. I can remember reviewing both Pan American and TWA load factors that were achieved in that early period and being impressed that they were remarkably high. I do not have statistics that I can quote you here.

Q. Did you make a record of your review or is that something else that was discarded?

[Tr. 5709] A. I discarded the review that I made prior to the presentation of this report.

Q. Did you make any review or any study in connection with your report as to what TWA's percentages of its revenue plane miles and revenue passenger miles flown with jets in 1960 compared with the same percentages for Pan American were?

A. I recall making no such study.

Q. Did you not think it pertinent to the kind of report that you are presenting here, Mr. Wemple?

A. No, I did not think it necessary for this determination.

Q. The data to make such calculations are all available, are they not, Mr. Wemple?

A. They can be taken off of some of the CAB Form 41 schedules, I believe.

Q. I will state these figures to you and you may check them if you so desire.

That in the year 1960, TWA's percentage of plane miles flown in jets was 58 and Pan American's—

A. Excuse me, sir. This is TWA International Division, total plane miles divided into the plane miles operated with jet aircraft? Am I correct on that?

Q. I think that's the way it is calculated, yes.

[Tr. 5710] Mr. Williams: Mr. Special Master, if this is a question, I object to it. The witness has already said it is not pertinent.

Counsel, if he wishes to make a statement, may do so, but we undertake no obligation to check these figures.

Mr. Hayes: I am not bound by the witness' statement of what is pertinent, as I understand the cross examination.

The Special Master: Not for purposes of your argument.

Mr. Hayes: I will ask a question.

I will make a statement as to what my question is based on.

Q. To resume, TWA's percentage of jets to total plane miles in 1960 was 58 and Pan American's 60.5.

And of passenger miles in jets, TWA's percentage was 80.2 and Pan American's 79.4.

I ask you, assuming the accuracy of the figures, and you may check them if you so desire, whether the fact that TWA's high percentage of passenger miles, higher than Pan American's flown in jets, should not be considered in determining comparative operations of the two companies.

A. I think those figures are completely consistent [Tr. 5711] with our estimates that are set forth here for Chapters II and III.

Mr. Hayes: Could I have the last part of the question again where I said "And I ask you"?

(The question was read.)

The Witness: I do not think it was necessary to consider these figures and as you state them I see nothing inconsistent between these figures and the calculations in our report.

Q. I gave you the figures for 1960. Your answers would be the same, I assume, if I gave you similar figures for the years 1961 through 1965; is that correct?

A. Our estimates don't go beyond 1963, but—

Q. To 1963 then.

A. That is correct.

• • • • •

[Tr. 5733] • • • Q. Is it a fact that actually during the period covered by your report, the jet seats made available by TWA and the passengers carried by TWA grew more rapidly than the jet seats made available or the passengers carried either by Pan American or by all IATA carriers?

A. I have no data on that point, and, therefore, no way to answer.

Q. Can the data be obtained from your report?

A. No, sir.

Q. It cannot?

A. It cannot.

Q. Not even from the tables on pages 21 and 23?

A. Your question related specifically to jet seats. The table on page 23 is all seats. So, the answer, therefore, is no.

Q. Did you make any such calculation?

A. I did not.

Q. You have told us, of course, that so far as TWA is concerned, after 1959 all of the transatlantic plane miles, all of the plane miles flown by the International Division, were jet plane miles, except for certain required or special piston miles.

A. Could you refer to a particular page for that [Tr. 5734] statement, if you want me to confirm—

Q. Yes, page 18. I thought you knew your report sufficiently well that I did not have to refer you.

A. I assume you are asking a question?

Q. I did ask a question, Mr. Wemple.

A. I would like—

Q. Page 17, I think it is.

A. (continuing)—it read, so I can answer it.

The Special Master: Read the question back.
(The question was read.)

A. Our estimates of the reconstructed TWA airline operation with the additional jets indicate that in our opinion the statement of your question would have taken place.

Q. From the tables on pages 21 and 23, can one determine whether the total seats offered by TWA and the total passengers carried by TWA, transatlantically, increased more rapidly than the total seats offered or passengers carried by either Pan American or the foreign carriers?

A. The basic data from which that calculation could be made are there.

Q. You have not made the calculation?

[Tr. 5735] A. I have not made it.

Q. Do you know to what extent, if at all, after, let us say, 1959, both Pan American and the foreign air carriers were operating jets as against pistons?

A. I do not have specific quantitative data on that point.

Q. Do you know whether during any of the period covered by your report transatlantic load factors were declining?

A. Yes.

Q. To what extent did they decline?

A. I do not have the load factors here. I cannot recall them offhand.

Q. They can be calculated from the data in your report, can they not?

A. For transatlantic flights, yes.

Q. That is all we are talking about, isn't it?

A. Load factor—I thought by your question you were relating to TWA's International Division operation or Pan American's Atlantic Division.

Q. I am relating my question to your report, which has to do with transatlantic. At least, I understood it did.

A. Pages 21 and 23 certainly have to do exclusively [Tr. 5736] with transatlantic.

Q. From those data can the load factors be determined for the years in question?

A. For transatlantic flights, yes.

Q. Do the load factors show a drop in load factors after 1959?

A. I believe they do, but I am not sure.

Q. You have not made the calculation?

A. That is correct.

Q. When I asked showing a drop, was that true not only of TWA but also of Pan American and IATA carriers?

A. Not having made the calculation, I cannot answer your question from knowledge of the numbers.

Q. For 1960, taking the data that you set forth at pages 21 and 23, I calculate that in the year 1960 TWA had a 63 per cent load factor, which was a drop of 1.6 per cent from 1959; that Pan American had a 68.5 per cent load factor, which was a drop of 10.2 per cent from 1959; and that all IATA carriers had a 63.6 per cent load factor, which was a drop of 2.4 per cent from 1959; and that in the year 1951, TWA's load factor dropped 13 per cent, Pan American's dropped 15 per cent and all IATA carriers dropped 13 per cent.

Assuming the accuracy of my arithmetic, what is [Tr. 5737] your explanation for the 1960 and 1961 load factors?

A. I believe we went over that yesterday. The load factor is the result of adding more seats than achieving an increase in passengers.

Q. Yes, we had that much. You defined a load factor. I am asking you what your expert opinion is as to these changes in load factors in 1959 and 1960. I have never asked you that question before.

A. I am afraid I do not understand the question.

Q. Without repeating—I will repeat the arithmetic, if you want me to. I prefer not to, to save time.

A. I have notes on the arithmetic.

Q. Fine. I asked what your opinion as an expert was as to why those load factors changed as they did change in 1960 and 1961.

A. I have nothing further to add.

Q. In 1962, Mr. Wemple, TWA's load factor went up 1.9 per cent, Pan American's went down 3.6 per cent and all IATA carriers went up 6/10 of 1 per cent.

Have you any expert opinion as to why those changes took place in 1962?

A. TWA and the grand total of all IATA carriers obviously achieved more passengers than their increase in number of seats.

[Tr. 5737A] With Pan American, the arithmetic was different, in that Pan American added more seats than they achieved an increase in passengers.

[Tr. 5738] Q. You are just telling me what the arithmetic shows. I am asking you for an opinion as an expert as to the reasons for those changes, if any, if you know them.

A. The reasons for those changes are the way in which individual airlines were operated, and in summary, the way all the IATA transatlantic carriers were operated during those particular years.

Q. You have not made a study of those operations to give us any opinion?

A. I have not made a study of those operations to give you specific reasons as to why each airline's results in load factors turned out the way they did.

Q. As part of your study, did you or did you not give consideration to seasonal variations in load factors?

A. I am generally familiar with seasonal variations in load factors. I therefore fundamentally did give consideration to those seasonal variations.

The seasonal variations are not a part of our calculation of changes in gain from operations. So, therefore, they are not specifically reflected in these calculations which are set forth in this report.

Q. Does your answer mean or does it not that you considered the variations, but that the variations did [Tr. 5739] not enter into your calculations?

A. That is correct.

Q. Did you, as part of that consideration, calculate what the seasonal variations were?

A. I did not.

Q. What consideration then did you give to the load factors, the varying load factors during the year?

A. I assume you mean what consideration did I give to variations in load factors throughout the different seasons of the year.

Q. That is right.

A. And I repeat, they were not used in our calculation.

Q. But you previously answered that you did consider them. You have also told us that you did not use them. I want to know what you mean when you said you did consider them.

A. I knew of the existence of the seasonal variations in load factor, and in determining the way in which these estimates could be put together, most soundly, I elected to use the annual average figures or annual figures rather than individual monthly or seasonal figures.

Q. Of course, even the monthly load factors were [Tr. 5740] available to you from the IATA statistics you used, were they not?

A. They could have been calculated.

Q. Do the load factors vary not only during the months of the year but also with the direction of the flights as to whether they are eastbound or westbound?

A. Yes.

Q. According to the IATA figures which you used, TWA in June, 1960 had a 92.3% load factor eastbound, which was higher than the load factor of Pan American or of all IATA carriers for any month in that year, and westbound TWA had a load factor of 91.9% which was higher than the load factor Pan American or all IATA carriers had in any month that year.

Would that indicate to you that TWA in 1960 was attracting more passengers than its competitors?

A. I have no idea—correction. Those percentages which you gave me would not enable me to answer that question, whether they were or were not attracting more passengers than its competitors.

Q. You cannot tell?

A. Not from those figures.

Q. Can you tell from any of the figures that were available to you?

[Tr. 5741] A. I certainly could have looked at the IATA monthly passenger figures for TWA, Pan American and the other airlines for June of 1960 by direction to determine whether or not TWA had attracted more passengers than the others.

Q. But you did not do so?

A. I did not do so.

Q. The IATA statistics, in fact, publish the load factors, do they not?

A. Usually, yes.

Q. I notice from the monthly IATA figures which you used that by November 1960, TWA's load factor had dropped to 34.5 per cent, Pan American's to 39.2 per cent and IATA's to 37.7 per cent eastbound.

Does that indicate to you—

A. I did not get the Pan American figure.

Q. 39.2 per cent.

A. And the IATA figure?

Q. 37.7.

Does that indicate to you anything other than a seasonal drop?

A. I have not made a quantitative study of the seasonal variations. I have no idea whether that is a normal seasonal change.

[Tr. 5742] Q. You have no opinion on the subject?

A. No opinion.

Q. Do you know that in the year 1961 the load factors of TWA, Pan American and all IATA carriers failed to reach the load factors of 1960?

A. I am not surprised. I did not remember that specific point.

Q. Do you know that they failed to reach in 1962 their 1960 load factors?

A. I am not surprised. I did not remember those specific numbers.

Q. And that they similarly failed to meet them in 1963?

A. My answer is the same.

Q. According to your Exhibit B, it is indicated—your report—that in the winter months of 1961 to 1962 there was a considerable shift of 331s from the International to Domestic service.

That is correct, is it not?

A. That is right.

Q. Despite that shift, according to the monthly IATA figures, thus taking capacity out of International, TWA nonetheless had low load factors, as did the other carriers I might mention during those months.

[Tr. 5743] Would that indicate to you that there was a lack of market to be served transatlantically?

A. It would indicate to me that TWA believed that it could find a better use for those aircraft elsewhere than on International Division routes, and therefore they made the switch from International Division assignment to Domestic Division assignment.

Q. Does it also follow from your answer that if planes could have been operated profitably in the International Division, or at least as profitably, they would have been kept in the International Division?

A. I have no basis for answering that question.

Q. You do not know? You did not inquire into that?

A. I did not inquire.

Q. Is it part of your opinion as expressed in your report that TWA could capture additional passengers with the additional planes and seats as well in months of low load factors as in months of high load factors?

A. The only opinion expressed in our report is that TWA would have maintained its historical correlation between per cent of annual IATA seats and per cent of annual IATA passengers.

• • • • •

[Tr. 5769] A. —which I believe I would have to know how you were going to use the term "transatlantic passenger," "beyond the gateway passenger" and the term "other than transatlantic passenger."

The Special Master: Aren't you using it here for the purpose of finding out whether the fares are included in the transatlantic fares?

Mr. Hayes: That is right.

The Witness: The revenue figure at the top of page 27 includes revenue for carrying a person across the Atlantic and wherever else TWA's International Division happens to operate a flight. All of that revenue is in there, whether it be beyond the gateway or for the transatlantic trip.

Q. You have already testified to that.

A. All right.

Q. How do you separate out beyond gateway passengers? What is your definition?

A. I have not done so in this report.

Q. I know you have not.

What would be your definition?

Mr. Williams: I think this is repetitious.

Mr. Hayes: I thought it was settled, but apparently I misunderstood his prior testimony.

[Tr. 5770] Mr. Williams: Let us look at the record when we have a chance.

Mr. Hayes: I thought it was defined.

Mr. Williams: I thought it was, too.

Mr. Hayes: Apparently it hasn't been.

A. There are several kinds of beyond gateway passengers.

There are those that board a flight at a point such as Paris and travel to Geneva or Zurich or Milan.

There is another beyond the gateway passenger who has come on a transatlantic flight that stops at Paris and continues to Milan. He is both a transatlantic and a beyond the gateway passenger.

So there can be overlap in this definition and one must be careful.

Q. You do not, as you sit here, give us any precise and exact definition then of beyond gateway traffic?

A. That is correct. I give you those two general definitions.

Q. On the top of page 27 still, the revenues as you have already made clear, including all revenues, necessarily include first-class, coach and economy?

A. That is correct.

• • • • •

[Tr. 5773] • • • Q. As a matter of fact, in reference to Defendants' Exhibit 242 for identification, it indicates that for 1962 and 1963, there was no coach revenue?

A. That is correct.

Q. Let us take economy then and coach and economy when they both existed.

A. Yes.

Q. Did the revenues from coach and coach and economy increase each year historically after 1960?

A. I believe they did.

The Special Master: Percentage-wise?

The Witness: Percentage-wise, too, I believe. Whether that went through the entire period of 1963 with a per cent change each year I am not sure.

Q. You mentioned with respect to beyond gateway revenue your reasons for concluding that they would increase them in the same proportion as the transatlantic revenue. Are you also assuming that the beyond gateway [Tr. 5774] revenue passenger miles would have increased in the same proportion as the transatlantic miles did?

A. We made no such assumption.

Q. Did you make any study at all of beyond gateway operations in terms even of revenue miles or available seat miles or load factors?

A. I do not recall any.

Q. It certainly is no part of your report?

A. That is correct.

Q. Did you make any study of the competition TWA meets in beyond gateway segments?

A. No detailed study.

Q. Did you make any general study?

A. I don't believe I would identify the consideration we gave as a study.

Q. Is there any consideration you gave over and above anything you have already testified to?

A. I am generally familiar with the competition TWA faced in its flights beyond the gateway cities of London,

Paris, Frankfurt and Rome, and it was with the background of that general familiarization that we selected this particular method for calculating the changes in revenues.

Q. By the way, isn't Lisbon considered a gateway [Tr. 5775] city, too?

A. Yes.

Q. I thought it was. You always mention the other four and never mention Lisbon.

A. That is correct.

Q. Did you make any assumption or any studies as to the airlines from which TWA would capture additional passengers beyond the gateway?

A. I did not.

Q. Did you make any assumption as to a transfer of seat miles from Pan American beyond the gateway?

A. I did not.

• • • • •

[Tr. 5777] • • • Q. With respect to this table on the top of page 27, as you have already explained to us, as I understand it, you have arrived at the percentages of increase you apply there via the table on the bottom of page 26 by basing your revisions on what you have referred to as the correlation of the TWA percentage of seats and passengers and so on as shown on the chart on page 24.

A. That is correct.

Q. Have you determined what, if any, correlation existed—that was historical of course, was it not?

A. That is correct.

Q. Have you determined what, if any, correlation exists between the transatlantic seats TWA actually offered and the International Division passenger revenue which you show on the top of page 27?

A. I have not done that correlation analysis.

Q. Or have you done it on the basis of any correlation between the TWA passengers actually carried and the international revenue which you show on the table at the top of page 27?

A. No, I have not done that correlation.

Q. Should there be correlation apparent between the [Tr. 5778] seats TWA actually offered or the passengers carried and its international revenue?

A. I have no reason to expect correlation.

Q. Why would there not be, Mr. Wemple?

A. Well, it's a historical—these are historical facts you are asking me about—

Q. That is right.

A. (continuing) —and correlation, statistical correlation does not come between those series, and, as I simply say, I have no reason to expect that these two series or three series of numbers would show correlation between each other.

Q. By the first part of your answer, I don't know what you meant.

A. Well, correlation is a statistical measurement, and it is very unusual to find correlation that is statistical correlation between series, and I would be surprised if there was correlation between seats and revenues and between passengers and revenues.

Many things affect, for example, the revenues produced per passenger, and these things have changed over the period of time that we are talking about.

Q. Would you please explain what you mean by statistical correlation between series?

[Tr. 5779] A. There is a statistical test that one can apply to two series of numbers to determine the degree of correlation. This is a long, complicated formula, and—but

nevertheless, it is one that is commonly used to determine correlation between series of numbers.

Q. Let me get away from the word "correlation." I don't want to get into any complicated statistical approaches.

Should there not be a relationship between the number of seats offered or the number of passengers carried and the International Division revenue, or should there not? Should there or should there not?

A. I would expect that there would be a general relationship between the number of passengers carried and the International Division passenger revenues.

I would be surprised if there was any particular relationship between seats and passenger revenues.

Q. But there should be as to passengers?

A. A general relationship, I would expect.

Q. Did you consider using that historical relationship in your approach to your study?

A. No, I did not.

Q. You did not consider at all?

A. Well, I considered it and I discarded it.

[Tr. 5780] Q. Did you make any calculations based on it?

A. I don't remember whether I did or not. I probably did. And one factor in discarding it is that revenues are, of course, affected by the fares that are charged in a particular period of time, and this is a factor that is obviously without particular relationship to numbers of passengers.

Q. By the way, do those calculations, if you made them, still exist?

A. They do not exist, no. One possible exception to that last statement. It may have been that there were some revenues per transatlantic passengers used in the February

1962 report. If it is important, I will look. I have a vague recollection.

Q. What is it you have in mind? I don't know.

A. That's Exhibit 214. No, I see the thing I was thinking of. It is on Exhibit E, and it is a figure of international passenger miles per transatlantic passenger handled.

Q. It is not the figure you thought was there?

A. No.

Q. You are referring to Exhibit 214?

A. Exhibit 214 and Exhibit—what did I say?

Q. E.

* * * * *

[Tr. 5783] A. There was a plan at one time to concentrate the jets on transatlantic service and use the pistons "beyond the gateway."

Q. Was that plan ever put into operation?

A. I believe it was.

Q. How long was it continued?

A. I do not know.

Q. When was it abandoned?

A. I do not know. I would surmise that the piston mileage for the International Division, which I believe—which is set forth on page 17, shows that it was essentially eliminated by the year 1962.

So I presume that by that year the jet aircraft had come into general use on beyond-the-gateways flights.

Q. Did you make any inquiry as to whether TWA's beyond-gateway passengers increased, in fact, in the period covered by your report?

A. I made no such inquiry.

Q. You show an increase of your transatlantic passengers of quite a substantial number from 1959 to 1963, going all the way from 146,359 to 359,000, more than doubling.

Did you make any determination at all to see whether beyond-the-gateway passengers doubled or what relationship they bore to the transatlantic passengers?

[Tr. 5784] A. I did not.

Q. You did not consider it important to make such a determination?

A. I did not consider it important. I might add also that I am not sure as to the practicability of making such a determination.

Q. Meaning what by that?

A. Whether or not one can get a good measure of "beyond-the-gateway passengers."

There is this problem that we have discussed before of definition.

Q. Can you not arrive at the figures of beyond gateway by deducting from the total number of passengers handled by the International Division those who were on transatlantic flights?

A. No. As we have set by our—well, that gives you one measure of beyond-the-gateway passengers. It does not indicate how many of the transatlantic passengers were also continuing beyond the gateways.

Q. I thought we had agreed on a definition of beyond the gateway at the beginning of this session.

A. All right, within the limits of that definition, my answer to your question is no.

• • • • •

[Tr. 5802] Can you define that for us?

A. Annual yield figures are obtained by taking the annual revenue from transportation which has been determined at the end of the year by TWA and its public accountants and dividing that by the number of revenue passenger miles that have been recorded for the division's operation

for the year. And it gives a figure in terms of cents per mile.

Q. Is yield also used in connection with the revenue per mile on a segment basis?

A. I guess the yield is used for a wide variety of things. The definition I have given applies to the figure that we quote at the bottom of page 30 which happens to relate to Domestic Division yield.

Q. That is an annual figure?

A. That is an annual figure.

Q. Do you know whether the fares per mile are higher beyond the gateway than they are transatlantically?

A. No, I do not know the specific answer to that. There are, of course, many, many fares beyond the gateway, and I do not know what their individual per mile rates are.

Q. You made no study of what the fares beyond gateway [Tr. 5803] cities were—

A. I did not.

Q. —on per mile basis—

A. I did not.

Q. —as against transatlantically?

A. I did not.

Q. Not having made any study, I gather you have no opinion as to what would be a fair rate per mile to apply to determine the revenue that could be estimated for beyond gateway mileage?

A. It would be a very difficult estimate to make because of the difference in types of tickets that are used for various kinds of transatlantic and beyond the gateway travel.

Q. Would it be appropriate to estimate beyond gateway revenue passenger mile by estimating the average length of beyond gateway trips and multiplying that figure by the number of beyond gateway passengers?

A. I would need to have the first part of that question repeated, please.

Mr. Williams: Could you read it back, please?

(The question was read.)

A. It would not be appropriate to use that method of estimating for my purposes or for this particular report.

[Tr. 5804] Q. What is inappropriate about it?

The Witness: Would you please read the rest of the question?

(The question was read.)

A. I would have no idea how to estimate the number of beyond gateway trips and to get the number of beyond gateway passengers which could be converted into revenues. I think it would be a very difficult task.

Q. So far as you know, it cannot be done?

A. No, I—I did not mean to say that.

Q. You are not at all sure it cannot be done, are you?

A. That is correct.

Q. But you did not do it?

A. I did not do it.

Q. In connection with the same table on the top of page 27, you include charter revenues, and I believe you have already testified that these percentages of increases being applied as they are to International Division revenue are by virtue of that very fact applied to charter revenues?

A. That is correct.

Q. Did you make any study of the charter revenues that TWA historically received during the period covered by your report?

[Tr. 5805] A. I thought I answered that question this morning. I will re-answer it.

Q. Maybe you did. I don't remember it. Pardon me if I ask it again.

A. I reviewed charter revenue statistics in this period. That was about the extent of my study of them.

Q. Did your examination include a determination of the number of charter flights each year?

A. No.

Q. Or the routes flown?

A. No.

Q. Or the number of passengers carried?

A. No.

Q. Or the character of the passengers by nationality or civilian or military?

A. No.

Q. Or the amount of the charter revenue?

A. I think I just answered your point on the amount of the charter revenue.

Q. You mean that it is included in the total figure of revenue?

A. Yes.

Q. But I mean, did you try to segregate out the [Tr. 5806] amount of the charter revenue?

A. No, I didn't.

Q. Did you examine charters from the angle of the equipment used in each of these years on charter flights aside from the 400,000 miles that you gave us for one year?

A. No.

Q. In your assumption that the charter revenue would have increased in the same proportion as to the total international revenue, did you take the further step of determining from what airline the charter passengers would have been captured?

A. We did not make the specific assumption respecting the charter revenue.

However, we did not consider which airlines would have been those who would have lost charter passengers that would have gone to TWA.

• • • • •

[Tr. 5862] By Mr. Hayes:

Q. What do nonscheduled transportation services consist of?

A. That was also a question that was in the transcript on which I was to report, page 5764 of the transcript, and the CAB Manual on Uniform Systems of Accounts and Reports, Section 9, Functional Classification—Operating Revenues, Sub Account 3200, Nonscheduled Services, has a paragraph which describes the nonscheduled transport services. And the essential item for TWA is from the performance of aircraft charter services.

Q. Anything else included?

A. The paragraph includes transportation of air traffic between points not prescribed in certificates, and from performances of other transportation services not constituting an integral part of services performed to—correction—services performed pursuant to published schedules filed with the CAB.

Q. What was the reference to the CAB charter accounts?

A. This is on a sheet labeled "Profit and Loss, Section 9, Functional Classification, Operating Revenues, Sub Account 3200."

Q. Could I see it?

[Tr. 5863] A. Certainly.

Q. I thought you said Account 3200?

A. Isn't that the number?

Q. Oh, way down underneath. The heading is "3900." I see. Now, I have it. That is a subheading.

I might say that that appears in Uniform Systems of Accounts, Section 9, page 53.

Did you make any inquiry as to whether there was included in the total for 1959 of 1,890,000 items other than charter?

A. I assume you are referring to these other items which I have just read, which are to be included in the nonscheduled services.

Q. Correct.

A. I did not make a specific inquiry.

Q. Did you make any general inquiry?

A. Yes.

Q. Of whom?

A. Of TWA people.

Q. Of whom?

A. I do not remember.

Q. When?

A. Probably some time during the past three years.

Q. Do you have any record?

[Tr. 5864] A. No, sir.

Q. It is your recollection that you were told that the only items there that were included in that amount were charters?

A. No. My recollection is that that account was considered to be essentially all charter revenue.

Q. It was considered by whoever you spoke with in TWA?

A. That is correct.

Q. But you made no study?

A. I made no study.

Q. Proceed.

A. The next item I have on my list, again, is from page 5764, and I was to report back on the item called "Other transportation," which is listed on Schedule 2-2M, and which for the year 1959 was $30,000 and is similarly quite small in the years that follow.

Other transportation is, for example, where TWA records fees that employees pay for travel on TWA.

Currently, the $3 youth fare charge goes into other transportation.

It is a small amount of miscellaneous transportation revenue.

Q. All right, sir.

[Tr. 5865] A. That is all I have to report.

Q. At transcript page 5621, you testified, in substance, that you may have made a calculation as to how many flights would produce 17,000 additional seats, the figure which appears at page 47 of your report, and that you would check your Volume IV for this calculation.

Have you done so?

A. I did so and I found nothing.

Q. You found no such calculation?

A. That is correct.

Q. At transcript page 5765, you said you would determine whether TWA conducted charter operations after 1958, having to do with freight, and whether the freight items which appear on Schedules 2-2M now marked Defendants' Exhibit 242 for identification for the years 1959 to 1963 are limited to scheduled freight operations.

A. The freight revenue listed in those 2-2M figures is for scheduled service, freight revenue. There is a very small amount of freight charter in the nonscheduled transportation services figure, which we have mentioned heretofore.

Q. Did you determine the amount?

A. No, sir. As far as a specific dollar figure, no, we did not determine that.

[Tr. 5866] Q. Is that testimony based on the same recollection of a conversation three years ago that somebody told you that?

A. Plus my own observations in and around TWA during this period of 1959 to 1963 when I was working on various jobs for TWA.

Q. Anything else?

A. That is all.

• • • • •

[Tr. 5868] Q. Do you have before you, Mr. Wemple, Defendants' Exhibit 245 for identification?

A. I do.

Q. The International Division which is headed Sheet 2 of 2.

Specifically—

A. One moment, please.

I have it.

Q. Specifically account No. 6137 on that page. Do you identify it?

A. Yes, communications purchased.

Q. I notice that for the years 1959 through 1962, they range between a little over a half million to a bit under three-quarters of a million until 1963 when there is a minus amount of $53,000.

What is the explanation for the minus amount in 1963?

A. That TWA changed its method of obtaining communications from purchase to some other form.

Q. How would one get a minus amount in a communications purchased account?

A. It could have been a credit on an overpayment from a preceding year. That is the only explanation I can think of for it.

[Tr. 5869] Q. That is speculation on your part, is it not?

A. That is correct.

Q. You made no inquiry?

A. I made no inquiry.

I think it is appropriate to state that our estimates were based on changes for each individual year.

Q. In connection with your determination of what expenses were fixed and what were variable, did you make any study of any airlines other than TWA for the purpose of determining whether there was an industry pattern with respect to what expenses varied and what did not?

A. I did not.

We were concerned with what TWA's own experience had been during this period of increasing numbers of jet aircraft being operated.

Q. Is it fair to say that generally speaking at least all airlines would follow generally the same pattern with respect to what expenses were variable and what were not?

A. I have made no such study. I cannot comment on that.

Q. You have no knowledge on the subject at all?

A. That is correct.

Q. I notice when one gets to your costing sheets, [Tr. 5870] Exhibits F, G, H and J in Volume IV, in every instance I believe and I have not checked every single page, the actual column reads "Actual Expense with Revision of Chapter I."

What does that mean, "Revision of Chapter I"?

A. That heading is for Exhibit F. And the revision of Chapter I effects the figures for example on Sheet 5 of Exhibit F under "Depreciation and Amortization Expense."

Q. I find this revision of Chapter I through all of these exhibits, not merely Exhibit F.

A. I also call your attention to the Chapter I on Sheet 3 in Exhibit F.

And I would refer your attention to page 9 of Volume I of our report, wherein it lists certain revisions in rentals expense and revisions in depreciation and amortization expenses.

Those changes have been made in the actual figures, so that the figure that we are using in Exhibit F is an actual

with whatever revisions there were for the calculation of Chapter I.

Q. The same explanation holds with respect to Exhibits G, H and I?

A. G refers to the actual revision for Chapters I [Tr. 5871] and II, and J, for example, revisions of Chapters I through IV.

Q. But insofar as this actual column refers to Chapter I, is it your testimony that what you have done is to throw out the rental expense that was actually incurred and put in the depreciation expense which you show at the bottom of page 9 of your report?

A. That is correct.

Q. That is not explained anywhere in your report that you did that, is it?

A. I thought it was explained adequately by the note at the head of these columns, "Actual Expense with Revisions of Chapter I."

Q. You thought it was?

A. Yes.

Q. You did not take the trouble to write an additional sentence or two so that we wouldn't have to worry about it?

Mr. Williams: No, he did not, Mr. Hayes.

Q. So with respect to those rentals you substituted depreciation, as you say, for the rental expense.

When you eliminated the B-331B expense, did you eliminate the rental also?

A. Yes.

• • • • •

[Tr. 5915] • • • Q. Do I understand from one of your last answers that you did not make the calculation on the basis of block hours at all?

A. At some early stage in this work, we may have used block hours. I do not recall specifically whether we did or did not.

Q. If you did, it has been discarded, to borrow your word, and does not exist?

A. That is correct.

Q. I direct your attention, if I may, Mr. Wemple, to page 71 of your report, that is, Chapter V, which deals with 30 as against 20 880s.

Specifically, I direct your attention to a table at the bottom of the page. I note that in the year 1963 you have no added costs for maintenance.

A. That is correct.

[Tr. 5916] Q. In view of the fact that for the purposes of Chapter V you added 7.9 880s to the fleet for that year, how is it that there is no added cost for maintenance?

A. The 7.9 additional CV-880 aircraft is set forth on page 66.

The top of page 70 shows that that 7.9 additional aircraft was expected to result in 9.4 million additional CV-880 plane miles, and 4.8 million fewer piston aircraft plane miles.

Exhibit J, Sheet 29, shows the calculation of our estimated change in maintenance; that 9.4 million additional CV-880 plane miles is estimated to have been accompanied by an increase, a proportionate increase of $2.8 million in direct maintenance expense. This is Exhibit J, Sheet 29.

[Tr. 5917] Q. Yes, I have it.

A. The reduced piston aircraft operation which follows immediately, again a proportionate reduction of the piston aircraft operation shows that a reduction of 4.8 million plane miles of piston aircraft operation proportionately would have reduced the maintenance expenses on that aircraft by $2.5 million.

Accordingly revisions in maintenance burden expense are set forth on the next page, and here we see that the proportionate increase in CV-880 applied maintenance burden expense would have amounted to 1.5 million dollars. A proportionate reduction in the L-1049G piston aircraft maintenance expense would have amounted to a reduction of 1.8 million dollars for a net change, a reduction of 3/10 million dollars in applied maintenance burden expense which just exactly offsets the calculated increase in direct maintenance expense of 3/10 of a million dollars for a net no change which is set forth in the table you referred to at the bottom of page 71.

Q. I understand your arithmetic, Mr. Wemple.

Do you consider it realistic that you could put on 7.9 more planes, jet planes, which are larger than the piston aircraft and fly them 4.6 million more plane miles without any increase in maintenance?

[Tr. 5918] A. Yes, because they are replacing piston aircraft plane miles for a major part of the total mileage that is operated. And the piston aircraft maintenance expense in that particular year was obviously higher.

Q. What do you mean by a major part?

A. 4.8 million miles of piston aircraft mileage were eliminated, which is slightly more than half of the 9.4 million plane miles of jet aircraft operation that was added.

Q. What you are telling us is that the piston costs you have eliminated are about twice as great on a plane mile basis as the jets you put on?

A. That is correct.

Q. Is that what you are saying?

A. That is correct.

Q. The 1049G was a very high cost plane, was it not?

A. In the year 1963 which we have been discussing, it maintenance cost was certainly substantially higher on

per plane mile basis than the maintenance cost of the CV-880 jet aircraft.

Q. Was the 1049G one of the highest cost piston planes?

A. I have not made a study of that particular [Tr. 5919] general premise. I cannot comment on it.

Q. Do you know that the 1649A was one of the highest cost piston planes?

A. It was—I have heard it reported to be one of the highest cost piston planes.

Q. You made no inquiry as to the relative costs of the different piston planes?

A. That is correct.

Q. What was that sheet on Exhibit J? I have forgotten it and I lost my place, Mr. Wemple.

A. I believe it started on page 29.

Q. Yes, thank you.

I notice there you are talking about the 1049G.

A. That's correct.

Q. Where do I find in your report that the 1049G planes were the ones eliminated when the assumed additional 7.9 CVs were put on?

A. On Sheet 4 of Exhibit J under the term "Note" near the top of the page.

Do you find it?

Q. Yes, sir.

A. It states that the piston aircraft expense changed simulation above and certain others that follow used statistics for the L-1049G aircraft.

[Tr. 5920] We selected statistics for this aircraft to be representative of the several types of Lockheed piston aircraft which would have shown reduced plane miles with additional CV-880 service available—correction—with additional CV-880 aircraft available for commercial service.

Q. What was the basis for your statement there that the costs of the 1049G were representative of the several types of Lockheed Constellations that would have been replaced?

A. In general, we reviewed TWA's reported plane miles for piston aircraft throughout this period.

We reviewed the maintenance and flying operations costs for these aircraft.

Q. When you say these aircraft, which aircraft, Mr. Wemple?

A. There was the L-1049G, there was the L-749 and 749As usually run together with it.

I believe there were some L—no, correction. There was no L-049.

My recollection is that in the year 1963, the bulk of the piston aircraft mileage was operated with 1049G aircraft and with 749 aircraft, and that the 749 aircraft were generally assigned to the shorter segments, [Tr. 5921] and it appeared to us that a most reasonable method of calculating these estimates would be to use the 1049G costs.

Q. You already told us that you had made no comparative study of the costs of the different piston aircraft.

A. As such.

Q. How then can you tell that the 1049G was representative of the costs of all the Constellations if you made no such study?

A. I did not mean to make that statement. We simply as it says—

Q. Which statement?

A. That you just made.

Mr. Williams: Let him explain. You just asked him a question. Let him answer it.

Mr. Hayes: All right.

Q. Go ahead.

A. As set forth in the note we set forth L-1049G statistics to be representative of the several types of Lockheed aircraft which would have shown reduced piston plane miles.

Q. That is the second time you have told us that, Mr. Wemple. We heard it the first time.

[Tr. 5922] A. I thought I had already answered your question. That was why I was repeating myself.

Q. Have you or have you not testified just within the past ten minutes that you made no comparative study of the costs of the different kinds of piston aircraft?

A. I did not make that study which you described as an overall study on the comparative costs of piston aircraft.

Q. On what factual basis did you determine that the 1049G costs were representative of the costs of all the piston airplanes that would have been replaced?

The Witness: Would you read that last part of the statement over again, please?

(The question was read.)

A. What I am trying to say is that we did not make that statement. The statement that I had made here is different from that which is contained in your last question:

The statement that we have here is that we selected statistics of a 1049G aircraft to be representative of the several types of Lockheed Constellations that would have shown reduced piston miles.

* * * * *

[Tr. 5930] Q. It is very easy to determine the costs per plane mile, is it not, of the different kinds of Constellations that TWA actually operated?

A. For an annual period, yes.

Q. You did not make that determination?

A. I did not.

I beg your pardon. I did look at operating costs for the various types of piston aircraft insofar as flying operations and maintenance were concerned I think for the 1049G and the 749.

I do not remember the results of that examination. I discarded the examination. I do not have it.

Q. Your reason for discarding it was not that you found the cost of the 749 is lower, was it?

A. No, it was not.

Q. Do you know if there was any year over this period covered by your report when the cost of the 1049G and of the 1649A was not higher than the cost of the other piston aircraft?

Q. I do not know the answer to that.

• • • • •

[Tr. 5944] The Special Master: Proceed.

By Mr. Hayes:

Q. Mr. Wemple, did you ever make any calculation showing the quarterly amounts, if not the yearly, of additional flying operations and maintenance expense that would have resulted from the use of four-engine piston aircraft in place of Martin aircraft?

The Witness: Would you re-read the first part of that question, please?

(The question was read.)

A. I recall making a comparison of, I believe, the flying operations and maintenance expenses combined for Martin aircraft versus a four-engine Constellation on a plane mile basis. And it was that calculation which I was referring to when I agreed with a previous question of yours, that the Martin has a lower per plane mile direct operating cost.

Q. What happened to that calculation, since it is not in your report?

A. I am sure it has been discarded.

Q. Did you consult with anybody concerning it?

A. This was perhaps a year and a half to two years ago. I may have consulted with counsel. I have no recollection of consulting with any particular person.

[Tr. 5945] Q. Did you send the calculation to anyone?

A. No.

Q. Did you send it to Price, Waterhouse?

A. I don't believe so.

Q. Did you have any communication with Price, Waterhouse concerning it?

A. I may have consulted with them at that time, but I have no direct recollection of it.

Q. Do you recall what reason you had for not using it in your report?

A. It was not pertinent to our report.

Q. In what sense?

A. We were simply eliminating piston aircraft service as a result of additional jet service.

We were not remaking the TWA schedule pattern.

Q. What was your purpose in making the calculation?

A. As I remember, someone asked me to make it.

Q. Do you recall who?

A. No.

Q. Do you recall what period was covered by it?

A. Yes, it probably would have been 1959 or 1960 or both.

Q. Did you make similar calculations with respect to other piston aircraft?

[Tr. 5946] A. I recall none.

Q. Do you recall what the study showed, Mr. Wemple?

A. That the Martin aircraft direct cost per plane mile was lower than the Constellation aircraft.

Q. Substantially lower?

A. Yes.

Q. That was the reason why you eliminated four-engine pistons rather than the Martins—

A. No.

Q. (continuing)—in your study?

A. No.

Mr. Hayes: I ask that there be marked for identification as—oh, I have a thing I want to take care of. I wanted to do it. I am forgetting it all the time.

I have here as an exhibit a transcript of the testimony of Mr. Henry Fellows, who was general manager of marketing and sales planning, TWA, at the time before the CAB in the general fare investigation. That was Docket No. 8008, to which reference has been made in the past.

This is his prepared testimony which was submitted at the time. I offer it in evidence as evidence of how TWA in its submission to the CAB [Tr. 5947] actually calculated its costs.

Mr. Williams: May I see it, please?

Mr. Hayes: Surely.

Mr. Williams: Mr. Special Master, we have not had an opportunity to read this exhibit. I realize that Mr. Henry Fellows at the time was general manager of marketing and sales planning for TWA. However, we have not called him in this proceeding.

Whether this is admissible against us, whether it has any bearing on this proceeding or not, I don't know, until I have read it.

Mr. Hayes: The chief reason I am offering it, Mr. Williams, is because of the next to the last page,

but I did not want to pull out a page; I wanted to give the whole thing, in which he shows how TWA in making its presentation in the general fare investigation calculated its costs.

The Special Master: Are you going to ask this witness anything?

Mr. Hayes: About this?

The Special Master: Yes.

Mr. Hayes: No.

The Special Master: Why don't you keep [Tr. 5948] it overnight, Mr. Williams, and we will reserve the offer.

Mr. Hayes: Let us mark it for identification.

The Special Master: Mark it for identification.

Mr. Williams: I may have no objection, but I don't know yet, if counsel could pass to something else.

Mr. Hayes: Would you mark it for identification?

(Testimony of Henry Fellows marked Defendants' Exhibit 251 for identification as of this date.)

Mr. Hayes: I ask that there be marked as Defendants' Exhibit 252 for identification a letter from Coverdale & Colpitts by Mr. Wemple to Mr. Trautlein of Price, Waterhouse, dated October 26, 1965.

(Letter from Coverdale & Colpitts by Mr. Wemple to Mr. Trautlein, Price, Waterhouse, dated October 26, 1965, marked Defendants' Exhibit 252 for identification as of this date.)

Mr. Hayes: I will have to get copies of this made.

[Tr. 5949] Q. Do you recognize that letter as one you sent to Mr. Trautlein?

A. I do.

Q. Is the study referred to in that letter about the Martins and the four-engine aircraft the one about which you just testified?

A. It sounds as though it was.

Q. What four-engine aircraft were you talking about there?

Mr. Williams: Would you wait just a second, please?

Mr. Hayes: Certainly.

A. It was a four-engine—

Mr. Williams: Just a second.

All right.

The Witness: Is there a question?

Q. The question was what four-engine aircraft did you compare with the Martin?

A. I do not remember specifically. It would have been a four-engine Constellation aircraft. I cannot tell you which one.

Q. You do not know which model?

A. That is correct.

Q. What did you mean by the language:

[Tr. 5950] "Please do not use this schedule because we find from further study that this substitution of aircraft probably would not have taken place."

A. May I look at the letter again a minute?

Q. Certainly. I am sorry I do not have extra copies.

A. No, that's not the problem. The problem is my trying to recollect what this was all about.

My recollection is that this was an exercise related to early sale of Martin aircraft, that is, sale of them at dates earlier than they were actually sold, and it had been sug-

gested that this earlier sale would have required the replacement of Martins with four engine Constellation aircraft on particular flights that had been operated with Martin aircraft.

As we got further into the matter, it became apparent that the Martin flights were not eliminated because the aircraft were sold, but they were eliminated for independent reasons having to do with scheduled changes.

And also there was very little direct substitution of four-engine Martin aircraft—correction—of four-engine Constellation aircraft on flights that had been operated with Martin aircraft. The bulk of the change [Tr. 5951] involving the Martin aircraft was simply an elimination of Martin aircraft flights.

That is as I recall the reason for that particular exercise.

Q. You referred to a further study which apparently must have taken place between October 4th and October 26, 1965. By that time you had already been working on this study for some three years.

What further study did you make during those three weeks?

A. Well, as I have just explained, we did the first calculation, as I remember it, simply assuming that four-engine Constellation aircraft would have been used mile for mile for Martin aircraft.

And then as we continued that particular exercise, we went further in our analysis of the schedule patterns, as I have just described, and found that the substitution of four-engine Constellation aircraft for Martin aircraft did not, in fact, take place nor would have taken place.

Q. Who requested you to make this study?

A. I suppose it was authorized by counsel. I have no recollection of who requested us to make the study.

• • • • •

[Tr. 6027] A. As set forth on page 67, we found that TWA's utilization of Convair 880 aircraft when it had 20 and when it had 26 stayed approximately the same. And it is this kind of evidence that supported my decision to assume the same utilization.

Q. By utilization, do you mean the same number of hours per day use of the aircraft?

A. No, sir, I mean in this instance the same number of daily westbound scheduled plane miles.

Q. What about the utilization in the sense of the utilization per day of aircraft?

A. We—these calculations are premised on the assumption that for a given period the total fleet with the additional aircraft would have shown the same hours per day utilization as the existing fleet did.

Q. On what did you base that assumption?

Mr. Williams: Can you add anything to what you have said?

The Witness: I have nothing to add.

Q. I direct your attention to the ratios you set forth at the top of page 28, the ratio of million of plane miles per aircraft for the 331s, and I note that the ratio which was 1.41 in 1960 went to 1.48 in 1961, and then dropped to 1.36 in 1962 and 1.33 in 1963.

[Tr. 6028] What is the reason for the drop in ratio which you there calculate?

A. The schedule patterns that were used for these aircraft operations in those various years were obviously different to the extent indicated by these ratios.

I have no explanation for the difference. They were obviously set up to serve different periods of time.

Q. Would they indicate changes in utilization from year to year, those differing ratios?

A. I would think so.

Q. Did you make any further inquiry as to changes in the utilization as evidenced by the ratios within any year?

A. No, sir.

Q. Did you make any study, Mr. Wemple, as to whether during the period covered by your report, TWA was actually utilizing its jets to the fullest degree possible?

A. I did not.

Q. What consideration did you give in your report to the number of plane miles flown domestically by the 720Bs in 1961 and 1962?

A. We selected the premise that those would have been unchanged by the revisions in fleets which are used [Tr. 6029] as the premises for the various sections of this report.

Q. You assume those plane miles would remain the same?

A. That is correct.

Q. What about the 131Bs in 1962 and 1963?

A. We assumed no change in those aircraft operations.

Q. What about the 331Bs in 1962 and 1963?

A. We assumed those would have been operated with 331 model aircraft.

Q. Your assumption is that the 331s would have operated the same number of plane miles as the 331Bs?

A. That is correct.

Q. Other than anything you have already told us, have you any factual basis for that assumption?

A. Nothing more to add.

Q. After determining your plane miles, your next step was to calculate the number of additional jet seat miles, is that correct?

A. Yes.

Q. That calculation appears at the bottom of page—

A. 28, for example.

Q. 28, yes. Where you multiply the average number of seats and you apply a load factor for the year, is [Tr. 6030] that right?

A. That is correct.

Q. Then you arrive at what you call additional passenger miles?

A. That is correct.

Q. What was your reason for using load factors domestically and not internationally?

A. For the international calculation we had the unique availability of transatlantic statistics, and the remarkable historical correlation between TWA's per cent passengers and per cent seats.

Similar data did not exist for the Domestic Division operation.

Q. You could have used load factors internationally, could you not?

A. I could have I expect.

Q. But you did not?

A. I did not.

Q. Did you try out the International on a load factor basis?

A. I did not.

Q. Domestically, as I understand your report—correct me if I am wrong—you show, for example in Chapter IV for the 880s at page 54 the additional seat miles?

[Tr. 6031] A. That is correct.

Q. You use the average number of 880 seats experienced in 1961 for your additions under the assumptions that the 880s would be on hand in 1960, is that correct?

A. That is correct.

Q. Internationally you showed the net addition of seats after deducting the piston seats?

A. That is correct.

Q. You did not do that Domestically, or did you?

A. We arrive at the same answer, I believe. The calculation is slightly different in its form.

Q. Where do I find it, Mr. Wemple?

A. As you say, the seat miles are on page 54 and then converted into passenger miles. And then there follows on the next several pages the development of the reduced number of piston aircraft passenger miles, which then is converted to a net figure on page 63.

Q. What was the reason for the different treatments Internationally and Domestically, different methods you used?

A. I have mentioned the availability of transatlantic statistics for the International Division which was used in making our calculations.

• • • • •

[Tr. 6052] Q. The industry.

A. We made no assumption respecting change or not change in industry passengers.

Q. Inherent in your report is there not the assumption that more passengers would be attracted to TWA with this equipment?

A. That is correct.

Q. So they would have to come from some place?

A. That is correct.

Q. You did not follow through to decide where they came from?

A. There was no purpose to be served by that.

Q. You did not make any assumption, I gather then, that the total number of passengers traveling would increase?

A. I made no assumption respecting that point.

Q. So not making that assumption, are you not assuming that the additional TWA passengers that you envision here came from competing carriers?

A. No, I'm not making any assumption in that respect.

Q. Where are they coming from?

Mr. Williams: I think your Honor, we went through this—

[Tr. 6053] Mr. Hayes: On International, not on Domestic.

Mr. Williams: —a long time ago.

Mr. Hayes: We never went through this on Domestic.

The Special Master: That is my recollection also that we did not do this on Domestic.

A. It was the history of the beginning of jet aircraft utilization in Domestic service that additional passengers were induced to travel by the availability of the superior jet aircraft.

I make no assumption whether these additional passengers would have been newly induced passengers or diverted passengers or both.

Q. You left that right up in the air?

A. That is correct.

Q. You mention that the airport has something to do with the load factor.

Does the type of terminal, station, have something to do with the load factor?

A. I'm sure it does.

Q. Do you know when the American and United Terminals at Idlewild were completed?

A. It was before TWA, but I do not remember when.

• • • • •

[Tr. 6059] • • • Q. Did you make any calculation, Mr. Wemple, so far as domestic operations were concerned, as to the percentages of domestic operations flown with jets by TWA and by American, United or the whole industry?

A. I have a vague recollection of having made some such calculations quite a number of years ago.

Those calculations have long since been discarded.

Q. They no longer exist, I take it?

A. That is correct.

Q. Do you recall what those showed?

A. My recollection is that during the early years of this period, TWA operated a smaller percentage of plane miles with jet aircraft than did American.

[Tr. 6060] Q. How much smaller?

A. I do not remember the details.

Q. Do you remember what the situation was in other years?

A. I have no other recollection of results of those calculations.

Q. You do not recall that in each of the years from 1959 to 1963 TWA's percentage of revenue plane miles was higher than American's, except for the year 1960 where it was 4/10 of one per cent lower?

A. I have no recollection of those statistics.

Q. And also higher than United's in every year?

A. I have no knowledge or data on that.

Q. Do you have any recollection that in each of the years 1959 through 1963 the percentage of available seat miles flown with jets in domestic operation, TWA had the same percentage as American in 1959 and much higher than United, and that in every other year TWA's percentage was higher than either American or United, except in 1960 when it was 2.8 per cent lower than American?

A. I have no knowledge of data on that subject.

Q. Or that the same situation obtained during those years with respect to revenue passenger miles flown with jets? Do you have any recollection of that?

[Tr. 6061] A. I am not sure—I have no recollection, but I'm not sure I understand your term "revenue passenger miles flown with jets."

Q. The percentages of revenue passenger miles flown with jets in domestic service, that TWA's percentage was higher than either American or United in every year except that in 1959 TWA and American had the same percentage and in 1960 American was higher by 4.1 per cent? You have no recollection of that?

A. I have no knowledge of data on that subject.

Q. On the domestic scene, did you consider that at any time during the period covered by your study there was an excess of capacity in the industry?

Mr. Williams: This has a familiar ring. I don't know whether—

Mr. Hayes: We covered it internationally before.

Mr. Williams: All right.

A. I do not find any reason respecting capacity by TWA and other airlines to modify in any way whatsoever the estimates that we have set forth in Volumes I and IV.

* * * * *

[Tr. 6096] * * * Q. What is a marginal load factor?

A. I do not know. I am not—let's say I am not familiar with that term. I do not know what you mean by it.

Q. I mean by a marginal load factor the load factor that was experienced when new equipment was added.

A. You mean such as the 90 per cent that TWA and American achieved in early 1959 with their jets?

Q. As against the previous year, whatever it might be.

A. Well, there was no previous year.

Q. Then there would not be a marginal load factor for the jets, if there was not a previous year?

A. No.

• • • • •

[Tr. 6139] Q. Have you any opinion, Mr. Wemple, as to which between 4B and 4C represents the proper approach or the better approach to the determination of net operating profits?

A. I have no opinion on that matter.

Q. The differences between the two are gigantic, are they not?

A. They are.

Q. Over $100 million?

A. And also in pages of analysis.

Q. I am delighted you mention that, because the fewer the pages, the greater the money. You have no opinion as to which is better?

A. That is correct.

Q. Though they are over $100 million apart?

A. I have no opinion.

Q. In 4C you come out with $50 million-odd, $51 million or $52 million, after you eliminate Chapter I having to do with rentals? If you include that, you come out with $64 million and here you come out with $170 million, and still you have no opinion?

[Tr. 6140] A. Correct.

Mr. Williams: That is what he said. That is a matter for the Court.

By Mr. Hayes:

Q. Do you consider both of these approaches to be reasonable?

A. Yes, sir.

Q. But you have no explanation as to the gigantic difference between them?

Mr. Williams: That is a different question.

Q. As to the reasonableness, I am talking about. They are both reasonable. You are an expert, Mr. Wemple.

Mr. Williams: Can you add anything to that?

The Witness: I have nothing to add.

Q. Is it part of whatever opinion is expressed in 4B that the 1964-65 profit ratios could be applied to each of the years 1959 to 1963?

A. I chose to apply them to the composite of the years 1959 through 1963.

Q. I know what you chose. Will you answer the question?

Mr. Williams: Read the question, please.

[Tr. 6141] The Witness: You will have to give me the question again.

(The question was read.)

A. It is not.

Q. It is not?

The Special Master: Can I ask a followup question here?

Mr. Hayes: Surely.

The Special Master: Do I understand your last few answers to mean that these two, Exhibit B on the one hand and Exhibit C on the other, are basically computations from assumptions that were furnished to you, and that you have no opinion, as an expert, based on your background, as to which is a more reasonable method of calculating damages in this case?

The Witness: As you have pointed out, the assumptions used for the calculations in 4C are quite different from the assumptions used in the calculation of 4B, and I have no basis for judgment as to which is the proper set of assumptions to be used for the overall damage determination.

I simply represent that with the assumptions in 4C this is an answer. Those are obviously more [Tr. 6142] limited assumptions, although more detailed, than the assumption for 4B.

Mr. Williams: We chose, Mr. Special Master, to think that this was a legal question which would be put to the Court, and I pressed the witness myself for the same kind of answers that Mr. Hayes has been trying to elicit, and for the same reasons he gave me the same answers.

Mr. Hayes: Have you anything further, Mr. Brownell?

The Special Master: I am thinking, but I am not saying.

I have nothing more on this point.

By Mr. Hayes:

Q. Would there be anything inappropriate about applying the 1964-65 ratios which you arrive at to the years 1959 to 1963 separately, assuming there is validity in applying them to the years as a group?

A. We have not set them up to be used that way.

Personally, I think it is better to apply the combination of the two years, 1964 and 1965 to the total of the years 1959 through 1963.

Q. What I am trying to find out is, assuming there is validity in applying the 1964-65 ratio to a [Tr. 6143] five-

year period, what would be improper about applying it separately to each of the years in the five-year period?

A. This has to do with the degree of significance, and I have no problems whatsoever in applying the two-year average to the entire five-year period. I have made no study to determine that the statistical significance is as good or as appropriate, if it is applied to the individual years.

Q. So you made no study to determine that; is that what you said?

A. That is correct.

Q. So you have no opinion on it, I gather?

A. I did express an opinion. I have made no detailed study.

Q. An opinion not based on a study?

A. That is correct.

Q. Mr. Wemple, what is the extent of your experience with passenger airlines?

A. In the fall of 1956 I believe it was, our firm was engaged by TWA and, as has been brought out at various times in this session, we have been engaged on various studies for TWA a great deal of the time since 1956 to date. [Tr. 6144] I believe it was around 1960 I did a study for BOAC on their sales activity in the United States.

Somewhere along in that period, I did a study for Flying Tiger, which is nominally a freight airline, but had a substantial amount of charter passenger business.

I have done a variety of studies for airports which are—

Q. The question was airlines.

A. (continuing) —only indirectly related. Correct. I believe that's the answer to the question.

Q. The 1956 study for TWA concerned what?

A. This was a review of TWA's operations and organization.

Q. You mean the corporate organization?

A. No, the personnel in the operating organization, if that's the same thing.

Q. Did it have anything to do with forecasting earnings or estimating earnings costs?

A. I believe not.

Q. Then you did two studies for TWA that have come out that you mentioned, one in 1959 and one in 1962?

A. Those are the dates of the reports.

Q. In each instance, as I understand it, TWA supplied you with forecasts prepared by it and you reviewed [Tr. 6145] them and expressed your opinions concerning them?

A. I believe one of those studies involved working with TWA in the preparation of those forecasts, but the answer to your question is yes.

Q. Of course, you have been engaged by TWA in connection with the preparation of the reports, TWA Exhibits 4, et seq. The Flying Tiger is not a scheduled airline, is it?

A. It's a scheduled freight airline. It is not a scheduled passenger airline.

Q. I mean scheduled passenger airline.

A. No, that is correct.

Q. You mentioned BOAC. Did that have anything to do with the forecasting of income and expense for BOAC?

A. It did not. Correction. It had to do with recommendations pertaining to their selling operation in the United States. Those recommendations, of course, involve revenues and expenses.

Q. I mean did it involve an overall study of the revenue and expense of BOAC?

A. It did not.

Q. Were you ever employed by any passenger airline in a managerial capacity?

A. No, sir.

[Tr. 6146] Q. Were you ever involved in decisions as to how aircraft should be scheduled, either as to time or as to routes? I mean the making of the decisions?

A. Well, I am a little confused by your question, but let me just answer the involvement.

As a part of the 1956-57 study with TWA, I spent a considerable amount of time with their scheduling people as to what they were doing and revisions that would be desirable.

As far as participating in the making of the final decision, the answer is no.

Q. Were you ever involved in the making of decisions for any passenger airline with respect to the equipment utilization? By "equipment," I am referring to the aircraft.

A. No.

Q. Were you ever involved in decisions as to routes, as to what routes to seek, what routes to abandon, et cetera?

A. Again, in one of our studies we did discuss extensively the abandonment of certain routes. We did not—I did not participate in the final decision.

Q. What study was that?

A. That was the 1956-57 one, as I remember.

[Tr. 6147] Q. Were those studies made by you of suggestions that TWA made as to what routes would be abandoned?

A. My recollection is that this was simply a part of our overall—correction—a part of our detailed review of TWA's entire operations.

Q. Did you ever testify before the CAB with respect to airline operation?

A. No.

Q. Do you have any writings on the subject of airline earnings and expenses?

A. No. I assume you mean published documents?

Q. Right.

A. No.

Q. I was not referring to the exhibits before us.

Are you a member of any professional society, the membership of which is made up of consultants or experts or management personnel with respect to airline operation?

A. No society that is specifically limited for focused on airline operation.

Q. Specifically, are you a member of the American Institute of Aeronautical and Astronautical Engineers?

A. I am not.

Q. Are you a member of the Society of Automotive [Tr. 6148] Engineers?

A. I am not.

• • • • •

[Tr. 6152] * * * *Examination by Mr. Tenney*:

Q. Mr. Wemple, here is TWA Exhibit 4A to which is attached a booklet, "Record of the Professional Experience of Coverdale & Colpitts, Consulting Engineers," which I believe has been marked TWA 4A(2), although it does not [Tr. 6153] appear on that document.

A. It does on the copy I have. Perhaps I have your copy.

Q. It is the same booklet.

A. Yes.

Q. That booklet describes in some detail the practice of your firm Coverdale & Colpitts, does it not?

A. Yes, this is our—we call it record of professional experience for the firm.

Q. Would you briefly describe the nature of that practice?

Mr. Hayes: Is this of the firm?

Mr. Tenney: Yes.

Mr. Hayes: Then I object to anything other than the qualifications of Mr. Wemple as an expert. We can't cross-examine the firm.

Mr. Tenney: Part of the qualifications of Mr. Wemple as an expert is his membership in a professional firm.

Mr. Hayes: So far as it has to do with him, his qualifications, I have no objections whatsoever. I object to the qualifications of his firm.

The Special Master: I will allow the line of questioning and see how it develops.

[Tr. 6154] The Witness: Could I have the question again?

By Mr. Tenney:

Q. Would you describe briefly the nature or the practice of your firm?

A. We render professional services to industry and transportation activities.

I guess it is proper to say that the majority of our engagements, the bulk of our work is involved with estimating the financial results that there will be from a particular project, particularly as to what the net revenue that is available to service debt for a particular project is, and these estimates are usually used in connection with financing of a particular project.

These projects, as I say, can be transportation projects, they can be industrial projects.

Q. How long have you been associated with that firm, Mr. Wemple?

A. I believe it was August 1952.

Q. When did you become a partner of the firm?

A. In the spring of 1960—correction—in the spring of 1954.

Q. You have just described the nature of the practice of Coverdale & Colpitts. Has your—

[Tr. 6155] A. Correction. That—my memory is fuzzy. That may have been the spring of 1956, rather than 1954.

Q. As a matter of fact, that's the statement on TWA 4A, so I assume it is 1956.

A. Yes, thank you.

Q. You just described the nature of the practice of Coverdale & Colpitts. Would that description apply also to your practice as a member of that firm since 1956?

A. The amount of work that I have done on industrial projects has been quite small. Otherwise, it very definitely describes the practice that I have been engaged in.

Q. Would you turn to the letter which has been marked TWA Exhibit 4A, Mr. Wemple? A. Yes, I have a copy.

Q. 4A(1), I am told.

A. That's the way mine is marked.

Mr. Hayes: 4A(1) is this?

Mr. Tenney: That is what I am told this marking means.

Mr. Hayes: Because the "(1)" was stricken off mine by somebody.

By Mr. Tenney:

Q. At pages 3 and 4 of that letter, you have a list [Tr. 6156] of studies in which you participated or of which you have been in charge.

Would you run down that list, Mr. Wemple, and give us some idea of the financial magnitude of the projects involved?

A. Yes, these were studies that were performed under my direction. I was in charge of them.

The first is an industrial district proposal, which, as I remember, was expected to be about a $30 million project.

The next is an aerial tramway, which is an $8 million project.

The next is a study to put a value on a phthalic anhydride manufacturing unit, which, as I remember, was alleged to have been worth about $1.5 million.

The next is the Connecticut Turnpike project, for which $459 million of bonds have been sold.

The next is a three-bridge project which is about a $20 million bond issue.

The next is the O'Hare International Airport development project at Chicago. That was $125 million bond issue.

The Honolulu International Airport was a $14 million revenue bond issue and, as I remember, that was [Tr. 6157] simply a part of about a $30 million project.

The Palm Beach, Florida proposed airport was about a $3 million project.

The Denver, Colorado airport terminal was a part of a $11 million project.

The Flying Tiger Line, at the time we did the study, showed a total asset value of about $27 million on its balance sheet.

The last study was not financial feasibility, the British Overseas Airway study.

Q. Several of these studies, Mr. Wemple, deal with airports.

Would you say there is a relationship between airports and airlines?

Mr. Hayes: I will concede that aircraft land and take off from airports.

Q. Is there any further relationship between an airline, knowledge of an airline and a study of an airport, Mr. Wemple?

A. The airport operation and capital cost is quite often financed by airlines and it becomes a part of the airlines' operating expense at that particular airport.

The organization of the airport, the physical facilities and actually the airport rate schedules are set [Tr. 6158] often as a result of negotiations with airlines and with references to airlines' financing—financial practices and operating practices.

Q. In preparing this report, have you tried to make full use of your knowledge of the airline industry and your judgment based on experience of what matters were relevant or not relevant?

A. By "report," I assume you mean—

Q. TWA Exhibit 4C.

A. Could you give me that question over again now that I can identfy the report?

Q. In preparing this report, have you tried to make full use of your general knowledge of the airline industry and your judgment based on experience of what matters were relevant and were not relevant?

A. Yes, very definitely.

Q. In preparing this report, have you consulted standard references whenever you considered them appropriate

A. Well, let me say I have consulted standard references on many, many occasions in the preparation of this report.

Q. Is every such consultation reflected in this report or in your working papers?

[Tr. 6159] A. No. Oftentimes the consultation turned up figures and statistics that showed that the point I was studying or researching was not pertinent. Obviously, there is no reference to that kind of instance.

There were other consultations where the figures proved to be confirming to analyses that we had already made. Again, we made no particular notes or references.

We often copied figures from standard references and our work sheets generally show the location in the standard reference where we got the figures, and there are, of course, many references—many notes in our reports as to standard references which we used as a source of data.

Q. Are there any material considerations lying behind the report in its finished form that are not reflected in the working papers and the reports as they now stand?

A. The matter of my total knowledge and experience with airline matters is, of course, not thoroughly or completely set forth in the report, insofar as it may have influenced my judgment.

However, all matters and considerations which I considered to be relevant are set forth in the report with reference to estimates and calculations in the report.

[Tr. 6160] Q. TWA Exhibit 4D, Mr. Wemple, is a letter signed by Coverdale & Colpitts, addressed to Mr. Edward J. Morehouse, dated May 2, 1966, and the first sheet of that letter sets forth your estimate as of April 1959 of the operating results which TWA could anticipate in the years 1959 to 1963, with a 63-plane jet fleet.

I show this to you, but I don't intend to ask you any questions on it. Defendants' Exhibit 206 is from your working papers relating to this forecast, is that not correct?

A. That is correct.

Q. On the right-hand side of Defendants' Exhibit 206 as the next to the last entry numbered 14, there is a reference to PAA jets experiencing high load factors on the North Atlantic; is that correct?

A. That is correct.

Q. In answer to questions by Mr. Hayes, you testified that the early Pan American load factors were not set out in your report or in the working papers, but that you had general knowledge of them. Do you recall that testimony?

A. That is correct.

Q. Can these load factors be obtained from public sources?

A. Yes.

[Tr. 6161] Q. Have you since, at my request, prepared a table showing them?

A. I have. I have it here. It sets forth the Pan American Atlantic Division jet aircraft passenger load factors by quarter, starting with the fourth quarter 1958, running through the fourth quarter of 1961, which, of course, is an extension of the period that is noted here which would have ended in April 1959.

Mr. Tenney: I ask that there be marked as TWA Exhibit 40 for identification this document which is headed "PAA Atlantic Division Jet Aircraft Passenger Load Factors by Quarters, 1958-1961."

• • • • •

By Mr. Tenney:

Q. Was this document prepared under your supervision, Mr. Wemple?

A. It was.

Mr. Tenney: I offer it in evidence.

Mr. Hayes: May I ask the purpose of this offer, Mr. Tenney?

Mr. Tenney: There was a good deal of talk about Pan American load factors, early load factors [Tr. 6162] in the course of your cross-examination, Mr. Hayes, and I would like to put what those load factors were into the record.

Mr. Hayes: You related this offer, as I understand it, Mr. Tenney, to Defendants' Exhibit 206.

Mr. Tenney: That is correct.

Mr. Hayes: Defendants' Exhibit 206, the assumptions contained therein, could not have gone beyond the first quarter of 1959. These are the load factors through 1961.

Mr. Tenney: That is correct. It goes on past the 1959 period, but I believe that the—

Mr. Hayes: That is why I asked what the purpose of the offer was. If it's just to explain Item 14 on the right-hand side of Defendants' Exhibit 206 and is limited, therefore, to the fourth quarter of 1958 and the first quarter of 1959, I have no objection.

Mr. Tenney: I would like to put it in for the entire period, apart from the Defendants' Exhibit 206. I think this was a matter of interest as was brought out in the cross-examination.

Mr. Hayes: Then you are not relating it [Tr. 6163] specifically to Defendants' Exhibit 206 or to TWA Exhibit 4D, as such?

Mr. Tenney: I believe it is related to that. It is also related to a subject which was examined upon extensively.

Mr. Hayes: You are not limiting the offer to that?

Mr. Tenney: I am not so limiting the offer.

Mr. Hayes: If it is not so limited, I have no objection.

The Special Master: Received.

(TWA Exhibit 40 for identification received in evidence as of this date.)

By Mr. Tenney:

Q. Mr. Wemple, your report, TWA Exhibit 4C, Volume I, page 9, which is a part of Chapter I—

A. I have it.

Q. (continuing) —in the first table appearing on that page under the headings "Domestic Division" and "International Division," there are entered the B-131 and B-331 respectively.

Mr. Hayes pointed out in the course of his examination that some part of the 331s were used in the Domes- [Tr. 6164] tic Division. Do you recall that?

A. I recall that.

Q. What difference does this make to this portion of your report, that some portion of the B-331s were used in the Domestic Division?

A. It makes no difference. As set forth in the second sentence at the top of the page, these expenses were taken from the CAB Form 41 reports, Schedule P-5.2.

The total rentals expense for B-331 aircraft is recorded under the International Division reports.

TWA apparently did not transfer any of the rentals expense to their report for the Domestic Division for the year 1960. So that this is the total rentals expense, as paid by TWA for the use of the entire fleets during those years irrespective of what division they were used in.

Q. In the course of your testimony on this chapter, Mr. Wemple, you stated that nothing except rental expense and depreciation would be changed, insofar as gain from operations is concerned, if TWA owned the aircraft instead of leasing them.

Do you remember that testimony generally?

A. I remember it.

Q. Are there some types of leases on which other [Tr. 6165] factors would have to be taken into account, if you were computing the cost of ownership as opposed to the cost of leasing insofar as gain from operations is concerned?

A. Yes. Actually, TWA had one of those kinds of leases with Northeast Airlines for Northeast's use of time of the aircraft. And the arrangements for that lease provided for the lessor to pay certain of the maintenance expenses, as I remember.

Now, if TWA had had these aircraft which are the subject of Chapter I on a different kind of a lease which involved the lessor paying certain of the costs, the operating costs for the aircraft, then obviously an adjustment would have been required in operating cost to reflect the circumstance in the lease.

However, we examined the cost reports in detail for these aircraft for the period when they were leased and we found that the only item that would have been affected was rentals expense and the depreciation and amortization charges for TWA.

Q. So the estimate reflected in Chapter I of your report involved the exercise of judgment on your part as to whether other factors should be taken into account?

A. Most certainly.

[Tr. 6166] Q. Mr. Wemple, would it have been possible to use what has been called in-revenue service dates in your estimates covering the buildup period of the new jet fleets?

A. I presume you mean in lieu of the average number of aircraft available for commercial service which we did use.

Q. That is right.

A. It probably is theoretically possible to do that, although there is no record made by TWA, no summary record maintained by TWA on the matter of number of aircraft in revenue service.

The detailed information from which such a record could be developed does exist in the TWA flight message reports and a few other things. So I suppose it is theoretically possible to have done it.

Q. Would it have been practicable to use the in-revenue service information for the first portion of the period while the fleets were being built up?

A. A calculation of that nature could be made.

Q. Mr. Hayes asked you whether you had made any studies as to what the effects on your revenue estimates would have been if you had used in-revenue service dates, and I believe you testified that you had not. Do [Tr. 6167] you remember that testimony?

A. That is correct.

Q. Have you since, at my request, made such a stud
A. I have.
Q. Have you made a tabulation of the results?
A. Yes. The—yes, I have.
Q. Would you give it to me, please?
A. That is more than a tabulation of the results. Th
is the working papers which I used to develop the answe

Mr. Tenney: I ask that there be marked as TW
Exhibit 41 for identification a sheet headed "Eff
on Estimated Change in Gain or Loss From Ope
tions If Number of Aircraft In Revenue Service
Used in Place of Average Number of Aircraft Av
able for Commercial Service," to which there
attached a number of sheets.

• • • • •

[Tr. 6168] By Mr. Tenney:

Q. Do you have TWA Exhibit 41 for identificat
before you, Mr. Wemple?
A. I do.
Q. Would you explain what TWA Exhibit 41 for ide
fication shows and how it is prepared?
A. For each of the Chapters II through V, we took
in-revenue service dates which are set up at various pla
in Volumes I and IV of our report, and there is anot
exhibit which was a letter to Price, Waterhouse, whic
don't happen to have with me, which gives in-revenue se
ice dates for some of these items.
Q. I show you TWA Exhibit 4E. Is this the letter
A. Yes, that is the one.
We took the historical in-revenue service dates and
took the reconstructed in-revenue service dates for

years in which there was a buildup of jet fleets which were the subject of these Chapters II through V.

Using the date when an aircraft went into revenue service, we calculated for each month and an annual average for the particular year involved a figure which is the average number of aircraft in revenue service.

In the period of time when the fleet would have reached its full size, as far as TWA having the fleet on [Tr. 6169] hand was concerned, we then shifted to the average number of aircraft available for commercial service, because by that time all of the aircraft in a particular fleet would have been in.

So we thus have a number mostly similar to the average number of aircraft available for commercial service, but which is calculated for the number of aircraft in revenue service.

We then took those numbers of aircraft in revenue service and went through our calculations that are in Volumes I and IV of our report, and revised the ratios which we used to calculate additional plane miles and to calculate additional expenses for the jet fleets.

The results of those calculations are set forth on the top sheet of Exhibit 41. It shows a grand total of change of an increase of 1.3 million in the change in gain or loss from operations for the Chapters I through V.

I emphasize, if I haven't already stated it, that we made the in-revenue service calculation for both the historical and the reconstructed conditions.

Q. Will you explain what the attachments are to this top summary sheet, so that we can have that in the record? [Tr. 6170] A. The attachments are by chapter. The first group of papers in each attachment is the calculation of average number of aircraft in revenue service.

Following that are the revenue calculations from the text of our report.

Following that are the revised expense calculations which are marked pages from Volume IV from our report.

And then following that is a revised summary page from the text of the report.

What we have done in each instance for these report pages is simply mark them with the revised figures that we obtained, using the in-revenue service numbers of aircraft for the years when there was a buildup of fleet, either actual or reconstructed.

Q. Just to make sure that this is clear, as I understand it, then, the sheets from the report that appear in these attachments are photocopies of the report pages as they originally appeared with marks on them to indicate the revisions that you have computed, is that correct?

A. That is correct.

• • • • •

[Tr. 6173] • • • Q. I show you a sheet which has been marked for identification as TWA Exhibit 4C(IV)(i).

You testified that this represented a revision of Schedule B of your report showing some changes based on information which you had received and reflecting some revisions in TWA's historical reports of aircraft available for commercial service.

Do you recall that testimony?

A. I do.

Q. Was this document prepared under your supervision?

[Tr. 6174] A. It was.

Q. In this table, there are monthly figures. There are also for each year averages showing the average number of aircraft available for commercial service by type on an annual basis.

What is the source of these annual average figures?

A. We calculated the annual average figures.

Q. From what?

A. From the monthly statistics which are set forth on this exhibit.

• • • • •

[Tr. 6176] • • • Q. Mr. Wemple, did you use the monthly averages in the computations of Volume I of your report?

A. No, we used the annual averages that are developed from the monthly figures.

Q. What differences are there in the annual averages on this exhibit from Exhibit B, as it appears in your report?

A. There is one difference for the annual average for an individual type of jet aircraft.

It is in the 1961 CV-880 annual average number of aircraft available for commercial service.

The revision is from the 14.6 figure which we originally calculated, to the revised figure of 14.5.

Q. Is there any revision in the annual averages re- [Tr. 6177] lating to other types of aircraft?

A. There is none.

Q. Have you, at my request, made a computation of what the difference would be in the estimates set forth in Volume I of your report, if you were to use the corrected annual average for CV-880s appearing on this revised schedule instead of the annual averages used on Schedule B, as it appears originally in your report?

A. We have made that calculation.

Q. Do you have the results of it with you?

A. Yes. Again, I have a summary sheet which shows the effect of that change in the annual average for 1961 for the CV-880 on estimates for Chapters IV and V. The total effect is—you can read it. It is set forth there.

Mr. Tenney: I ask that there be marked as TWA Exhibit 42 for identification a summary sheet—off the record.

The Special Master: Yes.

(Discussion off the record.)

Mr. Tenney: —headed "Changes in improvment in gain or loss from operations for a correction of certain numbers of CV-880 aircraft that TWA actually had in 1961, which changes the annual average number available from 14.6 to 14.5 aircraft and af- [Tr. 6178] fects slightly the estimates of Chapters IV and V" to which are attached photocopies of pages 63, 64, 71 and 72 of TWA Exhibit 4C(1) marked to indicate certain changes.

• • • • •

Mr. Tenney: I ask that there be marked as TWA Exhibit 42A for identification a number of other sheets from the report marked to show changes in the nature of revisions of calculations which Mr. Wemple has made in the course of arriving at TWA Exhibit 42 for identification.

• • • • •

The Special Master: In the absence of an objection, 42 will be received in evidence and 42A will be marked for identification.

Mr. Hayes: 42 will be in the same category as the report itself, subject to our general objections.

[Tr. 6179] The Special Master: That is correct. At this point they are both marked for identification.

By Mr. Tenney:

Q. Would you state what the summary sheet shows, Mr. Wemple?

A. The summary sheet shows that the effect of this change in annual average number of aircraft available for commercial service for the CV-880 fleet that TWA actually had in 1961 from 16—correction—from 14.6 to 14.5 would have affected our calculations set forth in Chapter IV of our report for 1960 by an increase of $1/10 million in the estimated change in gain from operations; and for Chapter V for the year 1961, an increase of $4/10 million in the estimated change in gain from operations.

Q. You testified, Mr. Wemple, that in connection with Chapter III of your report, TWA Exhibit 4C, and Schedule C—I guess it is Exhibit C of Volume IV, which gives your computations of aircraft available for commercial service on earlier delivery dates—you testified that you had not deducted in Schedule C any time to reflect the possibility that reconstructed TWA's B-131 fleet would have been reduced by the necessity of returning one plane to Boeing for a two-month period for equipment [Tr. 6180] completion and final certification, such as occurred historically.

Do you remember your testimony generally on this?

A. I do.

Q. Have you determined at my request the difference which such allowance would have made in the estimates contained in your report?

A. I have.

Q. Do you have it with you?

A. Yes.

Mr. Tenney: Off the record.

The Special Master: Off the record.

(Discussion off the record.)

Mr. Tenney: I ask that there be marked as TWA Exhibit 43 for identification a sheet headed "Changes in improvement in gain or loss from operations for a reduction of two plane months in the number of B-131 aircraft that would have been available for commercial service in 1959 with earlier receipt of fifteen B-131 aircraft, Chapter III," to which there is an attached photocopy of page 51 of TWA Exhibit 4C marked to reflect certain revisions.

I ask that there be marked for identification [Tr. 6181] as TWA Exhibit 43A a series of pages from TWA Exhibit 4C marked with revisions of calculation details which Mr. Wemple has made in coming up to the conclusions expressed in TWA Exhibit 43 for identification.

The Special Master: It will be marked.

* * * * *

By Mr. Tenney:

Q. Will you state for the record, Mr. Wemple, what TWA Exhibit 43 shows?

The Special Master: In the way of results?

Mr. Tenney: In the way of results.

A. TWA 43 shows that if in our calculations of improvement in gain from operations for the year 1959 for Chapter III in Volume I of our report we had made an allowance of two plane months for an aircraft of the B-131 series being returned to Boeing, it would have reduced our [Tr. 6182] change in gain from operations by one-half million dollars.

Q. I would like to turn now to Volume I of your report, TWA Exhibit 4C, page 27, and specifically to call your attention to the table at the top of that page.

You will recall that Mr. Hayes asked you a number of questions as to the application of the figures in the second column which is headed "Per cent of Increase in Transatlantic Passengers with Additional B-331 Aircraft" to the figures in the first column which is headed "Actual International Division Passenger Revenue."

Do you recall your testimony on that subject generally?

A. Generally, I do.

Q. At one point Mr. Hayes gave you some figures which were from the CAB Handbook of Airline Statistics, reporting TWA total scheduled international passengers in certain years, and he compared them with the IATA figures of transatlantic passengers set forth in your report and derived a difference which he referred to as TWA's beyond gateways passengers.

Do you remember that generally?

A. I do.

Q. Have you since examined, Mr. Wemple, the CAB [Tr. 6183] Handbook to which Mr. Hayes referred, to see what it shows with respect to the relationship between transatlantic and beyond gateways traffic?

A. I did.

Q. Would you explain what you found and what your conclusions were?

A. Yes. The CAB Handbook had a figure for TWA International Division of total originating passengers for each year.

We then went to the CAB Form 41 Schedule T-4, which gives the development of that figure by individual city and it also gives certain other passenger statistics.

Incidentally, the passenger statistics changed as to details. I believe it was in the year 1960. So that there was a greater choice of passenger statistics to examine for the years 1961 and thereafter.

We compared those data with the IATA figures and considered the characterizations of the data set forth in the CAB Form 41 Schedules T-4.

It is our opinion that the passenger statistics of enplaned passengers on scheduled service is most nearly comparable to the IATA statistics that we used in our report.

[Tr. 6184] We took TWA's International Division enplaned passengers for scheduled service for the U. S. cities that are served by TWA International Division, and multiplied that figure by 2 to give a transatlantic passenger statistic. The times 2 is, of course, to take the enplaned passenger in the U. S. city which would be an eastbound transatlantic passenger and to take the enplaned passenger —and to multiply it by 2 to represent that transatlantic passenger returning to the U. S.

We then took the difference between this calculated number of transatlantic passengers and deducted it from the total number of enplaned passengers for TWA International Division, scheduled service, and obtained a difference figure which is generally characterizable as the beyond the gateway passenger that you just mentioned.

Q. Do you have a summary of the results of this calculation?

A. I do.

Mr. Tenney: I ask that there be marked as TWA Exhibit 44 for identification a single sheet headed "TWA International Division Passenger Enplanements, U. S. Cities and Other Cities, 1959-1963."

• • • • •

[Tr. 6185] • • • Q. Will you explain, Mr. Wemple, what TWA 44 for identification shows as a result of your examination?

A. TWA Exhibit 44 shows calculations of beyond gateway passengers for TWA's International Division as 43.5 per cent of the total International Division passengers for the year 1959.

And for the years 1960 through 1963, the percentage ranged from a low of 32.5 to a high of 35.5, which I believe is a relatively uniform percentage.

Q. What do you conclude from that as to the propriety of using transatlantic passenger figures to determine total International Division passenger revenue in the manner in which you have done it at the top of page 27 of your report?

A. I believe this analysis supports the reasonableness of our work set forth at the top of page 27, wherein for individual years, 1959 through 1963, we have calculated the additional International Division passenger revenue on the basis of the percentage increase that would have been achieved in transatlantic passengers for each individual year.

[Tr. 6186] Q. Mr. Hayes gave you some figures as to beyond gateways passengers that he computed in the method that he described to you, which were quite different from this.

Can you account for that difference, Mr. Wemple?

A. The principal reason for the difference is that Mr. Hayes used a different CAB passenger statistic, which does not correlate particularly well with the number of transatlantic passengers reported by airlines to IATA.

In effect, they are a different series of figures obtained from different sources, as presented by Mr. Hayes.

These figures are all from one source and are comparable.

Q. A little later on in connection with the same table in your report, Mr. Hayes asked you a number of questions about the inclusion of charter revenues, and referred to

some figures from the CAB Handbook which he stated indicated a decrease in the percentage of charter passengers flown from 41 per cent in 1959 down to 7.5 per cent in 1963, with the 1962 figure being the low figure of 1.4 per cent.

Does such a fluctuation in the number of charter passengers from year to year have any relevance to the table at the top of page 27, Mr. Wemple?

[Tr. 6187] A. No. The table at the top of page 27 is predicated on the belief that TWA's charter business in the International Division would have varied with the availability of jet aircraft, as its transatlantic scheduled passengers would have varied as set forth at the top of page 27.

Q. What charter passengers are you assuming in the table at the top of page 27 that TWA would have carried?

A. A proportion of charter business that was the same as the proportion of charter business that TWA actually carried during each of the individual years.

[Tr. 6188] Q. So that a change from year to year would have what relevance to your assumptions?

A. The estimates for each individual year are predicated on what took place during that particular year.

The fact that there was a change from year to year is not relevant.

• • • • •

Q. Would you turn to page 52 of your report, [Tr. 6189] Volume I of TWA Exhibit 4C?

A. I have it.

Q. You state on that page, Mr. Wemple, that you assume TWA would have commenced revenue service with CV880s on May 15, 1960.

In the course of Mr. Hayes' examination, you testified that this assumption was based on instructions from counsel

and was not based on any examination of the actual experience of Delta.

Do you recall that testimony?

A. I do.

Q. Do you know, Mr. Wemple, when Delta inaugurated revenue service with CV880 aircraft?

A. Yes, it was May 15, 1960.

Q. From what source is that date available?

A. I found it in Delta's annual report for their fiscal year ending June 30th, I believe it is, 1960.

Q. Do you know when the CV880 was certificated for passenger service by—is it the CAB that does that or the Federal Aviation Agency?

A. I understand it was May 1, 1960.

Q. In the absence of directions of counsel, would you have chosen a later date than May 15th for inaugurational service by TWA, Mr. Wemple?

[Tr. 6190] A. For the premise that TWA would have received the CV880 aircraft on the contract delivery dates that are set forth on page 52, I would not have chosen any later date than May 15th for the commencement of revenue service.

Q. Would you explain why, please?

A. TWA would have received its first CV880 aircraft in November 1959 and prior to May 1st, TWA would have received a total of seven CV880 aircraft.

Delta received its first CV880 aircraft, I believe it was in February 1960 and it commenced revenue service on May 15, 1960.

TWA would have had a CV880 aircraft on hand longer than Delta. It would have had quite a sufficient number of aircraft on hand to have commenced revenue service, and therefore I believe it is perfectly reasonable to assume TWA would have commenced revenue service with this fleet certainly no later than May 15, 1960.

Q. Earlier this week, Mr. Wemple, Mr. Hayes asked you a number of questions on Chapter V of your report in the course of which you stated that for the table at the top of page 70 of your report you had made a computation of revenues based on average piston aircraft, while in your expense calculations you had based [Tr. 6191] calculations of expense for flying operations and maintenance on the historical expense incurred by TWA in connection with the 1049G piston aircraft.

Do you recall your testimony on that subject?

A. I do.

Q. Have you since at my request made a computation to determine what the effect would be on your estimates if you had based your estimates of expenses for Chapter V on an average of TWA's piston aircraft as you based the table at the top of page 70 which deals with revenues?

A. I have.

Q. Do you have the results of that computation with you?

A. I do.

Mr. Tenney: I ask that there be marked as TWA Exhibit 45 for identification two sheets, constituting photocopies of pages 71 and 72 of the Volume I of Mr. Wemple's report, TWA Exhibit 4C, marked to indicate certain changes, and also that there be marked as TWA Exhibit 45A for identification a series of work papers and other changed pages from his report establishing the details of the calculations leading up to TWA Exhibit 45 for identification.

[Tr. 6192] * * * Q. In this instance, Mr. Wemple, I notice that there is no summary sheet.

Would you, therefore, explain a little more fully what this TWA Exhibit 45 for identification shows?

A. For this TWA Exhibit 45, for each of the years 1960 through 1963, we made an alternative calculation of changes in flying operations and maintenance expense that would have been the result of TWA having received a fleet of thirty rather than twenty CV880 aircraft which is the basic subject of Chapter V.

These alternative calculations used TWA's historical total expense for the operation of all piston aircraft in each of those years. And it is this expense for all piston aircraft on which we—correction. And it is this historical expense of all piston aircraft that we used for our application of ratios to calculate changes in expense that would have been the result for [Tr. 6193] Chapter V.

The revised expense calculations are set forth on pages 71 and 72 which have been marked and printed, and are Exhibit 45.

The results are an increase in expense in 1960 from 10.8 to 11.6 million.

In 1961, from 21.6 to 22.8 million.

In 1962, from 21.0 to 21.7 million.

In 1963, from 14.1 to 14.9 million.

Q. What is the result of that change on your computations of improvement in gain or loss from operations?

A. If my quick arithmetic is correct, it is a total increase of $3½ million.

Q. A total effect in what direction?

A. Increase in expenses.

Q. What result does that have on the change in gain or loss from operations?

A. That would have a corresponding amount of effect. It would—if applied, it would reduce the calculated improvement in gain from operations set forth for Chapter V by $3½ million.

• • • • •

[Tr. 6194] • • • Q. Mr. Wemple, do you have available a copy of Defendants' Exhibit 15? That is the Coverdale & Colpitts report dated June 26, 1959.

In the course of your testimony on this report in answer to questions by Mr. Hayes you stated in substance that in your opinion a reading of this report would lead the reader to the conclusion that TWA would require additional jet aircraft to keep up with its competitors.

I would like you to briefly examine Defendants' Exhibit 15 and point out the portions of that report which lead you to that conclusion.

Mr. Hayes: I object to this, Mr. Brownell. The report speaks for itself. We can all read it. We can all draw our own conclusions as to what the report says.

The Special Master: Are you going to ask him to comment on it or just—

Mr. Tenney: I would like him to go through the report and comment on those portions of the [Tr. 6195] report that indicate TWA's need for jet aircraft.

Mr. Hayes: I press my objection, Mr. Brownell.

The Special Master: I will allow the answer, which I trust will be rather brief.

Mr. Hayes: I am sorry.

The Special Master: Which I trust will be rather brief.

A. There are three general classes of statements in the report.

The first class I would like to refer to relates to the advantages of a jet aircraft over a piston aircraft which, of course, are well known.

Page 2, it points out the speed difference.

Page 4, it points out that jet aircraft are more comfortable and attractive than piston aircraft.

Page 33, it points out that TWA and American had been averaging 90 per cent load factor during the initial months of operation with their new jet aircraft.

There is another series of statements which point up that with the fleet of 45 jet aircraft that were the basis for this particular study and forecast, TWA was going to be obliged to operate a number of piston aircraft on a number of important segments and that piston [Tr. 6196] aircraft by TWA would be operated against competition by other airlines' superior more modern aircraft, and that TWA was going to have to limit its schedules which it was operating with jet aircraft or with any kind of aircraft.

Page 3 points out that TWA expected to still have 72 piston aircraft in its fleets.

Page 6 points out that TWA would be operating a 1049G piston aircraft in direct competition with American's Lockheed Electra.

Page 10A, the Domestic Division, flight segments in their total schedule pattern, 126 would be operated with jet aircraft, and a total of 274 would still have to be operated with piston aircraft.

Those piston aircraft segments would be—include Pittsburgh to Chicago service, Cincinnati to Detroit service, Pittsburgh to St. Louis, New York to Columbus, et cetera.

That in the International Division, TWA was going to operate its beyond the gateway system—correction—its beyond the gateway service with piston aircraft.

And page 28, it points out that American would be using jet and turboprop aircraft on a number of [Tr. 6197] intermediate and short-range segments which TWA would have to be operating with piston aircraft.

It also points out at a page which I seem to have trouble putting my hand on at the moment that TWA's International Division—it is page 15—service would be reduced during the summer peak from 43 flights per week down to 36 flights per week.

It points out that those essentially will be jet-aircraft flights, but TWA is having to eliminate non-stop direct service between New York and Rome, between New York and Frankfurt, between Boston and Paris, between Chicago and London, et cetera.

The other kinds of statements that are set forth in here are that TWA with 45 jet aircraft will not be nearly as well equipped with jet aircraft as its principal competitors were then scheduled to be.

For example, TWA would have 37 jet aircraft for Domestic Division service, American would have 75 jets, and 33 turboprops, the Lockheed Electra. United at that time was scheduled to have 58 jets as against TWA's 37.

In number of seats as set forth on page 30, TWA would be able to offer 3537 jet seats—this is a daily service proposition—against American's 8000 and United's [Tr. 6198] 7700.

In the International Division, TWA would have eight jet aircraft available. It lists here that Pan American would have seventeen available.

Actually, this list prepared in this report is incorrect, because it did not reflect the six additional B331 aircraft that were diverted from TWA to Pan American.

BOAC, another principal competitor, was expected to have 25 jet aircraft against TWA's eight.

Those are the principal elements of the report which support my statement that I made the other day.

Q. Were you ever requested by TWA or Tool Company during the period in the early part of 1959 leading up to the preparation of this report which has been marked Defendants' Exhibit 15—to repeat, were you ever requested by TWA or Tool Company to express an opinion as to whether or not the 45 jet aircraft on order for TWA with which this report deals was too many or too few or the right number for TWA?

A. We never received that request.

Q. Were you ever requested by TWA or Tool Company to conduct an analysis of the relative advantages of this 45-plane fleet as against a 63-plane fleet for TWA?

A. We were not.

[Tr. 6199] Q. Did you ever state an opinion to TWA or Tool Company that a 45-plane fleet would be better for TWA than a 63-plane fleet?

A. We did not.

Q. Mr. Wemple, I show you Defendants' Exhibit 64 which is this rather bad photocopy of a letter addressed to Mr. Charles S. Thomas, president of Trans World Airways, Inc. and dated May 6, 1959, which I believe you testified you participated in the preparation of.

A. That is correct.

Q. In that letter, you state that you have made certain studies in the second paragraph, Mr. Wemple.

Is Defendants' Exhibit 15 the report that you have just gone over a report on the studies which are referred to in this letter of May 6th?

A. It is.

Q. In what connection was the May 6th letter to Mr. Thomas prepared?

A. It was prepared at his request.

Q. Did he explain why he wished the letter?

A. I did not learn or know of any explanation at that time as to why he wished the letter.

Q. You express the opinion in the May 6th letter that the jet fleet listed above which is the 45 planes [Tr. 6200] listed in the table just above which is to be delivered to TWA by the end of 1960 provided a fleet of aircraft in types and numbers adequate for a sound economic operation.

What did you intend to convey to the reader in that statement of opinion?

Mr. Hayes: I object to this what he intended to convey. We have his document here as to what he said. What is his intention is not evidentiary at all.

Q. What did you mean by that statement?

* * * * *

[Tr. 6201] * * * A. I believe this letter was written as a perfectly straightforward statement of our opinion at that time of May 6th, which is namely that the studies had shown that TWA could expect in the year 1961 a sound economic operation with those aircraft.

Q. Did you mean to suggest that TWA would be better with the numbers of jet aircraft set forth than with a larger or smaller number?

Mr. Hayes: I object to this.

The Special Master: He has already testified that he has never given any opinion on that subject.

Q. Is your prior answer that you had never stated any opinion to TWA as to whether or not the 45-plane fleet was too large, too small or the right number in any way affected by this letter?

Mr. Hayes: I object to this. It is the [Tr. 6202] same business again.

The Special Master: It seems harmless to me. I will allow the answer. It seems a little repetitious but there is no harm.

The Witness: May I have the question again?

(The question was read.)

A. No.

Q. In Defendants' Exhibit 15, Mr. Wemple, in which you commented just now, you set forth some forecasts as to jet and turboprop aircraft which would be on hand for various airlines in the year 1961.

Have you prepared at my request a list of the aircraft, jet and turboprop aircraft, which TWA and its principal competitors actually did have on hand over the period from shortly prior to that time up to as recently as practicable?

A. I have.

Q. May I have it, please?

A. Yes.

Mr. Tenney: I ask that there be marked as TWA Exhibit 46 for identification a table headed "Jet and Turboprop Aircraft On Hand For TWA And Principal Competitors, 1958-1966."

[Tr. 6203] • • • Q. Would you just explain how this table is put together and what the meaning of the various entries are? Not in any detail, just generally, Mr. Wemple.

A. We went to the sources which are listed at the bottom of the page and tabulated the number of aircraft reported for these various airlines as on hand at six-month intervals from 1958 through 1966.

We have separated the turboprops from the jets because they have certain different characteristics, although, in my

opinion, are vastly superior to the piston aircraft operated —correction—to the piston aircraft which TWA and most airlines operated.

The NA items on the right for the June 30th period are simply that the ICAO statistics do not show June 30th aircraft fleets on hand.

Q. Under Trans World Airlines, that column, does that include all the airplanes that TWA—all the jet aircraft that TWA had for both domestic use and international use?

A. And cargo use.

[Tr. 6204] Q. So that not all of them would have been available at the same time at any rate either domestically or internationally, is that correct?

A. They would have been divided between the Domestic and the International Divisions.

The history of TWA's division for the years 1959 through 1963 is set forth in Volume I of our report.

The Special Master: What page?

The Witness: Exhibit B.

Correction. Did I say Volume I? I meant to say Volume IV, Exhibit B.

Mr. Tenney: I offer this in evidence subject to the same ground rules.

Mr. Hayes: Subject to our general objections which have not been ruled on.

The Special Master: So received.

(TWA Exhibit 46 for identification, received in evidence, as of this date.)

Q. Turning to another subject, there was a good deal of testimony, Mr. Wemple, in the course of Mr. Hayes' examination about the use by TWA of four Boeing 720B jet aircraft which it leased for a period in 1961 and 1962?

Do you recall that testimony in general?

[Tr. 6205] A. I do.

Q. Would you turn to the chart on page 58 of your report, Exhibit 4C, Volume I?

A. I have it. Page 58, you said?

Q. Yes.

Will you explain what this chart shows as to the use by TWA B720 aircraft at the time to which this chart relates?

A. This page 58 is developed from information in TWA's employee timetables, and it lists all of the service that TWA operated on a daily basis westbound between various pairs of cities in the United States.

TWA offered other service than with the CV880 aircraft between these pairs of cities, and that other service is tabulated there by type of plane.

There was a very small amount of service between these 30 pairs of cities with the B720 aircraft, namely, three flight segments out of a grand total of 87?

Mr. Hayes: A grand total of 87.

The Witness: 87 flight segments on the righthand side of page 58, that is correct. Do you see it?

The Special Master: 67 were jets?

The Witness: 67 were jets, 87 grand total.

[Tr. 6206] Mr. Hayes: I will defer my questioning.

Q. How did you select these 30 pairs of cities, Mr. Wemple?

A. As I have mentioned these were pairs of cities that were—correction.

As I have mentioned, this is the entire daily westbound service that TWA offered in the March 1962 schedule with

the Convair 880 aircraft, and that Convair 880 aircraft schedule provided service for these 30 pairs of cities.

Q. On page 68 of your report there is another chart. What does it show, Mr. Wemple?

A. Page 68, did you say?

Q. Yes.

A. It shows the pairs of cities that were served daily westbound by Convair 880 service by TWA in October 1963. There were a total of 36 pairs of cities served in that particular flight schedule pattern.

Q. Do you know how many pairs of cities are included in that table on page 68 that are not included in the table on page 58?

A. I think it is 13, approximately 13.

Q. Have you at my request determined how these [Tr. 6207] additional pairs, these 13 additional pairs of cities were serviced by TWA in March of 1962 which is the time to which your table on page 58 refers?

A. I have determined the amount of jet aircraft service that TWA offered in March 1962 between these 13 pairs of cities.

Q. Do you have a table showing the results of that?

A. I do.

Mr. Tenney: I ask that there be marked as TWA Exhibit 47 for identification a table headed "Types of Jet Aircraft used by TWA in March 1962, for Daily Westbound Service for the Pairs of Cities Listed on Page 68 but are not Listed on Page 58 of the C & C Report Dated May 2, 1966."

• • • • •

Q. What does TWA Exhibit 47 for identification, Mr. Wemple, show as to service provided by the B720 aircraft?

A. It shows that there was no service provided by B720 aircraft for these 13 pairs of cities.

[Tr. 6208] Q. Taking together the information shown in the tables on pages 58 and 68 of your report and in TWA Exhibit 47 for identification, Mr. Wemple, do you have any conclusion as to the relationship between the B720 jet and the additional CV880s in TWA's historical schedule planning?

A. Yes, my conclusion is that there was very little use of the B720 aircraft on the part of TWA's Domestic Division service that was operated with CV880 aircraft.

Mr. Tenney: I offer TWA Exhibit 47 in evidence subject to the objections, the same group of objections.

Mr. Hayes: Subject to the outstanding objections to the whole report.

The Special Master: Received in evidence.

(TWA Exhibit 47 for identification, received in evidence, as of this date.)

Q. Mr. Wemple, are there any statistics kept that you are familiar with as to break even load factors?

A. Yes, there are.

Q. What kind of statistics are there?

A. The CAB publishes a break even load factor for airlines by division on an annual basis.

[Tr. 6209] Q. Have you at my request prepared a table of certain information from those statitistics?

A. I have.

Q. Will you show it to me, please?

A. Yes.

Mr. Tenney: I ask that there be marked as TWA Exhibit 48 for identification a table headed "Break Even Passenger Load Factors Scheduled Service 1958-1963."

• • • • •

Q. Mr. Wemple, do you consider these figures as to break even load factors from CAB reports to be reliable figures?

A. Well, they certainly are reliable figures of what the CAB calculates as the "Break Even Passenger Load Factor" for various lines.

Beyond that, I view them as a very general guide to the operating profit versus load factor for an individual airline division, but certainly not a precise measure of that relationship.

Mr. Tenney: I offer TWA Exhibit 48 in evidence, subject to the same general objections [Tr. 6210] that Mr. Hayes has alluded to.

Mr. Hayes: Subject to our objections to the whole report.

The Special Master: So received.

(TWA Exhibit 48 for identification, received in evidence, as of this date.)

Q. Turning to TWA Exhibit 4B, Mr. Wemple, which is your comparative profit study—

A. I have it.

Q. —Mr. Hayes asked you just yesterday a Number of questions on this report as well as a number of questions at the beginning of the examination.

Among other things I believe you testified that this study compared operating profit and did not take into consideration net profits or any item that went into net profits but was not considered in operating profits, is that generally correct?

Do you recall your testimony on that generally?

A. Yes, as I recall, I said that the figures beyond operating profit that get into the net income or net profit calculation were not included in this particular report.

Q. What kind of thing is eliminated by that approach? What sort of thing are we talking about that is eliminated?

[Tr. 6211] A. Interest on debt, income from non-airline operations such as Pan American's International Hotels Division, taxes, income taxes are not—are thereby excluded from consideration in this particular report which is Exhibit 4B.

Q. You explained in the course of your testimony that the comparability of route structure I think you said broadly defined was a principal consideration in your determination of the most comparable airlines for purposes of the study which is reported on in TWA Exhibit 4B.

Will you state again what comparisons you consider particularly significant under this broad heading of route structure?

A. Yes.

The cities that were served by TWA and the other airlines, and the service between pairs of cities by TWA and the other airlines, and the general area served, for instance, the Baltimore-Washington area which was discussed yesterday.

Q. In the course of your testimony, you stated at one point, Mr. Wemple, that you had at one time made a quantitative study of traffic that certain airlines carried, do you recall that?

[Tr. 6212] A. I do.

Q. You also testified, I believe, that that was no longer available?

A. That is correct.

Q. What was the source of the material that you had included in that study?

A. Much of it came from CAB publications and as I recall some of it came from annual reports. I think those are the principal sources of the information that we had originally used for that general study.

Q. Have you since at my request—

A. Excuse me. Also, airline guides, timetables.

Q. Have you since at my request, Mr. Wemple, consulted those sources and prepared a general similar study?

A. Well, I have reviewed certain CAB statistics to assemble data on traffic by American and TWA domestic and by Pan American Atlantic and TWA international.

Q. Do you have a copy of the results of that?

A. I do.

Mr. Tenney: I ask that they be marked as TWA Exhibit 49 for identification—

The Witness: Here are the results of the analysis to show the comparability of traffic [Tr. 6213] statistics for TWA international and Pan American Atlantic for the period 1959 through 1965.

Mr. Tenney: I ask that this be marked TWA Exhibit 49A for identification, a—

The Witness: May I also suggest that you include in A the statistics I have on the comparability of traffic for American Airlines and TWA domestic.

Mr. Tenney: I ask that there be marked as Exhibit 49A for identification three spread sheets headed respectively "Passenger Originations by TWA International and PAA Atlantic Divisions, 1959 to 1965," "Passenger Originations by TWA Domestic Division and American Airlines, 1959 to 1965," and "Revenue Passenger Miles, TWA Domestic Division and American Airlines, 1959 to 1965."

• • • • •

Q. Do you have similar results with respect to United Airlines?

A. At your request I assembled similar traffic statistics for United Airlines and TWA for the same period.

[Tr. 6214] Mr. Tenney: I ask that there be marked as TWA Exhibit 49B for identification this sheet which Mr. Wemple just handed me constituting a spread sheet headed "Passenger Originations by TWA Domestic Division and United Airlines 1959 to 1965."

• • • • •

The Witness: Perhaps it would be well to point out that that is a combination of United and Capital's statistics, because United merged with Capital in the course of that period, and that obviously has a very large effect on those traffic statistics as well as other considerations for United.

By Mr. Tenney:

Q. I am not sure that the record is particularly clear as to what you were saying about TWA Exhibit 49B, Mr. Wemple.

Did you have a further explanation that you wanted to give?

A. Yes, I simply wanted to emphasize that the United traffic statistics reflect—correction—the United traffic statistics set forth there are a combination of [Tr. 6215] United and Capital for the early part of the period before the merger, and to also comment that insofar as a comparative profit study is concerned, I think it would have been most inappropriate to have selected United for that comparison because of this very major change that took place with the airline during the period which involved its merger with Capital.

Q. Apart, however, from the merger with Capital, will you comment as to what TWA Exhibits 49A and 49B show as to the comparability of the airlines involved insofar as

that comparability is concerned with the matters reflected in these tables?

A. The first comparison is between TWA international and Pan American Atlantic, and the table shows essentially that after the Pan American figures are adjusted to eliminate the Berlin and Bermuda services which are not transatlantic services as generally defined or as generally employed by our other discussions of transatlantic operations. But after that adjustment, the cities that are served by both airlines, that is, the common cities, have passenger originations which represent between 70.6 and 78.3 per cent of TWA's total International Division passenger originations and for Pan American the range is from a low of 66.3 in 1964 to a high of 88.8 in 1959.

[Tr. 6216] So that these cities which are served by both airlines represent the bulk of both airline division's traffic.

The domestic comparison is—I have two of them. One is on the basis of passenger originations which shows that the passengers for both TWA and American at the cities which they both serve runs approximately 80 per cent of the total passenger originations of both airlines throughout the period.

Now, for the domestic operation, we have another statistic available, and that is revenue passenger miles between pairs of cities as compiled by the CAB.

Now, this has to be set up by pairs of cities, and we selected the 75—correction—we selected the 75 pairs of cities which TWA serves which provide over 80 per cent of TWA's total revenue passenger miles.

Now, American Airlines serves many of those same 75 pairs of cities, and the service that American Airlines—correction—and the traffic that American Airlines obtained for those same 75 pairs of cities throughout this entire

period runs about between 43 and 46 per cent of American Airlines' total business.

Now, the United Airlines comparison on a passenger boarding, whereas for the cities served by [Tr. 6217] both TWA and American the passenger boardings represent about 80 per cent of each airlines' total passenger boardings, United's passenger boardings for those same—for the cities that are common with TWA represents only about 60 to 65 per cent of United's total boardings.

On the traffic statistics which are revenue passenger miles, again United—the United-Capital combination is lower than the American comparison. The American figure is about 45 per cent of American's total revenue passenger miles.

The United-Capital figure is about 35 per cent of United's total revenue passenger miles.

Q. What do you conclude from that as to the relative comparability of the United and American to TWA's Domestic Division?

A. That United is not the most comparable airline. American is.

Mr. Tenney: I offer TWA Exhibits 49A and 49B in evidence subject to the same objections that Mr. Hayes has referred to.

The Special Master: So received.

(TWA Exhibits 49A and 49B for identification, received in evidence, as of this date.)

Q. On the map which appears as Exhibit B to TWA [Tr. 6218] Exhibit 4B, you testified that this was taken from the maps published by the airlines in the Airline Guide for a particular month, that is, March 1964.

Would you explain why you chose this source from which to draw a map comparing route structures?

A. We found it completely impractical to prepare a map for inclusion in this report that would be of manageable size and would show the entire official route structure of each airline.

Furthermore, in my opinion, it would have been misleading.

We, therefore, turned to the Official Airline Guide as demonstration of what each airline thought were their most important routes to feature in a map.

Q. Do you know whether there are other routes in which TWA and American are in direct competition which were not shown as direct routes on those maps?

A. There are.

Q. Would you name some of them?

A. Yes, the outstanding omission is New York to Los Angeles which American did not choose to serve—to show as a through-service.

There is also New York to Chicago which for some reason American did not choose to show on its map.

[Tr. 6219] Q. If they had been shown on those maps in the Airline Guides which were your source, how would they have been represented on your Exhibit B?

A. A black line.

Mr. Tenney: Mr. Brownell, I have no further questions.

• • • • •

[Tr. 6246] • • • Q. It is just not clear to me why for two years you used the upper line here which is line 19 on page 218 of the Handbook and for the remaining three years you use line 20.

A. I would like to have used line 20. Those data did not exist in CAB form for individual cities for the two preceding years.

The Special Master: So that you came out with a result that you thought was the most accurate estimate you could get from CAB sources?

The Witness: That's right. It is a roundhouse approximation. No question.

Q. But there is a mixture of peaches and pears here, is there not?

A. There is a mixture.

Q. You gave some testimony with respect to charter revenue and I think what you said in substance was that even though the charter revenue dropped from year to year —I think there was an increase in one year, if I recall correctly—you are just assuming that with the additional planes and flights and so on there would [Tr. 6247] be a continuation each year of the same percentage, whatever it was?

A. I thought we were talking about percentage of charter passengers, rather than revenue, this morning.

Q. Whatever it was, charter passengers.

A. And my statement was, yes, that with the availability of extra aircraft we assumed that TWA would have handled a proportionate percentage of additional charter traffic.

Q. That the percentage would be exactly the same as it historically was for the year?

A. That is correct.

Q. And this is pure assumption on your part?

A. That is correct. This was our judgment of what was a reasonable assumption to do.

• • • • •

[Tr. 6660] • • • Mr. Ordover: The purpose of this session today is to mark for identification or in evidence as the particular case may be certain docu-

ments relating to the testimony of Mr. Edward L. Wemple, which has heretofore been completed in this damage hearing.

This session is being held pursuant to an agreement of counsel made while Mr. Wemple was on the stand. It is being done to facilitate the marking of these documents and the agreement at the time was made so that Mr. Wemple's examination would not be interrupted by the necessity for obtaining and marking these documents.

Pursuant to the suggestion of the Special [Tr. 6661] Master noted at page 6254 of the transcript, Mr. Wemple has prepared TWA Exhibit 46A. This exhibit has been furnished to the Special Master and counsel and subject to the general objections of the defendants previously made and pursuant to the agreement of counsel for the defendants noted in their letter of March 16, 1967, I hereby offer TWA 46A in evidence.

Mr. Wier: Counsel for defendants has no objection to the receipt of TWA 46A in evidence subject, of course, to our objections to Mr. Wemple's testimony in general and further subject to the specific provisions included in our letter of March 16, 1967 to the Hon. Herbert Brownell, copies to Dudley B. Tenney, Esq.

(Four-page document, the first page of which is headed "TWA v. Jet and Turboprop Aircraft Year-End Inventory, 1958-1965 For TWA and Principal Competitors and Additional Allocation of TWA's Jet Aircraft," marked TWA Exhibit 46A in evidence, as of this date.)

• • • • •

[Tr. 10,638] • • • Mr. Tenney: As our next rebuttal witness, I will call Mr. E. L. Wemple, who has appeared before in this proceeding, and I do not think, therefore, will have to be resworn.

Mr. Perkins: I agree.

EDWARD L. WEMPLE, recalled as a witness, resumed the stand and testified further as follows:

Direct examination by Mr. Tenney:

Q. Mr. Wemple, are you familiar with the testimony that has been given by Mr. Nathan Simat in this proceeding?

A. Yes, I have read Mr. Simat's reports, his supplemental report and I believe I was present during most of his testimony on cross-examination.

Q. As you know, Mr. Simat has in his prepared reports and also in his oral testimony, expressed strong disagreement with the testimony which you gave earlier in this proceeding.

[Tr. 10,639] Do you wish to change the estimates and the opinion that you have expressed previously in any way as a result of having heard Mr. Simat's opinions?

A. No, I do not.

Q. In the report which Mr. Simat presented last year, which was marked Defendant's Exhibit 271, in Part III he states his opinion as to "certain fundamental errors in Mr. Wemple's methodology."

Commencing on page III-4 there are a series of four numbered paragraphs which purport to describe these so-called errors in your methodology. They are elaborated on elsewhere in that report.

I would like to direct your attention to the so-called fundamental error described on pages III-4, as consisting of your use of "the same average load factors," for estimating domestic operations as those which were experienced historically.

I will also remind you that this statement of so-called error is also referred to, among other places, in Part C of Vol. B at page 1 of which it is stated:

> "Mr. Wemple's assumption presupposes that TWA could introduce jet capacity into the market in unlimited quantity without suffering a decrease in average jet load factors."

[Tr. 10,640] Do you believe, Mr. Wemple, that capacity could be added in unlimited quantity without affecting load factors?

A. No, I do not and none of my estimates are based on a premise of adding unlimited quantity into the market.

Q. Would you explain that, please?

> Mr. Hayes: May I interpose here? It seems this is not at all rebuttal testimony. Mr. Wemple is not now going all over again his original report.
>
> The Special Master: So far, you are right. I will let it go a little while until I see the trend.

A. I have an exhibit prepared here to show what historically happened in TWA's scheduling during the 1959 to 1963 period when TWA introduced jets into the operations.

> Mr. Tenney: Just a moment, Mr. Wemple. I ask that this sheet, which is headed "TWA v. Hughes. Departures By Fleet Segment Length, Piston and Jet Aircraft 1959-1963" be marked as TWA Exhibit 443 for identification.

• • • • •

[Tr. 10,641] By Mr. Tenney:

Q. Is the document which has been marked as TWA 443 for identification, the exhibit you have just been referring to?

A. Yes.

Q. Please proceed.

A. This exhibit uses data on departures of piston and jet aircraft, taken from Mr. Simat's working paper, Vol. B printout, identified as "Program Output Listing 1." It groups departures for the last month of each quarter within a year by flight segment length.

I should like, first, to call your attention to the phenomena or the development that is shown in the departures of 1501 miles and longer. Those are the three right-hand groups which are listed ahead of the total.

In the year 1959, in the 1500 to 2000-mile segment length, for example, there were 1973 departures noted.

By the year 1963, there were none with piston aircraft.

For the next longer segment length there were 645 piston departures in the year 1959 and by the year 1963 this was down to 105.

In the next longer one there were 141 piston [Tr. 10,642] departures in 1959 and this sheet shows a reduction to 87 for the year 1963.

We actually couldn't find those in the examination we made of the flight schedules. However, my point is still the same, and that is that this represents a replacement of piston aircraft departures with jet aircraft departures.

The second phenomena that is shown in this schedule analysis can also be illustrated by the same flight segment length groupings.

In 1959, the 1500 to 2000-mile segments show 2494 departures and by 1963 that number has increased to 3355 departures.

The next two longer segment length groups show virtually a doubling of the number of departures between 1959 and 1963.

The Special Master: This is all domestic, isn't it?

The Witness: Yes. This illustrates the second scheduled change development, namely, a net increase in number of departures in the longer segment lengths.

The third development which I want to point out is best illustrated by the left hand column, which are [Tr. 10,643] the departures of segment lengths less than 300 miles long.

In 1959, there were 40,691 such departures recorded for that segment length in Mr. Simat's analysis. By 1963, there were only 25,000 such departures, a reduction of 15,000 in total number of departures of the short segment lengths.

There were, in 1963, 5470 piston—I am sorry—5470 jet departures and one must assume that those represent replacements of piston departures in the early years. But there was absolute elimination of 15,000 departures.

This, to my knowledge, was a management decision to eliminate the short stage length departures operated with piston aircraft, because they were not profitable. It had nothing whatsoever to do with the advent of the long-range jet aircraft, which is the subject of our analysis and estimates.

In my estimates, insofar as replacement of piston service is concerned, over 60 per cent of the jet mile-

age that TWA would have operated with the earlier and additional jet aircraft, would have been for direct replacement of piston service.

I have another schedule developed to show [Tr. 10,644] the magnitude of the net increase in jet service that would have occurred in accordance with my estimates.

Mr. Tenney: I ask that this sheet which is headed "TWA v. Hughes. Total Available Seat Miles Operated, Domestic Scheduled Service Only. TWA, UAL and AAL," be marked as TWA Exhibit 444 for identification.

Mr. Perkins: This was revised from the ones we received on Friday.

The Witness: This is revised from the paper that was distributed ahead of time to a very minor degree in the TWA estimated additional seat miles for the years 1959 and 1960 and 1961.

• • • • •

By Mr. Tenney:

Q. Mr. Wemple, before you go on to discuss this exhibit, perhaps you should tell us how we can tell this from the earlier incorrect one that was distributed previously.

Mr. Hayes: We never received an earlier incorrect one.

Mr. Cayo: Yes, we did. We never [Tr. 10,645] received the correction.

A. The revised edition has under the TWA, estimated additional seat miles for the year 1959 the figure 105. The next figure is 910 and the next figure is 1018.

Q. Will you go ahead, please?

A. This exhibit shows the amount of net additional jet miles which I estimate TWA would have operated with the earlier and additional jet aircraft, as a percentage of the historical seat miles which TWA, United and American operated in each year.

I have selected United and American, because, of course, they serve many of the same markets that TWA does and I believe this gives the best picture of the overall magnitude of the estimated additional seat miles in the total market, which was served by TWA.

The percentages are shown in the right-hand side of the upper part of this table. They are, of course, quite small, ranging from .5 per cent to 3.7 per cent.

Mr. Perkins: I think Mr. Hayes will join me in noting a continuing objection to this whole line of testimony, on the ground it doesn't appear to be rebuttal testimony at all, but a further support for Mr. Wemple's variation of—I don't know [Tr. 10,645] what it is—Mr. Wemple's original testimony.

The Special Master: You may proceed.

A. (continuing) The lower part of this table shows the additional TWA seat miles which I estimated as a percentage of TWA's historical seat miles and there the percentages start as 1.6. The highest in any year is 13.6.

I believe that these percentages show that my estimated additional jet seat miles cannot possibly be characterized as introducing jet capacity into a market in unlimited quantity.

Q. In your opinion, what effect would the addition of this amount of additional service have been on individual markets served by TWA?

A. I made that kind of an analysis for five of TWA's most important markets. These were tables identified as

31 through 36. The one on the top covers New York to Chicago schedules by TWA in June 1960.

Mr. Tenney: So that we can identify for the record what you are talking about, I ask that six sheets of which the first is headed "TWA v. Hughes. New York-Chicago Nonstop Jet Flights, Actual, June 1960," be marked as TWA Exhibit 445 for identification.

• • • • •

[Tr. 10,647] • • • By Mr. Tenney:

Q. Mr. Wemple, I believe that TWA Exhibit 445 for identification is the series of tables that you were just now referring to.

A. It is.

Q. I understand that you made some corrections in your earlier version of these which were originally distributed to counsel for defendants. May I ask whether you were able to send them copies of those corrections?

A. To my knowledge, they did not get copies of the corrections. The changes—

Mr. Hayes: We did get some corrections. You mean corrections of the corrections?

Mr. Tenney: No. I state for the record that I am advised that the corrected versions were distributed to defendants, but particularly since there are two versions now, can you tell us how we can be sure that we are dealing with the correct one?

The Witness: The second New York to Chicago sheet, the correct one, in the left-hand column, under "Flight No." the eighth figure, in the [Tr. 10,648] corrected version, has Flight No. 90.

Mr. Perkins: Instead of what?

The Witness: 800-B.

By Mr. Tenney:

Q. Mr. Wemple, you were commencing to make a statement with respect to this. You may proceed.

• • • • •

The Witness: The first sheet lists non-stop jet flights as operated by TWA, American and United between New York and Chicago in June 1960.

You will note that TWA operated only one jet flight in each direction out of a total of six of all airlines eastbound and seven westbound.

I point out that in addition to these jet [Tr. 10,649] flights, of course, TWA operated seven piston flights in each direction, and American, which was the major factor in this particular market, operated 14 eastbound and 15 westbound, most of which were Electra flights.

Turning to the second sheet in this package, I have inserted into the June 1960 listing of nonstop jet flights, additional flights, nonstop jets, which TWA was able to operate in July 1961. The additional flights are indicated with an "A" on the left-hand side of each of the two groups of columns.

In July 1961, TWA had approximately the number of jet aircraft that the assumptions would have given TWA in June 1960. So that we have simply moved forward the nonstop jet service TWA was able to

operate in July 1961 and presumably would have been able to operate in this particular market in June 1960.

These additional nonstop jet flights would have given TWA the very best competitive position of all the airlines in this market. It would have given them a much better competitive position, versus, for instance, American's, I think it was, eleven Electra flights in each direction.

[Tr. 10,650] TWA, with this arrangement, would have had seven jet flights.

The next sheet is New York to Los Angeles nonstop service. As it was operated by TWA in July 1960, plus the addition of the additional flights TWA was able to operate in this market in July 1961.

By Mr. Tenney:

Q. Mr. Wemple, I think you misspoke on the dates covered. Would you state those dates again?

A. I did misspeak. Thank you, Mr. Tenney.

This tabulation shows TWA and the other airlines' flights between New York and Los Angeles, nonstop, with jet aircraft, in June 1960.

I have added to the schedule the additional flight TWA was able—correction—that TWA did operate in July 1961, and the additional flights in each direction is identified with the "A" at the left side of each group of columns.

With this additional flight, TWA would have been able to operate as many nonstop jets between New York and Los Angeles as American did in June 1960 and this, in my opinion, would have improved TWA's competitive position in this particular market.

The next sheet is for the New York to San Fran- [Tr. 10,651] cisco market and it shows the flights operated by TWA, American and United.

There were no additional flights operated by TWA in July 1961.

In June 1960, TWA operated three eastbound flights. So did American.

In 1960, TWA operated three westbound flights as against two for American and two for United.

The next tabulation deals with Chicago to Los Angeles service, in both directions.

Here we have an additional airline, Continental, which serves that market.

In July 1961 TWA operated two additional flights in this market and these are shown by the letter "A".

With the two additional flights in June 1960, TWA would have been able to match the number operated by both American and United in each direction in this market.

The last sheet covers the Chicago to San Francisco market and the July 1961 schedule for TWA would have given TWA two additional flights in each direction in this market. With those two additional flights, TWA would have had a total of three in each direction.

In June 1960, American operated three in one [Tr. 10,652] direction and four in the other direction. United operated four in both directions.

In conclusion, I believe these additions to these particular markets, as I have said in passing, would have materially improved TWA's competitive position.

Q. Have you made any examination to determine whether in such markets as these an increase in service offered has historically had a result on TWA's share of passenger traffic?

• • • • •

[Tr. 10,655] • • • A. Yes, I have. I have prepared some charts to show TWA's share of each of these markets and TWA's share of non-stop flights operated in each of these markets, for the period 1959 through 1964.

Mr. Tenney: I ask that a series of charts five in number, of which the first is headed "New York-Chicago. TWA per cent of Non-Stop Jet Flights. TWA per cent of Passengers Carried. TWA Non-Stop Jet Flights per Day by Quarter, 1959-1964" be marked as TWA Exhibit 446 for identification.

Mr. Perkins: Would you note for the record that I have been advised that we have received no work papers which enable our experts to check the results of this exhibit. I think the pages there, the numbers 41 to 45 at the lower left hand corner and they certainly need more backup material in order to be able to check the accuracy [Tr. 10,656] of these exhibits.

The Witness: It had been my understanding that the work papers behind these had been made available to you during the last several days. My associate is making a call to see if we can clarify that point.

Mr. Perkins: Thank you.

• • • • •

Q. Is TWA 446 for identification the study that you have just referred to, Mr. Wemple?

A. It is.

Q. In the light of the statement by Mr. Perkins as to work papers, perhaps it might be helpful if you simply said what types of work papers do lie behind these charts.

A. We have tabulations of numbers of TWA's per cent of the market for each quarter for 1960 through 1964, taken from the CAB competition studies.

Q. Are those the same CAB's competition studies that have been referred to frequently during the course of Mr. Simat's and Mr. Eichner's testimony?

[Tr. 10,657] A. They are. For the year 1959, we have copies of passenger traffic data submitted to the CAB by the airlines for these pairs of cities. That data was used by the CAB to develop the annual report on competition study for the year 1959 and copies of the basic data sheets are included in our work papers.

We have tabulated data taken from those airline sheets to calculate TWA's per cent passengers for each quarter.

We have tabulations of non-stop jet flights operated by the airlines serving these markets, that did operate jet flights, this is of course 1959 through 1964, each month during the period and then we have summarized those into quarterly per cents of non-stop jet flights for TWA.

Q. The particular compilations of information from the CAB competition study and from the official Airline Guide, have been retained by you?

A. They have been retained by us.

Q. And was that what you meant when you stated just now that it was your understanding that it had been available to counsel for defendants?

A. That is correct.

Q. Will you proceed with your explanation of [Tr. 10,658] TWA Exhibit 446, Mr. Wemple?

A. The first sheet which covers New York to Chicago, shows on the left hand side a dotted line representing TWA's per cent of passengers for each quarter of 1959 and for the first quarter of 1960, in a descending configuration. In other words, TWA's per cent of passengers in the New York to Chicago market as measured by the CAB competition studies, declined.

You will notice before that, that American started its service in November 1959, United started its service in January 1960. TWA did not start jet service until April 1960. When TWA entered that market with some jet service, TWA's per cent of the market revived and went upward.

The Special Master: When was that, you say?

The Witness: April 1960. Then, although TWA increased its number of jet flights in that market slightly during the year 1960, as shown by the solid line for TWA's per cent of non-stop jet flights in a descending configuration the other airlines increased their number of jet flights much more than TWA, so that TWA had a reducing percentage of non-stop jet flights and TWA's per cent [Tr. 10,659] of the traffic dropped in the fourth quarter of 1960.

Thereafter, in 1961, when the CV 880 came in and TWA was able to put many more jet flights in the New York-Chicago market, TWA's per cent of the non-stop jet flights increased and so did TWA's per cent of the traffic.

Thereafter, TWA's per cent of the passengers roughly fluctuates with TWA's per cent of the non-stop jet flights.

The New York to Los Angeles page shows the same general kind of picture. TWA was second into the market here in April 1959 and as it went into that market with non-stop jet service, its percentage of the market went up.

United came along in October 1959 and TWA's per cent of the market went down and thereafter there is general fluctuation of TWA's per cent of the market generally with TWA's per cent of the non-stop flights.

The next chart is New York to San Francisco, in which TWA was the first in the market with jet service, in March 1959, and TWA's per cent of the traffic rose to a very nice 58 per cent [Tr. 10,660] during the third quarter of 1959.

United came along in September and American in November with jet service and TWA's per cent of the market dropped.

Thereafter the per cent of the market and per cent passengers is traced across the page, in some degree of correlation.

The next chart is Chicago to Los Angeles and this is the same general pattern. I call your attention particularly to 1961 when, with the additional CV 880 aircraft that TWA got into service in that year, TWA was able to increase substantially its per cent of non-stop flights in this market in the third quarter of 1961 and its per cent of traffic went up substantially also.

The fourth chart is Chicago to San Francisco and it shows the same pattern. American was the first in this market and TWA's per cent of the market dropped when American introduced jet service and then came up when TWA introduced jet service in June of 1959 and again there is the same following of patterns of the two lines.

I believe these many instances of per cent of the market showing immediate response to per [Tr. 10,661] cent of jet flights, shows clearly that TWA could expect, in these competitive markets, that passenger traffic, additional passenger traffic, would come their way if they were able to increase the amount of jet service. They were able to operate in such competitive markets.

Q. Referring back to the passage from Mr. Simat's original report that I called your attention to before, he mentioned that you had used in your estimates historical average load factors. I believe you have in fact used in your estimates historical average load factors and specifically load factors for the jet fleets, that is, the type of jet fleet that you have made your estimates with respect to, is that correct generally?

A. That is correct.

Q. Will you explain why you have used that type of historical average jet load factor?

Mr. Hayes: It seems we are just going more deeply and more deeply into his original report with more justification for it. It seems to me that we should bring this to an end.

The Special Master: It was attacked in cross-examination and that is the reason I will allow it.

[Tr. 10,662] Mr. Hayes: I beg your pardon?

The Special Master: It was attacked basically in the cross-examination and therefore if he can shed any more light on it even though in redirect examination, I will allow it.

Mr. Hayes: It was attacked by me in my cross-examination of Mr. Wemple and Mr. Wemple went on redirect at that time and he had every opportunity to defend the method he used and insofar as he could defend it, we will assume that he has defended it.

The Special Master: It's a perfectly proper objection. I have no quarrel with your raising it at all but I think Mr. Simat put some frosting on your cake and he is now responding to the frosting.

Mr. Hayes: I am delighted that the cake is now more delectable.

Q. Can you answer my question?

The Witness: Please repeat the question.

Q. Will you explain why you have used the type of historical average load factors that you have used in your estimates?

A. I believe they are the best load factors to [Tr. 10,663] use for estimates for the equipment assumptions that we have been given.

To illustrate this, I have prepared this chart, which shows—

Mr. Hayes: What chart is this?

Mr. Tenney: I ask that this chart, headed "TWA v. Hughes, Domestic Division, Monthly Passenger Load Factors (Scheduled Passenger Service) for All Aircraft Types and Certain Jet Aircraft, 1959-1963" be marked as TWA Exhibit 447 for identification.

• • • • •

Q. I believe, Mr. Wemple, you were starting to comment on this document that has now been marked as Exhibit 447 for identification. Would you continue with what you were about to say, please.

A. Yes. The solid line on this chart connects points which are the monthly load factors which TWA achieved for all aircraft combined throughout this period 1959 through 1963.

[Tr. 10,664] Mr. Hayes: May I interrupt? What is the word "hourly" supposed to indicate for that solid line?

The Witness: Mr. Hayes, I have no idea what the word "hourly" is doing there. It should be "average load factor."

Mr. Hayes: I am sorry for the interruption but I just didn't understand "hourly."

The Witness: The dotted lines are the monthly load factors recorded by the various fleets of jet aircraft as a new fleet was put into operation plus three months. I believe this chart shows that the new fleets shortly after their introduction fell into a monthly variation pattern that was very similar to the monthly variation pattern being experienced in TWA's overall average load factors.

The jets had their individual characteristic load factors, as illustrated, for example by the CV 880 jet fleet. It was put into operation in 1961 and recorded load factors which were higher than TWA's overall average load factor.

In 1963, when the jet fleet was increased in the middle of the year by roughly one-third from [Tr. 10,665] 20 to 26 aircraft, the load factor still maintained its characteristic position above the overall average of all aircraft.

Based on this, I selected each year's historical load factor as being the best load factor figure to use for our passenger mile calculations for these assumptions.

Q. Can you relate these selections that you have made as to load factors and the other comments that you have made in the course of your testimony just now, to each of the separate equipment assumptions that you have studied here?

A. The B-131 equipment assumption had to do with earlier receipt of those aircraft. So that it would have been possible to have operated additional B-131 plane miles in the first half of 1959. As shown clearly by the level of the

131 load factor points in 1959, jet seats were tremendously in demand at that time and I believe that additional flights operated in the first half of 1959 would also have been tremendously in demand.

For our calculation of additional B-131 passenger miles, I used a figure which I believe was 83 per cent annual average load factor, 83.1 per cent and as you can see by the chart, that understates, I believe, [Tr. 10,666] the number of additional passengers that would have been achieved with additional 131 miles in the early part of 1959.

The early receipt of B-331 jet aircraft is the same kind of an assumption, where it would have been possible for TWA to have operated a small amount of additional Domestic Division mileage with those intercontinental jet aircraft. That small amount of Domestic Division mileage would have come in the latter part of 1959 and the early part of 1960, when these jet seats were very much in demand.

The average load factors I used for those, were 83.1—this is historical—for 1959 and 64.5 for 1960.

As you look at this chart, comparing those figures with the dotted lines of what was actually achieved in those particular periods, I believe, again, that those load factors, if anything, understate the additional passengers that would have been achieved.

The next assumption has to do with the earlier receipt of CV 880 jet aircraft. As I mentioned before the CV 880 characteristically operated higher than TWA's average load factor. No doubt a result of being a smaller aircraft and the particular service to which TWA applied that aircraft.

[Tr. 10,667] With the earlier receipt of those aircraft there would have been additional CV 880 operation in 1960, which was a period in which relatively few jets were operated by domestic trunks and we have used historical figures on load factors of 68.6 for the CV 880 additional mileage

operated in 1960 and 65.5 for the additional mileage that would have been operated in 1961, during the first part and I think that as you look at this record of history, you will see that those historical selections are most conservative.

The assumption as to six additional B-331 aircraft would have given TWA additional jet mileage in the years 1960 through 1963. These are intercontinental aircraft primarily designed for international and primarily scheduled for internation service.

There would have been a small amount of additional Domestic Division service that could have been operated with these 331 aircraft and I think it is most reasonable to assume that they would have been operated in the same schedule patterns and with the same results each year that the B-331s were operated each year.

The next assumption to which I wish to call your attention, has to do with the CV 880 jet aircraft, the assumption whereby TWA would have had a fleet of [Tr. 10,668] 30 rather than a fleet of 20. This would have given a substantial number of jet planes miles operated during the years 1960 through 1963 as a result of having these aircraft.

We made a special study of the schedules operated with the CV 880 aircraft and we found a remarkable consistency of schedule pattern throughout the period. This relatively uniform schedule pattern is also illustrated by average stage lengths for CV 880 aircraft as recorded by Mr. Simat.

For the year 1961 the figure was 821 miles. For the year 1963 the figure was 767 miles, which is 93 per cent of the first year's figure.

It was my finding that TWA was relatively uniform in its use of CV 880 aircraft throughout this period including the period when TWA's fleet was increased from 20 to 26 and therefore, I believe, it is most reasonable to

have selected TWA's historical load factors for CV 880 jet passenger mile calculations.

• • • • •

[Tr. 10,669] • • • Q. Referring back, Mr. Wemple, to the so-called fundamental errors in your methodology which Mr. Simat testified to, one of them, he states at Page III-4 of [Tr. 10,670] his original report, consisted of your employment of what's called historical "equipment usage." The element of that which is expanded on more fully, most fully, I should say, is that you "inherently assume that the added jet and deleted piston flights would be at the same stage lengths as the average jet or piston flight actually operated each year," instead of what is called on several occasions in Mr. Simat's report, "marginal stage lengths." Will you comment on that, please?

Mr. Hayes: I would like the record to show, Mr. Brownell, that all of these questions are directed to the defense of Mr. Wemple's original report we have an objection to.

The Special Master: All right.

A. It is fundamental to my answer to your question that we consider the amount of increase which I estimate these equipment assumptions would have meant to TWA's plane miles or schedule of operations.

Q. Have you made a tabulation of that increase?

A. I have.

Mr. Tenney: I ask that this sheet headed "TWA v. Hughes, Revenue Plane Miles, Domestic Scheduled Service Only, TWA, All Aircraft Types, [Tr. 10,671] 1959-1963," be marked as TWA Exhibit 448 for identification. This, I am advised, also has been

revised from the version furnished to the defendants on Friday.

I understand that the revision has been supplied to you previously and I further understand that the difference is a correction of the label of the two columns to correctly identify the figures as plane miles.

The original incorrect identification was seat miles.

• • • • •

[Tr. 10,672] Q. Is TWA Exhibit 448 for identification, the tabulation you just now referred to?

A. Yes, it is, and the significant thing on that tabulation is that our estimated additional plane miles that TWA would have been able to operate with the jet aircraft amount to less than a 10 per cent increase in any year in the total plane miles that TWA did operate.

The various equipment assumptions would, of course, have had a different impact on the scheduling of the additional plane miles. It seems to me that the assumptions respecting early receipt of B-131 aircraft, B-331 aircraft and CV-880 aircraft, would have meant simply earlier inauguration of additional services for TWA and that our use of assumptions which imply an adoption of the historical average stage length for those particular types of aircraft for each aircraft's first full year of operation, are just plain unquestionable.

As to the assumption of the six additional B-331 intercontinental aircraft, this would have meant a small addition to the domestic operation in terms of plane miles. I think it is perfectly reasonable to assume that those additional plane miles would have been [Tr. 10,673] operated in the same general schedule pattern as the B-331 plane miles were actually operated in the Domestic Division.

The CV-880 aircraft assumption representing a fleet of 30 rather than a fleet of 20, is the assumption which produces the largest amount of additional plane miles.

As I mentioned before in a discussion of load factor, we did schedules analysis for the CV-880 in some detail, both for the fleet of 20 and for the operation when TWA had a fleet of 26 and found quite uniform usage of those particular type of aircraft.

As I mentioned under the load factor discussion, that uniform usage is also confirmed by the uniformity of annual average stage lengths which in the year 1963 had an average stage length that was 93 per cent of the average stage length for the year 1961.

Therefore, I concluded it is perfectly reasonable to assume that the CV-880 additional flight miles, as a result of the assumption of a fleet of 30, would have been operated in the same general scheduled pattern that TWA did operate its CV-880 fleet.

Q. You were said, sir, to have made a fundamental error, according to Mr. Simat's testimony, through your [Tr. 10,674] use of average historical, that is, experienced, passenger yields. My reference is to Page III-5 of his original report.

Will you comment on that so-called fundamental error, please?

A. Yield, which is a passenger revenue in terms of cents per passenger mile, is a developed figure. It is not a cash register reading. Each year TWA and its independent public accountants make a study and determine the amount of revenue which TWA shall record as income from the transportation of passengers.

The study is important and complex because people pay for transportation in a wide variety of plans and manners.

They buy tickets on time. They buy tickets through travel agents who some time are very slow in paying the money along to the airline. They use tickets for travel on TWA which are obtained from other airlines and for trips which involve two airlines, where the total price of the ticket must be split with other airlines.

They buy on air travel cards, on time payment plans and so forth.

TWA and its independent public accountants determined the proper revenue figure to be taken as [Tr. 10,675] passenger transportation income for the year. That revenue figure is then divided by a figure that comes from operations reports, a figure of revenue passenger miles recorded for all of the flights operating and the result is called "yield," which is cents per passenger mile.

We examined a number of yield figures which were used internally by TWA and we concluded that none of them was suited for our use for these particular estimates.

We have more recently done a study whereby we took the traffic on-board reports for transcontinental piston flights, I think it was Flights 3 and 4, as they were operated in February 1959, and we put a price which was the fare each of those passengers paid, divided it by the number of passenger miles and figured an income per passenger mile figure.

We did the same thing for TWA's non-stop transcontinental jet flights, 1 and 2, which were operated in April 1959 and we determined that the money paid to TWA per passenger mile on the jet was, I believe, .5 cents higher than it was on the piston, which is about a 10 per cent higher figure.

We did the same kind of an analysis for travel between New York and Chicago on TWA in June 1960 on piston air-

craft and on jet aircraft and we came up with [Tr. 10,676] a similar higher figure per passenger mile for the jet travel, of about 5/10 or 6/10 of a cent, which again is about 10 per cent.

During the period 1959 to 1963, TWA's average yield went up. I believe it was about—correction. Let me not guess. Let me look it up. TWA's average yield per passenger mile in 1959 was 5.487 cents. In 1963 the yield figure was 5.845 cents.

I believe that the jet surcharge and the higher price that the passengers paid for jets was certainly a factor in causing TWA's yield to increase.

I would like to point out that our revenue estimates do not claim any additional revenue for TWA passengers who would have shifted from piston aircraft to jet aircraft for their transportation as a result of TWA being able to operate more jet aircraft, replacing piston aircraft, with the earlier and additional jet deliveries.

Our additional revenue calculation is limited to revenue for what I call the net additional passenger miles that would have been recorded by TWA as a result of having the additional jet flights and in this we used TWA's overall average yield. We did not make any adjustment for the jet surcharge which passengers would have paid.

[Tr. 10,677] I believe our use of this overall average figure for our revenue calculations, is the very best system that I know of for doing such revenue calculations.

Q. In the course of that answer, Mr. Wemple, you referred to an examination of revenues, yields, in flights between New York and Los Angeles in February and April 1959 and for flights between New York and Chicago for June 1960.

Are the computations behind the statement of the results that you made there, available?

A. They are now. I believe my associate has them and will provide them for you.

Mr. Tenney: In the event the defendants wish the computations, we will provide them for you.

Mr. Hayes: You may indulge the assumption that they do.

Mr. Perkins: There were other analyses and studies referred to and I don't know if what you referred to referred to everything that Mr. Wemple referred to in his testimony.

Mr. Tenney: I believe they did, but I will ask Mr. Wemple.

By Mr. Tenney:

Q. Were there any analyses that you referred to [Tr. 10,678] or intended to refer to, other than the ones I have just mentioned, that the work papers have not hitherto been made available to defendants?

A. The only new analysis is the one which we just finished up this morning, the work papers of which my associate has now available to you.

Mr. Hayes: I believe Mr. Wemple mentioned some study made by TWA and their outside accountants, too. There was some reference to it.

Q. Would you briefly explain what you intended to refer to by that reference?

A. Each year towards the fall of the year TWA and its independent public accountants review data on income and ticket revenue in very considerable detail and from this review they determine the revenue figure which shall be taken by TWA and shown on its books for income from transportation of passengers.

Q. And this is the published yield figure that is produced annually?

A. This is the revenue figure which is published in TWA's annual reports.

Q. And you did not intend to refer to any other study other than that which is in the normal course of business performed by TWA and its public accountants [Tr. 10,679] annually?

A. That's correct.

Mr. Tenney: I am simply trying to make clear there is no separate study and so there are no papers that we can produce for you.

Q. Your fourth fundamental error, so-called, in Mr. Simat's report of last fall, relates to the manner in which you have produced your cost estimates, Mr. Wemple. My reference there is to Page III-5 of Mr. Simat's report last fall.

Will you comment on that error, so-called, Mr. Wemple?

A. I've prepared a study and calculation for the purpose of determining the nature and amounts of the change in operating expense which would result from acceptance of costing theories of Simat, Hellieson & Eichner and of the traffic and revenue analysis which I have adopted.

Mr. Tenney: Mr. Wemple, if you will pause for a moment, I will have this document marked for identification as TWA Exhibit 449 for identification. It is headed "TWA v. Hughes. Alternative Calculation of Changes in Domestic Division Operating Expenses Using SHE Estimates of Available Unit Costs, [Tr. 10,680] Costing Units and Cost Categories and C & C Estimates of Changes in Traffic, Revenues Jet and Piston Service."

This document consists of three typewritten pages to which are attached a large number of sheets containing the breakdown of the figures and I ask whether it would be desired that we include these attached sheets as part of the exhibit or simply designate them as work papers. Copies, of course, are equally available to counsel for defendants. I ask which Mr. Brownell would prefer and which the defendants would prefer.

Mr. Perkins: My preference would be to limit it to the summary sheets here and just submit those as work papers and if it is necessary to offer them in evidence, we will offer them on cross.

The Special Master: Fine.

Mr. Tenney: So Exhibit 449 for identification should only include the three typewritten sheets that I described. The remaining papers are not to be considered as part of the exhibit.

• • • • •

[Tr. 10,681] • • • Q. Is the document which has been marked TWA Exhibit 449 for identification, the study that you have just now referred to?

A. It is.

Q. Would you explain this exhibit, please?

A. As set forth on page 2, the first paragraph of this exhibit, for these alternative calculations we have used the SHE costing units which were listed in SHE report Volumes I and II. We have also used the SHE statements on TWA variable unit costs which are costs per block hour, et cetera, which we took from work sheets which were furnished with SHE Volume B. We have applied these unit costs to our estimates of changes in passenger traffic and in revenues. And we have set forth our estimates from our report, Volume I.

The result of this alternative cost calculation is set forth on page 3 and it gives a total figure of $91.5 million of additional operating expenses for the assumptions for which we have made estimates in our Volume I, as amended, by TWA Exhibits 42 and 43 and Defendants' [Tr. 10,682] Exhibit 262.

This figure of 91.5 million may be compared with the figure produced by our system of calculation of 94.9 million. There is a $3.4 million difference.

Accordingly, if we had used the SHE system of calculating operating expenses, we would have produced an improvement in gain from operations of 67.4 million rather than the figure we did produce of 64.0 million.

Accordingly, I believe the difference between Mr. Simat's preference for calculating operating expenses and my system, is of no practical importance to this discussion.

Q. What then does account for the substantial difference between the results of your estimates and the results of the computations made by Mr. Simat, if it is not costs?

A. Mr. Simat's estimates are based upon substantially different numbers of revenue block hours than result from our estimates. Different numbers of departures. Different numbers of piston plane miles deleted. Different numbers of stewardess block hours.

Those are the reasons for the difference which occur to me at this moment, to answer your question.

Q. Can they be summarized as a difference in [Tr. 10,683] operating patterns?

A. In the main, yes.

Q. It is also true, of course, is it not, that there are differences in the estimations by you and by Mr. Simat of how many additional passengers would be carried on these various assumptions?

A. That's correct, and also the amount of revenue that would be associated with those additional or lesser passengers.

• • • • •

Q. This point relates to a statement by Mr. Simat in the course of redirect at transcript 10,456-58, in which he states that, "On-line" passengers in the New York to Los Angeles market for the period 1959 to 1963, in the New York-San Francisco market in the period 1959 to 1962, generally decreased.

Do you recall that testimony, of Mr. Simat's?

[Tr. 10,684] A. Yes, I do.

Mr. Tenney: You may recall, Mr. Hayes, that there was an exhibit produced, I believe, in connection with that, although I don't have the exhibit number.

Q. Will you comment on that phenomenon described by Mr. Simat, please?

A. It was my observation that during the period 1959 to 1963, the airlines providing coast-to-coast service, as they got jet aircraft, were able to substantially improve transcontinental service from points other than New York; that prior to the jet aircraft and, of course, during the early period of jet operations, coast-to-coast service was superior between New York and Los Angeles and San Francisco and I believe that many people from places such as Boston, Philadelphia, Washington, and so on, traveled to New York to make their transcontinental trips; that as the coast-to-coast service improved between, for example, Boston and the West Coast, people, of course, began taking flights from the Boston area.

To review the figures, I have prepared this tabulation of data taken from the CAB competition studies.

Mr. Tenney: I ask that this sheet headed "TWA v. Hughes, Transcontinental Passengers, 1959- [Tr. 10,685] 1963," be marked as TWA Exhibit 450 for indentification.

• • • • •

Mr. Tenney: TWA Exhibit 450 for identification, having been produced since the time when we gave to the defendants copies of the other exhibits we have had marked, has not previously been given to them, but we are at this time furnishing them with copies and if there are any work papers with respect to it, of course, they will be available. It's actually simply a takeoff. Well, I should not say what that is.

Q. Mr. Wemple, is TWA Exhibit 450 for identification the document you were just now referring to?

A. It is.

Q. Will you explain how it was produced?

A. The upper part of the tabulation lists pairs of cities. An East Coast city on the left and a West Coast city on the right of the column headed "Segment." The East Coast cities are New York, Boston, Philadelphia, Washington and Baltimore.

The West Coast cities are Los Angeles and San [Tr. 10,686] Francisco.

The figures under each column heading 1959 through 1963 are taken from the CAB competition study and they are the total on-line passenger traffic between those pairs of cities.

You will note that the New York-Los Angeles, between 1959 and 1963, actually showed a 1 per cent decrease. New York-San Francisco, a modest 10 per cent increase. However, if you take the transcontinental subtotal you will find

that the total of all this coast-to-coast travel increased 17.5 per cent between 1959 and 1963.

The lower part of the table is included for interest. It shows that with the New York to Chicago to West Coast travel also included the increase for all the segments listed is 18.6 per cent during this same 1959 to 1963 period.

Q. May I ask on this, what carriers are covered?

A. All of those carriers providing transcontinental service, New York-Chicago—all the carriers providing coast-to-coast service, which, of course, is TWA, United and American and any other carriers whose traffic would have been listed in the CAB study as traveling coast to coast.

Q. You have included, then, all passengers listed as [Tr. 10,687] traveling between these two pairs of points by the CAB competition studies on whatever carrier?

A. Yes, to the best of my knowledge, that is how it has been put together.

Mr. Tenney: I offer in evidence, the documents which have been marked as TWA Exhibits 443 through 450 inclusive, which are the documents that Mr. Wemple has been testifying with respect to this afternoon.

Mr. Perkins: In addition to the general objection that has been made to the whole line of testimony and the exhibits offered up to this point, we also object to these until we have had an opportunity to examine them and cross examine Mr. Wemple with respect to them.

(TWA Exhibits 443 through 450 for identification, inclusive, received in evidence, as of this date.)

Mr. Tenney: I have no further questions of Mr. Wemple at this time and he is available for cross examination.

• • • • •

[Tr. 10,735] Mr. Perkins: I ask the reporter to mark as Defendants' Exhibit 378 for identification a cover page of the CAB report entitled "A Study of the Domestic Passenger Air Fare Structure," and pages 210 through 236 from that report which comprise the letter from Mr. Barch that I just referred to.

• • • • •

Mr. Perkins: Excuse me. I apparently didn't mention the important point that Mr. Barch was a vice president of TWA.

Mr. Tenney: May I ask whether a copy of the entire report is available?

Mr. Perkins: Yes, if you would like to see it (handing).

Q. At the bottom of page 211, Mr. Wemple—

A. Excuse me, Mr. Perkins, I don't—

Q. The numbers are at the top of the page.

—Mr. Barch states with reference to disparities between fares in north-south directions as opposed to east-west directions and I quote:

[Tr. 10,736] "Data from the present fare structure study also illustrate this condition in the spread between the fare per mile and rate per mile curves resulting from computed fares developed by application of the standard regression formula (Y equals A plus BX) applied to an appropriate sample of existing fares. Exhibit 1 attached, illustrates the disparity between the directional curves."

Turning to Exhibit 1, I particularly direct you attention to—

A. Excuse me, Mr. Perkins. Which page of Exhibit 1?

Q. The first page of Exhibit 1.

A. I have it.

Q. You will note that for jet first class and jet coach, Mr. Barch has computed rates per mile for north-south and east-west directions varying in the case of jet first class from 18.89 cents per mile on segments of 100 miles down to 7.24 cents on segments of 1,900 miles or longer.

I also call to your attention pages 4 and 5 of Exhibit 1 in which he has charted the rates per mile which he has developed from a regression formula showing how the rate declines as the segment length increases.

[Tr. 10,737] I ask you whether this is not an appropriate method of estimating what fares would be at different segment lengths.

Mr. Hayes: You mean yields?

Mr. Perkins: Fares or yields.

Mr. Tenney: I don't see how the witness can be asked to glance at a document of this length which he has never seen before and expected to answer as to whether a particular table appended as an exhibit to one of the appendices represents an appropriate method of doing anything at all.

He has had no opportunity to determine what is really involved in this study, let alone what methods were applied.

I believe that this question is not one that any witness can be expected to answer under these circumstances.

[Tr. 10,738] Mr. Perkins: I don't know about any witness, but if Mr. Wemple does not know, he can certainly say he does not know.

The Special Master: You have not had an opportunity to study this?

The Witness: I have never seen this report.

The Special Master: I don't see how he can answer it intelligently.

• • • • •

[Tr. 10,672] Q. In TWA Exhibit 444, you have tabulated for all aircraft types by year, 1959 through 1963, the historical seat miles for TWA, United and American, and your estimated additional TWA seat miles shows the per cent additions by TWA, and you have also shown those same percentages—you have also shown percentages for the relationship between the estimated additional TWA seat miles and TWA's historical seat miles.

In connection with that exhibit, you stated at page 10,646 that these percentages show that your estimated additional jet seat miles cannot possibly be characterized as introducing jet capacity into a market in unlimited quantity.

[Tr. 10,763] This testimony is in relation to your using the average load factor for each type aircraft in the year in estimating the added or deleted traffic additional or deleted aircraft.

In your report, you did not indicate any percentage increase where it would no longer be appropriate to use the average stage length, did you, Mr. Wemple?

A. If you refer to our report dated—

Q. TWA 4C?

A. Yes.

Q. Yes?

A. (continuing)—I don't recall for Domestic Division operations any percentage increase in seat miles figures in here at all.

Q. But—

A. If I understand your question.

Q. In applying your procedure of estimating additional traffic by using the average load factors, you nowhere in your report, as I recall, stated any percentage increase in capacity beyond which that would not be an appropriate way of estimating, did you?

A. I believe my answer properly is that is correct.

Q. Did you have any limitation in mind at that time?

[Tr. 10,764] A. No.

Q. I think here you mention that the highest in any year is 13.6 per cent. That is related to TWA's miles.

I would assume that you think it is certainly appropriate within that percentage to use the average load factor to estimate.

A. I believe I have so stated.

Q. Do you think there is a limit anywhere, or is it an unlimited quantity?

A. No, I would not say that TWA can add jet capacity in unlimited quantity in a market, without affecting the load factor. I am afraid I do not understand your question and I am, therefore, puzzled how to answer it. Perhaps I can ask you to rephrase it or repeat it to me.

Q. You have said that Mr. Simat was in error in charging you with an error in applying the average load factor to additional capacity in unlimited quantity.

If that is true, there must be some quantity beyond which you could not do it. I am asking you do you have in mind or have you ever had in mind some quantity beyond which you would not go? Have you ever considered this?

A. Yes, I have considered it. I do not have a [Tr. 10,764[A]] quantity in mind because the assumptions that we were given for these particular estimates did not involve, to use Mr. Simat's terms, introducing jet capacity into the market in an unlimited quantity.

So, I had no occasion to determine what might on a theoretical basis be a point at which you were to get into the thing that would be characterized as "unlimited quantity."

Q. You would not be able, in your opinion, to state any number where this principal—100 per cent or you have no—

A. I am not prepared with any number. A great many things are involved in the operation of an airline.

If one were to—TWA started off with essentially, as I remember, one transcontinental flight between New York and Los Angeles the very early part of this 1959 jet operation.

I believe it is perfectly reasonable to expect if they could have started off with three transcontinental flights instead of one, all three of those still would have been filled right up to the hilt; so that the load factor achieved would have been extraordinarily high in spite of an apparent tripling of jet flights.

This is the reason that I cannot give a pre- [Tr. 10,765] cise answer to that very broad question, as to what comprises "unlimited quantity."

Q. By the way, you state at the bottom of page 10,643 running over into 10,644, that this schedule which is TWA Exhibit 444 was developed to show the magnitude of the net increase in jet service.

At page 10,645 you say it shows the net additional jet miles which you estimate TWA would have operated.

Is that really what this exhibit shows, Mr. Wemple, the net additional jet miles?

A. The words "seat miles" should have been there rather than "jet miles."

Q. Let us add "seat miles," and I repeat the question.

A. Yes. I believe this exhibit does show the estimated net additional jet seat miles in comparison with TWA, United and American's total seat miles in the broad market served by those three airlines.

Q. What do you mean by "net additional jet seat miles"?

A. It is fundamental to our estimate that we estimated, as I have mentioned a number of times before, that a certain amount of the additional jet aircraft [Tr. 10,766] availability would have been used for direct replacement of piston aircraft flights and seat miles.

Over and above that direct replacement is the part which I call net additional jet seat miles.

Q. So this is the net—

A. Correct.

Q. (continuing) —it is not the added jet miles; it is the net over the deleted piston miles?

A. Over the piston miles replaced.

Q. Over the piston seat miles?

A. That is correct.

Q. But in your estimating, you estimated separately for added jet miles and deleted piston miles, did you not? You used separate load factors?

A. We calculated—yes, we used separate load factors for jet seat miles and piston seat miles, that is correct.

Q. The jet seat miles were not always added in the same markets where the piston seat miles were deleted, were they?

A. The total jet seat miles, as I have said before, served two different purposes. One was the direct replacement of piston seat miles and the other was a—what I have called a net addition.

[Tr. 10,767] Now, insofar as being in the same general markets are concerned, if you mean markets as pairs of cities, yes, they were in the same general markets, pairs of cities.

Mr. Perkins: I ask the reporter to mark as Defendants' Exhibit 379 for identification a sheet entitled "Various Comparisons of Wemple's Jet Seat Miles Added (Domestic) With Historical Jet Seat

Miles Flown (Domestic)," to which are attached three pages of work papers.

• • • • •

By Mr. Perkins:

Q. This tabulation, Mr. Wemple, in Column 3 shows that TWA assumed jet seat miles added in each year for each type of jet aircraft and in Column No. 4 it shows what percentage that was of the total jet seat miles flown by TWA in that year, and in Column 5 the percentage is related to the total seat miles flown with that type of aircraft.

There are other percentages which show what the total jet seat miles added—the percentage relationship [Tr. 10,768] with the total of American Airlines, United, American and United together, and all three of the trunks.

First, I direct your attention to this particular total—this Column 4, the percentage of the total jet miles added to the total TWA seat miles operated on jets in that year, which is 63.2 per cent, and the relation with American—

A. I am sorry, Mr. Perkins, I did not follow that last one.

Q. In Column 4 under 1960 opposite total 63.2 per cent.

A. I see your point. I was looking at the wrong year.

Q. The percentage of the total added jet seat miles in that year is 43.1 per cent of what American was flying and 56.6 per cent of what United was flying.

I ask you, in your opinion, could TWA have introduced capacity in those percentages at the average load factors for jets?

A. Yes, I believe they most certainly could. And I think in order to understand the reasonableness of my answer, you must take into account the number of jet aircraft that each of those airlines was operating in those years.

[Tr. 10,769] Your Exhibit 342 shows that TWA, American and United, number of jet aircraft assigned to service, Domestic Division in the year 1959 for the big three was 245.

In the year 1963, the number of jet aircraft these three used for Domestic Division service was 201.

By the—correction—so that the 1959 number is 12 per cent of the total number that those three airlines were able to use effectively in 1963, when they finally had that number of aircraft available to use.

It would have been a perfectly marvelous thing for TWA to have been able to double the number of aircraft, jet aircraft it had in 1959 and it would have given TWA a tremendous competitive advantage, I believe, over the position that it did find itself in in comparison with the other airlines.

[Tr. 10,770] Q. My question—

The Special Master: The other airlines were restricted in their supply, too, weren't they?

The Witness: And particularly United which in 1959 was suffering from the delay of the DC-8 deliveries.

Q. My question was not directed at this point—I think I will come back to it later—to 1959 and 1963, but I was asking just about 1960, the percentages shown in Defendants' Exhibit 379 for identification, and I just wanted your opinion whether additional seat miles could have been operated in those percentages at the average load factor?

A. My answer has been yes, I believe they could, and I point out to you that much of this assumed TWA jet seat miles which is listed here is for direct replacement of piston seat miles.

So that the—there was a block of passenger traffic already there just ready to move into TWA's better aircraft.

Q. Just looking at 1961 under column 5 for the CV-880s, you will notice that your assumed additions result in doubling the 880 capacity which would have been operated in that year, and I take it your answer [Tr. 10,771] would be the same with respect to that if I asked you the same question?

A. Yes, it would be, Mr. Perkins, and as I pointed out the other day, the CV-880, traditionally throughout the period, ran a higher average load factor than all aircraft operated by TWA in a particular year.

So my answer is yes.

Q. I think you did testify that you selected your average load factors as typical of particular types of jets because in your opinion they were operated in a manner characteristic with that type of jet.

A. I think I would have said it that TWA's operating plan assigned certain—correction—assigned various types of aircraft, jet aircraft, to characteristic service. And in my opinion they would have assigned the additional aircraft of that same type to the same characteristic service in a particular year or a particular period.

Q. Even if the capacity was doubled?

A. In this instance, certainly, even though the availability number of seat miles was doubled.

Again, a part of those available seat miles would have been replacing piston seat miles in the same service.

• • • • •

[Tr. 10,784] • • • Q. Returning to TWA Exhibit 447, is there some reason for your breaking off these dotted lines showing monthly average load factors for each type of jet after the introductory period?

A. Plus three months.

Q. Plus three months. Excuse me.

A. It simplified the chart, and it was intended to show initially that after the first few months at the very beginning of introduction of a new type of jet fleet the load factor pattern became similar, generally, to the pattern of all aircraft being operated by TWA in that period.

The Special Master: I remember your testimony on that. I couldn't understand why that should be so.

Is there any explanation for that or is that just another historical fact?

The Witness: I think it shows and is a reflection of the fact that—or the situation that load factor is influenced by a great many things.

[Tr. 10,785] There are seasonal variations in load factor. There is environment, that is, competitive situation developments that affect load factors.

And those things which affect TWA's overall load factor also very promptly begin to affect the new jets as they are brought into the fleets.

That was all I was trying—intending to show by this.

By Mr. Perkins:

Q. Of course, the average load factor is in part made up of the jet load factor, isn't it, that you show?

A. A very small part in the early period. A larger part—

Q. A much larger part in the later period, right?

A. That's correct.

Q. For any of these you have not charted what happened after the introductory period plus three months?

A. Not on this particular chart.

Q. You have not done it previously?

A. I have done it. I did not retain it.

It was a monstrous looking chart because it had so many lines on it.

• • • • •

[Tr. 10,786] Q. I note, Mr. Wemple, that in each case these average monthly load factors are declining quite rapidly, for the 131s and for the 331s and for the 880s, not for the 720s. Don't you think it would have been of interest to see what happened to these load factors as time went on?

A. I have studied them.

Q. But you have not shown them here?

A. They have not been included in this chart.

The Special Master: Isn't the reason you did not include them basically because after this three-month period generally they stabilized at about the same thing for all types of equipment, the same pattern?

The Witness: Each type of equipment seems to have its characteristic pattern, that is correct. There are some exceptions to that, as you go from one end of the period to the other, but that is generally true.

Q. In your opinion, Mr. Wemple, as these various new fleets were introduced and added to TWA's overall capacity, is it your opinion that they would have had any affect on the average load factors achieved by the existing fleets?

[Tr. 10,787] A. Of the specific type?

Q. Well—

A. Again, I'm sorry I don't understand your question. Does your question relate to a specific type or does it relate to an introduction of an additional aircraft of a particular type affecting the overall load factor? Of course, my answer to the latter is yes.

Q. For instance, as the 331s were introduced in the domestic service, would that have any affect upon the load factors obtained by the 131s which had previously been introduced? And repeating that question again, would the introduction of the CV-880s which you have shown here in 1961, in your opinion, did that have any effect on the average load factors obtained by the existing 131s and 331s?

A. I would have no reason to believe that they would have.

• • • • •

[Tr. 10,797] Q. Comparing the figures for the transcontinental subtotal for 1960 and 1961, there was an absolute decline in the transcontinental traffic, and while it picked up again in 1962, it still didn't come back to the 1960 level. That's the 1,337,000 in 1962 compared with 1,042,000 in 1960, only slightly above the 1959 figure of 1,273,000.

If, as you say, these improvements in service took place in 1961 and 1962, how do you explain the fact that the transcontinental traffic for all of these segments didn't improve at all in those years, but declined?

A. I believe you just recited what is quite obvious, that in all of those years it was somewhat higher than it had been in 1959, and that the improvement which had the effect was probably complete for the majority of 1963, which represents the overall effect.

This exhibit, of course, was offered in comment on Mr. Simat's statement which related to changes between 1959 and 1963, and that is what this exhibit is offered with reference to.

Q. You have no other explanation of why with the addition of these other services in 1961 and 1962 the total traffic declined from 1960?

A. I have made no study of that particular aspect [Tr. 10,798] of the thing of the intervening years details.

Q. With respect to the percentages in 1963, have you read or listened to the testimony of both Mr. Simat and Mr. Eichner at various times that in 1963 there was a general improvement in traffic?

A. Yes, there was a—I am familiar with the fact that there was a general improvement in traffic in 1963.

Q. Isn't that the explanation for the improvement increases in 1963 rather than these additional services?

A. I am sure that the general increase in domestic travel is reflected in the 1963 figures as well as the improved service for the other than New York-East Coast cities.

Q. Mr. Simat's testimony not only related to the absence of any increase in traffic over that period, but he also related that historical fact to the changes in capacity offered in those markets during that period.

Did you make any similar study of the changes in capacity for the transcontinental segments listed in TWA 450?

A. I am sure there were more seat miles offered in 1963 than there were in 1959, and that they were primarily jet seat miles, the increase was in jet seat miles.

And as I mentioned before, the airlines found [Tr. 10,799] it profitable to operate at lower load factors, because their break-even point was so much further down, and this is the way the airlines operated, including TWA in that period, with additional seats in 1963 compared to the number they operated in 1958 and 1959.

• • • • •

Excerpts From Testimony at Damage Hearing of John C. Biegler

[Doc. 554-19]

[Tr. 6314] * * * Q. In any case, I believe you testified that you received no suggestions on the draft from any of the other experts?

A. I testified that we received no suggestions as to the draft of our report or the form of our report from the other experts, yes, sir.

Q. But the draft was reviewed by Cahill and you received suggestions from them?

A. Yes, it was reviewed by Cahill, and we did receive suggestions relating principally to format, arrangement of the material, not to the calculations or form of the financial statements.

Q. Did you adopt these various suggestions?

A. Some we did, some we didn't. Most of them we did, because they did improve the—we felt they improved the arrangement and the readability of the report.

Q. But it is your testimony they did not relate to the substance of the report or any of your conclusions?

A. I would say that any suggestions they made did [Tr. 6315] not relate to matters of substance, conclusions in our report.

Q. When was the report completed in the form as finally submitted on May 2nd?

A. I think it was completed probably the morning of April 28th.

Q. And delivered immediately to Cahill, I assume?

A. As quickly as it was bound.

Q. And to the other experts at that time, too?

A. I do not recall whether we circulated that to the other experts or not.

* * * * *

Q. Mr. Biegler, do you know whether prior to the time that you were retained there had previously been another accounting firm retained to help in the preparation of the damage case?

A. I have no knowledge of it.

Q. At that April 8th meeting, were there presented to you any pro forma statements—

[Tr. 6316] A. No, sir.

Q. —of what the assumed financials would be?

A. No, sir.

Q. There were not?

A. No, sir.

Q. You started from scratch, in other words?

A. Yes, we started without—with nothing on paper but we discussed the general concept of our work.

Q. What is your understanding, Mr. Biegler, as to the purpose of this reconstruction that you were asked to do by Cahill Gordon?

A. Well, we were advised that there was a damage proceeding.

We were supplied as information at the very early stages with a copy of the complaint, which gave us a general idea that there was a proceeding and what it was roughly all about.

And it was our understanding that what we were attempting to do is to apply to the historical financial statements the effect of certain assumptions which were to be given to us to show what the financial data of TWA reconstructed might have looked like if these assumptions were applied.

Q. You understood then that this would be used as [Tr. 6317] an instrument for measuring the damages to be claimed by the plaintiff in this case?

A. I don't know that we were ever given that precisely. We were asked to indicate what the difference would be between the actual TWA results during this period and what they might have been or would have been if these assumptions had been applied to them. And the difference, of course, is a matter for our client to use in whatever way they felt appropriate.

Q. You speak of this difference between the historical and reconstructed.

You were measuring this difference, and did you understand that this difference as computed by you would constitute a major part of the plaintiff's damage claim in this case?

A. I don't know how to put it, sir, in any other way than to say that we applied these assumptions to the historical financial statements and came up with a difference to be used by our client in whatever manner they chose to. I have no control over the decision as to how they use this information.

We did what we were instructed to do.

[Tr. 6318] Q. I understand that you had no control over what they would do with it. I think my question related to your knowledge or understanding of what they would do with it after you had computed it.

Mr. Williams: Can you add anything to what you have said?

The Witness: I don't believe so.

Q. To be specific, if you would turn for a moment to page 5 of Volume I, and the items listed under, or next to Capital A, as I understand it, relate to your reconstruction in the first paragraph, page 1. You show certain figures which add up to 84 million dollars described as the increase in stockholders equity before income taxes.

My question is whether you understood that this increase would be claimed as damages by the plaintiff.

A. At the time we were preparing this report and developing this information, we, of course, did not know whether the—whether our client would claim this amount or not.

We were asked to do as I described before, certain things.

But in view of the fact that we understood the general nature of the assignment and what might be the [Tr. 6319] end use, we, of course, arrayed this data in such a form as to bring out the effect of the application of these assumptions on a basis of effect before income tax. But as to—as I said before, as to how this would be used by our client, we did not know at the time we prepared this report.

Q. Did you ever engage in a reconstruction like this before, Mr. Biegler?

A. I have never engaged in a reconstruction like this before.

Q. Judging from the—what was it, 22,000 man hours that—I don't know if that is the right figure—that went into it, I gather this was not a simple or easy task.

A. In terms of volume of detailed work, it was not a simple, easy task. There was a lot of detail to deal with. It did involve a lot of man hours.

Q. If you will turn back to page 1 again, please, Volume I, the first paragraph states that in accordance with your instructions you prepared these data for the period September 30, 1955, to December 31, 1963.

Whose decision was it to use this particular period for the reconstruction?

[Tr. 6320] A. It was our client's decision.

Q. That was—

A. Cahill Gordon.

Q. —not your decision in any way?

A. Not to my knowledge, no.

Q. Did you have any discussions with your client about the period that should be used for the reconstruction?

A. We may have had discussions at our earliest meetings to define the scope of the project.

And I'm sure, while I cannot recall the specific terms of those discussions, the dimensions of the project were set out and they related of course to the work of the other experts which ran—as to my recollection, really span, taking them all together, span this period, September 30, 1955 to December 31, 1963.

Q. Did you ever try any other period?

A. No, sir, never tried any other periods.

Q. Do you have any opinion of your own as to whether this period is or is not an appropriate period for this work of reconstruction?

A. I do not have any opinion other than the fact of what you might call the input is confined to this period in terms of the data derived from the reports of [Tr. 6321] the other experts and the assumptions supplied to us.

Q. Your starting point here is September 30, 1955.

Is this the point at which the historical TWA and reconstructed TWA first diverge?

A. On the basis of the assumptions given to us, this is the first balance sheet where you see a divergence.

Some of the assumptions which were given to us which are derived from the Drexel Harriman Ripley report deal with changes which were assumed to have taken place several months before September 30th, but they have—they were given effect to in the September 30th balance sheet.

Q. How about the closing period of December 31, 1963? I think you testified that this was in your opinion appropriate only as it coincided with the inputs that you received from the reports of the other experts, is that—

A. Well, I said that that was the last date which would be affected by the input of the other experts in terms of reconstruction of the annual results of operations.

Q. You say that is the last—I am sorry.

A. Well, the last input we received was with respect to results of operations. There were some changes in the [Tr. 6322] 1963 results as a result—from the Coverdale & Colpitts report.

Q. But this is not a point at which historical and reconstructed TWA come together again, is it?

A. I—you will have to define for me what you mean by come together.

There were certain things that were historical and reconstructed so far as I could see that could never come together at any date.

Q. That is right. Once you have started them on their divergent paths, there are certain effects that will persist after December 31, 1963, and be reflected on the balance sheet, is that correct?

Even if you assume no other inputs, there would be balance sheet differences that would persist if you went on and did it for—suppose you took the income statements and the balance sheet for—the income statement for 1964 and the balance sheet at December 31, 1964. There would certainly be differences in historical and reconstructed then, would there not?

The Special Master: You mean such as interest on outstanding securities, things of that sort?

Mr. Perkins: Interest, costs, depreciation.

[Tr. 6323] A. Well, I believe the existence of two different debt structures at December 31, 1963, would lead to a variation in interest charges from then on reconstructed vis-a-vis historical.

So far as other elements, such as operating income and expense, I would have no basis for judging whether that would be any different or not.

Q. But at least it is conceivable that there would be effects persisting after December 31, 1963, as a result of inputs relating to an earlier period—

A. I have—

Q. —in addition to what you said about the debt structure?

A. There would be a difference between reconstructed and historical in terms of depreciation charges in the future.

• • • • •

[Tr. 6367] • • • Q. I think my question is, you have adjusted the historical data, you have reconstructed them in accordance with certain assumptions that have been given you, and you have computed a difference—in this particular case it is the difference of 123.1 million over this period as of December 31, 1963.

Do you have an opinion as to whether it is fair to compare an historical with an assumed situation on the basis of assumptions and to compute that at a cutoff date when the effect of the assumptions may be to continue after that date?

Mr. Williams: That's rather a complicated question.

I think I will object to the form of it. I think it can be broken up and restated, but it is rather confusing.

The Special Master: I understand what you are trying to get at. There may be continuing effects after December 31, 1963 and does that affect the validity of—

Mr. Perkins: On the basis of the assumptions.

[Tr. 6368] Q. I just wondered whether you have an opinion as to whether in comparing—we are engaged here, as I understand it, or the work you—you have done is really to compare an actual historical situation with an assumed situation on the basis of a number of assumptions that have been given to you.

You have computed differences as they stand at a certain cutoff date, December 31, 1963.

My question was whether you have any opinion as to whether it is fair to make a comparison of this kind when the effects of those assumptions that you have been working with may persist after that cutoff date.

Mr. Williams: Do you understand the question?

The Witness: I understand the question.

Mr. Williams: The first question is is it fair.

Mr. Perkins: No.

Mr. Williams: You argue it later but the basic question is is it fair to compute it this way.

Mr. Perkins: My question, sir, is [Tr. 6369] whether he has any opinion on that subject, whether he cares to express an opinion of any kind.

Mr. Williams: The question is do you have an opinion as to whether it is fair to compute this the way you did, taking the cutoff date that you did.

The Witness: I believe that applying the assumptions as given to us over this period results in a fair presentation of the difference in results for this period.

I have no opinion as to what the on-running effect might be at some future date insofar as operations are concerned.

Mr. Perkins: I think you have answered my question.

Q. You said it is fair for the period, but you express no opinion beyond the period.

A. Because my engagement—the terms of my engagement terminated insofar as this work was concerned on December 31, 1963, insofar as reconstruction of the financial statements are concerned.

Q. I think I understand your answer, sir. I hope I do.

A. You are asking me, sir, about something I have [Tr. 6370] no opinion on because I have no idea what the effects would be that you are referring to. It is something I have never considered.

Mr. Williams: You mean after the cutoff date?

The Witness: That's right. I have given it no consideration.

Q. My question was in a hypothetical form, if there were such effects whether you had an opinion whether it would be fair to use a cutoff date.

Mr. Williams: If there were such effects?

A. I would prefer, sir, not to answer a hypothetical question of that type because I do not know what my instructions would have been under hypothetical situations.

Q. That figure of 123.1 million—I am now back at Exhibit 2, the upper righthand corner—if you can also put another finger on page 5 of Volume I, and in that tabulation there there is a figure of 71.7 million showing the effect of application of assumptions to increase in income and special items.

The 123.1 million is a figure which, as I understand it, is going to come down to this 71.7 million after you have subtracted whatever is appropriate to subtract, is that correct?

[Tr. 6371] A. That is correct.

Q. Mr. Mallender tells me there may be some other additions, too.

A. Whatever needs to be done to arrive at 71.7 from the 123.1, yes, sir.

Q. In any case, looking at Exhibit 2, the first thing you do is subtract the historical and reconstructed provisions for depreciation and obsolescence, and from the increased gain you subtract the increase of depreciation of 47.9 million, is that correct?

A. Yes, that's correct.

Q. Again these depreciations figures are summarized from the annual figures in 2-1, and the source of the annual figures in 2-1 is Schedule F in Volume II, is that correct, sir?

A. That is correct, sir. Section F.

Q. Section F?

A. Yes. It is shown on the last page, page 2 of Schedule F.

I am referring to the grand totals that are shown on Exhibit 2.

Q. On the second page of Exhibit F, the totals are those shown in the third and fourth columns, is that correct?

A. That is correct, sir.

[Tr. 6372] Q. The assumptions with respect to the provisions for depreciation and obsolescence are stated beginning on page 8 of Volume II?

A. Yes, sir.

Q. Paragraph 1 states an assumption derived from TWA's historical policy, and perhaps this is an assumption for which you take responsibility, do you?

A. I believe that if you will refer to the first page of our report on Volume I, I say in order to maintain consistency between the reconstructed and historical financial data, the adjustments which reflect these assumptions on the historical financial data for the period were made on bases which correspond in all material respects with the accounting methods, which was an agreed term of our project.

The reason was to minimize deviations between reconstructed and historical which might be injected by using different accounting methods. And I think what we are trying to say is we didn't use a different system of depreciation on the reconstructed airline than we did on the historical.

Q. I see nothing wrong in that. This was basically your agreed approach?

A. It was basically our agreed approach with our [Tr. 6373] client.

If our client had instructed us to do something differently we would have done it for this exercise.

Q. You would have?

A. Yes, sir.

Q. Then, of course, all the remaining assumptions under Paragraph 2 there have the same character as the ones we have been discussing before. They are part of input that you have used in computing reconstructed depreciation?

A. Yes, sir.

Q. Following Schedule F, we have Schedule F-1.

Schedule F-1 shows the historical and reconstructed depreciation by fleet, does it not?

A. Yes, sir, it does.

Q. If we look at the 331s, the second line, which shows reconstructed 18 and historical 12, we see that the reconstructed depreciation naturally is considerably greater in every year beginning in 1959, and that difference continues, and in 1963 the reconstructed figure is 11.4 million as against an historical figure of 7.6 million, a difference, if my math is right, of 3.8 million.

Have you computed what that difference would be in 1964 or subsequent years?

[Tr. 6374] A. I have not.

Q. Is it your opinion that there would be a substantial difference in 1964 and subsequent years?

A. Well, I would—I prefer not to answer these questions by some sort of roundhouse approach, but if you wish to take '64 it would be my guess assuming the same 18 aircraft that we would have probably the same difference with respect to that particular fleet, assuming they had 18 at the end of 1964.

Q. You said previously—

A. But that is not—you are asking me to give you an answer without actually calculating it out and I hope that you accept that on that basis.

Q. I understand.

That would also be true, would it not, of the 880s, the fourth line, CV-880s, new, and they are reconstructed as against 20 historical, and in every year beginning in 1960 the reconstructed depreciation is substantially greater than historical, and in 1963 reconstructed is 12.5 million as against 7.8 million, a difference of $4.7 million.

Your opinion would be, realizing you have not done any computation, that there would be a substantially similar difference in 1964, based on those same assumptions?

[Tr. 6375] A. I believe it is reasonable to assume that if in 1964 we continued with a 50 per cent larger fleet of new Convairs, 20 against—30 against 20, that the charge for depreciation on this larger fleet of Convairs purchased new, would be something comparable to the difference in 1963.

Q. On those same assumptions, a difference would persist until they had been reduced down to their residual values?

A. Presumably until you followed it through. It wouldn't be necessarily on an annual basis because of difference of timing of aircraft coming into the picture.

Q. But this is an effect of the assumptions that would persist after 1963, is it not, in your opinion as an accountant?

A. Well, if you wish to isolate a particular item—

Q. That is what I am doing—

A. You are asking to take just depreciation—

Q. Yes, just depreciation.

Mr. Williams: One at a time. The reporter can't possibly get you both talking.

Mr. Perkins: I am sorry.

[Tr. 6376] Mr. Williams: What were you going to say, Mr. Perkins? You were asking a question.

Mr. Perkins: I believe the witness said if you want to isolate it as to particular items such as depreciation, and I said, yes, that's exactly what I was doing.

Mr. Williams: All right, then you finish.

The Witness: Well, I think my answer was that if you are dealing solely with depreciation as we are here, the answers that I gave, dealing solely with that aspect of cost and operation, my answers are probably—are fair.

Q. I understand that and I was trying to be very specific here, take some figures that were identified and isolated in your report.

A. Yes, sure.

• • • • •

[Tr. 6389] • • • Q. Now if you will please turn to Schedule B in Volume II, this again deals with reconstructed long term debt and shows the additions, the assumed additions to that debt throughout the period you are dealing with, is that what this does?

A. That is correct. Additions on a reconstructed basis starting from zero.

Q. If you will look at the first column you will see that the—or I should say I see that under the Series A notes the total amount of 170 million was taken down prior to the end of 1958, and after that, there is no change in that balance, is that correct?

A. That is correct.

Q. As to the Series B notes in the second column, the entire amount was taken down—I am not sure I am reading this right—in 1960, is that it, so that the ending balance—

A. A portion was taken down in 1959 and a portion was taken down in 1960.

[Tr. 6390] Q. So that at the end of 1960 the ending balance was 90 million and after that that remained the same.

Then in the fourth column, subordinated debentures were assumed to have been issued in 1959 in the amount of $60 million. So that the balance there was 60 million at the end of 1959, and after there is no change.

So, after 1960, as you look across there, there are no further changes of any kind whatsoever in the reconstructed debt, is that correct?

A. That is correct.

Q. Is that an assumption derived from the Drexel Harriman Ripley report?

A. The Drexel Harriman Ripley report ends insofar as financing is concerned, with December 31, 1960, and the terms of the flight equipment mortgage notes that are included in their financing do not call for any further—any reductions under their terms through December 31, 1963. The sub-assumption C, if you want to call it that, of the basic assumptions—these detailed assumptions that you are referring to on page 6, give you the basis for no other changes in the debt financing program.

Q. You mean in reading Schedule B, I have to consider that enumerated assumption C on page 6 is part of [Tr. 6391] the assumptions that underlie Schedule B, is that correct?

A. Yes, sir.

Q. I will transfer my question and say where in the Drexel Harriman Ripley report do you find the assumption that the debt financing program referred to in assumption B—that's the program that they recommend—is to be considered as a substitute for the entire amount of debt financing both long term and short term reflected in the historical financial statements except for minor amounts.

A. You will not find that, sir, in—directly in Drexel Harriman Ripley's report.

Q. Where did the assumption come from then?

A. It came as a result of discussion of the whole problem of constructing these financial statements, discussions with our client, Cahill Gordon.

Q. They gave you that assumption?

A. Yes, sir, they did.

Q. Did you discuss the basis for any such assumptio with them?

A. We may have at the time. I don't recall the detail of our discussion.

Q. But the Drexel Harriman Ripley financing as I unde stand it is a program that carries you through [Tr. 6392 December 31, 1960, is it not?

A. That is correct.

Q. You have carried that program through Decembe 31, 1963?

A. We have carried this program through, and we ha eliminated the historical program, whatever program the was in 1961, 1962 and 1963, that's right.

Q. You have assumed, have you not, that had the Drex Harriman Ripley program been carried out, no furth long term financing of any kind would have been enter into by reconstructed TWA in 1961 or 1962 and 1963?

A. The application of the assumptions that were giv to us clearly bring out that there are—that by assumptio C that there were no additional financings in 1961, 19 or 1963.

Q. I understand that, but that assumption is one y got from counsel, is it not?

A. That is correct.

Q. That is not an assumption that you can find in Drex Harriman Ripley anywhere?

A. No, sir, it is not.

Q. Mr. Biegler, would you please turn now to Schedu E-3 of Volume II?

[Tr. 6393] A. Section—

Q. E.

This schedule is entitled "Reconstructed and Histori Additions and Transfers to Flight Equipment."

Over in the left hand column we have a description first of a piston fleet and underneath that of a jet fleet.

As we proceed across this schedule from left to right we see year by year the historical and the reconstructed capital expenditures for each type of airplane.

Is that what this represents?

A. Expenditures transferred to the flight equipment, yes, sir.

Q. Transferred to flight equipment?

A. Yes, sir.

Q. I note looking at the jet fleet that for both reconstructed and historical you have fifteen B-131s, and then you have reconstructed eighteen 331s as against twelve 331s historical, and you have eliminated five 331Bs from the reconstructed, and you have thirty 880s reconstructed as against twenty 880s historical, and you have eliminated six 880s used from the reconstructed and as to all of those I recognize that they are derived from [Tr. 6394] the various principal and enumerated assumptions.

But we go on from there and we find in both columns of reconstructed and historical eighteen 131Bs, four B-720Bs described as leased, and two B-331Cs described as leased, and they have a double asterisk which says the reconstructed and historical amounts are assumed to be identical.

In addition there is a reference to B-727s and B-331Cs which a footnote describes as aircraft on order as of December 31, 1963.

My question is that as to those aircraft for which there were additions to the flight equipment fund where the reconstructed and historical amounts are assumed to be identical, from where do you derive the assumption that those amounts would be identical?

A. Well, if you are not given an assumption that there is to be a change, the only thing that we can do is leave it the same way as it was historical.

We were given no assumption to change these figures. Therefore, we left them as they were.

• • • • •

[Tr. 6409] • • • The Special Master: Are there any preliminaries this morning?

Mr. Williams: Mr. Special Master, before Mr. Perkins goes on with his cross-examination, I have something which I would like to mention.

[Tr. 6410] Since we recessed on Tuesday, I have learned from Mr. Biegler that for his own assistance he had prepared what is really a condensed summary of his report. He has prepared it, really, for his own assistance, but we found it so helpful to us that I thought I would offer a copy to Mr. Perkins and a copy to you.

It adds absolutely nothing to the facts and figures contained in the report, but it is the sort of thing that might be used by way of summary to help a person understand the rather voluminous and complicated report.

The figures, as I say, are all found in the report, but it isn't easy for a layman to understand how they fit together without a summary analysis.

I asked him to bring it this morning with the thought that it might be of service to you, Mr. Special Master, and to Mr. Perkins, and if you wish, I will offer it in evidence as TWA Exhibit 50, or we can mark it for identification, or you can use it yourself. I don't care.

Mr. Perkins: I have no objection to its being admitted into evidence, subject to our verification that these figures are all identifiable from [Tr. 6411] the report and properly correspond with what you have there.

Mr. Williams: I will then offer it in evidence as TWA Exhibit 50.

The Special Master: Received.

Mr. Perkins: I might add, Mr. Williams, it might have been very helpful if something like this had been included in the report at the outset.

Mr. Williams: We didn't know it ourselves.

(Document entitled "Condensed Summary of Effect of Application of Assumptions," marked TWA Exhibit 50 in evidence as of this date.)

• • • • •

[Tr. 6438] • • • Mr. Perkins: I might say at this point, your Honor, and this is really not to be construed in any way as a criticism of Mr. Biegler or his firm, that I am sure they have presented this reconstruction in probably the best way that they could, and I have no opinion on whether there is any better way to do it.

I just wanted to state for the record that it is not a very easy document to understand, digest and analyze. If you look for the inputs that come in from the other experts, you do not see them right away. They all suffer a kind of "sea change," and I realize that had to be in the way that the witness did it.

I just want to say what perhaps is clear, that it was difficult for us to understand.

We had to retain our own accountants, and I don't think they understood it right away, either.

As of January 15th, they had accumulated some —nothing like 22,000 hours, but 600 hours in [Tr. 6439] the process of testing, analysis and looking at the work papers.

Naturally, in that process they did not have the time to verify whether the figures in the work papers were properly entered from the various books and ledgers in Kansas City.

We have no reason to doubt that they weren't put down accurately and properly, but we don't know it. We have not been able to verify it, and in that sense we relied on the figures in the work papers just as Mr. Biegler has relied on the audit of Haskins & Sells.

Again, there is no reason to suspect error in either case, but we just don't know. And whether any of these amounts will ever become material or not to check them out and verify, I just don't know, but I would like to say we would like to reserve that right in case at some future date it does become material.

Mr. Williams: Your Honor, I have no objection to their reserving a right of that sort, but I do think since they have had since last May, we should have some advance notice in case they do wish to do any verifying, so we will be prepared [Tr. 6440] for it.

Mr. Perkins: You will have all the notice we can possibly give you, Mr. Williams, I assure you. I doubt if it will be necessary, but at this point I just don't know.

By Mr. Perkins:

Q. On page 5 of Volume I, Mr. Biegler—

The Special Master: Before you get into that, as I understand it, the only thing you are reserving is in case you run across some instance from now on where you believe that there has been a mistake in the figures, that you reserve the right to call that to my attention.

Mr. Williams: That is my understanding of what counsel said.

Mr. Perkins: We have examined the work papers. We have no way of knowing for sure whether the figures in the work papers are accurate. We have not been able to test that. I say we assume they probably are accurate.

But if the need should arise to test those figures against the books, ledger, invoices or what not in Kansas City, we would like to reserve the right to do so.

[Tr. 6441] The Special Master: I wouldn't want to approve a reservation which would extend the time for bringing the hearings to a conclusion. It is perfectly all right with me for you to reserve the right, if you run across, in the ordinary course of your study, mathematical errors or a prima facie mistake in the figures, you certainly will have the opportunity to call that to my attention and make such verification as you need.

Mr. Perkins: I don't think we have in mind anything that would contemplate prolonging the proceedings, but, I think at this point I am not sure just how much of what's in here will be material,

and there may be some things in there which in the time we have had to date it has simply been impossible for us to verify through our accountants.

By Mr. Perkins:

Q. On page 5 of Volume I, Mr. Biegler, up to now we have been discussing how you got to the 71.7 million of increase in income and special items before provisions for income taxes.

Underneath that, you have a further item of 12.3 million described as an increase in capital surplus.

[Tr. 6442] You have a further statement about that particular item on page 6,—

A. Yes, sir.

Q. (continuing) —where you say that this particular increase is accounted for by the difference between the net proceeds of the assumed 1955 equity financing, and the proceeds of the historical equity financing in 1957, and that historical financing is one that you have eliminated in accordance with your instructions; is that right?

A. That is correct, sir.

Q. The enumerated assumptions underlying what you have done here are stated in Schedule A of Volume II on page 13. They are recapitulated on page 13.

A. Page 13?

Q. 13, after Tab A. I think that sets forth what I have just stated to you. And again where No. 3 there says that the later sale is to be eliminated "as a consequence" of the 1955 equity financing. That phrase "as a consequence" does not express your own personal views, but is simply part of the assumption, as given to you, is it not?

A. It is my understanding of the assumption, yes, and it is also my interpretation of the Drexel, Harriman, Ripley report. This was the way I understood it.

[Tr. 6443] Q. It is your interpretation of their report—

A. Yes, sir.

Q. (continuing) —but not your own independent assumption?

A. I am not—no, sir, it is not an independent assumption.

The Special Master: I wonder if we could have a little more discussion of that 12.3 million figure. I am not sure I understand that.

By Mr. Perkins:

Q. Under paragraph 1 there you say that the assumed issue is to be sold at 17.50 per share on June 1, 1955, and then there is a description of the use of the proceeds.

By the way, Mr. Biegler, wouldn't the effect of this June 1st equity issue show up in the balance sheet of June 30th?

A. The balance sheet at June 30th?

Q. The TWA balance sheet at June 30th would—

Mr. Williams: 1955.

Mr. Perkins: 1955, thank you.

Q. (continuing) —reflect the effect of this transaction, would it not?

A. If there had been a balance sheet reconstructed [Tr. 6444] as of June 30, 1955, and this transaction had taken place, I would expect to see it in that balance sheet, yes sir.

Q. Wouldn't you assume that reconstructed TWA like historical would have had a June 30, 1955 balance sheet?

A. Well, they most certainly would have.

Q. But you did not choose to do it that way; is that—you chose to start with September 30th?

A. That is right, because those were our instructions to start with September 30th and to apply the effect of these assumptions which were given to us by Drexel, Harriman, Ripley, the effect of those assumptions to the September 30, 1955 balance sheet which was supposed to give us our starting point for this project.

Q. That was given you as your starting point?

A. Yes, sir, it was.

Q. Going back to page 6, then, we have the proceeds of the assumed equity financing of 55.5 million, and that is simply money that came in from the shareholders, is it not?

A. It is money that came in from the buyers of those shares, yes, sir.

Q. They were shareholders after—

A. After they bought them, I assume they would be.

Q. If they were not previously. They did not take [Tr. 6445] up their rights.

That is also true of the historical financing of 43.2 million? That is simply money contributed by people who were or became shareholders at the time they contributed the money to the corporation?

A. That is right.

Q. Some of that you classified as an earned surplus of $12.3 million.

I think if we turn to Exhibit—

Mr. Williams: Did the Special Master ask a question about the 12.3 million?

The Special Master: Yes.

Mr. Williams: You understand, your Honor, what that is? The theory, I assume, is that because of the higher price at which the shares would have been sold in 1955, the corporation would have real-

ized $12.3 million more than they did, in fact, realize when this same number of shares was sold in 1957.

The Special Master: Is that considered an element in your damages?

Mr. Williams: Yes.

The Special Master: In the face amount of 12.3 million?

Mr. Williams: Yes.

* * * * *

[Tr. 6463] * * * Q. 5¾ per cent is, I think, stated in the assumptions, Assumption 1 on page 4, that this was an assumption supplied to you by your client, the use of an interest rate at 5¾ per cent and it states that that is the coupon rate on the long-term debt issue closest to December 31, 1963.

Did you suggest that particular interest rate to your client?

A. I did not.

[Tr. 6464] We asked our client what rate to use in this calculation of discounted present value, and this is the one that resulted from our question, assumed external borrowing rate.

Q. Is there any particular reason to use this rate rather than some other rate, or is it just an arbitrary—

A. Well, I think if you were looking for an external borrowing rate, you probably would look at the latest borrowing prior to the date we are dealing with by historical TWA, and this makes—made a—frankly made a lot of sense to me, if you were going to use an external rate.

And if you look at Exhibit I-B, you see that the 5¾ is the—is the rate on the issue that, as we discussed earlier this morning, the issue that was effected in 1963.

Q. Isn't it true that this measure that you have made here is primarily used as a means of evaluating alternative uses of particular capital?

A. I don't know—I don't really understand your question, Mr. Perkins.

Q. It is an estimating tool, is it not, used by the management of a company in deciding whether certain uses of capital might be more profitable than other uses [Tr. 6465] of capital?

A. Might be. I don't know.

Q. You do not know that?

A. No, sir.

Q. How about the December 31, 1963 date, was that a date you used on counsel's instructions?

A. It certainly was a date that was agreed to between counsel and ourselves. It was the terminal balance sheet date.

We had reached the point where we had reconstructed TWA and had the effect of the reconstructed operations. It was the date that we would be expected to make this kind of a calculation.

Q. You did not give any consideration to what might have happened after that date?

A. We did not under this calculation, no, sir.

Q. Did you consider it under any other calculations?

A. The only thing that—where any consideration was given to what might have happened after that date was a supplemental calculation where we were asked to assume conversions of debentures. You will note that the assumption which was given to us here is that there are no conversions of debentures.

Q. Right, yes.

[Tr. 6466] A. And we were asked by counsel to also make a calculation of what the effect on this present value

calculation would be if we assumed that the convertible debt—we were given assumptions. We were told to assume that the historical convertible debt was converted when it was, and that we would assume that the reconstructed convertible debt was converted at the same time. I believe you have a memo in your file of papers which describes that matter.

We did make the calculation. It is in our working papers. It is in the working papers supplied to Arthur Young.

Q. From what you said I assume that you know that all of the debenture issue of 1963 was converted prior to the time that you undertook this assignment?

A. Well, I don't recall the actual dates of conversion that were ascertained for the purpose of that supplemental calculation which is not a part of my report. But I do believe that it was some time in 1965.

I don't know that—I can't tell you whether it was before our engagement or not without referring to the precise dates.

Q. It was converted prior to the time that you submitted your calculation of present value, was it not? [Tr. 6467] I believe you said—

A. Well, yes. It must have been before May 2, 1966, yes, sir, if it was in 1965.

Q. What is your opinion of the appropriateness of submitting a calculation of present value as of December 31, 1963 of debt which includes an amount of $38.5 million which prior to the time you make the calculation no longer exists?

A. I think it is justified by the assumption that was given to us here that there are no conversions of debentures.

If we had been making this calculation in point of time on December 31, 1963, you certainly could not assume conversions that had not occurred.

The Special Master: What troubles me a little bit is to call it historical.

The Witness: Well, it is historical, sir, as far as the position at December 31, 1963 is concerned.

Q. Let me ask you this to clarify that: It would be possible, would it not, if you had a building with a lease and fixed rentals over a period of, say, 20 years, it would be possible as of a date to calculate the present value of the rentals that you would receive over that [Tr. 6468] period, would it not?

A. Yes, sir, it would.

Q. You could calculate those, say, as of a date December 31, 1963?

A. Yes, sir.

Q. You might receive those instructions on January 2, 1964, and you could perform that calculation, could you not?

A. Yes, I could.

Q. On January 1st, that building might have been, let us say, destroyed by a tidal wave or some uninsurable risk. It would still be possible for you on January 2nd to calculate the present value of those rentals as of December 31, 1963, would it not?

A. Yes, sir, it would.

Q. That is comparable to what you have done here, is it not, analogous?

A. I think you are—I don't quite see your analogy the same way that you do, sir, but I will accept it for the way I understand it.

Q. If you see it differently, explain the difference to me.

A. Well, the fact is at December 31, 1963, these debentures did exist, they were convertible, and we had [Tr. 6469] no basis for assuming conversion—you know we

can't look into the future insofar as the reconstructed TWA and—

Q. When you made this calculation it was no longer the future you were then in the present, were you not? That's why I think the analogy holds.

At the time that you made the calculation you knew that this debt which you were computing as of December 31, 1963 no longer existed in the form in which it is set forth in your assumptions?

A. Well, that is correct, we did know that, yes.

Q. I concede that your assumptions certainly justify what you have done, but I am wondering about what justifies the assumptions. Do you have any opinion on that?

A. I believe that these assumptions were reasonable ones to make a calculation of the present value of the debt on an historical basis at December 31, 1963.

Q. You have no opinion as to whether it would be appropriate to use that computation for the purpose of damages in this lawsuit at a date which is now several years later than December 31, 1963?

A. As I think I have indicated before, the question of whether this is used for a claim of damages is out of my particular field, sir. We have made certain calculations [Tr. 6470] and made some measurements of positions at various dates and so on.

But as to whether that item should or should not be in a specific claim for damages, I have no opinion. That is a legal matter.

Q. Are you also aware, Mr. Biegler, that—to identify it, let us turn to Exhibit I-B in Volume I.

At the top of the righthand column under historical, there is an amount of $100 million as the amount of subordinated income debentures, 6½ per cent, due June 1, 1978.

The footnote at the bottom—I will have to withdraw my question whether you are aware of it because obviously you were.

It says, "Stock purchase warrants originally attached to the subordinated income debentures authorize purchase of 2,700,000 shares of stock at $20 a share to June 1, 1965 and at $22 a share thereafter to December 1, 1973."

In your computations of present value at December 31, 1963, did you give any consideration to the exercise of these warrants?

A. I did not, sir.

Q. None had been exercised by that date, had they? [Tr. 6471] Do you know that?

A. I don't know that.

Q. You never did a computation?

A. No, sir, I did not.

In fact, in sending over the material that you requested, the memorandum that refers to some computation on warrants—and I frankly was mystified by its inclusion in the memorandum—we did nothing because we assumed that the gentleman who wrote the memorandum had misunderstood the conversation. It was a totally meaningless thing to me.

Q. The gentleman who prepared the memorandum was from Price Waterhouse?

A. That is correct.

Q. Do you know who it was?

A. Yes, sir, it was Mr. Schwartz who attended that particular meeting that the memorandum refers to.

Mr. Perkins: I think since we have been discussing this memorandum we can mark it for identification.

This is a memorandum for the files, special damage study, with initials at the bottom CBS in caps and signed initials above that and a date of April 19, 1966, two pages.

[Tr. 6472] (Memorandum for the files, special damage study, with initials at the bottom CBS in caps and signed initials above, dated April 19, 1966, consisting of two pages, marked Defendants' Exhibit 265 for identification, as of this date.)

Q. I will ask the witness if this is the memorandum that we have just been talking about.

A. It is.

Q. Paragraph 4 says that Mr. Tenney requested that you prepare another calculation of present value of future payments for historical and reconstructed debt service based on the following assumptions, and Subparagraph (b) thereof refers to all outstanding warrants to be exercised on the same date.

And you have testified that Mr. Schwartz who has initialled the memorandum personally prepared it.

Did you discuss this? Did you see this? Did Mr. Schwartz submit this to you after preparing it?

A. Yes, a copy would have come to me.

Q. Did you read it?

A. I'm sure that I did at the time.

Q. Did you discuss 4B with Mr. Schwartz?

A. I don't know that I discussed it with Mr. Schwartz.

[Tr. 6473] Q. Whom did you discuss it with?

A. I probably discussed it with Mr. Trautlein, my partner.

Q. What was the substance of that discussion?

A. Well, I'm sure that the substance—and I can't tell you because this is an internal office memorandum, just summarizing some broad matters discussed at a meeting,

and I can't tell you what we said but I assume that I would have said, "Well, I don't understand that point. We don't—we couldn't do anything on that."

And I think—

Q. Did you report back to the client? This is a request from your client that you prepare a certain calculation.

A. I probably did not because this was Mr. Schwartz' recollection of a discussion, and he—for all I know there may have been subsequent discussion which might have clarified this point.

Q. But although you were supervising this work, you just ignored this particular request?

A. I would say that we—we ignored it to the degree that it didn't seem to have any relationship to the calculation on the assumption that all these convertible securities would be converted.

[Tr. 6474] And I frankly don't know, sir, how we could inject into the present value calculation the exercise of warrants on stock.

There may be a way, but I personally do not know what it would be.

Q. It does have some relation to the stockholders' equity, does it not? You have reported on the increase in stockholders' equity?

A. As of December 31, 1963, yes, sir.

Q. Any exercise of warrants would increase that equity, would it not?

A. Yes, it would. People exercise their warrants and paying in the additional amount would provide more capital.

Q. Do you have any information as to whether any of these warrants have been exercised and when?

A. I have no information concerning the warrants other than it is shown on Exhibit 1B.

Q. Returning to Exhibit 265 for identification—

Mr. Perkins: This has been identified by the witness. Perhaps I should offer it in evidence at this point.

Mr. Williams: No objection.

The Special Master: Received.

[Tr. 6475] (Defendants' Exhibit 265 for identification, received in evidence, as of this date.)

Q. On page 2, Paragraph 5 says that Mr. Tenney agreed to your suggestion that you perform an additional analysis of present value giving effect to future income taxes of 50 per cent.

Did you perform this calculation?

A. We attempted to, and quite frankly gave up on this calculation, because we found that it was just impossible to arrive at any sort of an estimate of what an effective tax rate would be based on a statutory rate of assumed 50 per cent, because of such things as accelerated depreciation that would enter into the picture, the investment credit.

And I quite frankly, sir, gave up on this calculation.

Q. So it was never performed?

A. It was never completed. It started and we gave up. Because we just couldn't get the assumptions to make such a calculation.

Q. What occasioned your suggestion?

A. Well, the thing that occasioned it was my concern that if this were to be ultimately used in a damage claim, if it were, and I might—I want to emphasize that—that [Tr. 6476] any amounts that might be received with respect to such a matter as this would probably be subject to tax.

And putting it in its simplest terms would $20.3 million if that were the amount which were claimed, would that be

after an effective tax was paid, would that be representative of the differences in present value. That's what started me on the train of thought concerning income taxes.

And, as I say, when I sat down and tried to figure out what you would use as an effective tax rate, I gave up, because there are just too many assumptions to be made, concerning effective tax rates, over the span of years that we are talking about here for a present value calculation.

Q. But you knew that there would be income taxes of some kind, did you not?

A. I did not know that there would be income taxes. There might well have been no income taxes paid over this period of years through the accelerated depreciation allowances. You might have a series of operating losses and then they would be offset against operating income.

I think if you made enough assumptions you might make a stab at this, but I gave up.

Q. You made quite a few so far?

[Tr. 6477] A. That's sort of the assumption I am trying to describe as the sort of assumption that you have to deal with in projecting effective tax rates and I frankly gave up.

Q. But as a realistic matter, if you were weighing—or let me ask you this: Ordinarily in performing these calculations for some managerial purpose, don't you take taxes into consideration? We are talking about how much this—say the debt would be. The interest will be the net effect after taxes, will it not?

A. It will be net after applying the effective tax rate, whatever that is, yes, sir.

Q. Do you ordinarily ignore taxes in trying to measure the present value of future burdens or future income?

A. Well, as I explained earlier, the example that I was thinking of where you had an unfunded liability that you were setting up at present value, we would use the effec-

tive earnings, internal earnings rate after taxes, after the effective tax cost.

You would probably use what ever you consider to be the current earnings rate after taxes, and then the following year as you continue to accrue, you would base it on the earnings rate that year which would be your best [Tr. 6478] measure of—the safest measure of future earnings.

So that I think if you were using an internal earnings as your basis of discounting you would consider after taxes, after actual taxes. We are talking here more or less about cash flow so you can't use statutory rates. You have to talk about effective tax cost.

Q. That would be true in measuring the burden of future interest payments, you would consider—

A. That's true, that's true. The effective tax—the effective cost after taxes of the interest which might be something less than the statutory rate if your effective rate were zero.

Mr. Perkins: I would like to mark for identification as Exhibit 266 copies of supplements to the Schedule B-3 to Form 41 submitted to the CAB by TWA, quarterly—March 31, 1964 is the date on the first one, and then for each quarter after that, to and including the quarter ended September 30, 1966.

(Copies of supplements to Schedule B-3 to Form 41 submitted to the CAB by TWA, first dated March 31, 1964 and ended September 30, 1966, marked Defendants' Exhibit 266 for identification, as of this date.)

Q. These reports show the number of warrants, the total amount of warrants which were exercised during the [Tr. 6479] respective quarters, and the changes in the capital stock account as a result thereof.

The computation which we have made shows that during this period warrants in the amount of $6,155,960 were exercised.

With that information, Mr. Biegler, do you still consider that it is appropriate for this purpose of this lawsuit, if you have an opinion, to show an increase of 12.3 million in capital surplus reconstructed over historical at December 31, 1963?

A. Well, I have no opinion. Your question is long and complicated, but I really have no opinion on your question.

We made a calculation of reconstructed against historical at December 31, 1963, and covering that period, and that's what the 12.3 million is.

That's all I can tell you, sir. This is information that you handed me here that relates to periods subsequent to that, and I have no opinion on the pertinence of this to what I have—the figures that I have submitted in my report.

Q. There were instances to which you testified in which you sought out information after 1963 for the purpose of your report?

[Tr. 6480] A. There were a few instances, that is correct, for the purpose of my report, yes, sir, but I did not—

Q. You made no inquiry as to future changes in stockholders' equity which had occurred after December 31, 1963, but prior to the time that you submitted your report for the present date?

A. I made no inquiries concerning changes in stockholders' equity since December 31, 1963 for the purpose of my report.

Q. So that what has happened after that date with respect to the capital stock of TWA or the long-term, the historical long-term date as it existed at December 31, 1963, is totally immaterial to the assignment you were given and on which you have reported?

A. I don't know whether it is—you say immaterial. That is a conclusion.

But it is not a matter that I considered necessary to carry ut my particular assignment, for me to go beyond 1963.

Mr. Perkins: I would like to offer this in evidence.

Mr. Williams: No objection.

The Special Master: Received.

[Tr. 6481] (Defendants' Exhibit 266 for identification, received in evidence, as of this date.)

• • • • •

[Tr. 6523] • • • Mr. Sonnett: Mr. Brownell, there are several preliminary matters which I would like to raise bearing on the question of scheduling which I understand you indicated you would like to have discussed this morning.

The Special Master: Right.

Mr. Sonnett: Both of these matters have some relationship to the problem of scheduling from here on out, and subject to the resolution of these [Tr. 6524] two we anticipate that the two witnesses who are called for today would be our last witnesses in terms of the plaintiff's case in chief.

The first relates to Mr. Connelly of Boeing and to his letter to you of February 23, 1967, with a copy to Mr. Hayes and to me, which I take it everybody has had a chance to examine.

It might perhaps be in order to mark it for identification at the moment, so the record reflects what we are talking about.

(Letter dated February 23, 1967, from Mr. Connelly, The Boeing Aircraft Company, marked TWA Exhibit 51 for identification as of this date.)

Mr. Sonnett: Specifically with respect to this, my proposal would be in the interest of saving time that it be stipulated that Connelly would so testify and

that this be incorporated in the record as part of his testimony.

I don't know what the views of Mr. Hayes on that subject would be.

Mr. Hayes: I have no objection.

The Special Master: We can just take the statement in the record that you made as enough for that. It isn't necessary to have any paper signed.

[Tr. 6525] Mr. Sonnett: I would think if you so direct, it would be admitted for the purpose for which I have offered it.

The Special Master: I will direct it.

(Plaintiff's Exhibit 51 for identification received in evidence as of this date.)

Mr. Sonnett: The other one which I hope we can dispose of equally expeditiously is an effort to eliminate the need for some additional material in the record, and I would like to tender this proposed stipulation to counsel for the Tool Company and to the Special Master, and to request, please, that they read the last paragraph first, because I think this may shorten our problem.

Mr. Hayes: May I inquire what the purpose of the stipulation is? It seems to me to be completely outside the scope of anything that can possibly come before you as Special Master.

Mr. Sonnett: We will argue in due course. The reason for the third paragraph is to avoid the necessity of having argument now. We will argue in due course on the basis of these facts which I think are accurate, the factual material the Special Master is entitled to consider under well settled [Tr. 6526] law—for example, the International Boxing case in the Supreme Court—to consider what the fruits were that the defendants enjoyed by reason of their con-

duct. And as this indicates, the gain of the Hughes Tool Company out of its own share of TWA stock amounts to roughly $450 milllion after payment of expenses.

Mr. Hayes: Whatever the figures are, they seem to have absolutely no relevancy to the issues before you.

Mr. Sonnett: I didn't think you would stipulate relevancy. That's why I put paragraph 3 in. This is a matter for argument.

Mr. Hayes: Suppose they had sold at a loss, would that prove there were no fruits and, therefore, no conspiracy?

Mr. Sonnett: As I say, I don't think this is the time to argue.

Mr. Hayes: No, but you are asking me to sign a stipulation assuming the facts are accurate.

I won't sign a stipulation which has nothing to do with the case.

Mr. Sonnett: I was hoping we could avoid the necessity of calling witnesses to make a record of the simple facts contained in paragraphs 1 and 2 [Tr. 6527] which have been widely publicized, except, of course, two is a figure that we have arrived at which I am sure the Tool Company already has and can verify easily.

Mr. Hayes: I don't see any need even for calling witnesses.

If they call witnesses, it would only delay this proceeding. I would object to their testimony, on the grounds that I have already stated, and then you would be called upon to rule. You can rule just as well on this stipulation, it seems to me.

The Special Master: Why don't you just make it an offer of proof?

Mr. Sonnett: All right, I would like to know whether in this connection counsel for the Tool Company are now prepared to dispute the accuracy—

Mr. Hayes: We would have to check the figures.

Mr. Sonnett: If you do that, at least the record will reflect the correct numbers, whatever the ultimate decision as to relevance and materiality. So I would be quite happy to offer it. I would like to have it marked, therefore, as an exhibit for [Tr. 6528] identification—make it as an offer of proof.

Mr. Hayes: Are these figures before taxes that you set forth here?

Mr. Sonnett: Yes.

As long as we are doing that, I would like to also similarly, on the same basis, have marked and offer the prospectus for the sale of the Hughes stock, dated May 3, 1966.

Mr. Hayes: Same objection.

The Special Master: Mark them for identification and consider them as an offer of proof and I will reserve decision.

(Proposed stipulation marked Plaintiff's Exhibit 52 for identification as of this date.)

(Prospectus re sale of Hughes stock, dated May 3, 1966, marked Plaintiff's Exhibit 53 for identification as of this date.)

Vol. 11 of Defendants' Exhibits to Deposition of Charles C. Tillinghast, Jr. (consisting of Exhibit 11, with subparts 11-A through 11-T, inclusive) [Doc. 238] A-3220

Opinions and Orders of the Civil Aeronautics Board with respect to the Hughes Tool Company—TWA Control Relationship, as follows:

(a) CAB Opinion and Order No. 3210, October 17, 1944 (officially reported at 6 C.A.B. 153) [not a part of the Record herein] A-3297

(b) CAB Order No. 4437, January 26, 1946 .... A-3307

(c) CAB Order No. E-922, October 29, 1947 .... A-3309

(d) CAB Opinion and Order No. E-1735, June 30, 1948 (officially reported at 9 C.A.B. 381) [not a part of the Record herein] A-3311

(e) CAB Opinion and Order No. E-4701, October 6, 1950 (officially reported at 12 C.A.B. 192) [not a part of the Record herein] A-3333

(f) CAB Opinion and Order No. E-16195, December 29, 1960 (officially reported at 32 C.A.B. 1363) A-3403

Excerpts From Testimony at Damage Hearing of Gene M. Woodfin

[Tr. 6838] • • • Mr. Sonnett: I understand, but I propose to spend a little time on this.

Q. Under the heading "Jet Aircraft," it reads:

"TWA's major U.S. airline competitors have announced that they have ordered jet aircraft for delivery beginning in 1958. The cost of jet aircraft will greatly exceed that of the latest models of piston-engine aircraft (although they will have greater speed and capacity) and their use will require substantial investments in ground equipment and will pose major problems relating to operations, traffic control, maintenance and airport availability.

"TWA has placed no orders for jet aircraft, but its management believes that it will be necessary for TWA to operate such aircraft if it is to maintain its competitive position and that the cost of the required aircraft, spare parts, and engines will exceed $320,000,000. Accordingly, TWA is making plans for the operation of Boeing 707 and Convair 880 jets.

[Tr. 6839] "Hughes has placed orders, under contracts assignable to TWA, for 15 Boeing 707-131 aircraft, 18 Boeing 707-331 aircraft, and 30 Convair 880 aircraft, for delivery beginning in 1959. These contracts are subject to modification as to number and model of aircraft covered and as to specifications of the aircraft, including seating capacity. Hughes is not committed to sell any of these aircraft to TWA, nor is TWA committed to buy any of them from Hughes. Any such transaction between TWA and Hughes requires approval of the Civil Aeronautics Board.

"One of TWA's competitors is operating turbo-prop aircraft and others have ordered such aircraft. TWA has not ordered such aircraft, but is considering these and other types of new aircraft for future use."

Assuming those statements set forth in the registration statement or prospectus were correctly made, would you have advised TWA at the time to engage in the financing which, in fact, it did engage in in 1957?

A. Well, if I may say so, the financing in 1957—and I don't know that this question has ever been put to [Tr. 6840] me, but the purpose of the issue appears in the prospectus. It also appears in the digest and DHR Trans World Exhibit No. 7. This money was to pay for planes, the Lockheed 1649 and spare parts, which it had, and to pick up some additional bank borrowing on money that it had to have at that time.

This was not intended to be a financing to cover $320,000,000 worth of jets. They were on order—I would judge from what I read here that they were using the Hughes Tool Company credit to get a place in line to have these planes ordered.

And I would not necessarily have advised any financing at all at that stage of the game if Hughes was content to pay the down payments which I think run about 10 per cent of the purchase cost on these over a period of time until, as the pressure got a little stronger for Hughes Tool Company, you could hope to have a better climate for financing.

Mr. Morehouse didn't want to do any financing during this period of time either, and I don't think I would have in 1957.

Q. So that, in your opinion, the financing in June of 1957 was not in the best interests of TWA and you would not have so regarded it at the time?

[Tr. 6841] A. I didn't say that, Mr. Sonnett.

I said they had to have that financing—they were in trouble—to pay for their 1649's.

I thought you asked me and I apologize if I misunderstood, if I would have advised them to have done a financing which would contemplate the financing of $320 million of jets in 1957. I did not intend to say that it was not necessary to have the financing of the some $43 million at that time to pay for planes that they had and were receiving.

Q. If you would assume, Mr. Woodfin, that every statement of fact set forth in the prospectus before you had been true, would you have advised TWA to go ahead with this financing in June of 1957?

A. I don't think any of those facts set forth there would be germane to the problem of whether or not you needed the money to pay for the airplanes. If they take the airplanes away, you had to do something. You didn't have bank credit. You would owe the bank $55 million. You would come to a point where you had to do some financing.

The principal shareholder says, "I will put my money out." The minority come along. I think this is one of those times you reach when you've got to put the [Tr. 6842] money up.

Q. Are you saying that the decision would have been made by Hughes and not by the management and that you had to accept whatever decision Hughes made?

A. Well, I'd say this: I'd say that, if the management decided it wanted to have this offering and they talked to Mr. Hughes, who owned—and let's asume the most independent, competent management you want to assume, but we've still got to make some assumptions about ownership, and, if he says, "I am not willing to subscribe to my part of it," I don't think you could have done it.

• • • • •

[Tr. 7200] The Special Master: I believe you intimated before leaving aside any question of motives, that the program of financing that was actually carried out by TWA is a reasonable one within—while men might reasonably have differed whether to do some of this in 1955 or 1956 or 1957, that even in retrospect, the actual financing program was within the realm of good business judgment.

[Tr. 7201] The Witness: If Hughes hadn't been there they would have been in serious trouble, because they ran into deep operating troubles starting in—I don't know whether it is operating trouble. But they started losing money.

You see, the start of 1955—1955 was a bad year for TWA. They were down from $10 million earnings in the previous year to the $5 million at the end of 1955, and each quarter was getting progressively worse in comparison to the preceding year. Contrary to American, Pan American and United, they lost money in 1956. The other companies made money in 1956. They lost money in 1957. They lost money in 1958. It wasn't until 1959 that they started making a little money again.

By this time, of course, their chances of any big equity financing other than with Hughes' help or any big borrowing had disappeared and continued to be more difficult to do from the very date that they had the May financing or June financing, whenever it is —it doesn't tell us precisely—in 1955, because the market went down like a rock from then, from then on down the road, and their earnings went down.

• • • • •

[Tr. 7259] * * * Q. Addressing ourselves again to page 21 of your report, the last sentence of the paragraph, the first paragraph under (e) reads:

> "Mr. Morehouse is assuming, contrary to our view, that the common stockholders would double their holdings in TWA when they could at best expect only a nominal rate of return for the foreseeable future."

Bearing that in mind,—

[Tr. 7260] A. I mean by "nominal rate of return," of course, TWA was paying no dividend. This was a nominal rate of return on the additional equity that was invested. We would assume they would put it in tax—in government notes or short-term governments or something so they could get some return on it.

> The Special Master: It would be the corporation that could only expect a nominal return?
>
> The Witness: Yes, the sentence is poorly drafted.

By Mr. Sonnett:

Q. With respect to that statement, let us consider the 1957 TWA common stock offering. That was a one-for-one offering, I think, as we have already established, was it not?

A. Yes, completely underwritten by Mr. Hughes when the company was in dire straits for money after loss years 1956, 1957, and in a very bad year in 1957.

Q. The subscription price of the 1957 offering—

A. $13.

Q. (continuing) —13 when the market was 14—

A. That's correct.

Q. (continuing) —what better expectation could the stockholders of TWA have in 1957 than presumably they had [Tr. 7261] or would have had in 1955?

A. Well, they would have had very little, except they were getting much closer to the jet age. At that time they had the equipment to pay for which they had on hand. There was a very definitive use for the money. And I am sure it was an unhappy financing. It is not one that one would have wanted to undertake, unless it was required.

Q. Do you recall the number of shares of the 1957 offering which were made available to stockholders other than Hughes?

A. Well, I can't tell you precisely, but it was—Hughes at that time owned about 74 per cent, as I recall. So it is about 25 per cent of 3.3 million.

The Special Master: Was your question offered or taken up?

The Witness: Offered.

Mr. Sonnett: Offered.

By Mr. Sonnett:

Q. Our figure is 860,894 shares were made available to stockholders other than Hughes.

Do you know how many of those shares were subscribed for by others than Hughes?

A. Well, approximately three-fourths.

[Tr. 7262] Q. About 75 per cent, then?

A. That's correct.

Mr. Sonnett: Would you mark this—

The Witness: 75 per cent of the 25 per cent.

Mr. Sonnett: Correct.

Will you mark these two letters, one July 9, 1957 of TWA to the Hughes Tool Company, and the second July 11, 1957 of the same subject matter to the New York Trust Company as the next exhibit, A and B?

(Letter dated July 9, 1957, from TWA to Hughes Tool Company, marked TWA Exhibit 267A for identification as of this date.)

(Letter dated July 11, 1957, from TWA to New York Trust Company, marked TWA Exhibit 267B for identification as of this date.)

Mr. Sonnett: I will offer these in evidence.

Mr. Leisure: I will object to them, until there is some questioning that would indicate their relevance.

The Special Master: I think they are relevant. I will admit them.

[Tr. 7263] (TWA Exhibits 267A and 267B for identification received in evidence as of this date.)

By Mr. Sonnett:

Q. Referring to 267B, you note the statement therein, do you not, that:

> The Hughes Tool Company had purchased 45,917 shares of the common stock. This was out of the portion made available to stockholders other than Hughes and not subscribed for by Hughes.

Is that correct?

A. That's true, plus the 170,900 shares which Merrill Lynch bought for their account.

Q. Is it your understanding of the 1957 TWA financing that the Hughes Tool Company was required to purchase those 45,000-odd shares?

A. I'd have to look at the prospectus again. I don't believe they were, but I'd like to see the prospectus.

Q. That is Exhibit 194.

A. They had to provide them with a minimum of $34 million. And I—and they had purchased the $34 million

minimum. The 45,000 shares they didn't have to pick up, if they didn't want to.

The Special Master: That is the way I [Tr. 7264] read it.

By Mr. Sonnett:

Q. Do you know the number of shares that Hughes purchased through the exercise of rights which he had purchased on the open market?

A. 170,000 shares, I would presume.

Q. 170,900?

A. 900 shares.

Q. Is that about right?

A. Yes, sir. I guess that—that's the only way I know he could have gotten them. Merrill Lynch bought the rights and that would account in my mind for the offering being as well subscribed as it was because it gave the rights some value.

Q. Was he obliged under the financing to purchase the rights?

A. Well, he was obliged to buy $30 million—up to $34 million worth. Which way he chose to do it, Mr. Sonnett, I wouldn't want to comment on, because whether that would encourage other people to come in or not it was probably helpful. Certainly they were unexercised rights that he had to pick up or could pick up in addition to that.

Q. Could, not that he had?

[Tr. 7265] A. That he could, yes, 45,000. Nobody was knocking the door down to take it all.

Q. That was not surprising in light of the then financial situation of TWA in 1957, was it?

A. No, it wasn't at all.

• • • • •

Excerpts From Testimony at Damage Hearing of Nathan S. Simat

• • • • •

[Tr. 7537] • • • Q. Are you a member of any professional society exercising disciplinary supervision over its members?

A. There are various professional societies to which I belong, which exercise a small measure of disciplinary control over the members of the society, but I would not say that I belong to any society that has either licensing practices or an examination practice or anything of that character.

Q. What professional societies do you belong to, Mr. Simat?

A. American Economic Association, American Statistical Association, Institute of Management Sciences, several others.

Q. Are there any others that you regard as relevant to what you are doing here?

A. Yes. I belong to a Regional Planning Association which I think covers the same kind of transportation matter that is generally covered in this report. • • •

[Tr. 7708] • • • The Special Master: Are we ready, then, to go ahead with Mr. Simat's cross-examination?

Mr. Hayes: I suppose the first step here—

Mr. Tenney: Is to move to strike it.

Mr. Hayes: (continuing)—would be to substitute the corrected pages which have been supplied for the pages in the exhibits as originally presented. That is Exhibits 271A and B for identification.

All of the material that you required Mr. Simat to present has, according to Mr. Tenney's letter, been transmitted to plaintiff's counsel, and in view of the corrections, I think the best procedure would be to consider the corrected pages substituted for the original pages.

We have submitted the corrected pages. None [Tr. 7709] of us, including our own office, has a copy of the report with the corrected pages in lieu of, and we will endeavor to get copies for your convenience whereby you will be able to tell at a glance what the original page was as well as the corrected page. We just didn't have the time to get that out before this morning.

The Special Master: On that you are now offering—

Mr. Hayes: To substitute corrected pages for the pages in the original report.

The Special Master: It will be received on the same basis as the original submission.

Mr. Tenney: Mr. Brownell, may I be heard on that?

The Special Master: Yes.

Mr. Tenney: As I stated in my letter to you, which defendants received a copy of on Friday, we wish to renew our motion to strike the original report, in which case there is no point in receiving these changed pages in evidence.

I might start out by saying we disagree strongly with Mr. Hayes' statement that we have been given what you said we were to be given.

[Tr. 7710] In aid of that motion, I would like, first, a little additional voir dire of Mr. Simat, if I may.

The Special Master: You may proceed.

Mr. Hayes: I might call to your attention the sentence in your letter to the effect that in the course of the following weeks, most, if not all of the material necessary to understand the data used and the nature of the computations was finally made available. I am taking you at your word.

Mr. Tenney: I will explain that, Mr. Hayes.

Voir Dire Examination

By Mr. Tenney:

Q. I imagine you realize, Mr. Simat, that you are still under oath, although you have not been resworn.

A. I understand.

Q. You will recall your testimony in this hearing on July 24, 1967. That was the day when I examined you on the format and preparation of this report, Defendants' Exhibits 271A and 271B, which I will call your report, and I moved to strike it.

In recalling that testimony, do you wish to change any of the testimony which you gave that day?

[Tr. 7711] A. No.

Q. Specifically, you testified extensively that as source material for your report—and I am talking about the report as it was originally filed—not about the report as you have now changed it—you testified that as source material you used TWA's employees' timetables, which are already in evidence in this proceeding, corrected from certain filings with the CAB called transmission sheets, and you expressly stated that you did not use the Official Airlines Guide. Citations for that are 7538 and 7542.

Do you recall that testimony?

A. Yes.

Q. Do you wish to change that testimony?

A. No.

Q. Another specific instance, you testified quite extensively about the so-called SLURP program and you testified that this was used at Operations Research, Inc.—we have called it ORI—and you were quite explicit about that.

Do you wish to change that testimony?

A. I have since determined that Operations Research used not the version of the SLURP program that I thought they were using, but a canned program which they obtained [Tr. 7712] from IBM, which they had modified to include certain features of the SLURP program. So I was mistaken in that respect.

Q. Would you care to give us the title of that canned program?

A. No, I don't have the title of the canned program. I will be glad to furnish it to you.

Q. You also testified rather extensively towards the end of that day that these operations were performed either under your—

> The Special Master: Read the citations for that last point into the record also.
>
> Mr. Tenney: It was explicitly covered at the pages following page 7544.
>
> The Special Master: Thank you.

By Mr. Tenney:

Q. You also testified towards the end of that day that these operations were performed either under your supervision or by others with careful checks being made by you.

For example, you talked about some hand-checking of the computer work which I had the impression you performed personally.

A typical example is at pages 7670 to 7672. I [Tr. 7713] think there are others.

Do you care to change your testimony on that?

Please remember, I am talking about your report as it was originally filed, not as it has been changed or your trying to change it now.

A. I frankly am not aware that I testified that I had performed hand calculations personally. Hand calculations were performed by my organization.

If I testified to the effect that I personally performed the hand calculations, I may have overstated my exact role.

I did perform some hand calculations, yes.

Q. First I would like to pursue the question of the Official Airlines Guide and the employees' timetables.

Mr. Simat, I have here—and I would like to go over in as much detail as is necessary to make my point, but I don't think it will take a great deal of detail—the employees' timetables effective January 10, 1961 for TWA, a copy of the Official Airline Guide, showing the January 1961 timetables for TWA, and I would like you to look at Table I, Book 1 of your computer printouts and find what you have given us as the January 1961 timetables for TWA schedules.

This is one that we looked at as a spot check.

[Tr. 7714] I would like you to examine them and see if you can determine whether that schedule was taken from the employees' timetables or from the OAG.

I think you will find, because of the Convair 880 schedules in January of 1961, that it quite clearly was taken from the OAG.

A. Excuse me. May I have the flight number read back again, please?

Q. Any Convair 880 flights.

A. Any one?

Q. Any Convair 880 flights, or all.

A. What the comparisons indicate, that while there is no Convair 880 flights shown in the Official Airline Guide, there are Convair 880—Convair flights shown in the employees' timetables and there are no Convair 880 flights shown in our schedules here.

[Tr. 7715] • • • The Witness: May I point out in this connection, Mr. Tenney, that we have on rechecking the schedule information transcriptions, found many errors and that we have, in fact, corrected these errors, we believe, in our most recent runout of the schedule information.

And you will find in the revised data that information for the Convair 880 schedules in this period is reflected.

[Tr. 7716] By Mr. Tenney:

Q. I am exploring the question of what your source material was for your original report that you testified to on July 24th, Mr. Simat.

A. Let me make this clear again, Mr. Tenney, that our instructions were that the final source of all schedule information was the employees' timetable.

This was the source to which all information was presumed to have been checked before it went into published form.

Now we have found many errors, and apparently these are included.

But let me also point out to you that before publishing our previous report that we made every effort to ascertain whether the errors in the schedule information were consequential and our test checks indicated that the information that we had transcribed if it was not entirely accurate

was nevertheless very close to the actual experience of TWA, and that revision of the information would not result in any material changing of the findings and conclusions.

Mr. Tenney: We selected January of 1961 as a spot check, because it was a logical place to expect a difference between the employees' [Tr. 7717] timetables and the OAG, because it was not until the end of December 1960, that the defendants released to TWA any of the Convairs that they had been holding up before.

When they were released it was necessary to take urgent action to schedule the planes and naturally the timetables were produced as fast as possible for the employees. The OAG of course has a lead time. So that we could check out—and it is perfectly apparent that the OAG was used.

I would like to have this document—

Mr. Hayes: May I move to strike the sort of argument. If Mr. Tenney has any questions to address to the witness I think he should address the question and confine himself to the questions.

The Special Master: You may proceed.

Mr. Tenney: I would like this document which was received on July 21st at 4:30 p.m., that is, the Friday immediately before Mr. Simat's previous appearance here, with a very limited group of work sheets that were then produced for us—I would like this marked as TWA Exhibit 318 for identification. It consists of 25 pages.

[Tr. 7718] • • • Q. I show you TWA Exhibit 318 for identification and ask first if you can identify it as a work sheet produced by your office.

A. Yes.

Q. Will you look at page 2 of TWA's Exhibit 318 for identification and read into the record the first two sentences, please?

A. "The purpose of this task is to prepare the schedules of Trans World Airlines for analysis by a computer. The necessary information will be taken from the Official Airline Guide."

Q. Do you wish to change your testimony as to the source of the information contained in your report as far as schedules go as it was originally submitted in this proceeding, Mr. Simat?

A. No, I do not.

This document was prepared at a very early stage. It is essentially an internal document prepared to train people who had no prior experience with the transcription of schedule information to correctly transcribe schedule information.

[Tr. 7719] We were at that time using for illustrative purposes the Official Airline Guide because we had only a limited number of copies of the employee timetable information.

The entire set of instructions is cast in terms of Official Airline Guide information which is in the same basic format as employee timetable information.

The analysis that was prepared was to be checked and ultimately conformed to the employee timetables, and this is why we give the employee timetables as the source of the information.

The correctness of the information is to be determined by comparison with the employee timetable and not with the Official Airline Guide.

That is the statement that I am making and that is the statement that I wished to make earlier. All of the schedule data were to have conformed by my instructions with the employee timetable information.

And I might point out in this connection that it is not only true of the schedule information but also it is true of Form 41 information, that is, financial data, obtained for TWA that we had at intermediate stages from time to time used the ATA statistics for transcribing Form 41 information rather than the Form 41 reports.

[Tr. 7720] And the reason for this is that the Form 41 reports as available to us were in such terrible condition that we were not able to work with them on a day to day basis but again the instructions were that after all of the transcription work was done, the information was to be checked back to the Form 41 reports which is the ultimate source of the data.

So that then becomes the source of the report.

I do not regard the Official Airline Guide as the source of the schedule analysis and the employees' timetable is the source of the schedule analysis.

Q. We have here a copy of instructions by your office that on their face direct the key punch operators to use the Official Airline Guide?

A. These are not instructions to key punch operators. These are instructions to our own people for the transcription of information from a schedule to a work sheet which is then submitted to the key punch operator for key punching.

Q. Have you any copies of instructions to your people calling for using the employees' timetables? I seem to recall that you testified that no copies of that sort of instructions were retained.

A. We do not normally retain copies of instruc-

[Tr. 7721] tions, of this sort.

It was by digging back through our files that we found that we had an instruction manual in this degree of detail. The reason for preparing such a detailed instruction manual is that we were in fact dealing with inexperienced people to whom a few oral instructions would have meant very little.

Q. Are you aware of any instance in which the OAG differed from the employees' timetables during the period 1959 through 1963 in which your Table 1, Book 1 of your original computer printouts used the employees' timetable and not the OAG?

A. No. I haven't made the complete check or comparison between the OAG and the employees' timetable.

Mr. Tenney: Neither have we but we made a spotcheck and the results of the spotcheck are now on the record.

I offer in evidence TWA's Exhibit 316 A and B, 317 and 318 for identification.

The Special Master: In the absence of objection they will be received.

• • • • •

Q. You have indicated, I believe in an earlier [Tr. 7722] statement today, Mr. Simat, that in the course of rechecking your work you found a number of errors.

I assume that those errors are the basis of the corrections that have been proferred by Mr. Hayes this morning.

A. That is correct.

Q. When did you start finding out these errors, Mr. Simat?

A. We had actually instituted check procedures even before the submission of our first report. We were handling a great deal of information in a very short space of time.

While we were employing checking procedures that we had every reason to believe would detect any substantial errors in the results, we were not sure at any point up to the submission of the report that we had correctly entered all of the detailed information.

For one thing, as I mentioned earlier, the status of the source material is exceedingly poor. In working with the Form 41 data for example, we were working with copies of copies. The original work sheets, I am sure was a carbon copy to start with.

We found that a number of numbers were totally undecipherable. We found in other cases that there had [Tr. 7723] actually been slippage of lines, wherein the alignment of the figures and the stub were not entirely correct.

And then there were cases where we just simply had to throw up our hands in despair, we just couldn't make out the figures at all.

The employees' timetable information was in similar shape. We were working with reproductions of reproductions and the information was very difficult to read.

We also had a number of relatively inexperienced people transcribing the information. That is the reason for the detailed manual which we do not normally prepare in connection with the schedule transcription work that we do internally. Because of the necessity for compiling the information quickly, we had to bring in people on a temporary and part time basis to actually do the transcription work.

Now, none of these circumstances is conducive to 100 per cent accuracy.

So while I knew of no specific errors at the time that we submitted our report, I was ready to wager that there were a number of errors in the basic information.

We were also compelled by pressure of time to [Tr. 7724] introduce checking procedures which were not 100 per cent satisfactory in disclosing all of the errors.

For example, in checking the schedule information, we used a sampling procedure wherein the work product of individual personnel was checked, spot-checked. If an error was found, that particular period, whatever it might be, was redone. There were some periods that were redone two, three times until we were satisfied that we had them reasonably accurate.

On a sampling basis of course, there is a certain amount of error that will get by undetected.

This was true both of the schedule transcription data and also of the cost transcription data although it was essentially true we kept our more experienced people on the cost data rather than the schedule data.

Q. Mr. Simat, I am asking you simply when you started the process of discovering these errors and making this revision? You have given us Thursday night 311 revised pages which we count as making 5,945 corrections.

We are advised that all 14 volumes of the computer printouts—that is one set—if you add that one to it it is one set—that we have been working on for two months have been rerun.

[Tr. 7725] When did it come to your attention, Mr. Simat, that you should commence this revision?

A. I have been trying to explain, Mr. Tenney, that we have felt all along that further checking procedures were required and that if we had the opportunity to perform the further checks and to introduce somewhat more accuracy into the calculations and into the basic data that we work from that we would.

The checking procedures were initiated before the publication or before the submission of our previous report. We

have been working on corrections on checking from that point forward.

We have found it necessary to put aside from time to time our work on the corrections in order to progress in other areas.

I might point out in this connection that for almost the entire month of July and a good part of the month of August we were busily producing information in connection with the original report, answering questions, compiling the basic reports, making sure that everything was appropriately cross-referenced so that the understandings as to what went into the original reports would be complete.

We were also proceeding during this period in [Tr. 7726] the preparation of our critique on the aircraft disposition program. This, too, consumed a good deal of the time and effort in the shop during the months of July and August.

We have also at the same time been proceeding on what I now call Phase 2 which is the more detailed approach that I previously outlined. And as you know, we encountered quite a few difficulties in obtaining the basic information. We have had people working on the sample forms, cataloging the information that was submitted.

We are progressing as fast as we can in that area. And all of this has taken time away from the checking procedures. But we have been progressing in that area.

In July, early July, we hired largely for this purpose, I might point out, Mr. William Wolf, who was formerly a director of scheduling for Pan American. He has been spending virtually full time reviewing the schedule data.

The Special Master: Is any further checking going on now which might result in additional modifications?

The Witness: Not of the original report, no. We have completed all of the checking.

[Tr. 7727] Q. While you were preparing all this information which you were talking about in answering questions on the original report, supplying cross-references, telling us how it was put together—which parenthetically of course you knew was the result of the correspondence that defendants' counsel and we were engaged in throughout this period—why did you not at any point inform us that a major revision of that report was under way?

A. Well, for one thing, Mr. Tenney, I do not believe that the revision is a major one.

The errors that we have corrected while they are numerous are relatively insignificant. The final results have been barely changed.

Unfortunately, the method of estimation that we used is a chain method wherein if the first number is changed, virtually every number from that point forward is changed.

But all of the changes with one or two exceptions have been very, very minor. They have not as was pointed out in the letter of transmittal significantly changed our estimate of the profit and loss from the added jet services. We are within 2 per cent or approximately 2 per cent of our original estimate.

The Special Master: Do you agree to that [Tr. 7728] conclusion, Mr. Tenney?

Mr. Tenney: I believe that he has adjusted his end results so that they are a small number of percentage points worse from the TWA standpoint. I have no means, none whatsoever, of having an opinion based on checking as to the remainder of his statement, but I doubt it very much.

The Special Master: What's running through my mind is if the changes are all insignificant with pos-

sibly one or two exceptions, which I understood you to say, whether we could not have those one or two exceptions and disregard the insignificant changes in the interest of saving time here without producing significant results.

Mr. Tenney: I would be surprised if Mr. Simat would be willing to stand on the mish-mash of his original report, frankly. * * *

[Tr. 7883] * * * Q. So Table 8A, which is jam-packed with things like that—I have a list here five pages long—Mach 3 speeds and so forth for marginal speed for 880 aircraft and other early jets—Table 8A should be disregarded, is that correct, Mr. Simat?

A. Well, I certainly didn't rely upon it. If there is some other use you can see for the information in Table 8A, the information is there, but I would certainly not rely on it for any estimating purposes.

Q. Then let us turn to Table 9 in the same volume. This table is headed "Operating Statistics of Added Flights." I take it that this is a table that you did rely on, is that correct, Mr. Simat?

A. Yes.

Q. Let us turn once again to the CV-880 aircraft, which, once again, is the first jet aircraft type.

The Special Master: Table 9, is it?

Mr. Tenney: Table 9, yes.

Q. Let us take a look at June to July of 1962 in that table, and if you carry it over to the extreme right- [Tr. 7884] hand column, you find the average block-to-block speed of added trips, and I find that the 880 aircraft was then traveling average for additional flights 1.11 miles per hour. Is that a figure that you should pay much attention to in considering added flights, Mr. Simat?

A. I certainly wouldn't pay much attention to it.

Q. What really was the normal cruising speed, approximately, of the CV-880 aircraft?

A. Oh, it's about 475 miles an hour.

Q. From February to March of 1962, it seems to have been going 177.07 miles per hour. That is pretty near stalling speed for it, isn't it?

A. No. Let me point out to you that we are talking about block-to-block speeds, and block-to-block speeds are computed by dividing the miles flown by the block-to-block time.

There is in every flight profile, as you know, Mr. Tenney, an ascent and descent factor. There is also a taxiing factor. There is also a waiting time. And it is quite conceivable that speeds as low as 30 miles per hour are flown by jet airplanes, when they are flown over short distances. And the bulk of the time in-flight is consumed in getting up into the air and coming down or [Tr. 7885] flying around in the air, but not in cruising.

So I can point out to you that it is faster to fly over a distance of 30 miles with a DC-3 airplane than with a Boeing 707 jet. Over such stage lengths, the block speed of the Boeing 707 would be slower than the block speed of a DC-3.

Q. By the way, I show you, Mr. Simat, Vol. I of the Coverdale & Colpitts report, which is TWA 4C-1.

On page 2, you will see some cruising speed information as to different types of jet aircraft. I think you will find that the CV-880 is shown as having a cruising speed of 615 miles per hour. I think you said it is someplace in the 400s.

Would you care to change that?

A. Yes, I will change that. I think I was thinking in terms of average speeds.

Q. Since we are dealing with block-to-block speed, which might well be lower than cruising speed, would you turn to the next table which is "Aircraft Type B-70," which is the symbol for the 131 aircraft, and look at November to December of 1963, and look across at that same average block-to-block speed?

The 131 was averaging a block-to-block speed of 1745 miles per hour. Would that be explained by the [Tr. 7886] flight profile, Mr. Simat?

A. Yes, in fact, it would.

Bear in mind, Mr. Tenney, I think you are forgetting that we are dealing with differences, the differences between the number of flights operated in one month and the number of flights operated in a second month, differences in the number of hours per day that aircraft are operated and differences in the number of miles.

In both examples that you have selected, you will note that the number of added departures per day were quite small. We were not dealing with any material volume of added operations, and—it is possible, conceivable that where a change in operations involves the substitution of operations to and from terminal areas where the waiting time, the taxiing time, the ascent-descent time, the congestion factors are less than they are at some of the more highly congested terminal areas, that we will get changes in the number of hours per added operation which we divided by the—or divided into number of added miles per added operation will provide block speeds of 1745 miles or even something perhaps slightly larger.

However, these do occur in a distinct minority [Tr. 7887] of cases. Over the entire period, I think you can count on almost the fingers of one hand the number of cases where the block speeds are that unusual—the computed added block speed, I should say, is that unusual.

It will happen. It happens arithmetically. If I can give you another contrived example: if we were to add a fraction of a flight in New York where the terminal time is very high, we would get under such circumstances or tend to get, I should say, very low added block speeds.

On the other hand, in adding fractions of flights to points such as Fresno, where the congestion factor is very low, we could very well get block speeds of this amount.

Q. Doesn't this show that this concentration upon differences in an extrapolation from differences that you have engaged in in deriving your data for this entire analysis arithmetically, as you put it, inevitably produces wild statistics that you have then ground into your regression analysis?

A. That is not so. The use of first differences or differences between one period and another will, for certain ratios, produce fairly wide differences, particularly those ratios involving hours and miles.

[Tr. 7888] There is generally more stability to ratios involving miles and numbers of aircraft departures, that is, the ratios which are depending upon average hop, and over a period of five years the resultant average relationships, in my opinion, are satisfactory.

In almost every instance that we have been looking at, the number of added aircraft, the number of added departures are relatively small.

Q. I thought that you testified earlier that in your regression analysis there was no weighting of these segment-month statistics for the number of flights involved but the change was always treated as equivalent to any other changes.

A. That is correct, we treated each month as a separate and distinct entity.

Q. If you take into account the extremely small values, there are certainly quite a number of strange results here.

* * * * *

[Tr. 7894] * * * Q. There are, of course, throughout these tables a number of operating statistics of added flights, and then operating statistics of deleted flights that are similar to the ones that I have called your attention to that have block to block speeds that are out of line with any possibility for a given airplane, that have lengths of hop that are surprising, to say the least.

They are, as you have explained, produced by the arithmetical results of the study of what you have called first differences here. But I think that you made it clear enough that you think these results are sound in your opinion and that you are willing to extrapolate from them so I won't go over all these other details.

Do you still insist that the method of subtracting one month from another month by type of aircraft and dividing these mileages and departures and relying on the factorial differences that you have got is a sound method of analyzing how an airline will operate?

A. Let me first point out to you, Mr. Tenney, [Tr. 7895] that we did not use the block speed relationships in any of our analyses programs in the form in which they appear in the tables referred to by you.

The only information that we used in connection with our analyses was the length of hop of added flights. And I do not believe that you dwelt too long on the length of hop added flights or deleted flights.

I do want to point out, however, that we did not use the block speed relationships nor did we use the utilization relationships in any further analysis.

I do not feel that the information that we were required to use for want of other information to establish the pat-

tern of added flights is the best information that I can conceive of for estimating how added airplanes would be used. It was, however, the best information available to us.

We worked with obvious problems insofar as we used information which was uncorrected for seasonal variations in traffic demand.

If we had better information, we would use the better information.

The estimating problem that we were confronted with was to make the best estimate we could with the information available on the stage lengths for which or [Tr. 7896] over which added jet aircraft would be operated or the added jet aircraft would be operated or the stage lengths from which jet—or piston aircraft would be deleted.

The best experience in my opinion as to what would happen with an additional injection of jet capacity is what did happen when capacity was added.

We were compelled by reason of not having the internal records of TWA to use published records as to the scheduling of aircraft. And we find in comparing the published scheduling records with reports submitted by TWA to the Civil Aeronautics Board that it is not always true that when flights are scheduled with Convair 880 aircraft they are operated with Convair 880 aircraft. We are also finding or have found that it is not true that when flights are scheduled with 131 aircraft that they are always operated with 131 aircraft.

There are substitutions of aircraft which do not appear in the schedule data. And for these reasons there is a certain amount of infirmity in the schedule information. On the other hand, there is nothing better—or was nothing better available to us.

And as for the soundness of the conclusions [Tr. 7897] that we have derived from the data, it is a fact that the

stage length of jet operations decreased as jets were added. Nothing will alter that fact.

The decline in stage lengths is occasioned by the additional jet capacity at lower stage lengths than those flights that were operated before the addition.

This is a simple mathematical conclusion. If the flights were added at the same stage length as those already operated, there would be no decline in stage length. It is obvious that added flights were coming in during the period at lesser stage lengths than the flights that were already being operated.

We have used what we think is or was the best available information to us to estimate the relationship between the existing and added flight stage lengths, and I believe that our estimates are reasonable. We were able—

The Special Master: Can I interrupt at this point? I don't like to get too far out of tune with the development of the case. I am quite puzzled at this point.

Do I understand that the effect of the shorter stage lengths would be to increase your [Tr. 7898] estimated costs of operation?

The Witness: That's exactly right, sir.

The Special Master: I hope as we go along we can keep this in mind. How can it be that two people so expert in this field having the advantage of actual operating figures can estimate the financial results to TWA in the operation of a comparatively small number of airplanes and come-up with a difference of over $100 million in a five year period which is over $20 million a year?

I hope somewhere along the line we could get a summary so that I could focus on it while we are in the course of cross-examination here as to what are

the categories of difference here, because just at first blush it seems all out of line with me.

Mr. Tenney: Mr. Brownell, that is exactly what I plan to do in the course of cross-examination. It is quite a lengthy report and it has a lot of figures in it. But I propose to go through the report section by section, giving Mr. Simat as I believe I have today an ample opportunity to explain what he did. And I believe that it will be quite apparent how he has [Tr. 7899] come out with these diametrically opposite conclusions from the plaintiff's experts here.

• • • • •

[Tr. 7917] • • • By Mr. Tenney:

Q. In Book V of the computer printouts, Table 16, the very first jet covered—

A. I believe it is the 880.

Q. 880. Have you found it?

A. Yes.

Q. Here I find that you have 34 samples for a study, Mr. Simat, and once again the data are determinable from the left-hand column, giving the Y values and the right-hand column giving the X values for your selected sub-case, and once again can be plotted in the same way.

[Tr. 7918] Is that generally correct?

A. That's generally correct.

Q. Have you attempted to plot this?

A. No, we have not made scatter diagrams of the information on this table.

Mr. Tenney: I ask that this graph be marked as TWA Exhibit 320 for identification.

• • • • •

By Mr. Tenney:

Q. Assuming that TWA Exhibit 320 for identification is a correct transcription graphically of the data set forth in your selected sub-case on the 880s, and that the least squares line, as there represented, is a correct representation graphically of your selected equation, a statistician, do you consider that equation a very good fit of the data?

A. If that were the only information available, I might be somewhat disturbed about the strength of the relationship, but the information that you have plotted on the chart is not the only information available.

[Tr. 7919] I also had available to me the information that the Convair 880 stage lengths in actual experience decreased as Convair 880 aircraft were added.

I had the relationships that we had fitted not only to the Convair 880 equipment, but also for the Boeing 707s, 131Bs, the 131s and the 331s, all of which yielded a characteristic pattern that indicated that the marginal stage lengths, stage lengths at which added operations were performed, were substantially below the stage lengths of the existing operations at the time of the addition.

The relationships, moreover, are consistent among the various types of jet aircraft.

They are not only supported—they not only support one another, they are also supported, I think, by the planning expectations of TWA.

From our analysis of the TWA jet plans, we find that in projecting the usage of aircraft about to be delivered, that TWA's plans staff similarly made provision in their planning estimates for a decline in the average stage length of operations as the size of the fleet was built up. And this, of course, again indicates that the marginal load factor, the load factor at which added services were being performed or to be performed, is lower than the average stage length.

[Tr. 7920] So, taken alone, the relationship is not as good as I would have hoped it to be. Taken together with all other available information, the relationship yields a consistent result which is consistent not only with other relationships similarly derived for other types of aircraft, but also consistent with experience.

The Special Master: May I ask a question right there?

Would you go so far as to say in your own analysis that the other observations and information which you had in themselves was the basis of your final judgment rather than the study that you made here?

The Witness: That is exactly right.

As I indicated, we did not expect to obtain high correlations from the use of the kind of information that we used in these anlayses, because we knew we were including seasonal distortions in the picture and we just didn't anticipate that the relationships would be that good.

On the other hand, we did get relationships from the analyses that were consistent with what we expected to find, and these relationships, I might say, are supported not only by empirical evidence, but [Tr. 7921] I believe by sound business practice.

In the scheduling of aircraft, an airline would ordinarily use the first airplanes that it receives in those uses which are the most profitable to it.

As additional aircraft are received, they will go into the next most profitable uses, and so on.

In the industry today, and it was true in the 1959-1963 period as well, the most profitable operations were conducted in the longer haul stage lengths.

Short-haul operations are today and they were in the 1959-63 period, either unprofitable or relatively unprofitable, compared to longer haul operations.

So the relationships that we determined here were relationships that we did expect to see. The problem is simply one of measurement, attempting to find the best measurement of the added stage length and it is in this area that we expect that the supplemental report will make a substantial contribution.

By Mr. Tenney:

Q. But, Mr. Simat, this is the only data you used in your statistical analysis, isn't it? None of the stuff [Tr. 7922] you are talking about is involved in the statistical regression analysis in these printouts?

A. These are the only data that we used to establish the precise relationship between the marginal stage length and the added stage length, to test the principle of whether the marginal stage length was, in fact, an amount below the average stage length.

We considered considerable additional data, including other information that appears in the IBM runs that have been made available to you.

Q. Is any of that additional data involved in the regression analysis that produced the equation that you have used to determine stage lengths?

I would like a yes or no answer to that.

A. I believe I have already given—

Q. I would like a yes or no answer to that.

A. To determine the exact relationship between added stage length and average stage length that was used in our estimates, we used no data, but the data contained in these analyses.

Q. Isn't it entirely clear that to any statistician—and, of course, you are an expert statistician, Mr. Simat—from this plot that the relationship shown by that least squares

line is statistically invalid and not as you [Tr. 7923] testified in your direct testimony statistically valid?

I refer to page A5 of Vol. II of Defendants' Exhibit 271.

A. One of the biggest mistakes that a statistician can make is to accept the data that he is working with as being beyond reproach.

A statistician must consider, in my opinion, the quality of the information that he is working with at the time he draws his conclusions.

It is customary practice among statisticians, for example, to exclude certain observations, on the grounds that they are atypical.

It is also a practice among some statisticians to weight observations differently. Those which they accord more standing to are weighted more heavily than those which they feel are more nebulous, more tentative, perhaps subject to greater error are weighted less heavily.

I have already testified that we considered a number of the observations here, those, for example, produced where the traffic was either trending upward or downward, seasonally, to provide a distortion in the relationships.

What we hope to have is a balance in the distor- [Tr. 7924] tions. And I believe that we did, in fact, achieve a balance.

We got on balance a relationship which was consistent with what we would have expected on an a priori basis.

Q. I don't see how you can have it both ways, Mr. Simat. Either you are going to rely on history and not on a statistical analysis that you say you have determined to be statistically valid—in that case we can talk about history and we have no quarrel about history if history is used in an undistorted way.

But I do not see how you can refer to history to back up a statistical analysis that you have testified—and you are under oath on this, Mr. Simat—

Mr. Hayes: He is quite conscious of the fact he is under oath. Let's not be Perry Masonish about this.

Mr. Tenney: It happens to be an important factor here.

Mr. Hayes: Everything is important in this case, Mr. Tenney.

Q. Mr. Simat, do you know of any instance in which a statistician has represented an analysis as bad as this [Tr. 7925] one as being statistically valid besides your own?

A. Yes.

Q. Name one.

A. In the first place, I do object to the characterization of the analysis as bad.

There are a number of observations that are plotted on the chart which is marked for identification as TWA 320. They do not all have the equal value.

The fact is that a least squares line fitted to all of the observations does show the kind of trend that we anticipated we would receive.

The fact that there are observations above and below the line do not shake my confidence in a line, particularly since I do know from other information that the line that we obtained is the kind of line that must have historically occurred in the TWA experience.

The Special Master: That means you disregarded this particular part of the study in reaching your conclusion? Because this would appear to be contrary to your—

The Witness: No, we haven't disregarded it, this part of the study. We have used the relationship shown here to determine the exact mathematical relationship between the stage length of added [Tr. 7926] flights and the average stage length. We have used it for that purpose only to find a measure of the relationship between the two results.

We have not used correlation in this case to test whether the relationship is indeed valid, because there is other information which I think is superior, that indicates that we are dealing with a valid correlation.

Now, I personally would have hoped for a more defined relationship in the sense that the amount of distortion present would be less than is here.

I believe that the way we have conducted the analysis, we have balanced out upward and downward distortions.

What I am saying in short is that I personally do not place much weight on the correlation coefficient that is derived from this particular relationship.

• • • • •

[Tr. 7928] • • • By Mr. Tenney:

Q. We have prepared in exactly the same way graphs of the data set forth in Table 16 of the computer printouts in your preferred sub-case with respect to the other two types of jets, as to which you have determined equations that are set forth and used in your report.

The equations themselves, of course, appear on page A7 of Vol. II of your report. The data are derived from the computer printouts.

I take it, Mr. Simat, that your answers to similar questions with respect to these two charts would be the same

as the answer to the questions that I have asked you on the earlier charts. Would that be so?

A. Yes.

Q. Keeping these computer printouts in front of you, there is some additional information on these computer printouts that I would like to examine.

I think that this table which I have had prepared in blank, which can be filled out from data in the computer printouts, may be helpful.

I show you the form of the table.

[Tr. 7929] Ignoring, for the time being, the latter two columns, I would like to refer to the computer printout and determine with you what the figures would be for the first three columns that are blank in this form.

To explain the left-hand two columns, if necessary, the left-hand column simply identifies the aircraft type, and the next column sets forth the equation taken directly from your page A7 of Vol. II of your report. It also, of course, is derivable from the computer printouts.

The next three columns are the ones that I would like to obtain the information called for.

Turning to the B-331, can you tell us what the R figure is or coefficient of correlation for your preferred equation in the B-331, Mr. Simat?

A. The figure is .24429.

Q. How about R^2?

A. .05968.

Q. How about the standard error?

A. 3906.831.

Q. The CV-880 comes a little earlier in the printouts, I think you will discover. I wonder if we could get the same information for the CV-880?

A. The R is .17838.

The R^2 is .03182.

[Tr. 7930] The standard error is 931.694.

Q. Next on the B-131—

The Special Master: Is this for each plane? When it says B-331, does that mean for each increase, each plane added?

Mr. Tenney: This is the formula that Mr. Simat has derived for use in determining the stage lengths for added flights for B-331s throughout the period.

The Special Master: Generally?

Mr. Tenney: Generally.

The Special Master: I see.

By Mr. Tenney:

Q. On the 131, what is the corresponding information?

A. The R is .69148.

The R^2 is .47815.

The standard error is 2345.181.

Q. Then the B-131B, which is the last of the jets as to which you have derived equations set forth in your report?

A. The R is .27594.

The R^2 is .07615.

And the standard error is 1864.768.

Q. Those standard error figures are all in miles, as [Tr. 7931] indicated in this table; is that correct, Mr. Simat?

A. Yes.

Q. Turning to the last two columns left blank in this form that I have given you, the expression at the head of the next-to-the-last column, 1 minus R^2, I believe you defined at our last session as the coefficient of nondetermination; is that correct?

A. That's correct.

Q. And that can be derived, can it not, by the arithmetical subtraction of R^2 from 1; is that correct?

A. Yes.

Q. The square root of 1 minus R^2, which is the expression at the head of the final column, we found at our last session is the coefficient of alienation, I believe; is that correct?

A. Yes.

Q. And as indicated by the form of the expression, once the coefficient of nondetermination has been obtained, its square root can be calculated and that will be the coefficient of alienation; is that correct?

A. Yes.

Mr. Tenney: It would save time, perhaps, if I furnished everyone with those figures. They are readily obtainable, of course.

[Tr. 7932] I would like to have the sheet which Mr. Simat has been filling out marked as TWA Exhibit 323 for identification.

Mr. Hayes: He did not fill it out. He was reading the figures.

Mr. Tenney: In that case, I would like to have this sheet which sets forth in the columns to which Mr. Simat was referring identical figures to those which he read.

On the last two columns, the figures are obtainable by the mathematical computation that he has just described.

I would like that marked as TWA Exhibit 323 for identification.

Mr. Hayes: You don't want that. The other one would be 323.

Mr. Tenney: I withdraw that. I thought I would be marking something that he had been marking, but it is unnecessary under the circumstances.

• • • • •

By Mr. Tenney:

Q. Referring to Arkin and Colton Statistical Methods [Tr. 7933] Book, which we were referring to at our last session, on page 85, I read the following:

> "Just as the coefficient of correlation is a relative measure of the degree of association between two series, the coefficient of alienation is a comparative measure of the lack of association."

Do you agree with that statement, Mr. Simat?

A. Yes.

Q. Looking at TWA Exhibit 323 for identification and looking at the extreme right-hand column, we find that the coefficient of alienation for your formula as to B-331s is .96970, which is very nearly perfect alienation or nonassociation, isn't it, Mr. Simat?

A. What the formula indicates is that there is a considerable amount of variance which is not explained by the relationship.

As I have testified, I would expect that.

Q. You have even more perfect alienation for the CV-880 formula, do you not?

A. There is a higher coefficient of alienation, meaning that there is more unexplained variance, yes.

Q. Even for the B-131, the coefficient of alienation or the measure of nonassociation of the data that you have been analyzing is greater than the coefficient of correla- [Tr. 7934] tion, is it not?

A. That's true, but from that one cannot conclude that there is an invalid statistical relationship between the two variables.

Q. The final jet that we have here, we have once again a very high coefficient of alienation, .96, which is far higher

than any measure of association shown for your formula; is that not correct?

A. That is correct, there is a considerable amount of unexplained variance.

Q. Mr. Simat, do you wish to change your testimony as set forth on pages A7 of Vol. II of your report to the effect that you have determined that these formulas are statistically valid and a significant improvement in estimating stage lengths if added jet flights?

A. No.

* * * * *

[Tr. 7978] * * * Q. The historical average was 1844 miles for B-131s during the year 1959, and your report has statistically determined that added flights would be at 1401 miles by the [Tr. 7979] use of your equation in part A of Vol. II; is that correct, Mr. Simat?

A. Yes.

Q. Referring to Ezekiel and Fox, page 24, a portion of which we read into the record some time ago, you will recall that Ezekiel and Fox suggests that the standard error of an average or an estimate should be given together with it as one method of indicating the statistical significance of the average.

The standard error shown on TWA Exhibit 323 for your B-131 equation is 2345 miles. So that if you were to follow the practice suggested by Ezekiel and Fox, an appropriate way of stating the mileage that you have estimated for 1959 B-131 added air flights would be, would it not, 1411 miles plus or minus 2345 miles?

A. Well, I don't know that that's an appropriate way of stating it. And I agree that you should indicate a standard error of the estimate. It could be one standard error on one side of the number, two standard errors, three standard errors.

There is no single practice that is preferred.

But I don't know what implication you are attempting to obtain from all this. Whatever the standard error of the estimate may be, what the equation yields is the [Tr. 7980] most probable value of the marginal stage length.

Q. And if, as you suggested, you were to use two standard errors and follow the Ezekiel and Fox method of notation—you would only use two standard errors if you were trying to emphasize your interest in accuracy—the notation would be 1411 miles plus or minus 4690 miles, wouldn't it?

A. You understand, of course, that the standard error is both to be added and subtracted. So that having arrived at a figure of 1411 miles as the probable value, that what the standard error is saying in effect is that you could subtract from that figure as well as add to that figure.

And it could very well be that the true marginal stage length is below the figure of 1411 miles that we have estimated. It cuts both ways.

The Special Master: It would be somewhere between 0 and 4000 miles, roughly?

Mr. Tenney: It might be minus, sir, by his analysis.

The Special Master: It might be minus down to 0? It might be plus up to 4000. Would that be right?

Mr. Tenney: I suppose so, sir. Some place [Tr. 7981] in that range.

The Witness: Well, the equation determines the most probable value.

The Special Master: Yes, I understand.

* * * * *

[Tr. 8007] * * * Q. Would you turn in your report, Mr. Simat, to page B-8?

Towards the bottom of the page you state:

> "Selecting those city pairs where increases in jet services were accompanied by decrease in piston services, we correlated the amount of changes in jet services with the amount of changes in piston services for the various combinations of jet and piston aircraft types involved."

You go on to say that you did the same thing among piston types, and you state that the correlations appear in Table B-V on page B-9.

What was the purpose of this analysis, Mr. Simat?

A. The purpose of the analysis was to ascertain whether the introduction of jets displaced the piston [Tr. 8008] type aircraft in rough proportions or whether the effect was concentrated in one or another of the piston type aircraft.

In short, we were testing Mr. Wemple's premises and our own premise by this examination.

If, in fact, the introduction of the jets affected only the long haul piston aircraft, we would expect to find correlation between the added jet services and the displaced piston services only between jet aircraft and such aircraft as the Lockheed 1649A.

We did, however, find that there was a strong correlation between added jet services and displaced piston services for all prevailing types of piston aircraft. And this we believe supports the validity or our estimate that where we have in estimating the distribution of piston miles displaced by plane type allowed for proportionate declines, in the piston miles operated by all types of aircraft.

Q. How was this analysis performed?

A. It was performed by selecting those city pairs and those periods, changes from one month to the next, where there were increases in jet operations and decreases in

piston operations with the particular types of airplanes involved here.

[Tr. 8009] In other words, for the correlation between Boeing 331s and Martin 404-202As, the R being for that correlation .87, we selected all of those segments where there was an increase in Boeing 331 service and a decrease in Martin 404-202A service in the same period, and we correlated the amount of correspondence in the segments between the amount of added Boeing 331 service and the amount of retired or displaced Martin 404 service.

In short, if one mile of Boeing 331 service was added and one mile of Martin 404-202A service was displaced, we had a correlation between those two factors.

If it varied among the segments, then in some cases the amount of added Boeing 331 miles might be five and the deleted Martin 404 miles one, so that we had one for one mile displacements, five for one mile displacements, ten for one mile displacements and so on, the correlation would be lower.

It was only when the displacement was on either a mile-for-mile basis or some defined ratio that remained constant among the various pairs of points that we got high correlations and this—what's set forth here is the result of those regressions.

Q. Would these additions and deletions be on the same segments?

[Tr. 8010] A. Yes.

Q. And in the same month?

A. And in the same month, yes.

Q. Since there are 60 months and well over 100 segments served by TWA at all times during this period, you have approximately—you have a minimum of 6000—actually I think it is closer to 8000—segment months that you were studying, is that correct?

A. You would have to multiply that by another factor to provide for the number of different combinations of aircraft that are under consideration.

Q. But each segment month is separately studied to determine what combinations of aircraft you can find to have changed in that segment month, is that—

A. That's right.

And one particular segment month can provide as many as ten combinations of aircraft, ten or more, taking two at a time.

Q. Where in the computer printouts is this analysis to be found?

Actually, Mr. Simat, I think——

A. The basic data, of course, appear in Table VIII, Book III.

Q. The regression analysis to be found in Table XX [Tr. 8011] of Book V?

A. Also Table XXI.

Q. Looking at your chart on page B-9, the first half of it where you are showing correlation between added jet services and displaced piston aircraft services, there are 27 different correlation figures shown.

Comparing them to the correlations that appeared originally on your unrevised page B-9 there really is very little similarity. They are practically all changed. They aren't even all relating to the same pairs of aircraft types.

Can you explain why these results were changed so very much in your revision?

A. Well, in the first place, I don't agree with your characterization of the results. I think that both the unrevised and revised data indicate the same general picture, and that is the correlation between added jet services and deleted piston services across the board for all types of piston services.

As to why there were changes, as you know there were some errors in the original schedule analysis, and these errors were corrected in the revised schedule analysis.

In some cases, the number of instances where we [Tr. 8012] had an increase with one type of airplane and a decrease with another type of airplane, these were diminished to the point of no return or were added and so we have somewhat different results.

But the picture is in my opinion almost exactly the same and the changes themselves are not material.

Q. In original page B-9 for these two particular aircraft types you referred to a moment ago, the Martin 404 and the Boeing 331, originally you showed a correlation coefficient of 1.00.

Now, in the revised page you show a correlation coefficient as you mentioned a moment ago of .87.

Looking at Table XX of Book V where the regression appears for this particular pair of planes, it is opposite sign change M4 versus B30 is the heading—have you found the table, Mr. Simat?

A. Yes, I have.

Q. How many samples is this based on?

A. Two.

Q. So that out of the, say, 8000 segment months, there were two segment months in which there was a change in the service of opposite sign nature between Martin 404s and Boeing 331s, is that correct?

A. That's correct.

[Tr. 8013] Q. Actually I was rather surprised in the light of that number of samples at the change in the correlation coefficient between 1.00 in your original and your revised .87.

With two samples, you only have two points, don't you, Mr. Simat?

A. That's correct.

Q. Isn't it true that you can draw a straight line between two points that passes perfectly through those two points necessarily?

A. That's certainly true.

Q. What would the correlation coefficient of such a straight line be with respect to those two points?

A. 1.00.

Q. Yet the correlation coefficient set forth in this table is as you reproduce it in your report, .87, is it not?

A. That is correct.

Q. Can you explain this apparent anomaly, Mr. Simat?

A. The only way I can explain it and I would certainly have to check into it is that the RHO which is printed out here is a RHO corrected for the number of samples.

• • • • •

[Tr. 8018] • • • By Mr. Tenney:

Q. Mr. Simat, just before lunch, we were talking about Tables 20 and 21 of the computer printouts and their relation to the correlation set forth on page B-9 of Vol. II of your report.

We had been talking about the particular relationship between Martin 404s and B-331s and had noticed that there was a sample size of 2 in Table 20 with a coefficient of correlation of .87.

On Table 21, which takes in all sign changes for that same pair of types, there is a slightly larger sample size.

Have you found the table, Mr. Simat?

A. Yes, I have.

Q. The sample size there is 5, is it not? • • •

[Tr. 8019] • • • A. Yes, the sample size is 5.

Q. So that if you take all instances out of the 8000 segment months under study in which changes in both the 331s

and Martin 404s occurred, there are 5 of which 3 had changes in the same direction; is that correct?

A. Yes.

Q. It was only the other two that had changes in the opposite direction that you had studied in Table 20 coming up with a correlation coefficient of .87.

Now, when you take the remaining three into account in Table 21, the correlation coefficient is only .25; is that right, Mr. Simat?

A. Yes.

Q. And R^2 is .06?

A. That is correct.

Q. To take the one that you were looking at a moment ago that I inadvertently misled you to, the Martin 404 against the CV-880, you have a sample size there of 3, [Tr. 8020] taking all changes into account in the 8000-segment months, is that right, Mr. Simat?

A. Yes.

Q. And the coefficient of correlation there is .29 and the R^2 is .08; is that right?

A. That's right.

Q. Of those three samples, one involves changes in the same direction. Table 20 only studies another case of a sample size of 2 in opposite directions.

If you turn to Table 20 on that pair of airplanes, you will find a coefficient of correlation .65, which, once again, is surprising, since a straight line can be drawn between the two points, but still considering the sample size and the nature of the coefficient of correlation, is that a very statistically valid relationship that you have determined?

A. No.

• • • • •

[Tr. 8064] By Mr. Tenney:

Q. The figures that we looked at on page 4-33 were only for 1960, of course, and they only reflected the passengers deleted because of the addition of that portion of the six additional 331s that were put on domestic service in 1960, which was an average of 1.4 aircraft.

If for 1960, for example, you wish to count all the passengers that were deleted, piston, because of, according to your study, the replacement of piston flights by jet flights, you have to go to Part V, VI and VII.

In Part V, the figures are on page V-20. This relates to the earlier delivery of CV-880s, twenty in number. Excuse me. Early deliveries of the Boeing 331s and 131s. I am sorry.

And the 1960 total of passengers deleted works out at 83,371.

For the twenty CV-880s, that is Part VI, on page 6-18, and a large number of passengers are deleted in 1960. It works out adding all these types together at 947,374.

In Part VII at page 7-19, still in 1960, for ten additional 880s, we have an additional 533,971 piston passengers deleted for a total in that year alone of 1,729,434 piston passengers that TWA is assumed to have [Tr. 8065] lost.

Totaling the corresponding tables for jet passengers added, you get 546,707, for a net loss of 1.2 million passengers.

Doing the same thing for all others, coming up with a grand total—none of these figures are added up and totaled by year in your report—but totaling them up, we find that in the five-year period TWA has deleted 5,102,206 piston passengers, but has only gained 2,041,515 jet passengers for a net loss of over 3 million passengers.

Don't you think that computing a net loss of over 3 million passengers as the direct result of reequipping the airline with new, modern jet equipment is a little strange, Mr. Simat?

A. Not a bit. As a matter of fact, my figures don't entirely agree with yours, but they are very close. And they indicate that over the five-year period, according to our estimates, there would be a decrease of approximately 13 per cent in total passenger originations of TWA, and a decrease of 2.5 per cent in the total passenger miles flown by TWA.

And if I again—I again call your attention to the statistics which I cited earlier that indicated that be- [Tr. 8066] tween 1959 and 1961 alone at a time when TWA added approximately 1 billion seat miles to its operations with jet airplanes, TWA suffered a loss of over 10 per cent in the number of passengers which it carried, and I believe a loss in the passenger miles—I haven't checked that figure—I will right now—

Q. You attribute this loss to the direct result of the equipment with jet aircraft, Mr. Simat?

A. There is a loss in passenger miles from a total of 4.6 billion to 4.25 billion, approximately, in a two-year period.

And I do attribute this loss to the scheduling changes which accompanied the introduction of the jet fleet.

As I pointed out, the replacement of piston aircraft miles with jet aircraft miles in the longer stage lengths and the increase in the absolute number of jet flights operated in the longer stage lengths did not develop any material amount of traffic.

On the other hand, the displacement of piston services from the shorter stage lengths did have a material impact

on the volume of traffic moving in the short-haul segments. And it did decrease in absolute terms the number of passengers and passenger miles that [Tr. 8067] were flown over those segments, because the short-haul market is extremely sensitive to the number of flights that are operated, the frequency of service and frequency of service was curtailed and curtailed very markedly during this period.

Q. You believe that by TWA getting and putting into service ten additional Convair 880s and about perhaps up to one-third of six additional Boeing 331s that would have been assigned to domestic service, plus the somewhat earlier receipt of the aircraft, both the additional and the ones that it did, in fact, receive—it is your opinion that this would have had the direct result of TWA losing net something in the neighborhood of 3 million passengers?

A. That is correct. I think the last thing that TWA needed at this time was additional capacity. That was at a time when the entire industry was having difficulties incorporating the capacity which it had.

The earnings of all carriers were down and all carriers show the same kind of decline in traffic.

If I recall the period, the government was quite concerned at that time about the amount of over-capacity and the airlines were furnishing a report to the Board at its request, with special data indicating load factors of jet flights on the major segments of the airlines. This [Tr. 8068] was no bonanza period.

Q. Going back to this table that you were referring to in the Handbook of Airline Statistics, looking at the originations—if that is the line that we should look at—line 19—if you extend your examination from 1961, which is where you directed our attention up to 1963, you do not find that there has been a loss in passenger originations since 1959, do you, but, instead, an increase in passenger originations?

A. That is correct. And it took a very substantial growth in the economy to produce that kind of an increase in traffic.

Q. It is about a 500,000 increase in passengers net over that five-year period; is that correct?

A. Are we still referring to TWA?

The Special Master: Yes, origination.

The Witness: Passenger origination. Excuse me. I am looking at the wrong line here.

Let me point out that between 1959 and 1962 the number of passenger originations on TWA in no year exceeded the 1959 total. It was only in 1963 that we had the increase of 500,000 passengers.

And I should further point out in connection with that that there was a very substantial gain in [Tr. 8069] income levels and in economic activities which accounts, in my opinion, for the general increase in traffic during this period.

It has nothing to do with the acquisition of jets. • • •

[Tr. 8070] • • • By Mr. Tenney:

Q. Mr. Simat, the answers that you were giving, explanations that you were giving a moment ago, lead rather naturally into the consideration of load factors and other matters that are discussed rather fully in your Part C, which I think we can go into more fully tomorrow.

There is one question separate point still in Part B that I would like to get before we get to Part C, and it is a change of subject.

It deals with pages B-19 and B-20 of Vol. II of your report.

On these pages there appears a section or there commences, I should say, a section headed "Number of Piston Aircraft Retired (Domestic and International Divisions)."

On those two pages which are both revised, there [Tr. 8071] are some changes indicated from the earlier version of your report.

I wonder if you could explain to me why you made those deletions?

A. Simply because I goofed. I had intended to use a method which would substantially understate the number of piston aircraft retired, so that the eliminated depreciation and insurance costs would be low.

I found that I selected a method which maximized the amount of depreciation and insurance costs that I eliminated. It was just a mistake on my part. I don't know how I managed to mesmerize myself into thinking I had chosen the conservative method, but I was wrong.

Q. When you had found out that you had not chosen the conservative method, Mr. Simat, but had, instead, chosen a method that would maximize, you decided to stick with the maximization and change the description of it as conservative rather than the other way around; is that correct?

A. I don't believe I have categorized it as conservative.

Q. You did originally?

A. I did originally, yes.

Q. And that is the substance of the deletion, [Tr. 8072] isn't it?

A. I fully confess to the error of my ways.

Q. If you had calculated the annual aircraft miles per available aircraft for each of the years in question from the actual data for that year, the result would have been fewer aircraft miles per available plane and a larger number of so-called surplus aircraft than you have assumed, would it not?

A. Yes, if we had used the low utilization rates prevailing as a result of the mothballing of piston aircraft, no longer used or useful in TWA's aircraft services or schedule services, we would have ended up with a higher number of surplus aircraft, yes, sir.

Q. On page B-21 where the table appears in which you compute the number of surplus aircraft, actually all of those dates under the word "Years" really are meaningless, aren't they? Couldn't they just as well be replaced by the year 1958, since it was 1958 data that you used?

A. Oh, I suppose we could eliminate some superfluous numbers in the table.

The fact is that the last column, the annual aircraft miles per available aircraft, is the figure that is used in calculating surplus aircraft. And the same figure was used for each aircraft type for each year.

[Tr. 8073] And that figure is based upon 1958 experience. • • •

[Tr. 8092] • • • Q. Turning, however, to TWA Exhibit 330, which sets forth both jet capacity and piston capacity, it is true, is it not, Mr. Simat, that a piston seat offered to the public on any market is, to some extent, a competition with every type of seat that is offered to the public on the same market?

A. I don't think there is any question about that. If their services are operated in the same market, if they are at all acceptable to the public traveling in that market, those services do compete with all other services in the same market that are similarly acceptable to the public.

Q. Consequently, it is relevant in determining the increase in capacity that is being offered to the public, based on your assumptions of increases in the number of [Tr. 8093] jet seats offered, to take into account the overall capacity including pistons; is it not?

A. Only to the extent that there is a direct overlap in every market in which services are offered. That is, in every market where there are jet services, there are piston services. In every market where there are piston services, there are jet services.

Also, if we are going to play the arithmetic game of adding piston capacity and jet capacity as though they were equal things, the results can be highly misleading, because while a piston seat does compete with a jet seat, it does not compete with a jet seat on equal footing.

Q. On TWA Exhibit 330 for identification the next to last column sets forth the net change for TWA alone, jets and pistons, year by year, and that column certainly is dealing with a change in the same market, is it not, Mr. Simat?

A. No, it is not.

For that column to be accurate, we would have to have the conditions that I just enumerated, a complete overlap of the market where piston and jet services were being supplied and complete comparability of jet and piston seats in terms of their appeal to the public.

• • • • •

[Tr. 8120] • • • Q. Page 403 of the 1965 CAB Handbook which I see that you are looking at gives a definition of break-even passenger load factor which is very close, almost exactly the one that you gave as your first definition, and I assume is the definition that we should use in looking at these tables.

[Tr. 8121] I read that definition into the record just for convenience.

> "Break-even passenger load factor represents the number of passenger load factor points at which scheduled passenger revenues equal the cost of conducting scheduled passenger service."

I think that is all I need to read for our present purposes for the definition.

Using break-even load factors in that sense then, Mr. Simat, what was the effect on the break-even load factors of American trunk airlines of the introduction of jets into their fleets?

A. The general impact was to reduce break-even factors.

Q. The break-even load factors for operations of jets was lower than with pistons, was it not?

A. On the basis of overall averages, that is true.

In the shorter haul markets, the break-even load factor on jet operations actually exceeds the break-even load factor on certain of the pistons.

Q. That varies in accordance with the type of jets as well as the type of pistons, does it not, Mr. Simat?

[Tr. 8122] A. It varies with the type of jets as well as the type of piston.

It varies with the distance of operations.

It varies with revenue yield.

There are lots of variables in the break-even load factor.

Q. Page 403 of the CAB Handbook, 1965 CAB Handbook, which is the page that I see you have before you, gives the average break-even load factor for the domestic trunk lines generally as being for the year 1959, 57.5 per cent; for the year 1960, 58.3 per cent; for the year 1961, 56.0 per cent; 1962, 51.3 per cent and 1963, 50.7 per cent.

Is that correct, Mr. Simat?

A. That's what the figures say.

Q. Your Table C-VII at page C-17 of your report shows 1961 as the first year when the trunk line carriers had approximately as much jet capacity as piston capacity. Before that, there was more piston capacity. After that, there was more jet capacity.

Is that correct, Mr. Simat?

A. Yes.

The Special Master: What year was that?

Mr. Tenney: 1961.

[Tr. 8123] Q. Generally, the sharp drop in break-even load factors following 1960 and for the next several years has been attributed to the introduction of jets into service, is that not correct, Mr. Simat?

The Witness: Excuse me. May I have that question read back, please? I missed something.

The Special Master: Sure.

(The question was read.)

A. I am not sure that everyone attributes the decline in break-even load factor to the introduction of the jets. I certainly do.

The Special Master: Did or did not?

The Witness: Do.

Mr. Tenney: There is time, I think, perhaps, for one more general question before lunch. It may save a good bit of time if it proves possible to answer it simply.

Q. Can we agree, all else equal, that a passenger would in all probability choose to travel by a jet rather than by a piston, if he was given the alternative?

A. I am sure we could agree on that, if we add a few more conditions. One is that the timing of the jet and piston services are acceptable to him; that the [Tr. 8124] number of stops or routing of the airplane is satisfactory, both from the standpoint of the jet and the piston services. I don't think there is any real doubt that a passenger offered a choice of alternative services at convenient departure times, offering him non-stop, where he wanted to go, that passenger would unquestionably choose the jet.

* * * * *

[Tr. 8125] * * * The Witness: I wanted to supplement the last answer that I gave to state that I was assuming, in making the answer, that the rates for transportation on the jet and piston aircraft were the same.

The Special Master: You mean the fares?

The Witness: Yes.

Cross examination (cont'd) by Mr. Tenney:

Q. Mr. Simat, if the break-even load factors decline simultaneously, it is perfectly possible for a decline in passenger load factors to be accompanied by an increase in profits, is it not?

A. Yes.

Q. American Airlines, at the end of 1959, is shown by the ICAO Fleet Statistics, which appear in TWA Exhibit 57, which is already in evidence—American Airlines, [Tr. 8126] as I say, is shown as having at the end of 1959 twenty-four jets in its fleet, all of them Boeing 707s.

I show you a photocopy of the relevant page of TWA Exhibit 67.

Is that correct?

A. Are you asking me to vouch for the ICAO Statistics or simply to tell you whether the figures you quoted are part of the statistics that you furnished me?

Q. Whether they are part of the statistics that I furnished you.

A. Yes, there are twenty-four aircraft shown for American Airlines as of the end of 1959.

Q. The corresponding table, still from TWA Exhibit 67, in the ICAO Fleet Statistics as of the end of 1960, shows that American Airlines had increased its jet fleet by an additional ten Boeing 720 jets; is that correct?

A. The same source shows that as of the end of 1960 American Airlines had thirty-four aircraft on hand, ten of which were Boeing 720 aircraft.

Q. I make that a 42 per cent increase in its jet fleet from the end of the preceding year.

Referring to the 1965 CAB Handbook which you have before you, at page 144, American's overall load factors are shown as declining from 70.4 per cent in 1959 to 65.3 [Tr. 8127] per cent in 1960; is that correct, Mr. Simat?

A. I am looking at a page 144, Mr. Tenney, and I see a load factor of 60.5 per cent which is termed the overall revenue load factor in 1959, and a load factor of 56.5 per cent in 1960.

I think you were talking about a revenue passenger load factor, not the overall load factor.

Q. Yes, I am incorrect. I did misspeak myself, Mr. Simat. I intended to call your attention instead, as you have indicated, to the total revenue passenger load factor which in those years is 70.4 per cent and 65.3 per cent respectively. Is that correct?

A. Yes.

Q. The same handbook, 1965 handbook at page 403, which we were looking at this morning, reports break-even load factors, and for American they report the break-even load factor—break-even passenger load factor, I should say—as being 65.2 per cent in 1959, but 61.0 per cent in 1960; is that correct?

A. Yes.

Q. Still in the same handbook at page 242, American's [Tr. 8128] operating profit is reported, and its operating profit in 1959 is reported as having been $24,518,000. It stayed about the same, but rose slightly in 1960 to $24,721,000, according to this report.

Is that correct, Mr. Simat?

A. Yes.

Q. So that American in the years 1959 to 1960 would be an example of an airline whose passenger revenue load factor declined while its profit stayed even or, indeed, increased somewhat; is that correct?

A. That is correct. And I point out further that between 1959 and 1960, American Airlines added approximately 1.5 billion seat miles to its total operations. While I do not have the figures for jet and piston service separated, I would assume that the great bulk of the increase, if not the entire increase, was increased seat miles operated with jet aircraft. And having added 1.5 billion seat miles during this period, American Airlines added a profit of approximately $200,000 between 1959 and 1960.

The Special Master: Operating profit?

The Witness: Right.

• • • • •

[Tr. 8142] *** Q. In 1964, for Trans World Airlines, the CAB 1965 Handbook at page 146 shows a revenue passenger load factor of 56.4 per cent which has decreased substantially from the years that we were looking at earlier, does it not?

A. Yes, and it is up considerably from the low point of the period which was in 1962 when the load factor was 51.3 per cent.

Q. On page 403, the break-even passenger load factor for TWA is shown as having declined to 48.9 per cent which is substantially lower than it was during the years we were looking at before, is that not correct?

A. Yes, it is down from the break-even load factor in 1959 and also from the break-even load factor in 1960.

[Tr. 8143] Q. On page 244, TWA's domestic operating profit for the year 1964 is shown at $50,892,000, is it not?

A. Yes.

Q. So this, too, is an example of the fact that it is possible for load factors to decline while profits increase, is it not?

A. I wish you would go back over those figures again. It was my recollection that the load factor in 1964 was up.

Q. The load factor in 1964 was 56.4 per cent and the comparison that I was drawing was with 1960 when it was 63.9 per cent.

So that over that period of time, there had been a decrease of 7.5 per cent in the load factor?

A. Yes, it is possible.

It is also possible to lose money in a rising load factor.

Q. You have explained both in your report and orally that in your opinion not only did each addition of jet capacity produce a less than proportionate traffic increase, but also that each decrease in piston aircraft capacity—that with each decrease in piston aircraft capacity the loss in piston traffic was more than [Tr. 8144] proportionate to the reduced capacity. There, of course, I am quoting from C-I of your report.

I think that you have also here earlier today and yesterday drawn the further conclusion that a net loss of airline passengers over this period was the result, is that correct?

A. That is correct.

I indicated that the explanation of the loss in traffic was a sensitivity of the passenger travel market in shorter stage lengths to frequencies of operations, that is, to the number of flights available. With the curtailment of piston aircraft services, the effect on traffic is quite marked.

Q. The 1965 CAB Handbook at page 144 has American statistics, that is, American Airlines statistics, and at page 132 it has total domestic trunk statistics.

Looking first at American and at the origination line which I think you told us the other day was the best line to look at, the line 19 as far as traffic goes, I find that in the last pre-jet year, which was 1958, American's originations are reported as 7,191,000 and that in 1963 the last year that we are concerned with in our study, at 8,402,000.

The intervening years I will read rapidly.

[Tr. 8145] 1959, 7,633,000.

1960, 8,080,000.

1961, 7,576,000.

1962, 7,998,000.

Over the period, is it not clear that American's passenger traffic increased significantly?

A. It is certainly true that over the period from 1958 to 1963, there was a significant increase in American Airline's traffic, and the traffic of every trunk line in the business.

Also, all the local service airlines, all of the international carriers. And this increase was in large part the result of a very substantial gain, in economic activity.

Q. It is also the period of the first five years in which jet capacity was introduced by these airlines into schedule service, is that not correct?

A. That is correct.

And let me point out to you, Mr. Tenney, that with respect to American Airlines' passenger originations, between the year 1959 and 1961, there was a decline in the absolute number of passengers from 7,633,000 to 7,576,000.

And this was a period when American presumably, by your count, had an edge in the number of jet aircraft.

[Tr. 8146] Q. The decline as we both know, for TWA was greater, was it not?

A. Yes, but with a greater number of aircraft, American Airlines, they should have shown, if I understand your theory correctly, a substantial increase in passenger traffic.

It is perfectly obvious that the jets that were added between the years 1959 and 1961 did not add a single passenger.

Q. I would like to put into the record the corresponding figures for domestic trunks as a whole from page 131 of the CAB Handbook, again the originations line. For all domestic trunks in 1958 there were 35,515,000 originations.

1959, 44,488,000.

1960, 45,184,000.

1961, 44,669,000.

1962, 46,759,000.

1963, 53,380,000.

The increase that those figures reflect you would attribute to the same factors that you attribute the increase in American's passengers, is that correct, Mr. Simat?

A. I increased—I attribute the increase in the [Tr. 8147] total number of passenger originations and the much greater increase in passenger miles I might point out to a greater public acceptance of air transportation, part of a continuing trend, and further to a very substantial improvement in the state of the economy.

If you will take random data for the years 1965 and 1966, you will see the increase in these two years is even more dramatic than anything that we had experienced before without any substantial influx of jets.

Q. Will you repeat that last part, please?

A. Without any substantial influx of jets.

Q. On page C-II, you make the statement at the end of the first paragraph that in your opinion:

> "A further addition of capacity by TWA or by any other air carrier would have been even more unprofitable."

Setting TWA aside for the moment, what do you mean, Mr. Simat, when you use the phrase "even more unprofitable" in that sentence?

A. I have in mind that between 1958 and 1961, for example, the airline industry added considerably to its investment in the form of jet aircraft, and yet the airline industry as a whole did not experience [Tr. 8148] an increase in earnings. In fact, there was a decrease in earnings.

So that for every dollar of investment added, there was, in fact, a loss, an operating loss.

I am suggesting that if the capacity increase had been any greater than it actually had been that the amount of the profit lost would have been still greater.

I am further suggesting that it was not possible for any major airline to have added capacity over and above the capacity it already added at a profit.

Q. The fact is that American Airlines returned a profit in its operations during every year of this period, did it not?

A. That is not the test.

The test is whether the additional investment in aircraft and in capacity produced a net operating income over and above the net operating income that would have been experienced if they hadn't added the capacity to the investment.

We are talking about adding capacity here, not maintaining capacity.

Q. How do you know, Mr. Simat, what American would have achieved if it had not added capacity during this period?

[Tr. 8149] A. We have the figures for the earlier years of the period.

I am not aware of any developments in the economy, in the climate in which American Airlines and other lines were

operating, that would have caused a deterioration in profits, except the addition of capacity.

Q. The fact remains, does it not, that American Airlines achieved a profit in each year in this period? That can only be answered yes, I think, Mr. Simat.

A. It is your question. I think the answer is yes. Let me check.

American Airlines in each of the years from 1959 through 1963 achieved a profit in domestic operations.

In international operations American Airlines lost money in 1959, 1960, 1961.

Q. I think you have already testified, Mr. Simat, that for American the international operations represented in the year that you selected to compare only two per cent of the total, a relatively minor proportion, is that not correct?

A. The total revenues are not great, but that doesn't make the operations any less profitable.

[Tr. 8150] Mr. Tenney: Would you read that back to me?

(The answer was read.)

The Witness: I would point out to you, Mr. Tenney, in this connection, that in the year 1964, American Airlines reported a net profit of $3,231,000 on total international passenger revenues of $8,200,000. By just crude calculations that appears to be close to a 40 per cent return per dollar of passenger revenue.

Q. Mr. Simat, what would have happened in your opinion to any airline that in 1959 through 1963 did not acquire jets but simply continued to fly the pistons that it had been flying before?

A. There would have been some loss of traffic.

Q. I thought you testified that there were no factors that you were aware of in the economy during this period that could have accounted for any losses other than the increase in jet capacity?

A. I believe that your earlier questions were directed to the industry as a whole.

Q. No, they were not.

A. We are now talking about a single carrier.

Q. They were not. They were addressed to a single [Tr. 8151] carrier, specifically in many instances American. The same way your sentence on page C-II that I called your attention to is addressed to a single carrier, an additional capacity by TWA or by any other carrier.

I am not talking about the industry. I am talking about a single carrier.

A. The record will speak for itself, but my recollection is that the line of questioning that came up earlier had to do with the state of industry and factors that would account for traffic developments within the industry as a whole.

Q. Let us go back to some of those questions then so that we know what we are talking about.

We were talking at one point there about American Airlines. And we are talking about American Airlines in connection with this sentence of page C-II of your report which says and I quote only this part:

> "A further addition of capacity by any other carrier would have been even more unprofitable."

I am inquiring as to how unprofitable the historic addition of jet capacity was by a specific airline, in this case, American.

I call your attention again, as I did before, [Tr. 8152] to page 242 of the CAB Handbook showing that American Airlines actually returned a profit throughout this period.

A. Perhaps, Mr. Tenney, I can illustrate some of the basic economics here with a rather simple numerical example.

Let's assume a situation where there are only two carriers in the whole wide world and they operate between one pair of points.

And let's assume that each of the airlines is operating 100 seats in the market and each is carrying 80 passengers. The load factor is in each case 80 per cent.

And by any break-even standards, this is a profitable load factor.

Let us assume that things go on swimmingly in this vein, until one of the two carriers decides that it might be desirable to add another flight and to obtain a bigger share of the market. So it does this. It adds another flight, another 100 seats.

It is now offering two-thirds of the capacity in the market, and this should entitle it to two-thirds of the traffic.

There will be 300 seats in the market, instead [Tr. 8153] of the 200 seats, 160 passengers, and the load factors will be 53.3 per cent, probably in terms of just pure break-even point, without considering return on investment and costs of capital, an amount that is sufficient to recover the operating costs of the operation for all carriers in the market.

However, what has the carrier that has added the additional flight wrought? He is now getting two-thirds of the traffic, approximately 107 passengers, in lieu of the 80 passengers he was getting before. So he is adding 27 passengers, but he has added 100 seats and the costs of 100 seats.

So by virtue of the addition of the flight, he has gained 27 passengers, but he has lost a lot of money.

Now, the operation may on an overall basis be profitable, but it is not as profitable to either carrier as it was before.

To the carrier that has been stripped of the 27 passengers that the adding carrier has acquired, he is losing the revenue of the 27 passengers.

To the carrier who has added the capacity he is gaining revenues of the 27 passengers but he is adding one heck of a lot of costs.

[Tr. 8154] So nobody gains.

Q. The other carrier lost those passengers while not doing anything at all, isn't that correct, Mr. Simat?

A. That's correct.

Now, let's go through the arithmetic again and have the other carrier recover some of those passengers.

We have our first carrier operating 200 seats now, and the second carrier in the market has decided that he is not to be outdone. So he adds another 100 seats in the market.

Now we have 400 seats in the market. We have 160 passengers divided two ways. That is 80 passengers per carrier. Divide that two ways, and that is 40 passengers per flight.

We are not operating all services at a load factor or 40 per cent.

The carrier has gained back the difference between 80 and—excuse me. Let me calculate that one out.

Mr. Tenney: Off the record.

(Discussion off the record.)

The Witness: It has gained back the 27 passengers and it has cost that carrier the cost of operating 100 seats to gain back that 27 passengers [Tr. 8155] and it has lost money in the process.

Now, ask me should it have done what it did, added the second 100 seats? The answer is no.

It was better off not operating the second 100 seats than operating the second 100 seats.

In other words, you do not correct mistakes by making additional mistakes.

Q. In that example that you just gave, Mr. Simat, you made the comparison for the second carrier between—the comparison as to what the second carrier achieved by adding its jet between the number of passengers that it ended up with after these two successive additions of capacity in the same market which was 80 to the figure that it would have had, and, in fact, since you did it in a step process, did for a time have, as a result of doing nothing while the first carrier added its flight, and that is how you got the 27 additional passengers produced by its added flight, that is, the second carrier's added flight, is that correct?

A. That's correct, yes. It is the difference between not doing anything and doing something.

Q. Why did you not compare the number of passengers that it had at the very end of all of this operation with the number of passengers that it had at the very beginning of all of this operation, in which case it would [Tr. 8156] have produced zero passengers by adding a flight?

A. Well, if you want me to make the comparison, I will, but I don't think it is appropriate.

Q. It would be quite unsound to make that comparison, wouldn't it?

A. I can't answer that question categorically.

If you assume a situation where one carrier is free to act and another carrier is not free to act, then the answer is probably yes.

But if you assume a situation where all carriers in the market are free to act, then I'm not sure what the answer is.

In other words, it is a question of whether you have to take into account what the competitive impact of the action will be.

Q. I am trying to confine myself to the example that you formulated which was as you explained deliberately simplified, but attempting to take into account competitive factors.

In the terms of your comparison of these two air carriers who are the only two air carriers in the market and they compete on this particular pair of cities, which is, of course, a necessarily simplified assumption, but in terms of your own example it would be [Tr. 8157] quite unsound, would it not, to evaluate what the second carrier achieved by adding its flight through a comparison of what it had before there had been any increases, even by the first carrier against what it had after both carriers had made their increase? That would be an unsound comparison, would it not?

A. That would be true. And it would also be unsound for the first carrier in the market to have added the 100 seats without considering the possibility that the second carrier in the market would add a like 100 seats.

Q. The answer to my question was yes, was it not?

A. With my qualification, yes.

Q. I am going to get a straight answer to my question, Mr. Simat. That's not a qualification you just gave. It is a volunteered statement about something the first carrier you say should have taken into account. The answer to my question was yes, was it not?

A. I think I've answered all of your questions, Mr. Tenney.

Mr. Tenney: Would you read my question back, please?

(The question was read.)

Q. I would like an answer to my question without [Tr. 8158] any volunteered comment as to what the first carrier ought to be thinking about while this is going on.

The Special Master: Give him an answer.

A. I believe I said it was true.

• • • • •

[Tr. 8165] • • • Q. In 1959, as this table shows, TWA flew 1,379,000,000 jet seat miles, according to your table, and 1,146,000,000 jet passenger miles, is that correct, in 1958?

A. Yes.

Q. The marginal load factor that we pointed out a moment ago appears in your table opposite the year 1960, but actually you have applied this as the marginal load factor for 1959 in your computations, have you not?

A. That is correct. We have used the change between 1959 and 1960 to guide us in determining how additional capacity operated in 1959 would be utilized.

[Tr. 8166] Q. Just to look ahead a bit, you do this in each year, do you not? The marginal load factor that you determine and put in your table opposite the year 1961 is the one that you use for calculations of 1960 results and so on down the line. 1962's marginal load factor is used in 1961. 1963 is used in 1962 and 1964 is used in 1963, is that correct?

A. That is correct.

Q. In 1960, before adjustment again, the figures shown for available seat miles for TWA are TWA's actual 1960 figures, are they not?

A. Yes.

Q. The same is true for revenue passenger miles shown for 1960, actual TWA statistics, nothing assumed about them, is that correct?

A. That's exactly correct.

Q. The amount of the assumed capacity increase does not come into your computations until after you have deter-

mined this marginal load factor from the actual capacity increase in the subsequent year, is that correct?

Mr. Hayes: I am sorry to interrupt—

A. I am not sure I understand that question.

The Special Master: Read it back, please.

[Tr. 8167] (The question was read.)

Q. If that is confusing, I will try to restate it.

A. Well, I think I understand the question now.

The answer is that the amount of capacity increase is something that is entirely independent of the calculation of the marginal load factor.

Q. The amount of capacity assumed to be increased?

A. Or assumed to be increased, yes, sir.

Q. The assumed increased capacity for TWA which both you and Mr. Wemple have used for the year 1959 can be found on page V-VII in Volume I of your report. It is Table V-F. I think as a matter of fact it may appear in one of the tables we put in. I think TWA Exhibit 329 and 330 that we put in earlier this morning actually has that figure. It has been the easiest way to look at it.

For 1959, I find that there was an assumed increase of 267.9 million available seat miles of jet capacity for TWA, is that correct?

A. Yes.

Q. Your marginal load factor is determined in this table based on a computation of the results of an addition in available seat miles of 1.640 billion, is it not?

A. Yes.

[Tr. 8168] Q. Mr. Simat, the assumed increase in capacity in 1959 is only about 19 per cent of TWA's actual 1959 capacity, but you have determined a marginal load factor based on the results of an addition in capacity of, I think it is, 118 per cent.

Is that a proper method of computing what would have occurred in 1959?

A. Yes, I believe it is a proper method of computing what would have happened in 1959.

Q. Do you really think that you would have as much of a drop in load factors from a 19 or 20 per cent increase in capacity as you had from 118 per cent increase in capacity?

A. I think that we are within the range of capacity increases where the differences in the marginal load factors are not material.

* * * * *

[Tr. 8225] * * * Q. Mr. Simat, I notice that that correlation between the B-131B and the B-720-B was by a fair amount the highest correlation in your table on C-26, which is taken from Table XX, and it is by a very considerable amount the highest of the correlations between any two pairs of aircraft that we have been discussing here when the correlations are taken from Table XXI as well.

Can you tell us what in general TWA's experience with the 720Bs in its fleet was? How many were there, in general when it did have them and what the circumstances were when they left TWA's fleet?

A. They were a total of four aircraft all told, and they were in service from July of 1961 through October of 1962.

The aircraft were leased to TWA. The figures I gave you were for domestic services. There is an [Tr. 8226] indication, a footnote to the table that in 1961 .0—excuse me—0.1 aircraft were assigned to the International Division.

Q. When did the Boeing 131B aircraft come into TWA's fleet?

A. The first of the aircraft assigned to service came in in April 1962.

Q. By the time that the 720Bs were retired from TWA's service and the lease terminated, how many 131Bs approximately had come into TWA's fleet?

A. In the last month in which there are any recorded B-720Bs, there were on the average 1.8 such aircraft, and in the same month the number of available 131Bs in domestic services is indicated as 17.6.

Q. What was the relationship in point of time between TWA entering into the contract for the purchase of the the 131Bs and its making the arrangements for the lease of the 720Bs?

A. I can't answer that question, Mr. Tenney.

Q. To put it more generally, is it not the case that the 720Bs were leased by TWA to fill in part the needs for jet equipment during the period pending the arrival of the 131Bs for which they made arrangements at approximately the same time?

[Tr. 8227] Mr. Hayes: I object on the ground that there is nothing in Mr. Simat's testimony as to this unless he knows as a matter of fact.

The Special Master: Do you know?

The Witness: I don't know as a matter of fact, no.

Q. If the 720Bs were leased as a stop gap measure pending the arrival of the 131Bs, that would tend to explain why you would get a very high correlation between the additions of 131Bs and the deletions of 720Bs, would it not?

A. If that were so, yes.

* * * * *

[Tr. 8290] * * * Q. Did that proportion in your opinion increase, decrease or remain the same over the five year period you have studied?

A. There was a slight tendency for the proportion to decrease over the five year period from which we concluded that the factor, whatever it was for jet operations was somewhat different from the factor of piston operations, that the average jet passenger would tend to make fewer intermediate stops than the average piston passenger.

At the beginning of the period, however, there were several forces which required, if anything, more stops on on the part of the jet passenger than the piston passenger because the jets were operated over a limited number of stage lengths or a limited number of markets. There was some tendency for passengers who might have used direct flights to have rerouted themselves so as to [Tr. 8291] make use of the jet aircraft involving a separate connection or an additional connection over and above the connection that they would have made if there were no jet services available.

The Special Master: Does that indicate there was a strong passenger preference for jets during this early period of jet operation?

The Witness: I think that where the jets were available, the jets were obviously the preferred aircraft. And where it was possible to make connection to jet flights and save time in the process, passengers would reroute themselves.

In those cases, of course, there would be no additional traffic created by reason of the rerouting. It is simply a matter of passengers rerouting themselves.

And if rerouting involved an additional number of miles flown, a passenger flying out of his way to make the connection, this would have a depressing effect on revenue yields. For the same amount of revenues

that the airlines would collect, it would have to fly the passenger a greater distance.

• • • • •

[Tr. 8328] • • • By Mr. Tenney:

Q. Page D-19, the next page has one thing that I found just slightly puzzling, the top of page D-19 which is a revised page.

The sentence says:

> "They establish a relatively small spread between the jet and piston aircraft percentages ratios as we would expect and they establish a somewhat higher percentage ratio for piston than for jet aircraft services as we would further expect."

And I notice that the revision on that page, the only revision was that you changed the word "lower" in the phrase "somewhat lower percentage" to the word "higher" to make it "somewhat higher percentage."

Was that change a reflection of a change in your computations or a change in your expectations, Mr. Simat?

A. It was a change brought about by the clear light of day.

As I recall my drafting of the original sentence, it was some time around 2:30 in the morning, and sometimes I am not at my best at 2:30 in the morning.

[Tr. 8329] Q. On page D-21, Table D-IX, we have what you have headed "Recalculation of Estimated Net Added Passenger Revenues to Determine the Amount of Overstatement from the use of Faulty Passenger Revenue Yields," which is a lengthy table in terms of numbers of columns at any rate, and the first three columns after the dates are taken, according to your heading, from Mr. Wemple's figures.

After that, we are dealing with your computations.

Is that correct?

A. Well, in the case of column 5, the computations are not mine. The computations were already prepared by the Civil Aeronautics Board. They are the computations of average passenger trip lengths which we derived from the Handbook of Airline Statistics published by the Civil Aeronautics Board.

Q. So this is an actual average trip length of passenger added miles, although you have headed it "Assumed Trip Length," is that correct?

A. That is correct.

Q. The next column is headed "Actual Trip Length of Passenger Added Miles."

That is not an actual trip length, that is an assumed trip length, isn't it, Mr. Simat?

[Tr. 8330] A. That's a calculated actual trip length of the traffic that was added between 1959 and 1963, derived directly from TWA's experience.

To obtain this figure, we took the 1959 passengers carried by TWA and the 1963 passengers carried by TWA and subtracted one total from another to obtain the number of passengers added.

We took the 1959 passenger miles and subtracted those passenger miles from the reported 1963 passenger miles to derive the number of added passenger miles.

Then we derived the added passenger miles by the added passengers to obtain the added distance over which the added passengers traveled.

And that figure is 1453, which is what you would expect if the added traffic were largely carried in jet aircraft.

Q. You have applied that 1453 in each of the five years, 1959 through 1963, without any change, is that correct?

A. Well, the 1453 is the average for the 1959-1963 period, and for purposes of this calculation we have used the period average and applied it to each of year of the period.

Q. If you tried to compute this figure in the manner [Tr. 8331] that you have described on an annual basis by comparing each year with the next year, could you do it?

A. It could be done. And I would anticipate that in lieu of the amount shown here of 1453 miles each year of the period, we would have a decreasing series, where in 1959 the trip length of added passengers was substantially higher than the trip length in 1963. And if I carried the calculations out on that basis, I think you would find that the column headed "Mr. Wemple's Overstatement of Net Passenger Revenues in Miles" column 9, would be higher for the years 1959 and 1960, somewhat lower for the years 1962 and 1963, and the total effect of introducing an annual average trip length would be to increase the amount of the overstatement from 4.6 to something higher.

Q. In 1960, as opposed to 1959, TWA had a decline in revenue passenger miles.

There was also a decline between those two years in originations.

You have the phenomena from 1960 to 1961.

If you applied your method in those two years to obtain an annual figure, what kind of result would you get?

A. I don't think you could apply the same method [Tr. 8332] to data for the years 1959, 1960 and 1961, since during this period, as I have testified and as you have now stated, there was an absolute decline in the amount of traffic carried by TWA, notwithstanding the addition of considerable jet capacity.

To make the calculations on an annual basis, I would—for this period—I would go to the detailed information

which has now been furnished us by TWA indicating the on-line trip length and the flight stage length of passengers that were actually carried by TWA in jet services.

We now have the information we did not have earlier, which enables us to get behind divisional averages and totals.

From the information that we now have we are able to make a better approximation or a better estimate of the average trip length of added traffic year by year for jet aircraft. In fact, we can do this for each type of jet airplane.

Q. If you performed this annual computation from 1959 to 1960 and 1960 to 1961 using the method that you described and carried out the arithmetic, in spite of the fact that TWA had a decline in those years in originations and passenger revenue miles, by your method wouldn't you come out with a negative yield figure with TWA paying the [Tr. 8333] passengers to travel on it?

A. I think we have another version here of a parable.

It was once true, Mr. Tenney, that Capital Airlines had a negative investment. In other words, it was on a deficit in its investment account and it was also true that they lost money for that year. And some witness divided the operating loss by the investment base which was negative and concluded that Capital had the highest rate of return in the industry.

The reason for that is when you divide one negative by another negative you get a positive.

Q. But doesn't the fact that it cannot possibly be used on an annual basis during much of this period indicate that this method that you have used to select a single figure which you call actual trip length of passenger added miles for each year of the five-year period is a completely unsound method?

A. Not so, Mr. Tenney.

The obvious fact which you can observe from column 5 is that the average trip length of passengers during this period was increasing. It went from 892.6 miles in 1959 to 942.3 miles in 1963.

And algebraically I know of no phenomenon that [Tr. 8334] would explain that increase in average trip lengths, save the fact that the added passenger traveled at a somewhat higher average trip length than the passengers that we started out with in 1959.

In other words, to bring the average up you have to add something at a higher value than the average.

There are varying ways of determining what the trip length is of an added passenger. In those years where there was an absolute decline in the volume of passengers and passenger miles, algebra fails you.

However, there are ways of obtaining, even for those years, the trip lengths of added passengers. And if you look at the entire period from 1959 to 1963, it is possible, using simple algebraic calculation, or arithmetic calculation, I should say, to compute the average trip length of the added passenger.

The figure that appears when you make that computation is 1453 miles. That is the trip length which explains the difference in the average trip length experienced by TWA's passengers between 1959 and 1963.

And to my mind, it is not an unreasonable figure.

Q. But to summarize, in part, this figure when you apply it in each year in this five-year period without change, isn't it true, Mr. Simat, that there is nothing [Tr. 8335] whatsoever actual about it; that it is instead an example of a variable constant added to your work to come out with a predetermined answer, otherwise known as the finagle factor?

A. It is certainly true, Mr. Tenney, that the 1453 miles does not—is not the added trip length for each year of the period. It is the average for the entire period.

And I have testified that if we determined as we now can more accurately the figure for the added trip length for each year of the period, we would find that it is higher for 59, 1959, than it is for 1963, and that if we made the adjustments in Table D-IX on that basis, that we would find that the overstatement in Mr. Wemple's estimates were even greater than we estimate in column 9 of the table. • • •

[Tr. 8400] • • • The Special Master: As long as you were interrupted in your argument by me, Mr. Hayes, let me ask you, suppose Mr. Simat next spring should [Tr. 8401] after more cross-examination, develop another theory which he thought was even more accurate to express his views, how would you feel about that?

Mr. Hayes: I think that if I were in your shoes I would say you've had time enough to think up your best one.

The Special Master: You think three bites is enough?

Mr. Hayes: No, it is only two bites. The second was merely correction.

The Special Master: The first and then revision and substitution?

Mr. Hayes: The second is not a bite.

The Special Master: Do you, Mr. Simat, look on this as a substitution for your—what will be the status of your present report if this report is allowed?

The Witness: I think I testified earlier and I still feel that the revenue estimates produced by this second round would be far superior and more reliable than the revenue estimates produced by the first round.

The Special Master: Let me ask you, either you or Mr. Hayes, whichever one decides, your pre- [Tr. 8402] sent report comes up with the idea that TWA would have lost millions of dollars if it had had these additional planes.

Do you think it is reasonable to expect that your supplemental report will show that TWA would have come up with some profit, that there would be $50 million difference between your present estimates—60 million between your present estimate and revised estimates? What help is it going to be to me to have a supplemental report which shows that instead of losing $60 million under these assumptions TWA would have lost 70 million or 100 million or 30 million or would have broken even, not had any profit! That is really my problem.

Mr. Hayes: I think it amounts to this. You are sitting as a master in a damage hearing. What we have so far tendered is merely a critique of plaintiff's expert witness, with the reasons given as to why in our expert's opinion his assumptions can't be accepted; and with adoption—with the application rather to the plaintiff's expert's methodology of refinements that our expert thinks should be made before it could be accepted.

The second report is taking a new, fresh [Tr. 8403] look based not on divisional averages, not on assumed data.

For example, the assumption that Mr. Wemple indulges with respect to how many flights there would be in the International Division without telling us where they are going to fly. He did not study that or anything else, without telling us what areas they would be put in or where they would be put in or anything about them.

Now what is proposed is that on the basis of what TWA actually did—

The Special Master: I understand that.

Mr. Hayes: —flight by flight—

The Special Master: Let me—

Mr. Hayes: To answer your question if I may—I don't think I have answered it—

The Special Master: I don't think you have either.

Mr. Hayes: That's what I would like to do. This is merely preliminary.

The Special Master: Right.

Mr. Hayes: I think from your position as a master on a damage hearing you would want to know what is the best estimate that can be made based [Tr. 8404] on the actual facts regardless of what the result would be. I can fully understand Mr. Simat sitting here can't tell you what is is going to come out with. He has not finished it.

The Special Master: Let us take a couple of hypothetical situations. Suppose Mr. Simat came out with the result in a supplemental report on his refined figures that TWA would have lost $120 million instead of $60 million, what difference as a practical matter would that make in the case?

Mr. Hayes: I think as a practical matter that would make this difference to you, that on a detailed study assuming it stands up there couldn't possibly

be any award of damages here. There is nothing to compromise.

The Special Master: Isn't that true on the present—

Mr. Hayes: We think the present report tends to establish that the calculations put in by plaintiff are not reliable, but the second report would show what are reliable calculations and there would be a much firmer basis for a conclusion by you that there couldn't possibly have been the damages claimed. That is the big difference it [Tr. 8405] would make.

The Special Master: That would seem to throw considerable doubt on your mind on the validity of the present report.

Mr. Hayes: No, it does not. I don't at all even suggest that there is any lack of validity in the present report.

I am thinking rather of a record that we must make here first for you and then for the courts beyond, and I am thinking chiefly of the best evidence for this case. This is what I am driving at.

The Special Master: So am I. I want to make it very clear on the record that I in view of the large amounts involved in this case, I want to give the defendants more than what I think is reasonable time to develop their expert testimony in this matter, and I am trying to lean over backwards in that respect.

On the other hand, I recognize we have to come to the conclusion some time.

You say that this should be the last bite, the third bite. Mr. Tenney says the second bite is enough.

I realize there is tremendous cost to both [Tr. 8406] sides involved.

I still can't quite get through my head why Mr. Simat, having presented this report showing that TWA would have lost $60 million on these assumptions as to why—and you stand on that report as being the judgment—because Mr. Simat has said very firmly that in his opinion even aside from the results, his study has shown that he thinks that all the surrounding facts and circumstances and background support his conclusions. If his conclusions are accepted at face value, TWA not only has no case, but as I said facetiously the other day, they owe Mr. Hughes quite a lot of money.

But what I mean to say is that the gap is so wide there, before you could come to a conclusion that TWA was damaged, if you are going to accept Mr. Simat's testimony, that a ten per cent change in the figures, 20 per cent, I believe, change in the figures would still come to the same conclusion, that under no circumstances is TWA entitled to any damages here.

So I don't want to waste your time or the plaintiff's time or the Court's time or anybody else delaying the matter for another year, six months to [Tr. 8407] a year, as I think Mr. Tenney expressed it, if I can't see any possibility of there being a change in your general conclusions.

Mr. Hayes: If I knew which I don't, and I am not inquiring because I have no right to make—

The Special Master: In other words, how can you do anything except help TWA in a new report, by showing that the loss wouldn't have been as much as you thought? Because it certainly won't do much good as I see it at the moment to say TWA would have lost 70 million instead of 60 million.

Mr. Hayes: I couldn't agree with you more, Mr. Brownell. • • •

[Tr. 8431] • • • By Mr. Tenney:

Q. At the end of our session on Tuesday, Mr. Simat, we had gone over some information as to Pan American and other carriers, equipment position in 1959. I would like to turn to the next year 1960.

You testified that by the end of 1959 Pan American had received 21 jet aircraft, and that TWA had received four of its international type B-331s.

Can you tell us what Pan American received in terms of jet aircraft during the year 1960, mentioning types if you have them available?

A. I have before me a summary table which does not provide information as to the type of aircraft beyond a general description of the manufacturer and the overall model number.

And according to the figures that I have before me, as of December 31, 1960, Pan American had 29 Boeing aircraft of the 707 variety, and this was an increase of eight over the number of aircraft it had on hand at the end of December 31, 1959.

Pan American further had 17 DC-8 aircraft, Douglas aircraft, for a total of 46 aircraft. And the [Tr. 8432] 46 at the end of 1960 compares with a total of 21 aircraft at the end of 1959, all of which were Boeing.

Q. I think perhaps you know this of your own knowledge, Mr. Simat, even though the model numbers are not set forth in greater detail in that table.

Of those eight additional Boeing 707 type aircraft received by Pan American in the year 1960, it is true, is it not, that three of them were Boeing 707-331s, originally constructed to TWA's specifications?

A. It sounds right, Mr. Tenney, but I do not have the figures before me to confirm it.

Q. Can you tell us how many additional intercontinental type jet aircraft TWA received in 1960?

A. Again, I will have to consult another source for that. According to the figures before me, TWA had 19 Boeing aircraft in 19—at the end of 1959, and a total of 27 at the end of 1960.

That is a net gain of 8. I would have to consult another source to determine the type numbers of those 8 aircraft.

Q. I think that from the Coverdale & Colpitts report—and in fact I think we covered this on Tuesday—15 of those aircraft in both years were Boeing 707-131s, not used in transatlantic service.

[Tr. 8433] So that all 8 of the increase in 1960 were of the 331 type?

A. Yes, that has been called to my attention as something that appears on page 10 of the Coverdale & Colpitts report.

Q. In 1960, therefore, Pan American took delivery of a total of 25 additional jet aircraft usable on its intercontinental routes, while TWA took delivery of an additional 8 such aircraft, without regard to the specific manufacturers or precise model numbers.

Yet on page E-5 of your report, it appears, does it not, that during 1960 TWA was able to increase its percentage of available seats offered as compared to Pan American's available seats offered from 53 per cent to 72 per cent.

That is what your table shows there, does it not, Mr. Simat?

A. Yes.

Q. On Tuesday we put in TWA Exhibit 337 which gives the ratio in a slightly different form as Pan American to

TWA, and it shows that the ratio of transatlantic seats offered by Pan American to those offered by TWA dropped in 1960 to 1.39 from a figure in 1959 of 1.89, which is just a different way of expressing the same [Tr. 8434] proportion, is it not, Mr. Simat?

A. Yes.

Q. Doesn't this change in the proportion of seats offered between those two airlines at a time when Pan American was taking delivery of far more aircraft than TWA was—doesn't this change in proportion indicate that Pan American found it necessary to use many of its jets on other routes and could not concentrate on a competitive response to TWA in the transatlantic market?

A. It could mean various things, Mr. Tenney.

It could mean that Pan American decided that the capacity in the transatlantic market was already excessive, and that a further investment of equipment in the transatlantic market would not have been economic for it.

Q. Do you see from these statistics any support for the theory that Pan American in 1960 was engaging in competitive response to TWA's increase in transatlantic service?

A. Yes, I note that between 1959 and 1960, Pan American increased its seating capacity in the transatlantic market from 472,000 to 537,000, an increase of approximately 25 per cent.

Q. The approximate increase in TWA's seats offered from 1959 to 1960 was on the order of approximately 70 [Tr. 8435] per cent I make it by eye. It that about right, Mr. Simat?

A. Your eye is pretty good. It is within 1 per cent of what I calculate on my slide rule.

I also note, Mr. Tenney, that the total number of IATA passengers increased approximately 25 per cent between 1959 and 1960.

Q. One of the assumptions that we are operating under in all of these estimates is that six of the jet aircraft that Pan American would have had at the end of 1960, that is, the six Boeing 707-331s that we have referred to would not have been in Pan American's fleet but would instead have been in TWA's fleet, is that not correct?

A. That is one of the assumptions, yes.

Q. Moreover, an additional assumption that we are making in these estimates is that delivery dates of these aircraft as between Pan American and TWA would have been reallocated with more of the earlier delivery positions going to TWA and fewer of the earlier delivery positions going to Pan American, is that not correct?

A. If by these aircraft you mean aircraft of the Boeing 331 type, the answer is correct.

It is not, of course, correct with respect to [Tr. 8436] the six aircraft.

Q. If TWA with the historical proportion of aircraft available to it was in 1960 able to increase its percentage of total available seats offered in transatlantic service as compared to Pan American to 72 per cent, is it not reasonable to assume that our reconstructed TWA, as we sometimes call it with six more jet aircraft of the proper type and all of its aircraft of this type having their delivery dates somewhat affected in a favorable direction by that second assumption would have been able to schedule substantially more proportionately jet seats as compared to a Pan American that under these same assumptions would have had fewer aircraft on a somewhat slower timetable?

A. The answer is not necessarily so, and maybe to make it more precise, no.

The fact is that Pan American did have aircraft deployed in other divisions which could have been switched to the

Atlantic Division. Pan American had various other options on the operation of aircraft, all of which would have permitted Pan American to increase its volume of service on the transatlantic sector over and above the service that it actually supplied in 1959 on the same sector.

[Tr. 8437] Q. In terms of jet aircraft, as opposed to piston aircraft, what options did Pan American have that would have made the conclusion I suggested a moment ago an unsound one in your view?

A. My earlier statement did refer to jet aircraft. If I didn't make that clear, let me make it clear now.

Q. Then would you explain what the options were that you referred to?

A. Well, during the year 1960, Pan American had a total available fleet on the average of 32.4 aircraft, these are four-engine jet aircraft, of which a total of 16.0 or somewhat less than half were deployed in the Atlantic Division. That left a remainder of some 16.4 aircraft deployed in other divisions which could have been deployed in the Atlantic Division if need be.

In the same year, TWA had all told a total of 6.1 four-engine jet aircraft assigned to its international services.

So there was on hand as far as Pan American was concerned a substantial reserve of four-engine jet aircraft which were available to be switched into the Atlantic Division if management had so decided.

Q. But on our assumption, of course, that reserve would have been substantially less by perhaps six aircraft?

[Tr. 8438] A. I referred, Mr. Tenney, to average numbers of aircraft for the entire year, and not the number of airplanes on hand at the end of the year.

And I pointed out earlier that there are material differences between the average numbers of aircraft available during the year and the average numbers of aircraft—the actual numbers of aircraft available at the end of the year.

If, for example, every airplane in the fleet were received on December 30th, the actual average number of aircraft available during the year—and let us assume a fleet of ten airplanes is received on December 30th—it would be in the order of 20 days divided by 365 or by quick arithmetic something about 6 or .6 or .7.

Q. Have you computed what the average number of aircraft during the year 1960 for Pan American would be if you took into account the assumptions that we are operating under?

A. No, I have not made that calculation, but I will. It is a calculation that can be made from the receipt dates of the airplanes after allowing for an inservice lag to put the dates on all fours with the dates that are reported to the Civil Aeronautics Board. There is, of course, a difference in the counting of [Tr. 8439] aircraft days between the information reported to the Civil Aeronautics Board and the information maintained internally by TWA.

In the case of the Civil Aeronautics Board information, the starting date, the date when the meter started running on aircraft days is the date that the airplane is placed in service, in transport service. It is not the date when it is available for service.

And there is a lag which I would estimate is normally on the order of approximately ten days between the in-service date and the availability date.

Q. I think perhaps there is another way that this can be computed without much difficulty.

Isn't it true that the amount of the annual average jet aircraft available for service to Pan American would be decreased by the operation of these assumptions in 1960 should be the same as the amount by which the annual average of airplanes of this type available to TWA in 1960

was increased? We are just talking about the same aircraft switched over and certain delivery assumptions.

Is that not correct?

Mr. Hayes: May I have that question, please?

[Tr. 8440] The Special Master: Read it back.

(The question was read.)

A. Yes, that's approximately correct with the difference that the method of counting aircraft days by the Civil Aeronautics Board is a little bit different than the method of counting aircraft days that is used in the Coverdale & Colpitts report and used internally by TWA.

Q. I find on Exhibit D of Volume IV of the Coverdale & Colpitts report the figure given of an additional 5.0 B-331 jet aircraft available for commercial service to TWA during the year 1960, and that figure is given as an annual average.

So that while there might on the basis of the slight difference in computation that you refer be a slight difference there, we are talking approximately about 5.0 aircraft fewer on an annual average basis available to Pan American in 1960, are we not?

A. Yes.

Q. Is it your opinion that Pan American in 1960 would have allowed the effect of any equipment shortage that it might have felt it had to be concentrated upon those parts of the worldwide system other than the transatlantic routes?

[Tr. 8441] The Witness: May I have that question read back?

(The question was read.)

The Special Master: Is that clear to you?

The Witness: I think it is clear to me now.

A. I don't think there is much doubt that Pan American if it felt it was suffering from an equipment shortage would

have placed the bulk of its equipment in the Transatlantic Division.

In point of fact, the Atlantic Division is where Pan American first put its jets.

In the year 1959, for example, Pan American had on hand during the year an average of 7.7 jets on a system-wide basis. Of these 7.7, 6.3 were put in the Atlantic Division.

Q. Wouldn't Pan American be jeopardizing its worldwide good will if it extended beyond a limited period of time the period during which it did not offer adequate service on it worldwide routes other than the North Atlantic?

A. I am afraid I don't understand what you mean by Pan American's international good will.

[Tr. 8442] Q. Pan American's routes are as you have testified and as, of course, is on the record in other context here worldwide and have been for decades.

It is true, is it not, that Pan American has attempted for decades to build up a worldwide route system and good will on a worldwide basis among potential passengers seeking to create a clientele that will turn to Pan American in preference to other air carriers for air transportation?

A. Oh, I'm sure that as a matter of company policy, it is a policy of Pan American to attempt to obtain as much traffic as it can from the various points it serves.

However, this is a policy that has to be tempered by the availability of aircraft and by general economic conditions.

For example, for many years Pan American ran from London what is known as a change of gauge service to the Scandinavian countries. It did not even operate a through-plane, that is, a single plane on which the passenger could sit and get all the way to the Scandinavian countries. They operated a plane across the Atlantic to London, where a change was made to a small DC-3, later a DC-4, neither

plane pressurized even to supply services to the Scandivian countries.

[Tr. 8443] I might point out that the Scandinavian rights came to Pan American at a fairly high cost, since they had to acquire American Overseas Airlines to obtain those rights, and as part of the—I guess you would call it the package—they had to suffer TWA's entry into London and Frankfurt, two markets where TWA was not previously certificated.

Q. In this London to Scandinavia route that you refer to during the period that Pan American was using DC-3s and DC-4s on it, what other airlines were operating on that route with more advanced equipment?

A. Scandinavian Airlines System otherwise known as SAS was operating through-plane service from the Scandinavian countries to New York throughout this period, with the most modern four-engine equipment available.

Q. No American airline, of course, was servicing Scandinavia at all at that time?

A. Pan American had the exclusive U. S. flag airline rights to the Scandinavian countries, and still has.

Q. Of Pan American's jet fleet in 1959 and 1960, six we have established earlier consisted of Boeing 707-100 series aircraft, which were the earliest jet aircraft [Tr. 8444] delivered to Pan American.

On Atlantic service, it was necessary, was it not, for those aircraft to plan a fuel stop at Gander?

A. I believe that was true in one direction only.

Q. Occasionally stops had to be made in the other direction as well, did they not, depending, of course, on weather conditions?

A. Yes, depending upon weather and load conditions occasionally stops had to be made in the other direction.

But the stop in the other direction was made at Prestwick.

Q. When the 707-300 series aircraft went into service, did Pan American continue to use the 707-100 series aircraft on Atlantic service or did it transfer them to its other routes?

A. I really don't know the answer to that question, Mr. Tenney. It is something I would have to look up. I can look it up and give you an answer later, if you wish.

Q. I don't know that that will be necessary. Let me state as an assumption for some further questions what I believe to be the fact, and you can, of course, if on checking it, subsequently you find me to be incorrect, correct this. [Tr. 8445] But as an assumption for further questions, I believe it is correct to say that Pan American transferred its 707-100 series aircraft to other routes shortly after the 300 series became available, although there was up to the beginning of 1960 some slight amount of service offered with those aircraft. On the whole, they were transferred to other routes.

Those aircraft, the 100 series aircraft would not be satisfactory for the transpacific routes, would they?

A. Again, it is not a question that I can answer categorically.

I would believe that they would be satisfactory for the Hawaiian service where the non-stop stage length is about 2200 miles.

Beyond Hawaii, where the non-stop distances are much larger, I would guess that they would not be satisfactory. But, of course, the Hawaiian service comprises a very substantial part of Pan American's Pacific operation.

Q. At least beyond Hawaii, it would have been necessary, would it not, if Pan American had chosen to transfer its long-range Boeings, or other available [Tr. 8446] long-

range jet aircraft, to the North Atlantic routes in 1960—it would have been necessary, say, for Pan American to accept that competitive foreign airlines and particularly Qantas, BOAC and JAL, to be the airlines that would first introduce jet service to those transpacific routes?

The Witness: May I have that question read, please?

(The question was read.)

A. I just don't understand the question.

The Special Master: It would have been a necessary result that Pan American would have had the BOAC, Qantas and Japanese Air Line jets running on the Pacific and Pan American would not have been there with jets.

The Witness: I would again have to refresh my recollection on this, Mr. Tenney, but I believe that that was the case, that BOAC and Qantas jets were in operation before Pan American put its jets in transpacific routes. Of course, the Japanese Air Lines services supplied in the transpacific area were in that period very moderate.

By Mr. Tenney:

Q. On page E-7, you state, Mr. Simat, at the top [Tr. 8447] of the page—it is a carry-over sentence, but it is on page E-7 that the language appears I would like to call your attention to.

You refer to the years 1959 to 1960, and you describe them as a time when the industry was facing tremendous over-capacity.

In 1959, there was no over-capacity, as least in terms of jets in the industry, was there, Mr. Simat?

A. I don't believe that over-capacity can be reckoned in terms of any one particular airplane.

The over-capacity situation results when there is too much capacity overall for the traffic demand.

The fact that one particular type of airplane may appear in the inventory in very moderate numbers does not mean that an over-capacity situation does not exist.

For example, there can be an over-capacity situation today, although the DC-3 is perhaps operated at a level of one per cent of the total seat miles provided by domestic airlines. That doesn't mean that the DC-3 is not in an over-supply situation.

So, I don't think that I can answer that question as it relates to jets alone. There was an over-capacity situation in the industry as a whole.

[Tr. 8448] Q. We established, however, on Tuesday, did we not, that at least with respect to the airlines that we looked at, Pan American and TWA jet load factors in 1959 were quite high by any standards?

A. That, of course, Mr. Tenney, does not signify that an overcapacity situation did not exist, if it were true that all of the traffic carried in jet airplanes were passengers that would otherwise have been carried in propeller aircraft that the high load factors on the jets themselves do not signify that any additional traffic was brought into the market on that operation of the jets on top of all of the other capacity being offered by the airline as an economic thing.

Q. So you are unable with respect to 1959 to judge whether the industry had over-capacity in terms of jet capacity alone, is that the substance of what you are now saying?

A. I am saying that the fairer test is whether the industry with the capacity that it was offering in 1959 was able to conduct a profitable operation overall.

Q. In your opinion then, in 1959—and I take it that you would apply this theory to subsequent years as well—and you can correct me if I am wrong—you can only judge [Tr. 8449] whether there is an over-capacity by grouping jets together with pistons to determine whether there is an over-capacity, is that a fair statement?

A. I think the fair statement is that you have to consider the entire supply of capacity and the entire demand for capacity in determining whether there is an over-capacity situation.

Q. So just to wind that little point up and take some of these assumed examples with exaggerated numbers that we have taken from time to time to clarify positions, if there are only a very few jets and they are flying at 90 per cent load factors which undoubtedly means that many times there are people that would like to fly on those planes and are unable to do so, because the 90 per cent load factor is an average figure, but there are a lot of pistons, a lot more pistons than there are jets and they are flying, let's say, to exaggerate, 20 per cent load factors, you would say that the industry was facing a position of over-capacity, and you would not think of it a fair thing to do to segregate the jets and consider whether there was over-capacity in terms of jets or not?

A. I believe that the fairer test would be to determine the revenues added by the additional capacity [Tr. 8450] offered on jet aircraft against the expenses added by reason of the operation of the aircraft, and if the expenses are greater than the revenues then you did the wrong thing in adding the airplane, and if the revenues are greater than—the added revenues are greater than the added cost, you came out like a bandit.

The point is that an over-capacity situation is defined in terms of whether it is possible to conduct economic operations as a result of the capacity added.

• • • • •

[Tr. 8456] • • • Q. On page E-7 there is a table in your record which is headed "E-IV," which sets forth what you term flights added first in the second quarter and then in the third quarter of the years 1960, 1961, 1962 and 1963 for TWA, Pan American and foreign flag carriers grouped.

Can you tell me whether in this chart all types of jet and pistons are combined or whether it is solely jet flights?

A. I believe these are all flights, jet and piston combined.

Q. When you say flights added in the second quar- [Tr. 8457] ter for example, do you mean flights added over the same quarter in the preceding year or do you perhaps mean flights added over the next preceding quarter?

If that is not clear, for example, in the second quarter of 1960, you have a figure of 322 flights added. Is that 322 more than the second quarter of 1959 or is it 322 more than the first quarter of 1960? You do not expressly state which.

A. It is the first quarter of 1960. • • •

Q. I show you TWA Exhibit 338 for identification, Mr. Simat, which is an exhibit that we have prepared from TWA Exhibit C and C5 which is in evidence and which sets forth IATA monthly statistics.

This table compares the flights on the other basis and not the one that you did; that is, this table sets forth the absolute number of flights flown by Pan American and TWA in each of the months specified and then computes the difference month by month and quarter by [Tr. 8458] quarter from the corresponding month and corresponding quarter in the preceding year.

In this table, we find that in the second quarter of 1960 TWA increased the number of flights that it flew across the

Atlantic by a net of one starting with 18 fewer in April but increasing to 13 more in June, while in the same period of time Pan American decreased its flights for a net of 152 flights in the quarter.

Doesn't that illustrate that Pan American was not following the theory of competitive response, at least during that quarter, in scheduling its jet flights across the Atlantic.

The Witness: May I have that question read back please?

The Special Master: Sure.

(The question was read.)

A. I do not believe that you can use data of this kind to establish the degree of competitive response.

I deliberately steered clear of making year to year comparisons because of a number of factors that can change between the years.

I think in measuring the degree of competitive responsiveness, the method that we used of comparing the change from quarter to quarter during the buildup of [Tr. 8459] the seasonal peak is a much more meaningful measure than the kind of comparisons that result from taking the differences between flights in the quarter of one year and the same quarter of another year.

I note, for example, that in the third quarter we seem to have a reverse phenomenon with Pan American increasing flights and TWA decreasing flights, and I think it would be scarcely possible to conclude from these data that there is no competitive relationship between Pan American and TWA.

Q. Do you happen to know the time when Pan American's DC-8 jets were delivered to it in 1960, that is, the approximate dates during that year?

The Special Master: Can you refresh his recollection on that?

Mr. Tenney: Your Table E-A has some information.

A. Yes, I was about to point that out. It does have some of the information that you are asking for.

The Table E-A which appears at Page E-A-1 indicates that in June of 1960 Pan American had nine DC-8s in its system and all nine were assigned to the Atlantic Division.

That information is derived from a Pan Ameri- [Tr. 8460] can exhibit in the transatlantic renewal case Docket 13577.

Q. If those aircraft had come in rather shortly prior to that date, that would tend to explain, would it not, the increase in flights flown by Pan American in the third quarter of 1960 over the second quarter which appears in TWA Exhibit 338 for identification.

A. Well, I suppose to the extent that more aircraft assigned connote an ability to operate more frequencies, that would be true. It would scarcely explain the decline in Pan American's operations between the second quarter of 1959 and the second quarter of 1960 where the flights declined 152. The number of aircraft assigned to the Atlantic Division of Pan American did go up over that period.

According to my figures and again quoting from Exhibit E-A, in June of 1959, there were six Boeing 121 aircraft available in the Atlantic Division, in June of 1960, there were 13 Boeing 321 airplanes available and nine DC-8s available.

So there were a total of 22 aircraft available in June of 1960 as opposed to six jet aircraft available in June of 1959. And I would assume therefore there was a much greater capacity available in the [Tr. 8461] second quarter of 1960 than in the second quarter of 1959.

Sheer availability of airplane doesn't explain the behavior of the flights, which in the second quarter of 1960 decreased some 152 flights over the second quarter of 1959.

Q. Are those figures in the table on E-A-1 average figures or are they end of period figures? Do you happen to know, Mr. Simat?

A. The answer is that I do not know precisely. I assume that they are end of period figures.

The Special Master: What were those figures as to types?

The Witness: In June of 1959, there were six aircraft available of the 121 series, that is the smaller Boeing with the shorter range.

In June of 1960, there were 13 airplanes assigned to the Atlantic Division of the longer range 321 series, plus nine DC-8s which also had transatlantic capabilities. So there were 22 airplanes available.

And the figures indicate that the decline in flights operated—

The Special Master: I get that part, yes.

[Tr. 8462] Q. And those were year and figures. So that if the DC-8s had come in very shortly before the end of that period, they would not be expected to have performed any significant amount of service in the second quarter, is that correct?

A. Yes, there were also, as I pointed out, 13 Boeing 321 aircraft available.

Q. Yes, I realize that.

I notice also that the six 100 series aircraft had by this time apparently been transferred from the Atlantic Division to other routes as far as this table indicates.

A. The Boeing 121 aircraft as you indicated were no longer assigned to the Atlantic Division, apparently replaced by the Boeing 321 and the DC-8.

Q. The total flights in your table on page E-7 and also the total flights in TWA Exhibit 338 for identification include piston flights and do not break out jet flights, so that the increased number of jets might have been accompanied by a substantial decrease in piston flights on the part of TWA, might they not? I mean on the part of Pan American, might they not?

The Special Master: You can't tell from this table. [Tr. 8463] The Witness: His question is might and the answer is yes they might have but from this table you can't tell as you point out.

Q. If you look at Table E-VI on page E-11, a comparison which breaks out the pistons and the jets can be made. Taking for example, July of the years in question which appears to be the closest date that we can pick, we find that in 1959 Pan American flew 29 piston weekly transatlantic round trips, and 24 jet weekly transatlantic round trips, while in July of 1960, the figures were nine piston weekly transatlantic round trips and 50 jets.

So that although these dates do not precisely correspond, it is a reasonable assumption, is it not, that from year to year Pan American had drastically decreased the amount of its piston service on the transatlantic routes, is a that correct?

A. Oh, yes, Pan American did decrease its piston operations on the transatlantic routes as did TWA, where the decrease is from 45 flights piston flights in July 1959 to six piston flights in July of 1960, one fewer piston flight than was operated by Pan American.

Q. Starting on page E-8, you have a general dis- [Tr. 8464] cussion of the competitive reaction in 1959 as to which we had some testimony already today and the day before yesterday, in the first sentence under "Competitive

Reaction, in 1959," you make the statement that you conservatively estimate that foreign flag carriers would not have responded competitively with additional seats in 1959.

In 1959, in your judgment, was it possible for foreign flag carriers to respond competitively with additional jet seats in 1959?

A. According to the data which I have—and the data derived from the Digest of Statistics—they are compiled by the International Civil Aviation Organization, ICAO—foreign air carriers had on hand—and I am referring now to foreign air carriers that are competitors of TWA and Pan American—foreign air carriers had on hand at the end of 1959 some 30 jet aircraft.

And I would from these figures conclude that it was possible for foreign air carriers to have supplied additional jet capacity.

Also, it was possible for foreign air carriers to have increased their piston capacity. Since piston aircraft were operated at a fair differential, it was possible by use of night services, by additional fre- [Tr. 8465] quencies, for foreign air carriers to have increased their participation in the market by adding to their piston services.

So the answer is yes, they could have increased not only their jet seats but also their piston seats as well.

Q. The fact is, however, that to a considerable extent in your judgment that they could have added additional seats, you were relying on the ability to add piston seats as a competitive response to the assumed addition by TWA of jet seats, is that not correct, Mr. Simat?

You have mentioned the piston seats every time we brought this up.

Mr. Hayes: I think he mentioned both in his last last answer, Mr. Tenney.

Maybe to keep the record straight what I should do is object to the question in that it misstates his testimony as is apparent from the last answer.

The Special Master: Will you rephase your question?

Mr. Tenney: I will go at it a little dif- [Tr. 8466] ferent way.

Q. How many carriers are you including in this group of carriers that you said were competitive directly and had 30 jets on hand at the end of the year 1959?

A. Four.

Q. Which four are they?

A. The four are BOAC, Air France, Sabena and I have Qantas in the totals too.

Q. There are a number of air carriers, foreign flag air carriers operating on those routes that did not have jets, is that not corect?

A. Oh, that's correct, yes.

Q. What did Sabena have at the end of the year?

A. One.

Q. Was it in revenue service?

Mr. Hayes: Was it what?

Mr. Tenney: Was it in revenue service?

My information indicates that it was not.

A. My source does not indicate whether it was in revenue service or not, if you are testifying to it.

Q. No, I am not testifying to it. I am asking you the question. You do not know the answer, is that correct?

A. Well, my source does not indicate whether it is [Tr. 8467] in revenue service or not.

Q. How many did Air France have?

A. Three.

Q. How many did BOAC have.

A. 19.

Q. Do you happen to know when Air France got its jets?

A. No, I do not.

Q. Do you happen to know during what part of 1959 the BOAC jets came in?

A. I believe the BOAC jets were available—or some at least were available in 1958. There were at least six aircraft available to BOAC at the end of 1958.

And the balance I believe came in early in 1959.

Q. All of these BOAC jets were the Comet IVs, were they not?

A. That's correct.

Q. None of them were Boeings?

A. No.

Q. Doesn't that indicate that with the exception of BOAC and to an extremely limited extent Air France any competitive response in 1959 by foreign flag carriers to additional TWA jet seats would have had to be [Tr. 8467A] in terms of additional piston seats?

A. No, I do not agree with that at all.

Obviously foreign flag carriers did have jets and they were able to respond with jets. It is simply a matter of degree.

• • • • •

[Tr. 8473] Q. Have you assumed, Mr. Simat, that Pan American had in 1959 a means of acquiring Boeing 320s on a different schedule than either the historical schedule [Tr. 8474] or the historical schedule as modified by Mr. Rummel's testimony on the basis of certain assumptions? Did you have some other means of acquisition in mind?

A. I have not made any assumption with respect to that.

The calculation that appears at page E-9 is a calculation to show how many additional Boeing 321 aircraft would be

required to meet the increase in capacity which has been estimated for TWA, the 18,000 seats.

And it is estimated and I believe quite conservatively that this amounts to a total of 0.4 aircraft.

We have assumed for purposes of this estimate that each aircraft would make one flight per day. In point of fact each aircraft can make two flights a day in the transatlantic.

I have in mind, however, that in 1959 Pan American had a total of 7.7 aircraft, of which 6.3 were assigned to the Atlantic Division, leaving a balance of 1.4 airplanes out of which the 0.4 airplane to meet this capacity requirement—and I think it should be substantially less than 0.4 airplanes, but they had 1.4 airplanes to meet a need for 0.4.

So I believe there was ample capacity on the [Tr. 8475] part of Pan American to have supplied the 18,000 seat deficit, if you want to call it a deficit, if they wanted to.

Q. During the first half of 1959, isn't it true that Pan American had available to it only the six Boeing 707-100 series aircraft that it already had, in fact, on the Atlantic Division and that no transfer of those aircraft could have accomplished any increase in service on the Atlantic Division?

A. Well, it is certainly true that there were six Boeing aircraft on the Atlantic Division, but it is not true that they could not have accomplished more transatlantic flights with the six Boeing aircraft.

The six Boeing aircraft were utilized not only in transatlantic services but in services beyond the gateways, that is, penetrating into Europe. It would have been possible for Pan American to have turned these flights around sooner and accomplished transatlantic flights with the same number of airplanes. That's one possibility.

Q. Would that fall under the general head of increased or improved utilization that you discuss somewhat elsewhere in your report?

A. I think it would have the effect of increasing [Tr. 8476] utilization.

If the airplane is used exclusively in the transatlantic service where the stage lengths are very long, the result would be to increase the average utilization per day and hours and certainly to increase it in miles per day.

Operations beyond the gateways were, as a rule, conducted at shorter stage lengths, and in the air transportation field as in most transportation fields it is almost axiomatic that the longer the stage length of operation the better the utilization. The higher the speed, the more the hours per day that the vehicle can be effectively used.

But that is not necessarily the assumption that I am making.

Q. I would like to turn to page E-A-2.

This is the first page of a table which is described on the preceding page as a listing of non-transatlantic flight segments operated by Pan American with jet aircraft where no competitive jet aircraft were in operation.

You indicate at the top or near the top of this first page of the table that Pan American was operating its flight No. 1 from San Francisco to Honolulu with [Tr. 8477] jets and against no jet competition, is that correct?

The Witness: May I have the question read back, please. I am sorry. I think I missed something.

(The question was read.)

A. The flight operated from San Francisco to Honolulu to Tokyo to Hong Kong according to the table. And it is my understanding it had no jet competition on any leg.

Q. I note that in April you specify only the Honolulu-Tokyo-Hong Kong legs and you do not commencing in April of 1960 include the San Francisco-Honolulu leg, is that correct?

A. That is correct.

That would indicate that in April of 1960, there was a jet service operated between San Francisco and Honolulu by another airline.

Q. What airline would that be.

A. United Airlines.

Q. Is it realistic to assume that Pan American might have transferred the jet aircraft operating from Honolulu on its flight 1 with pistons while keeping the jet leg from San Francisco to Honolulu?

A. Oh, yes, I think it is quite logical to assume that. [Tr. 8478] A substantial part of the traffic that would move on a service from San Francisco to Honolulu to Tokyo to Hong Kong would in all probability make a stop-over at Honolulu. That is one of the big attractions of the Central Pacific routing of Pan American, the stop-over at Honolulu and it is well advertised and is considered to be a major factor in Pan American's position in the Pacific area.

Q. The jet would still have to stay on the West Coast to fly the San Francisco to Honolulu leg, wouldn't it? That same jet could hardly be transferred and fly the Atlantic, could it?

A. That particular jet?

Q. That particular jet?

A. Well, perhaps not that particular jet, but the number of aircraft required to operate that particular pattern would be reduced, and by rescheduling the service, by timing it differently and so on, it would be possible in my opinion to free the equivalent of a whole jet airplane from the Pacific Division of Pan American for use in the Atlantic Division. It is simply a matter of rerouting.

I also might mention in this connection that if it became desirable to transfer the entire airplane [Tr. 8479] from the Pacific Division to the Atlantic Division that it was possible to do this by the use of the polar route from the West Coast to Europe.

Q. I am asking for information on this, Mr. Simat. Did Pan American have authorization to fly the polar route?

A. I'm not sure exactly when the authorization to fly the polar route began.

In any event, it is used only largely in the summer months. But I don't think it is necessary to physically transfer the plane that way. It is a matter of rerouting airplanes and reassigning them among divisions.

Q. Pan American Airlines commenced jet service from San Francisco to Honolulu to Tokyo in August of 1960, did it not?

A. I'm not sure of the precise date That sounds about right.

I note that between July of 1960 and October of 1960, according to our data on page E-A-2 there is the omission of Tokyo flights which suggests to me that there was a Tokyo service available in October that was not available in July.

Q. Northwest Airlines began jet service from [Tr. 8480] Seattle to Tokyo at about the same time, at the beginning of August, 1960, did it not?

A. I believe that that is approximately right. Northwest initially contracted for the DC-8s and like all airlines that ordered the DC-8s the Northwest orders came through later.

The Seattle-Tokyo route is not directly competitive with the Pan American route from the California points.

Q. You say it is not directly competitive, Mr. Simat, by which I take it you mean it has a different point of ori-

gin, but for passengers within point of origin at any distance at all from either San Francisco or Seattle who wish to go to Tokyo, it is a very important element of competition, isn't it?

A. I point out to you, Mr. Tenney, that the Northwest Seattle-Tokyo route has had a very distinct mileage advantage over the Central Pacific route amounting to maybe 2000 miles, and the attractiveness of the Central Pacific route is the Honolulu stop-over and not the time saving that emerges from that, and the passenger who wanted to save time would have in the normal course taken the Seattle routing, in any event.

I don't consider those two routes to be in [Tr. 8481] substantial competition, no.

Q. On the next page of this table, you give information with respect to Latin America and Bermuda and one of the significant routes indicated there is the route from New York to San Juan in December of 1959 which continues for a time thereafter.

Do you happen to know when Eastern Airlines began its jet service to San Juan?

A. I don't have the precise date. Eastern Airlines, of course, was one of the fortunate airlines that acquired the DC-8.

Q. I show you a photostatic copy of the Official Airline Guide, page C-163 for the month of July, 1960 which indicates if I read it correctly that Eastern was flying DC-8 jet service from New York to San Juan at that time.

The date when this service was commenced does not seem to appear any place on this page as far as months go. There are under the Bermuda table, you will note, several notations as to flight discontinued effective August 14th. We don't have here apparently the original Airline Guide

from which this is photostated but if you will assume subject to check that this is from the volume that I represent it as being from, doesn't [Tr. 8482] this indicate that Eastern Airlines was by the end of July, anyway, 1960, operating jet service from New York to San Juan daily as a matter of fact, it says?

A. It is quite possible, Mr. Tenney.

I would point out to you that the volume of service supplied in October of 1960 by Pan American was substantially in excess of the daily volume as you know.

Q. So that if that's correct, then your table on these two pages dealing with Latin American routes would be in error to that extent, that the New York-San Juan route would not be a route on which Pan American was operating jets without jet competition?

A. That's correct.

• • • • •

[Tr. 8490] • • • Q. Have you ever advised the management of an airline to deliberately use brand new jet equipment at substantially less utilization than they could have achieved making best use of the operation possibilities at the time?

A. The answer to that, sir, is yes.

Q. What airline was that?

A. Northeast.

Q. Were those operations very successful?

A. They were more successful than the operations that would have been conducted if they had conducted the operations that I advised them not to conduct.

Q. Were you responsible for the forecast presented on Northeast Airlines' behalf to the CAB of income that they expected to achieve in 1963 in the New York-Florida renewal case?

A. Only for the traffic portion of the forecast, which I might point out was within two per cent.

Q. How close was the income portion of the fore-
[Tr. 8491] cast?

A. That was very close, the revenue portion.

Q. The forecast as to operating profit was nearly four million, was it not?

A. I don't recall the exact figure.

Q. Do you recall the actual operating loss achieved in 1963?

A. Not offhand, no.

Q. I have here the figure of 11,142,000. Is that approximately right?

A. It could very well be right. At the time the forecast was prepared there was no Eastern Airlines shuttle operations in contemplation.

Also, the Civil Aeronautics Board had not yet ruled that the route should not be renewed. Eastern had not yet pressed for bankruptcy proceedings on the part of Northeast and threatened to have the tickets remanded.

• • • • •

[Tr. 8494] • • • Q. On the next two pages, E-21, E-22, you compute your estimates of TWA's increase of transatlantic passengers.

Am I correct in summarizing your report on this subject as basing the difference in the figures of passengers that you come up with from the figures as to the passengers that Mr. Wemple in the Coverdale & Colpitts' report came up with on the differences in the number of seats offered which would result because of your assumptions on competitive response that we have been discussing?

Mr. Hayes: Could I have that question read?

Mr. Tenney: I think I better withdraw that question. That is confused even to myself.

Mr. Hayes: We are in agreement

Q. The figures as to passengers that you come up with on these pages are of course different from the passengers that have been estimated by Mr. Wemple in the Coverdale & Colpitts' report.

Am I correct in understanding that the difference results entirely from the different assumptions that you have made as to the number of flights that competi- [Tr. 8495] tors of TWA would have flown during these periods?

A. Well, if you will change the word "flights" to seats, I will agree with you.

Q. Seats. I change the word to "seats."

So that if your estimate that Pan American would have reacted to any increase in the seats offered by TWA on a seat for seat basis, and the foreign flag carriers would have similarly reacted on a one seat for every two seats offered by the American flag carriers basis, if those estimates of yours were completely rejected, your estimates as to the number of passengers would fall with them, is that not correct?

The Special Master: If your assumptions fall your conclusions fall, isn't that what you are saying?

Mr. Tenney: That's what I am saying.

The Witness: Post hoc ergo propter hoc.

The Special Master: What is the answer to that?

The Witness: I would hope that the answer would be correct even though the assumptions are incorrect, but you are right, Mr. Tenney.

* * * * *

[Tr. 8577] * * * By Mr. Tenney:

Q. Mr. Simat, shortly before our recess, we established that one category of cost as to which you used a different costing unit than Mr. Wemple did, that is, the category general administratnon expense, has some computer testing made in your computer printouts of the two alternative costing units.

I believe that the category other cash operating expenses, which you chose is designated as Equation 14A in your index and in the various printouts, and the costing unit transportation revenues, in this category is designated as Equation 14B in your index and again in the printouts.

Is that correct?

A. Yes.

Q. Do you have any tabulation of the relative results that were achieved by these checks of those two costing units?

[Tr. 8578] A. Not at hand, no.

Q. There are obviously various ways that they could be compared, but would you agree with me that a comparison of the corrected R^2 as reported in each one of these tests would be a reasonable measure of what the checks showed?

A. I think that's one basis for comparison.

Another basis for comparison is the stability of the B coefficient value.

* * * * *

[Tr. 8581] Q. I am familiar with what it is and we will look at it, Mr. Simat. I am not suggesting that this classification is in any way unsound. We have to do something with respect to the index which we are all working with because otherwise it will be confusing.

I see no particular problems that are quite that substantial in nature in Books XI and XII which deal with TWA

although they are set up somewhat differently. If we see any problems we will clear them up then.

I would suggest that we look first, if you will please, at Book IX which is the domestic cross-sectional analysis of indirect costs and see what we can see there as to Equations 14A and 14B.

This book is classified in the first instance by equations so that it is quite possible to take off the results for each of the five years 1959 to 1963 for any given equation without too much chasing back and forth.

Looking at Equation 14A first, the year 1959, I find a corrected R^2 of .8890.

Is that correct, Mr. Simat?

A. Yes.

Q. What other value there would you suggest we try to preserve for comparison. I have tabulated some [Tr. 8582] of these correct R^2 but I have not tabulated—

A. Why don't we just look at that one then?

Q. All right.

A. I also suggest—

Q. If you think that the slope is important—

A. Yes, why don't you list that too? That's .0474.

Q. Why don't we just run on by year here which is the easiest way to do this, I think, staying on Equation 14A.

A. All right, do you want me to call the figures out?

Q. You can call. I will jot this down and I suggest you might want to jot it down too.

A. For 1960, the R^2 corrected is .9600.

The cost coefficient is .0505.

For the year 1961, the R^2 corrected is .9557.

The cost coefficient is .0506

For the year 1962, the R^2 corrected is .9712.

The coefficient is .0509.

For the year 1963, the R^2 corrected is .9680 and the cost coefficient is .0519.

Q. Thank you.

Now could we turn from that to the next succeeding equation which is 14B and get the same information?

[Tr. 8583] A. For the year 1959, the R^2 corrected is .8987.

The cost coefficient is .0380.

For the year 1960, the R^2 corrected is .9712.

The cost coefficient is .0416.

For the year 1961, the R^2 corrected is .9610.

The cost coefficient is .0424.

For the year 1963, the R^2 corrected is .9602.

The cost coefficient is .0414.

For the year 1963, the R^2 corrected is .9709.

The cost coefficient is .0418.

Q. Thank you.

These are all the tables in Book IX that would bear directly on the comparison we are tryiing to make, are they not?

A. Yes.

Q. Looking at the figures that you have come up with here, as far as R^2 corrected goes, I make for four years out of the five the R^2 corrected as higher for transportation revenues which is Mr. Wemple's costing unit than for other cash operating expenses which is your costing unit.

The only year that that is not true of is 1962.

Do your figures agree with me on that?

A. Yes.

[Tr. 8584] Q. Do you see a substantial difference in the consistency of slope that you would consider significant?

A. I don't see a substantial difference in the R^2 and as far as the consistency of slope is concerned, I think there is slightly more consistency of slope in the equation relat-

ing to general and administrative cost to other cash operating expenses.

Q. What is in terms of ten thousands which is the unit that these slopes are expressed in, that is, four figures to the right of a decimal point—.0001 would be one-ten thousandth—in terms of ten thousands what is the range between the slopes that you have taken off for 14A and 14B respectively?

A. For 14A the range is .0045.

For 14B, it is .0044.

The average level of the cost coefficient in 14A is somewhat higher than the average level of the cost coefficient in 14B, and in terms of percentage deviation I would say that the 14A relationship is probably somewhat better, but not materially so.

Q. Do you ascribe any significance to the difference in average levels? Wouldn't such a difference inevitably result from the use of a different X unit?

A. I don't think that any of the differences I am [Tr. 8585] looking at here are particularly significant.

Q. That was domestic. I don't know whether you want to go through the exercise or not.

I have gone through the exercise as to R^2 for international as well, coming out with the same result. I can read them off to you if you like. I do not have the slopes unfortunately.

Should we go through the exercise for slopes as well or can we just take my figures on the international?

A. I think we might as well go through the exercise for slopes as well.

Q. That would be for Book X?

A. The R^2 corrected for 14A for the year 1959 is .9857. and the cost coefficient is .0586.

For the year 1960, the R^2 is .9929, and the cost coefficient is .0492.

For the year 1961, the R^2 corrected is .9922 and the cost coefficient is .0494.

For the year 1962, the R^2 corrected is .9920, and the cost coefficient is .0552.

For the year 1963, the R^2 corrected is .9971 and the cost coefficient is .0546.

Q. Thank you and now we will turn to Equation 14B.

[Tr. 8586] A. 14B the R^2 is .9904, corrected, and the cost coefficient is .0479.

For the year 1960, the R^2 corrected is .9910 and the cost coefficient is .0386.

For the year 1961 the R^2 corrected is .9937 and the cost coefficient is .0391.

For the year 1962, the R^2 corrected is .9947 and the cost coefficient is .0418.

And for the year 1963, the R^2 corrected is .9978 and the cost coefficient is .0396.

Q. Thank you.

Looking back at the figures that you have read off from the printouts and looking first at the R^2s as to which I have had an opportunity to examine them before in my tabulation, I find that four of the corrected R^2 for Equation 14B are higher than those for Equation 14A in the same year, the only difference in this case being the year 1960 when it comes out the other way.

Do your notes correspond with mine?

A. Yes.

Q. Do you see any substantial difference in the consistency of slope in the two equations to which you would ascribe any significance?

[Tr. 8587] A. Again, the range of differences in the slope values under 14B is proportionately somewhat greater than it is under 14A.

Q. What are the absolute differences?

A. The absolute differences, as I calculate them for 14A, .0094, for 14B, .0093. There is about a 25 per cent difference in the value of the cost coefficient on the average, the cost coefficient under 14A being higher than the cost coefficient under 14B.

Q. Differences in the absolute amount of slope are, of course, to be expected as between different variables selected for your X variable, is that not correct?

A. That's quite true, Mr. Tenney.

I am only using the differences as a base from which to measure the degree of stability in the experienced cost coefficient for each year.

Q. Do you consider that those tests establish a superiority for your costing unit over Mr. Wemple's costing unit?

A. Not in and of themselves. Taken together with other considerations, including the fact that other cash operating expenses is normally used in my experience at least in the air transport industry as the explanatory factor for general and administrative costs, including [Tr. 8588] the conceptual reason that the size of the general and administrative burden is not only related to the amount of revenues which an airline obtains, but also to the complexities and size of its total operations.

In short, there would be general and administrative costs incurred, if the airline had no revenues at all. If it operated its aircraft empty, it would nevertheless incur some general and administrative costs.

Conceptually it appears to me that transportation revenues are not as good a costing unit as other cash operating expenses. The stability of the cost coefficient values seems to confirm that, although I do not really place much value on the differences between the two.

In terms of the R^2 corrected, the differences are so slight that I would not use that as a discriminating factor.

Q. I understand your explanation of the reasons apart from the statistical check, that in your judgment point towards the selection of the other cash operating expenses. But from the statistical check alone, if you were to use the statistical check as the determining factor in your choice, wouldn't you consider it signi- [Tr. 8589] ficant that out of the ten equations that were derived through your regression analysis eight of them had corrected R^2 which is the corrected coefficient of determination that are higher for the transportation revenues variable than for the other cash operating expenses variable?

A. I don't consider the difference in the R^2 to be significant at all.

I do not believe that there should be a substitution of statistical measures for common sense. I think it is unavoidable that you have to consider the cost model, the cost estimating relationships in terms of what it is you know about the behavior of operating cost to determine whether a particular cost factor makes sense.

I've used the statistical analysis simply as a check to reasonableness of the relationships and I place as much value in this particular case upon the stability of the cost coefficient as I do upon the R^2 corrected which as you know are subject to some sampling error and the differences are almost infinitesimal.

[Tr. 8590] Q. Is it fair to say that the controlling, the controlling factors in your selection between these two units were derived from your experience and judgment and were not dependent upon the statistical analysis?

A. It is fair to say that I approached the analysis with the idea that other cash operating expenses were better related to general and administrative costs than transporta-

tion revenues, and that had the statistical analysis indicated that transportation revenues in terms of the empirical evidence provided a much superior measure I would have switched.

Q. As it is, it is sort of a Mexican standoff at any rate, isn't that fair, Mr. Simat, as far as the statistical analysis goes?

A. Well, as far as the statistical analysis, yes, it is a Mexican standoff.

As far as the conceptual differences are concerned I don't think that there is any real problem.

* * * * *

[Tr. 8668] * * * Q. Book XI is time series analysis in the sense that you have used that and as you have defined it this morning, is it not, Mr. Simat?

A. Yes, it is.

Q. It is confined to TWA, the first portion of the book covering domestic direct costs and the second portion of the book international direct costs, is that correct?

A. That is correct.

And I might say as a preface that we did not rely on any of this information.

[Tr. 8669] Q. I do think there is one thing I would like to ask you about, though—I won't introduce my little plots here—by which I mean graphs—but there are one or two odd things about this that may have a rather general significance.

Take the international side of this, and take any equation, but Equation 1 I suppose is the most important of the direct cost equations, and then look, if you would, please, at aircraft type 808.

A. As a matter of fact, that is exactly where I opened it up.

Q. Aircraft type 808 is shown in your index as being the Boeing 707-300 series, is it not?

A. Yes.

Q. When, just approximately, did TWA get Boeing 300Bs which of course are designated by TWA as 331Bs, into their fleet? Just approximately.

The Special Master: Can you refresh his recollection on that?

Q. It was about the end of 1962, was it not?

Mr. Hayes: 331Bs?

Mr. Tenney: That's right.

A. Yes.

Q. Looking at your residual analysis of this [Tr. 8670] table here, I see figures for the Boeing 300B, direct operating costs, commencing—the first figure I see there if I translate it correctly is the third quarter of 1959, is it not?

A. You are absolutely right. It is the first quarter of 1959.

Q. Excuse me. First quarter of 1959.

Not only TWA but nobody in the world had that kind of airplane at that time, isn't that correct?

A. It just shows you you can't rely on these figures.

Mr. Tenney: There are some other examples but I don't think I will go into them.

* * * * *

[Tr. 8753] * * * Q. But in your estimates of transatlantic flights, you have used the same numbers that Mr. Wemple estimated which involve an allocation of the total mileage flown by these aircraft in international service, between transatlantic flights and other International Division services, is that not correct?

The Witness: May I have that question read back, please?

(The question was read.)

A. Mr. Wemple estimated transatlantic flights by applying an historical factor representing the ratio of numbers of transatlantic flights to numbers of aircraft miles flown. We have applied the same ratios in our estimate of transatlantic flights.

Q. By the application of that ratio, Mr. Wemple assumed an increase in non-transatlantic services proportionate to the increase in total aircraft miles flown, is that not correct?

I think that the portion of the Coverdale & [Tr. 8754] Colpitts report immediately prior to page 15 and then on page 15 sets the analysis forth rather fully. I just want to make sure I am clear as to what your answer is on this general subject.

A. If I may take a crack at rephrasing the question before answering it, because I am not sure I can answer it in the form in which it was given to me, if we were to take the total flights estimated by Mr. Wemple, transatlantic flights, and multiply those flights by some average distance per flight—and this would be difficult to determine, I might add—the mileage that we would come up with as a result of a calculation would be something like less than the total International Division mileage that is operated by TWA. So there obviously or should be in the historical experience some reflection of mileage operated beyond the gateways.

However, the significance of that mileage is not at all clear. I am not aware, except for some minor operations through the Middle East, of services which TWA originates abroad.

In short, the bulk of TWA's services originate in the United States and are operated across the Atlantic and penetrate into Europe.

So, all the mileage is accounted for and all of [Tr. 8755] the traffic, transatlantic traffic carried on these flights is accounted for.

Now, historically, it has been true, and I think that Mr. Wemple's figures would indicate, that, there is an increasing proportion of TWA's transatlantic service that is operated between the gateways—and by gateways I mean U. S. gateways such as New York and transatlantic gateways such as London, Paris and Rome.

This is characteristic of U. S. operations in the transatlantic area. As time has gone on, there has been less of a concentration of long flights penetrating deeply into Europe or the Middle East, and more of a concentration of transatlantic services, turn-around flights operated in the transatlantic area. And this policy, I might state, is encouraged by the U. S. Government. The last international policy paper that was promulgated by the government strongly suggested that U. S. airlines concentrate primarily on the transatlantic area and devote less effort to operations beyond the gateways.

I don't know whether this has answered your question as completely as you anticipated or not.

Q. I think it does.

Just one or two more questions on that same general subject.

[Tr. 8756] If reconstructed TWA with these additional aircraft employed to some extent in beyond the gateway services found that the use of these additional jet aircraft in those services did not produce any increase in revenues, management could have made a decision to concentrate all of those services on what you have described as turn-

around transatlantic flights, thus providing more transatlantic seats, might they not?

A. Yes, that was certainly an option open to management.

A further option open to management was not to have flown that mileage at all. But as I have tried to make clear we are not altering in any way the assumptions made with respect to total miles flown. And in the transatlantic area we have further assumed that Mr. Wemple's calculation of the usage of the aircraft is a correct calculation, and we have followed his calculation.

I myself would not agree that the use of the aircraft as it is inherently assumed in the calculation is the appropriate use of the airplane.

The Special Master: Are you speaking now as between transatlantic and beyond the gateway or between domestic and international?

The Witness: Well, I am trying to make a [Tr. 8757] distinction here between really three things.

There is transatlantic, and then there is beyond the gateway, beyond the gateway meaning in this case the origination of a flight abroad and moving to another point abroad.

The Special Master: I understand.

The Witness: Then there are questions of how far you route a transatlantic flight once you get into Europe. In other words, having operated to Paris, do you want to go to Rome as well on that flight? If you do not go to Rome on that flight and operate only to Paris, presumably you lose some of the Rome passengers that you are carrying.

And in the figures that we have used, we have used TWA's historical experience with respect to its

New York-Paris and New York-Rome passengers as well.

So we have made no basic change in the manner in which they were routing airplanes or assumed no basic change. But there were options obviously available to management. They could turn the flight around at Paris if they wanted to.

By Mr. Tenney:

Q. You have not in your computation made any estimate [Tr. 8758] as to what additional revenues might have been achieved by the exercise of that option?

A. That is correct. Or revenues that might have been lost by the exercise of that option.

• • • • •

[Tr. 8762] Q. Would you refer, please, to Volume IV of the Coverdale & Colpitts report, Exhibit F, sheets 51 and 52 which are the page references given on this table that we have been looking at for the lines in question.

You will see near the bottom of the page the line which reads, "4B-331B jet aircraft," and the figure under the heading "Actual Expense" of $10.4 million, and then the figure in the last column opposite the same line of minus 10.4 million indicating a deletion of the $10.4 million in question in the Coverdale & Colpitts estimates.

Do you see those entries, Mr. Simat?

A. Yes.

Q. Do you see immediately under that the explanatory sentence which reads:

"Our estimates assumed the substitution of B-331 aircraft for B-331B aircraft which eliminates this B-331B expense."

Do you see that sentence, Mr. Simat?

A. Yes, I do.

[Tr. 8763] Q. Did you in your report estimate a reduction of TWA's expenses to reflect the absence of operating costs for the B-331B aircraft in 1963?

A. If we didn't, we should have.

I would have to check again to make sure.

I had some problems with the numbers in Exhibit F. It does not seem reasonable to me that a given amount of B-331 mileage could be used to replace the same amount of B-331B mileage at a lower cost, since the B-331B is a less expensive airplane to operate per mile than the Boeing 331, but let me examine my own figures.

I will have to check this further, Mr. Tenney, but I believe that we do have an error here. I believe that we have not offset the Boeing 331B miles in our cost estimates and consequently we have not deducted the reduction in Boeing 331B aircraft operating costs in 1963 that we should have deducted.

But I will have to check out the figures.

Q. In theory, historical B-331B costs should be deleted for the purposes of the assumptions we are making here, is that correct?

A. That's absolutely right, yes.

Q. I will call your attention to the fact that this involves in the International Division for 1963 the largest [Tr. 8764] portion of those 331B expenses totalling $11.8 million, but that a small amount appears in 1962, 100,000 only, and a relatively small amount appears also in the domestic portion because of the nature of the allocation of the B-331B between domestic and international which shows up on Schedule II-5 for 1963 and amounts to 700,000.

Mr. Hayes: That is II-5, TWA Exhibit 345.

Mr. Tenney: That is right.

Q. II-5 for 1963 amounting to 700,000 and II-4 for 1962 amounting to 100,000.

So that you have about an additional 900,000 in those miscellaneous places as to which the same principles are applicable and as far as we can tell there was no deletion.

A. I will certainly check that out.

In principle, the B-331B costs should have been deleted. If they were not, it is sheer error on our part. • • •

[Tr. 8868] • • • By Mr. Kohn:

Q. May I ask one question on what you just said, Mr. Simat?

When you say that the use of one airline gives you problems for purposes of comparison, may I ask you is there any airline whose domestic operations are more comparable to the domestic operations of TWA than those of American Airlines?

A. I would say that United Airlines is probably very close in comparability to TWA in terms of its domestic route structure and the extent to which it parallels TWA's routes.

I would have difficulty distinguishing between United and American Airlines on the grounds that United [Tr. 8869] was less comparable than American.

Q. You think United is as comparable as American is to TWA?

A. I think there are a number of airlines that would have to be considered.

TWA, like all major trunk lines, competes with virtually every other major trunk line in the business today.

In fact, I believe it is true that TWA competes with every trunk line over some portion of its routes.

But the difficulties of using one airline as a basis for estimating the profits of another are that the earnings of

any one particular airline are quite susceptible to changes in policies, changes in route structure, which affect that airline perhaps more peculiarly than the operations of any other airline.

I myself do not feel that the comparative profit type of study is particularly valid in any circumstances, but I would say to make it more valid than the study is here, one would certainly have to broaden the base by extending the number of years that are used as the base period from which the given period is estimated.

One would also have to extend the base to in- [Tr. 8870] clude a greater number of airlines in the base so as to make the results less susceptible to the kinds of errors that can creep in because of the events that are peculiar to one airline or another airline.

And one would also have to examine both the base period and the given period very carefully to make sure that there were no changes between the base period and the given period that would affect the earnings of one airline more than another.

For example, if it were true that one airline was the beneficiary of a major route grant which affected its earnings in the base period, a route grant which it did not have in the given period, certainly either the given period earnings or the base period earnings, would have to be adjusted to equate the two situations, to assume either that the route grant was there all along or it was not there at all in both periods. You couldn't have it both ways.

• • • • •

[Tr. 9180] • • • Mr. Tenney: Our spot-checks, as I say, showed several instances in those two months which was the only two we checked, December of 1959—excuse me—July of 1959 and December

of 1961 in which we thought Viscounts and Electras were included. I am glad to know it was in error if that occurred.

Mr. Brownell, I have really only one other thing which is in the nature of a response to a question directed to counsel I guess I would put it some time ago in the course of the examination.

It was with respect to TWA Exhibit 355 and TWA Exhibit 356. Those two exhibits were introduced in the course of Mr. Kohn's cross examination of Mr. Simat on the so-called comparative profit study of Mr. Wemple and the related section of Mr. Simat's report.

The portion of the transcript—and Mr. Perkins may wish to check this—to which I refer is page 8881A.

You may recall that these exhibits, TWA 355 and 356 were prepared to correspond in most respects to tables introduced in the course of Mr. Wemple's [Tr. 9181] comparative profit study comparing TWA's international operations with Pan American's Atlantic operations and TWA's domestic operations with American's domestic operations. The differences in these two exhibits were that one of them added United Airlines as a domestic comparison, and the other added domestic trunks as a domestic comparison. Otherwise, they came out with about the same figures.

Mr. Hayes said on page 8881A and I quote him:

"I notice that there has been a change between page 4 of Mr. Wemple's Exhibit 4B and TWA Exhibits 355 and 356 with respect both to the figures called TWA actual profits in the two exhibits including the

profit for international from 34.4 to 34.5 and a corresponding reduction of $100,000 in the Pan American figure. Is this supposed to also be an amendment of Mr. Wemple's original report which was carefully checked by counsel and Mr. Wemple?"

Mr. Kohn said, "We will have the $100,000 figure you mentioned checked."

I have a couple of extra copies. Here is a set of 355 and 356. And here are two copies of 355 and two copies of 356.

It was not our intention by introducing 355 and [Tr. 9182] 356 to amend or make any changes in Mr. Wemple's original report. The differences in these figures that Mr. Hayes called attention to are the results of rounding differences, people rounding things in a different way this time than they did last time.

But in order to avoid the suggestion of a correction which was not intended to Mr. Wemple's original report, I would like to amend for the record certain of the figures in these two documents.

In the first table of Exhibit 355 opposite Pan American Atlantic under 1964 the figure 26.2 should read 26.1 which is what it read in the corresponding table in Mr. Wemple's original report.

That does not affect the average.

In the third table the lines opposite TWA international, the figure under 1963 should be 23.3 instead of 23.4, and the total figure should be 34.4 instead of 34.5.

In the final table at the bottom of the page opposite TWA international under the actual column the figure 34.5 should be changed to 34.4 and the difference figure of 81.1 should be changed to 81.2 and

correspondingly the total at the very bottom of the page, 149.4 should be changed to 149.5.

[Tr. 9183] Except for the last few figures which are the result of the computation, this conforms the figures to those given in Mr. Wemple's original report.

There are substantially the same changes to be made in TWA Exhibit 356. In the first table opposite Pan American, Atlantic, under 1964 the figure should be 26.1 and not 26.2.

In the third table opposite TWA international under 1963 the figure should be 23.3 and not 23.4. The total figure for TWA international should be 34.4 and not 34.5.

In the final table opposite TWA international, actual TWA profits should be 34.4 and not 34.5. The difference figure should be 81.2 and not 81.1.

And the total figure at the extreme bottom right should be 121.3 instead of 121.2.

To repeat, the cause of these things they were rounding differences, rounding these things in different manners on the two separate occasions.

• • • • •

[Tr. 9788] Q. A minute ago, Mr. Simat, you referred to certain passages in the Ezekiel & Fox. So as to put this in some kind of a manageable compass as far as whatever else you would like to bring up, would you attempt to review the passages that you directed our attention to just now—I realize you did not have a chance to study it carefully—and consider whether those adequately bring out the points you were trying to make, and if they do not, give us a list of such other things as you wish to call our attention to, if possible on Thursday when we resume, and I suppose that

we could all agree that whatever point there is in these probably can be brought out with a relatively limited number of examples, if you will select the ones that seem to you to be most appropriate to make your point.

Then we can review them and see if we have any further questions on it.

Would that procedure be satisfactory to you, Mr. Simat?

A. It sounds most fair, Mr. Tenney.

Q. I have one question that is somewhat on the same line, perhaps one small group of questions and perhaps we can get to that before we recess.

In previous printouts of regressions that you [Tr. 9789] have furnished us with, Mr Simat, in connection with your earlier report, and indeed in most of the printouts that you have furnished us with in connection with this report, some other tests or perhaps I should call them parameters have been printed out. Specifically almost all of them have listed the standard error of estimate.

I notice that is not here in this one. Can it be readily computed from this data?

A. It can be computed from the data. It is not shown in this particular printout, and the reason that it is not shown is that we have used from time to time in our analysis various programs for computing correlation coefficients.

Some of the work has been done in Boston, and we have used two different computer organizations in Boston. We have had some of the work done in Washington, D. C. and we have used two different computer organizations in Washington, D. C.

And there are variations in the programs insofar as certain of the programs do not report or print out all of the statistical parameters.

The program that was used in this particular case did not print out the standard error, but the standard error can be computed, and we would be glad to supply it.

[Tr. 9790] Mr. Perkins: I would like to make one statement, Mr. Tenney, as to what the report does or does not contain, and this pertains particularly to Volume B of the report.

It was composed under extreme pressure to meet a deadline, and there is no doubt that if time—if there had been even another week to write it, it would have been a fuller, clearer, more detailed report.

That is simply a fact which may explain why some things are not in the report that might otherwise be there.

The attempt was to put the essentials there and the work papers it was hoped would supply anything else.

But I am sure that with further time this would have been a somewhat more full and lucid report, the text in Volume B in particular.

Mr. Tenney: Let me state for the record the figure which has been given to me by a man who computed it as the standard error of estimate for your preferred equation and perhaps you can check it and confirm subsequently whether this is accurate or not.

[Tr. 9791] It is one standard error plus or minus 10,530,000 passenger miles.

I think this would be a good time for our recess.

The Special Master: All right.***

[Tr. 9997] * * * By Mr. Tenney:

Q. As I understand it, this printout that you have just showed me, Mr. Simat, is the printout of data cards that were used in connection with the production of De- [Tr.

9998] fendants' Exhibit 331, I believe it is, which was revision of your profit and loss calculation on certain changed principles; is that correct?

Mr. Perkins: I think that was—my recollection may be faulty—I think that reflected changes in connection with the elimination of 331B costs, and I think there was a change in the computation of the method of adjusting the marginal load factors for the effect of economic growth.

In connection with submitting that, Mr. Simat had had a program prepared which could immediately compute the profit and loss effect of changing any of the factors that he had used, and Defendants' Exhibit 331 was such a computation of profit and loss, and in connection with that we supplied a program—a printout of program and probably other materials.

By Mr. Tenney:

Q. I do not recall—I am asking for the transcript to be checked and possibly you will recall—that we were informed at the time that the constants that you had used for yield have been changed.

Do you recall that?

A. I don't recall that we changed the constants of [Tr. 9999] the yields.

Q. In your revised report, Mr. Simat, at page D-8, the figures for the yield formula that you used in that revised report are all set out, and they are different from these figures that appear in this program, and I now discover from your having explained it to me now, that they are different from the figures that you used for Defendants' Exhibit 331.

We did not know that at the time. That may also explain why most of the cost figures seem to be different, cost constants seem to be different from those that were used in your previous report.

For example, in your previous report, Vol. I—

The Special Master: When you say "revised report", you mean revised pages of original report?

Mr. Tenney: Mr. Brownell, we had a lot of revisions of these documents and it is undoubtedly confusing.

Defendants' Exhibit 271 was, of course, originally introduced in July, and then we had a large number of revised pages.

The Special Master: Yes, I remember that.

Mr. Tenney: That was regarded as the revised [Tr. 10,000] basic report of Mr. Simat, and that's usually what I intend at least to be referring to when I speak of his revised report.

The Special Master: All right, I just wanted to get that clear.

Mr. Tenney: In that report, there are figures set out as to many factors that were used in computations.

One of the figures set out on the page I cited is a list of the factors used for the yield formula for each year in question.

In the way this thing is organized, that particular table was largely the same as it had been in July, and you can actually see the corrections that were made. There were relatively few figures. And I think we all have them marked in our copies.

Mr. Perkins: Two of them were just rounding corrections, and the only correction of any significance

was the fixed amount for 1959, which was changed from $5.59 to $5.34.

Mr. Tenney: A good deal later, near the end of the cross-examination of Mr. Simat on this report, a revised profit and loss study—computation, I should say, was introduced which was marked as [Tr. 10,001] Defendants' Exhibit 331, and came up with different end results.

My understanding was that it had reflected changes only of the types that Mr. Perkins outlined on the record a few minutes ago.

I had not understood, although it now does appear, that most of the other constants or factors were revised to some extent.

Just for example—I have not examined this program that Mr. Simat is referring to for this purpose—but in the case of tons per aircraft, a factor that Mr. Simat uses for some of his computations, the year 1959 for the 1049H aircraft, Vol. I, Page V-14 of Mr. Simat's revised report, Defendants' Exhibit 271 sets out that figure of tons per aircraft for that type of aircraft at 10.924.

In our check of the program data used for Mr. Simat's supplemental report, we find that the figure he has used is 14.905. It had not occurred to us that this change might have been inserted into Defendants' Exhibit 331, and in the course of our cross-examination last fall, we did not inquire into it to that extent.

I think perhaps now about all I can do is [Tr. 10,002] ask were these other factors changed at that time as well.

The Witness: Is there a pending question?

Mr. Tenney: Yes. I will restate it, because it followed a lengthy statement and it might be more difficult for the reporter to find it.

By Mr. Tenney:

Q. In connection with the preparation of Defendants' Exhibit 331 last fall, were there changes made in your variable cost factors from those which were printed out or set out in revised Defendants' Exhibit 271?

A. It is my understanding that Exhibit 331 contains all the revisions that were made either as a result of errors determined and revised in the report itself or as a result of errors that may have become manifest through the cross-examination.

And 331 is supposed to be the correct version of the calculation of profit and loss in the case.

And I am not aware of any changes in 331 that are not a matter of record.

Q. I do not believe that there is anything on the record except this conversation, question and answer this afternoon, that reveals that there were changes in these costing factors used in the computation of Defendants' [Tr. 10,003] Exhibit 331.

But do I now understand that there were such changes?

A. I am just not aware of them. I will be glad to look to see if there were any changes. I don't believe so.

But we will certainly check out this possibility, since it seems to be a matter of caution.

As far as I know, the calculations that are performed in Exhibit 331 are to support—or to support 331 are the correct calculations. These were made available to you for checking.

We have used the same basic factors in calculating the profit and loss data in connection with our supplemental report.

There should be no change between 331 and the supplemental report in any of the costing factors.

And as far as the yield information is concerned, the only difference between the report and what it sets forth there and the figures that appear in the computer run are that the computer actually worked out the formula and came out—carried the calculations out a greater number of places than we did for purposes of the report, and consequently there are rounding errors, or rounding dif-
[Tr. 10,004] ferences, I should say, but they are all in the last place and generally insignificant.

Mr. Perkins: I might just state, Mr. Tenney, we had assumed that since you had an opportunity to examine that and didn't ask any questions about it, that it was satisfactory to you. And we noted that, in fact, TWA Exhibit 370, you submitted a number of calculations which were, in fact, based upon the figures shown in Defendants' Exhibit 331.

Of course, we don't mean to say if you now have some questions that you did not have at that time about anything that appears in 331, we would certainly be most happy to explain them to you.

• • • • •

[Tr. 10,034] The Special Master: Proceed.

By Mr. Tenney:

Q. Mr. Simat, Subchapter D of Part III of your report is headed "Estimated Changes in Operating Profit or Loss," and it begins on Page III-24.

The actual changes are set out in tabular form on the Pages III-25, III-26, III-27; is that correct?

A. Yes.

Q. III-27 is Table III-J, and it summarizes the net changes produced by combining your piston estimates and your jet estimates for the years in question; is that right?

A. Yes.

Q. On the assumption that we are dealing with here, TWA would have had in the period in question a substantial number of additional jet aircraft, varying in absolute number, of course, from year to year, but a significant number of jet aircraft in addition throughout the period to those that it had historically; is that not correct?

A. Yes.

Q. Those aircraft, that type of aircraft, I should say, generally speaking, the transport aircraft that were being introduced into domestic airline service during that [Tr. 10,035] period, represented the newest, fastest and most attractive aircraft being operated in domestic service in those days, did they not?

A. Yes.

Q. Is it fair to say that the net results of the changes in TWA's operating fleet that this would have produced would have been in the direction of making it a newer, more modern fleet than it was historically?

A. Yes, a higher percentage of the fleet would have consisted of aircraft of the jet variety.

Q. I believe you have testified on several occasions that the jet aircraft are more attractive to passengers, other things being equal, than piston aircraft. I am only looking for a general answer to that. I am sure that you have a number of comments that you have already made on the record as to what this means and why, but in general, is that not correct?

A. I just wouldn't want to bury the term "other things being equal." That is a mighty big "if."

But other things being equal, yes, the jet is a more attractive airplane than the piston aircraft.

Q. I believe, however, you have stated, on occasion, in the record, your views as to what other things should be

examined, and I do not think that we need to go into [Tr. 10,036] it again, unless you think it is important at this point.

The Special Master: I am not insisting on it.

Q. In the column on Page III-7, giving the total for the five years 1959 through 1963, opposite the figure "Increases-decreases in operating profit," we find (87.32) and that represents, as I understand it, your estimate or opinion that the result, as far as operating profit goes to TWA of its change in its fleet, would have been to cause it to have $87.32 million less operating profit or more loss, whichever way you want to look at it, than it did historically in those five years; is that correct?

A. Yes.

Q. The next figure immediately above it in that column indicates that the operating costs to TWA of this improved fleet would have been 12.60 million less than its historical fleet; is that correct?

A. Yes.

Q. With a more modern fleet, more attractive to passengers, if TWA could have operated that fleet at an operating cost such as $12.60 million less, how could it be that TWA would have lost money by the change?

A. I think, Mr. Tenney, that we have been over this ground before and you have to look, as they say on Madison [Tr. 10,037] Avenue, at the big picture.

The replacement of piston aircraft services by jet services was not, as I think I pointed out before, an unmitigated blessing.

During the period when the industry was substantially increasing its jet capacity from 1958 and 1959 through 1961, there was, indeed, an absolute loss in traffic. And the reason

for the loss in traffic is associated, in my opinion, with the very sharp decline in the number of operating scheduled frequencies.

The substitution of a large jet with 120 or more seats for services that had been supplied with aircraft with seating capacities of 50 to 60 seats, or approximately half, resulted in a very material reduction in schedule frequencies.

And since the jets did not stimulate traffic, did not add to the total volume of traffic, however attractive they may have been in competition with piston aircraft being provided in the same markets, all other things being equal, there is no evidence, with the exception of what we have developed in connection with this proceeding, that the jets actually did add to the total volume of traffic which moved in the industry.

The Special Master: Why don't the air- [Tr. 10,038] lines go back to the piston planes, then, if they can make that much more money?

The Witness: The answer is that the jet, all other things being equal, is a more economical plane to operate. Its cost per seat mile will be less than that of the piston aircraft when the traffic develops to the point where a sizable fleet of jet aircraft can be utilized at frequencies which are demanded by the market. The jet is a very economical plane, and the jet will make a profit.

We are now talking about whether in a period when the addition of jets were resulting in fairly substantial losses in traffic for the industry as a whole, whether additional jets were required to make a carrier whole.

The answer is in a period of over-capacity, the addition of additional capacity is not the answer.

As for why the airlines do not go back to piston aircraft, there were periods when some of the airlines would have wished very devoutly that they could have returned to the good, old days.

• • • • •

[Tr. 10,393] Q. If one were to reject the theory that you can make a profit and loss analysis applicable to individual aircraft in a fleet and rank them by profitability—and I realize, Mr. Simat, that that is a hypothesis that you have made and I am not asking you to reject it—I am just asking you to suppose that hypothesis were rejected—and make the further hypothesis that the only reasonable way of determining the profitability of units in a fleet were to average revenues and costs for the fleet, then the entire analysis that you have made in Appendix D would not be possible, would it?

A. Oh, it would be possible. It wouldn't be appropriate under those assumptions.

Q. You would not get any results that would point in any direction at all, would you?

A. Well, we could follow the same procedures. We would not be following the procedures to any meaningful conclusion, if that's the answer you are seeking.

Q. The process of ranking aircraft by profitability is the fundamental first step that you must make to apply the analysis that you have applied in the alternative estimate, is it not?

A. The underlining hypothesis is that aircraft in the fleet will have different levels of profitability, [Tr. 10,394] and it is possible to estimate the profitability of a larger or smaller fleet of aircraft by ranking the aircraft in order of profitability, determining a relationship between the rank order of profitability and profit and loss, and estimating for a larger or smaller fleet accordingly.

This, in my opinion, is a reasonable way of doing it, but, of course, it would not be reasonable under the assumption you have propounded.

Q. On page III-29 of Volume B, there is a chart which is labeled IIIA and which is headed "Operating Profitability of Jet Aircraft Showing Profit or Loss by Profit Rank in a Sample Month."

Was this chart intended by you to be illustrative of the points that you were making in connection with the alternative estimate?

A. Yes, it is illustrative of the differences in profitability of different aircraft in the fleet when they are ordered in relation to their actual profit or loss as determined by whatever method of revenue allocation and cost allocation is used.

Q. Mr. Eichner this morning testified that there was nothing particularly necessary about ranking the most profitable ones first. You could rank the less [Tr. 10,395] profitable one first. And if you did that and transferred the results onto a graph like this, all the lines would be pointing up, wouldn't they?

A. You simply change the scale, but you don't change the line. • • •

Q. Mr. Simat, TWA Exhibit 434 for identification has taken the precise three months and aircraft that you chose for your illustrative chart at Page III-29, and we have plotted the same data except that we ranked the least profitable aircraft as No. 1 and the most profitable aircraft as the last number in this ranking order, and we find that all the lines point up.

Now that you look at this chart, isn't it clear that that's what they would have to do if you ranked them in that manner?

A. Well, the basic character of the line does not change whether they are pointing upward or downward.

The line indicates that there is among the [Tr. 10,396] individual aircraft of the fleet a difference in profitability, such as the difference between two aircraft consecutively ranked is virtually a constant amount, that is, the amount of difference between any two aircraft is approximately the same, however, they are ranked, either from high to low or low to high.

Q. Whichever way you rank them statistically it would make no difference, you would get the same formulas and so forth that you have come out with and the same coefficients of correlation and so forth that you have come out with in Appendix D, is that not correct?

A. That is right. With the exception, of course, that they would be ranked in order of profitability from low to high or high to low.

Q. Back on Appendix D, those pages starting at page 3, the next to the last column are correlation coefficients.

These are the same measures in general that we have been referring to from time to time in both this report and your previous report last fall?

A. Yes.

Q. These, of course, are simple correlations because you have only one independent variable, is that correct?

[Tr. 10,397] A. Yes.

Q. There were one or two surprises here.

On page 5, for the 331 aircraft for September and October of 1961, there were only two data points, is that correct, Mr. Simat?

A. Yes.

Q. As a matter of theory, isn't it clear—I think you have previously testified—that a regression of this type per-

formed on two data points must produce a formula with a correlation coefficient of 1.0?

A. Right. In the interest of conservatism we have stated it as .9999.

Q. Is it possible that your computer was not computing it right?

A. I think the computer was computing it right.

Q. Why weren't you conservative in April of 1962 where the computer seems to have come up with the two data points with a coefficient correlation of 1.0000?

A. I think we may have run out of conservatism by then, but I don't think there is any practical difference between the two correlation coefficients.

Q. Do you regard these correlation coefficients as high, Mr. Simat?

A. They are high.

[Tr. 10,398] Q. Do you rely on them as indicating a reliability for the analysis that you have performed here?

A. Only to the extent that they indicate to me that our basic premise as to the difference in profitability among individual aircraft was essentially correct; that the differences are—amount to a constant, so that the first ranked airplane has a profit margin that is some sum greater than the second airplane which in turn has a profit margin which is the same amount greater than the third ranked airplane and so on.

Q. If you take any 25 numbers, just to pick a size of sample, and you rank them in order of magnitude, aren't you always going to find, if you did it right, that the last one is smaller than the one just before it and so right on up the line?

A. Well, that's certainly true since that's the criterion for the ranking. The question is whether you get the same difference in amount between conservative aircraft.

If we had a truly random situation where profit margin was not related to ranking at all, then we would find that there would be a tendency for a large number of aircraft to show rather small differences among them in order of profitability than for a [Tr. 10,399] comparatively few number of airplanes to show large differences in profitability.

* * * * *

[Tr. 10,402] Q. We, Mr. Simat, have caused some random numbers to be generated by a computer, using numbers of the quantity that are involved in your various samples, and we had five separate sets of random numbers generated, each of them being six-digit figures, since the figures that you were working with from Appendix B are six-digit figures, that is, they are figures in the group of 1 to a million.

The six sets were sets of 4, 6, 15 and 24, and then another set of 4, since we were trying to get the largest and smallest numbers used in the three types of aircraft that you have. So we have 4 and 15 for the 131, 6 and 24 for the CV-880, and 4 for the 331. We omitted the two.

And we caused regressions to be run on those sets of numbers, after they had been ranked in decreasing order, to see if we could ascertain a regression formula from them and what the statistical results were.

All of these processes are things that can be accomplished through programming a computer in the proper way, can they not?

A. Yes, there are about four or five different ways of obtaining random numbers, and I assume that these random numbers were obtained with signs, they were plus and minus.

Q. No, these are numbers in the group from 1 to a [Tr. 10,403] million.

A. Of course, the numbers in our series run from pluses to minuses.

Q. That is true. So that it would slightly increase the size of the total group that you could include?

A. Slightly, meaning double it.

Q. I don't think you have any minus figures that are in anything like that order of magnitude, Mr. Simat. I have previously checked this, but I don't think you have any minus figures that are as high as 100,000, do you?

We find one 125,000 minus figure.

A. I don't see any plus figures above 500,000.

Q. So that we have a number of series of numbers within, oh, roughly—the precise numbers are not important—the range of 500,000 or so and minus 125,000 or so or a total of something between six and seven hundred thousand six-digit numbers that might be involved; is that correct?

A. Well, the entire range of experience, profit and loss on the method of cost and revenue allocations used is from approximately plus 400,000 to minus 100,000, which would give you a range of about 500,000 in total.

Mr. Tenney: Would you read that back to me? [Tr. 10,404] (The record was read.)

By Mr. Tenney:

Q. Actually, if you have a series of random numbers that are all of constant positive sign, you can convert them without affecting their randomness into a series including both positive and negative by uniformly subtracting a constant figure of your selection from each of your random numbers, can you not?

A. Yes.

Q. Any regression in terms of developing a regression line that you performed on the resulting figures would not be changed by that process, would it? It would change your intercept, I believe, but it would not change the slope of your line in any sense?

A. That is correct.

• • • • •

[Tr. 10,407] By Mr. Tenney:

Q. Clearly, Mr. Simat, without an examination and analysis of the program which I can't expect you to perform here, you are unable to check the randomness of these numbers, and I shall not ask you to do so, but that is something that you could check by an analysis of the program, could you not?

A. Yes.

Q. I ask you to assume that the numbers were random numbers properly selected for the purpose in the way I have described to you and answer the questions that I will ask you on these regressions on that assumption.

Taking the first sheet of TWA Exhibit 435 for identification, the first process performed on the four random numbers as to rank them in descending order of magnitude. That is essentially the first process performed by you and your colleague, Mr. Eichner, on the numbers that have been produced by Mr. Eichner's analysis in Appendix B, is it not?

A. That was a process that was used. I myself would have tested the range of the data also to see whether or not the random numbers generated were in the same range order of differences as the series that they are purporting to represent.

I notice, for example, that just to pick one at random that I am looking at a page which is headed "24"—I don't know whether that is the 24th run or the 24th page—

Q. No, this is the regression on 24 data points. Some 24 random numbers?

A. The range that I observe is from a low value of $36,779 to a high value of $786,639 which is a difference of about $750,000, and in examining the range of profit or loss data for any particular aircraft type or any particular month, I can't find any experience that comes even close to producing such a range.

I think this is generally true of all of the data generated by the random generation technique.

Q. As I understand that statement, Mr. Simat, you have suggested by it that the range of numbers from which these random numbers were selected is too large to be comparable to the ranges of numbers that you were using?

A. Yes.

The range of numbers will affect the calculation of the standard deviation of your Y series, and the larger that standard deviation the higher the cor- [Tr. 10,409] relation coefficient is apt to be.

If you reduce the range and reduce the standard deviation, you would have a tendency of reducing the correlation coefficient.

Q. If you took all random numbers that had been generated within any given range of numbers, could you not reduce or increase the range to any desired extent by multiplying all of the random numbers uniformly by a predetermined constant? For example, if you had selected your random numbers from a range of one million, couldn't you reduce the range to half a million by multiplying them all by .5 and rounding fractions up one perhaps?

A. Yes.

Q. Or you could increase the range by a corresponding process?

A. Yes.

Q. That would not change the randomness of the series if it had been properly generated in the first instance, would it?

A. But it would change the standard deviation which is a measure of dispersion arrived at by squaring the differences between each value and its mean.

The larger the range, the larger the standard [Tr. 10,410] deviation will be.

Q. It is your opinion then, Mr. Simat, that the coefficient of correlation would be decreased if you used a smaller range for this purpose?

A. Yes.

Q. Do you think that would be of material effect in this case?

A. I don't have any means offhand of estimating the effect. I think it would be significant, yes.

Q. You do not believe that it would increase the coefficient of correlation?

A. No. That is, increasing—decreasing the range will not increase the correlation coefficient.

Q. The correlation coefficients achieved by the regressions contained in TWA Exhibit 435 for identification are not printed out directly since this program prints out only the R^2 which is the square of the correlation coefficient, but they can be computed from that R^2 figure which appears about a third of the way up on the left hand side of the first sheet for that particular regression under the heading "Index (R^2)."

That computation can be made, can it not, Mr. Simat?

[Tr. 10,411] A. Oh, yes, take the square root of the figure that is shown.

Q. Without bothering to compute the precise correlation coefficients, it is apparent, is it not, that they would all be above .9 and all except the first two—I withdraw that. They would all be above .9, would they not?

A. Yes, some would be just fractionally above .9.

Q. Some would be very close to 1.0, wouldn't they?

A. Some would be very close to 1.0.

Q. Mr. Simat, is not your analysis in Appendix D essentially nothing more than creating a statistical pattern by rankings and random numbers that were produced not by a computer but through Mr. Eichner's analysis, and then deducing statistical conclusions from it?

A. No.

In the first place, Mr. Eichner's analysis did not produce random numbers.

In Eichner's analysis produced a reasoned profit and loss for individual aircraft under certain very definite and consistent methods of obtaining the revenue allocations to those aircraft and the cost allocations [Tr. 10,412] on the basis of experience data.

Q. Do you believe that the correlation coefficients that you print out in your Appendix D are any indication that the results you have achieved are reliable?

A. Yes, I think the correlation coefficients that we obtained indicate that the results that we have shown and obtained by our cost and revenue estimating procedures pretty clearly establish that there are differences in profitabilities among aircraft, which are part of a rational pattern; that differences in aircraft profitability are accounted for by differences in aircraft usage and not by any random effect.

Q. As far as the extent to which your coefficients of correlation furnish any indication of reliability of your results, would it not be significant that a similar regression performed on a properly selected series of random numbers ranked in decreasing order of magnitude produce correlation coefficients as good as the ones that you have developed?

A. Well, I do not agree that the random numbers that have been generated by whatever program was used are in any way comparable to the figures that were determined by us from the profit and loss analysis.

[Tr. 10,413] I already pointed out that the range of numbers is materially different in the two data sets, and this alone is enough to create differences in the regression coefficients or the correlation coefficients I should say.

. . . . . .

[Tr. 10,455] By Mr. Perkins:

Q. Mr. Simat, you were questioned at various points during the cross examination as to the basis of your opinion that jets, the mere addition of jets or a substitution of jets for pistons did not in itself stimulate new traffic in connection, particularly with the justification for your ratios of .17 per cent and so forth as contrasted with much higher load factors that that many jets obtained in operation during this period.

I ask you whether you have examined some of the prime markets for TWA and its principal competitors with respect to the effect of substituted jets for pistons and adding jet capacity on traffic carried?

A. Yes, I have.

Q. What were the segments that you studied or the markets that you studied, rather?

A. The two primary TWA markets, markets which over the five-year period have ranked Nos. 1 and 2 in TWA's passenger mile volume afford, I think, a particularly [Tr. 10,456] good illustration of the effect of jets on total traffic and also the development of jet services over the years, and the resulting diseconomies of services.

I have examined the total numbers of on-line passengers carried by American, TWA and United—these, of course, are the three transcontinental carriers—in the New York-Los Angeles and New York-San Francisco markets—these markets are respectively 1 and 2 among TWA's markets—and I find in looking at the New York-Los Angeles traffic that the annual travel between New York and Los Angeles as reflected in the surveys of the Civil Aeronautics Board has decreased from 1959 from a total of 526,000 passengers to 520,000 passengers in 1960, 450,000 passengers in 1963—

Q. 1961.

A. 1961. Excuse me.

463,000 passengers in 1962, and 515,000 passengers in 1963.

In the case of New York-San Francisco traffic, the experience is quite similar, with the exception that after 1960 the traffic totals reflect not only the impact of the jet but also the impact of a third non-stop transcontinental carrier in the market, American Airlines. [Tr. 10,457] Prior to 1960 or the end of 1959, more correctly, American was not permitted to fly non-stop between New York and San Francisco but was required to serve at least one intermediate point.

In the case of New York-San Francisco traffic, the respective totals for each of the years of the five-year period are 307,000 in 1959, 328,000 in 1960, after American came into the market, 297,000 in 1961, 291,000 in 1962, and 336,000 in 1963. And 1963, of course, was the year of a big gain in the general economy.

Mr. Perkins: Would the reporter mark a two-page document, the first page of which is headed "Annual On-Line Passengers Between New York and Los Angeles Carried by American, TWA and

United, 1959 to 1963," and the second page of which is headed "Annual On-Line Passengers Between New York and San Francisco Carried by American, TWA and United, 1959 to 1963," as Defendants' Exhibit 367.

(Two-page document, first page of which is headed "Annual On-Line Passengers Between New York and Los Angeles Carried by American, TWA and United, 1959 to 1963," marked Defendants' Exhibit 367 for identification, as of this date.)

Q. I ask, Mr. Simat, if Defendants' Exhibit 367 [Tr. 10,458] for identification sets forth the results of his analysis of the traffic carried in those markets in those years.

A. It does.

Mr. Perkins: I offer it in evidence.

Mr. Tenney: Are there any additional work papers on this document?

The Witness: No.

Mr. Perkins: The source is stated as the competition among domestic airlines, CAB.

Q. Are all the figures set forth in that source, Mr. Simat?

A. Yes, the figures are directly derivable from the source. They all appear in the source as separate totals.

Mr. Tenney: This includes both jets and pistons in every instance, as I understand it.

The Witness: Yes. There is, of course, in the source no distribution between jet and piston operations of passenger traffic. Only the single combined total is reported.

Mr. Tenney: The on-line passengers, as I recall it, are based on the origin and destination studies, is that correct?

The Witness: The on-line totals are [Tr. 10,459] derived in the first instance from the survey which the Board calls the origin destination survey, which reports the true origin and destination of the passenger and the passengers routing. Wherever there is a change of airlines involved, the routing disclosed, indicates the combination of airlines used and the points at which the inter-line transfer is made.

The Special Master: Why do you think TWA had a continuous drop during these years in the percentage of traffic that it got in these two markets?

The Witness: There are, of course, a host of considerations that enter into the division of traffic between competing airlines in any one or more markets.

Advertising efforts is one major consideration.

In my opinion, the TWA advertising plan during the period was largely geared to attracting new travelers, the first traveler, and as a result TWA, I think, suffered in terms of percentage participation in the market in many markets where business travel tends to provide a high proportion [Tr. 10,460] of total travel.

I do not believe that the decline occurred because of any lack of equipment or service in the market. There are also—

The Special Master: You think it was their advertising policy.

The Witness: I think advertising policy is a major consideration.

Then there are other problems, of course, or other factors which affect distribution of traffic in the transcontinental markets.

One factor is the identity of the transcontinental airlines on other companies. United has traditionally enjoyed a greater identity in traffic originated at the West Coast terminals because of the extensive service which United supplies on the West Coast of the U. S. between Seattle, Portland and Los Angeles-San Francisco. That is more or less United's home base.

American Airlines has enjoyed a similar advantage in the East because of its extensive services between Boston-New York and Washington.

TWA has lacked the advantage of strong terminal support at both ends. And this advantage [Tr. 10,461] when properly exercised by competing carriers normally does not favor TWA's position in the transcontinental markets.

Mr. Perkins: Do you have any more questions at this point, Mr. Brownell?

The Special Master: I am bursting to ask a few, but I won't.

Mr. Perkins: Was there a ruling on that offer?

The Special Master: No, I don't think so.

In the absence of an objection it will be received.

(Defendants' Exhibit 367, received in evidence, as of this date.)

Q. Have you also made a study, Mr. Simat, of the service offered by TWA, American and United in those same two markets during this period in terms of frequency and type of equipment, at least jet versus piston?

A. Yes, we have tabulated for the month of August in each of the years from 1958 through 1963, the weekly frequencies offered by TWA, United and American eastbound and westbound, and with jet and piston [Tr. 10,462] aircraft. Thus, we have covered all of the frequencies available for the transportation of passengers in what we believe to be a representative month of the year. August is either at the peak or near the peak of transcontinental traffic.

Our figures indicate that there has been a very steady increase in the amount of jet capacity that has been offered, and, in fact, the amount of total capacity that has been offered over the years in the face of this static or even declining trend in the total volume of traffic.

By approximate calculation, the total number of seats offered by all three carriers over the period has doubled or more than doubled in both the New York-San Francisco and New York-Los Angeles markets.

So here we have a case which I think is probably as illustrative as any that could be obtained for establishing the economics of jet operations.

Q. Have you prepared a tabulation, Mr. Simat, showing for each of these airlines and for the month of August and each of these years the weekly frequencies and whether they were performed by jet or piston service?

[Tr. 10,463] A. Yes, we have.

Mr. Perkins: I ask the reporter to mark as Defendants' Exhibit 368 for identification a three-page document, the first page of which is headed "UAL-TWA-AAL, Combined Transcontinental Non-Stop Scheduled Frequencies Per Week-August 1958-1963," the second and third pages consisting of the detailed data upon which the first page is based.

(Three-page document, first page headed "UAL-TWA-AAL, Combined Transcontinental Non-Stop Scheduled Frequencies Per Week-August 1958-1963," marked Defendants' Exhibit 368 for identification, as of this date.)

Q. Is this the tabulation you just referred to, Mr. Simat?

A. Yes, it is.

Mr. Perkins: I offer it in evidence.

The Special Master: In the absence of objection it will be received.

(Defendants' Exhibit 368, received in evidence, as of this date.)

Q. From this study of the history of traffic in those two markets, 1959 through 1963, in relation to the services that were offered, what conclusions do you draw with respect to the stimulus afforded by the [Tr. 10,464] addition and expansion of jet service during these years on traffic?

A. I think it is apparent from the traffic totals that the jet itself has had little or no impact on the stimulation of additional traffic.

Consequently, it appears apparent that the economics of adding capacity are largely the economics of stealing traffic from a competitor and in monopoly situations where there are no competitors, the economics of jet operations require the substitution of jet capacity for piston aircraft capacity on a seat mile per seat mile basis in order to realize the economies of jet operations, but in no event does it appear that there is any gain to be realized from the addition of capacity qua addition of capacity.

The Special Master: There is an obvious error there in the 1960 TWA figures. It does not show any eastbound flights at all, New York-San Francisco.

The Witness: We will examine that as soon as I can obtain the scheduled information. • • •

Excerpts From Testimony at Damage Hearing of L. John Eichner

[Tr. 10,158] L. JOHN EICHNER, called as a witness, being first duly sworn by the Notary Public (William Blitz), testified as follows:

Cross Examination by Mr. Tenney:

Q. Mr. Eichner, first I understand that you are an officer of the corporation Simat, Helliesen & Eichner.

A. I am.

Q. Of which Mr. Simat who has been testifying here is I believe president.

A. Correct.

Q. I understand that you desire to adopt as your direct testimony in this proceeding Part II of Defendants' Exhibit 359 which is—359A, I should say, which is Volume A of the supplemental report of Simat, Helliesen & Eichner, Inc.?

A. I do.

Q. Mr. Eichner, in this portion of the report—I may refer to it occasionally as the report, but we are talking about this portion of the report, as I understand it, you have attempted to analyze what historically occurred in TWA's operations in the period 1959 to 1963, is that correct?

A. Correct.

[Tr. 10,159] Q. In doing so, you have made use, I believe Mr. Simat explained, of the traffic information which you have derived from a study of TWA's internal records, including the on-board reports and similar information that were supplied to defendants by TWA at your request last fall.

A. That is correct.

Q. As I understand it, none of the figures that you have set out in Volume A are based upon the competition studies

or similar information which we have been discussing at considerable length with Mr. Simat?

A. Not in the appendices. And I'm not sure about the body of the report if we referred to it or not and I believe we did in some footnotes.

Q. Appendix A sets out in tabular form the specific analysis that you have made of the historical operations in that period with respect to jets, is that not correct?

A. That's correct.

Q. Would you turn to the month of June 1959 in Appendix A?

The first column is headed "B-70 A/C NUM."

Would you state what that heading means?

A. These are B-707-131 aircraft which we numbered [Tr. 10,160] arbitrarily from the routing charts which we were furnished by TWA.

Q. The fact that that column contains seven entries running from 010 to 070 reflects the fact that you identified seven aircraft in operational service in that month, is that correct?

A. That's correct.

Q. These numbers do not, as I understand it, purport to represent specific aircraft in the sense of a physical object, one physical object, do they?

A. Not in the sense of an NC numbered aircraft. Yes, in the sense of an aircraft which was an investment of TWA and which was shown as an active aircraft on their routing chart.

In other words, on their routing chart they showed seven actives in the upper left hand corner. Each of these numbers represents one of those actives the way they had them routed and as detailed in Table G and GG.

Q. But 010 actually represents a flight pattern for one day and not a particular aircraft, is that not correct?

A. It represents a flight pattern for one day which would not have been possible if they had not had [Tr. 10,161] that aircraft.

Q. But that flight pattern might be flown on any given day by any of the seven aircraft that they had, is that not correct?

A. As we stated in our report, it usually—the pattern was for TWA to rotate each one of the seven aircraft through all seven patterns but if they had had only six active aircraft, then there could have only been six numbers there and the seventh one would have had to have been dropped.

Q. Since you have designated these units as aircraft, I think that we will probably frequently be referring to them as aircraft in the course of this cross-examination, and I would simply like to get it clear on the record, right now, and as clear as we can make it, that the entries that you have listed here as A/C number such and such are really 24 hour flight patterns from the routing chart, that is, what a particular aircraft, but not necessarily the same aircraft, is doing on a 24 hour period? It is a pattern? It is a routing pattern and not an aircraft?

A. I think I might have a semantic problem, Mr. Tenney. TWA itself called them operating units. They said they had seven operating units and I think that's [Tr. 10,162] probably as good a way to refer to them.

The Special Master: What you are saying then if you are talking about the New York-Los Angeles run that it might be one physical airplane one day and another physical airplane the next day? It does not mean the same NC number?

Mr. Tenney: That is correct.

Mr. Perkins: I think that is all set forth in a good deal of detail at the very beginning of our report.

The Special Master: Yes, but he is trying to educate me.

Mr. Perkins: Yes.

Q. The way you have selected these numbers is, I believe, by looking at the routing chart—and perhaps for this purpose it would be helpful if we did pull out the routing chart for June of 1959—I am sorry we did not—

A. I have one for June of 1959 here if you want to use it across.

Q. You have taken the patterns shown in order from top to bottom along the left hand side of the page—

A. Usually.

Q. —have you not?

[Tr. 10,163] A. Usually.

Q. In every case that we found you had done so?

A. In every one that I did personally I did it that way, but some of the people helping me after a while took them slightly out of order.

• • • • •

[Tr. 10,167] • • • Q. The two columns just before that "Average Length"—I should say the column just before that "Average Stage Length" presumably is a numerical average of the average stage length set forth for the specific segments in Table GG, taking into account the number of departures for each segment, is that correct?

A. Correct.

Q. The passenger revenues from which the total revenues are computed as you have just described take into account all passengers on board in that segment and no

solely what Mr. Simat has described as on-board passengers, is that not correct?

A. That's correct.

Q. "Average Passenger Load Factor," the heading for the third column in Appendix A, is a similar computation derived from the load factor figures set out for particular segments in Table G, am I correct?

A. That's correct.

Q. The last four columns in this particular table which are "A/C OPER"—"GRND plus IND"—"Total OPER" and "Profit/Loss"—would you state what each of those headings is intended to cover?

A. A/C OPER covers the aircraft operating expenses [Tr. 10,168] for the direct operating cost of the flight. In Table—in Appendix A, it would include the block-hour cost for the crews, for the fuel consumption, for the maintenance and maintenance burden, for the—all insurance and depreciation and aircraft rentals, if any.

The GRND and IND represent the ground and indirect expenses such as aircraft servicing, traffic servicing, stewardess, other passenger service expenses and so forth.

Total operating is the sum of those two columns and profit and loss is the difference between the total revenues and total operating expense.

Q. In the case of ground and indirect costs, how have you derived that figure for the particular aircraft unit that is described as aircraft No. 010?

A. We used the methods that were described in the Volume II of the first report. We computed the aircraft servicing costs based upon a weighted departure which was the available tons times the departures.

The traffic servicing was based as described in the first report.

The stewardess expense was based upon four hostesses per jet as we described in the first report.

The passenger servicing expense other than [Tr. 10,169] stewardess expense varied with the loads that we had on board.

The advertising varied with the traffic.

The general administration is varied with all other cash costs.

If you wish I could do it with a pencil and paper while we recess and bring you back a pencil and paper for the record if you want to.

Q. I don't think it will be necessary at all.

The point that I would like to make clear, and I think perhaps it is clear from your answer, is that the ground and indirect expenses, specifically, represent an allocation to this particular operation of expenses that are only recorded on an overall basis by TWA, am I not correct?

A. These are expenses which are only recorded on an overall basis by TWA, but which by our costing method is developed in the first report and by TWA's own internal costing methods tend to vary with the operation.

If you add a departure from O'Hare to LAX on Flight 27 the first trip listed here you have to add people to service it, and it reflects that additional personnel.

Q. One final question to round out the description [Tr. 10,170] of this table, the second column which we have not discussed yet is headed "Rank." Rank is simply the numerical order of profitability that you have determined for these aircraft units as set out in the last column, am I not correct?

A. That's correct.

Q. If, for example, a particular aircraft pattern in the month of July were relatively more profitable than in the

month of June, its rank in the month of July would be different than it was in June, is that not correct?

A. That's right.

Q. It does not represent the order in which aircraft were received or necessarily the same aircraft number from month to month?

A. No. The only purpose of the ranking was to show that as additional jets were delivered, some jets were quite profitable and remained quite profitable, but other jets became less profitable or became losers.

Mr. Tenney: We will go into how this is used in some detail later on.

• • • • •

[Tr. 10,209] • • • Q. Using this averaging approach that you have used, if we look, say, at the next aircraft unit that you have identified in that same month which has an average stage length according to Appendix A of 2538.26 miles—that is a transcontinental trip, is it not, Mr. Eichner?

A. Yes, sir, it is.

Q. Can you tell us what segment that presumably [Tr. 10,210] is flown on?

A. If you are referring to aircraft No. 030—

Q. Yes.

A. That was flown on segments—it was scheduled between San Francisco and New York and New York and San Francisco. And it had some irregular operations involved.

And also on a segment between San Francisco and Baltimore.

Q. On segments of that length, it really is unlikely at the very least, that the passengers would be flying by TWA an average trip length of 1.435 times the segment length, is it not?

A. Yes, it is.

Q. In general, therefore, your approach has tended to minimize the revenues associated with the longest segments, is that not correct?

A. I would not use the word minimize, Mr. Tenney. So I would say no.

It has tended to approximate the revenues on the longer segments more accurately than other methods which have been used in this case. But it is not as accurate as using the data which we later obtained from the station performance report which would result in [Tr. 10,211] slightly higher revenues.

Q. As a matter of fact, the ratio that is recommended on Page III-22 for segment lengths in this range over 2500 miles, this being the ratio that I take it Mr. Perkins would prefer that I question you about, the ratio is 1.01 for 1959 and over the five year period after ranges 1.00, does it not?

A. Yes.

The ratio shown on Page III-22 which gives a more precise estimate of both revenues and expenses would be 1.01.

Q. That would produce a higher total revenues figure for this long range flight, is that correct?

A. A slightly, very slightly higher revenues figure for this long range flight on the magnitude of $10,000 out of approximately $922,000.

Q. Once you have determined a passenger revenues figure, what have you done to transform that into a total revenues figure?

A. We added five per cent to it for cargo.

Q. Do you think that the use of across the board indication of five per cent for cargo revenue is an accurate reflection of TWA's historical jet operations?

A. I believe we stated in a footnote in one of [Tr. 10,212] the reports which I believe I wrote that we wanted to explore this problem and we just did not because of the lack of time. It was a figure that was used throughout the case and we saw no reason to question it.

Q. You have examined, have you not, Mr. Eichner, the report put in on behalf of TWA by Coverdale & Colpitts as Mr. Wemple's testimony in this proceeding?

A. Yes.

Q. At Volume I, Page 31 of that report which constitutes testimony in this proceeding, the only evidence which has been produced on this subject is stated that in the Domestic Division the proportion of cargo revenue to total revenue varied in the five year period between 7.1 per cent and 8.5 per cent.

Do you see those figures in that table on that page, Mr. Eichner?

A. Yes, sir.

Q. Actually, that being a percentage of total revenue, it would be slightly higher as a percentage of passenger revenue, would it not, because of the smaller base?

A. That's correct.

Q. Mr. Wemple has testified that he used the five per cent figure for estimating additional cargo revenues, [Tr. 10,212A] although historically the proportion was from 9 to 12 per cent. He has rounded the figures up there at the top of Page 31.

But you, Mr. Eichner, are supposed to be dealing with historical figures in Appendix A, are you not?

A. That is correct.

[Tr. 10,213] Q. Why did you not use the historical ratios that have been testified to in these proceedings?

A. Well, because it would have been obviously incorrect to use 9 to 12 per cent of the total operating revenues which includes the all-cargo operations of TWA.

Mr. Tenney: Would you read that answer back, please?

(The answer was read.)

Q. I think you stated a few minutes ago that the ratio if related to passenger revenues solely would be even higher, did you not—

A. Yes, sir.

Q. —because of the smaller base?

A. I said—we were referring to the 7.1 to 8.5 per cent shown in the first column.

When you referred to 9 to 12 per cent you are referring to the per cent of cargo shown in the last column which includes the international where a much higher ratio is included.

Now, I testified in response to your question that if you were referring to a ratio between cargo revenue and passenger revenue instead of cargo revenue to total revenue which Mr. Wemple used, then you would have a somewhat higher percentage than the one shown in this [Tr. 10,214] column of 7 to 8.5 per cent.

Q. Why did you not use 7 to 8.5 per cent or something somewhat higher instead of 5 per cent, Mr. Eichner?

A. Because it would have been incorrect.

Q. Why would it have been incorrect? Would you enlighten me, please?

A. Because the cargo revenues for the Domestic Divisions includes the cargo revenues on the all-cargo flights.

Q. You have and have had available to you information on all cargo departures performed by TWA historically as well as other flights, have you not, Mr. Eichner?

A. That's correct.

Q. Do you happen to know whether there were any all-cargo jet flights during the month of June, 1959?

A. There were none.

Q. As a matter of fact, it was not until 1963, was it, that all-cargo jets were introduced by TWA?

A. That's correct.

Q. It is a fact, is it not, that most mail and cargo shipped by air moves in the late evening and early morning hours, rather than during other hours of the day, Mr. Eichner?

A. This is correct.

Excuse me. Let me just modify that answer [Tr. 10,215] slightly. It is shipped during the evening hours. However, the number of flights operated by an airline such as TWA is much less during the evening hours than it is during the daytime.

So the evening flights will have a tendency to carry a higher cargo load than daytime flights, but in the totals, whether more moved at night or in the daytime, you can't say unless you examine the figures.

Q. Since most of it is shipped at night, do airlines not specifically schedule some flights at times during the late evening and night hours that are intended to be particularly convenient for cargo and mail shipments?

A. Occasionally they do. It was very seldom that they did this with jets during the early period that we are speaking of.

Q. What period do you mean to cover?

A. June, 1959.

Q. Did it become common during the total five-year period that we are considering through 1963?

A. It never became common, because passenger jets were so expensive to operate for cargo trips, but it was done occasionally as we all became desperate in 1961 and

1962 to use these jets profitably and try to find [Tr. 10,216] profitable uses for them.

Mr. Tenney: Would you mark this document as TWA Exhibit 423 for identification, it being a four-page document headed "Schedules of Flight 15."

(Document headed "Schedules of Flight 15," marked TWA Exhibit 423 for identification, as of this date.)

Q. Mr. Eichner, TWA Exhibit 423 for identification is a takeoff of schedule information for a flight flown by TWA's Flight 15 taken from the employees' timetables which are TWA Exhibit 4C3 for identification and covering the pertinent information on Flight 15 from the inauguration of that flight during June of 1961 through December of 1963.

I believe that from your study of the schedules you have examined some of this information on Flight 15, have you not?

A. We have examined the passenger information on Flight 15.

Q. Flight 15 appears in the routing charts of that period that you have studied for purposes of determining aircraft units for this analysis, does it not?

A. Yes.

Q. Throughout this period, Flight 15 was flying in the hours immediately around midnight, was it not?

[Tr. 10,217] A. That is correct.

Q. The on-board reports cover for individual flights not just passenger information but also cargo loads, do they not?

A. They show the mail, express and freight loads.

Q. From those mail, express and freight loads, using experienced yield factors, it is possible to compute for a particular flight the amount of revenue obtained by TWA in return for its transportation of air mail, express, freight and baggage, is it not?

A. It is possible to make an estimate on a different basis than the 5 per cent average that we used, but whether or not it would be a better estimate, I could not say until I made a study of those yields and of the way they taper.

Now, the reason for this is that there is a much stronger taper in cargo rates than there is in passenger rates. They go down much more sharply with distance. As an example, in the Post Office Department, they pay the airlines such as TWA a multi-element rate so much for loading each pound on a plane, so much for each ton mile of line haul or pound mile of line haul.

This means that you have a much sharper decline in your yields. And for anyone to make a statement as to what the results would be without having made a study of [Tr. 10,218] these tapering yields it would be impossible.

Q. Is it not probable in your opinion that Flight 15, flying at the time that it did, on the route that it covered during the period 1961 to 1963, had proportionately a substantially greater part of its true total revenues derived from mail, express, freight than the average of TWA's fleet?

A. It is possible that if the operation were a dependable one that it did.

Q. If a particular flight derives only a small portion of its revenues from passenger service and a larger portion of its revenues—at least proportionately—from cargo operations, does your method as applied in Appendix A not tend to distort the results of the operations of that aircraft unit in a downward direction?

A. It would tend to distort the total revenues in a downward direction, just as we have undoubtedly overstated revenues in an upward direction for many afternoon and evening flights, early evening flights.

Q. So that it exaggerates the difference then between those two aircraft if the late night aircraft hauling a larger portion of cargo in it turned out in your analysis to be a less profitable aircraft? The difference between that and the other aircraft is exaggerated by your [Tr. 10,219] method, is it not?

A. The differences between your high passenger aircraft which don't have much room for cargo and your very low passenger loads which were carried on trips such as 15 which showed heavy passenger losses tends to be dampened by using the average 5 per cent method.

Q. What do you mean by dampened?

A. It means that the cargo revenues are overstated on many of the jet flights shown in GG by using the 5 per cent average and they are understated on a few other trips. And we know that these were relatively few because there were relatively few flights operating late at night.

Q. You used the word dampened. Do you mean exaggerated? That was my question.

A. No, sir. The cargo revenues which are credited are dampened by using a 5 per cent average. The total revenues, excuse me, are dampened by using a 5 per cent average.

Q. In January of 1962, for example, we have found from Table GG that you have classified Flight 15 with aircraft unit No. 080, which appears on page 71 of Appendix A.

Can you confirm that, Mr. Eichner?

A. Which type of equipment is this, Mr. Tenney?

[Tr. 10,220] Q. This would be Table GG for January, 1962. Flight 15 is classified, I believe—

A. It is a 131, isn't it?

Q. 131. Classified with aircraft unit 080?

A. Yes, sir.

Q. 080 ranks on page 71 of Appendix A as the eighth ranking aircraft by profit and loss computations in that month.

If you added to the total revenues shown there, which are $577,000 an additional, say, $80,000 for cargo revenues, perhaps taking a portion of them proportionately from other aircraft, would that not tend to decrease the difference that you have reflected between the profitability of this eighth ranking aircraft and the aircraft that you have listed above it?

A. Yes, and perhaps your question is illustrative of what I mean by dampening.

You can increase the revenues of a plane such as 080 and reduce the losses on that one but then you increase the losses and perhaps this plane No. 090 which is marginally profitable for the month or 160 which only earned $7000 then become loss figures if you juggle the figures.

Q. I am not juggling the figures, Mr. Eichner. You [Tr. 10,221] are juggling the figures. You are the person who is putting in perfectly constructed figures on cargo revenue and drawing conclusions from them.

A. Is that a question, Mr. Tenney?

Q. Do you consider an accurate computation of cargo revenues a matter of juggling figures?

Mr. Perkins: I object. I don't think this is getting us anywhere. Why don't you just ask questions?

The Special Master: I think I have both points of view in mind.

Mr. Tenney: I ask that this document be marked as TWA Exhibit 424 for identification consisting of

a cover summary sheet and six pages of work papers and ten pages of on-board reports from which information has been taken with respect to Flight 15 in the month of January, 1962 breaking out not only passenger revenue, but also air mail express, freight, first-class mail and baggage.

(Cover sheet entitled "Analysis of Revenues TWA Flight 15, For Departures Included in SHE Table GG, January 1962," six pages of work papers and ten pages of on-board reports, marked TWA Exhibit 424 for identification, as of this date.)

[Tr. 10,222] Q. I show you TWA Exhibit 424 for identification. The on-board reports attached as the last set of attachments are copies of on-board reports that have been previously delivered to you, are they not?

A. They are similar to many on-board reports which we have received, that's correct.

Q. By the process of identifying the work sheets, cargo revenue for this month for TWA Flight 15 has been computed and related to passenger revenue, and computed as being in the proportion of 58 per cent.

Is that a relationship that you consider an expectable relationship in order of magnitude from your experience in the airline business?

A. TWA 424 does not impress me as having all the facts stated, and I would say no.

Q. What would you expect the order of magnitude of this relationship to be?

A. I would have no idea until I had a chance to study much further.

It could be half as much as the 58 per cent if the yields taper as much as I think they do.

Q. There isn't any possibility at all it could only be 5 per cent, is there?

A. No, I would not say there would be 5 per cent on [Tr. 10,223] this one flight in the month of January, 1962 which is a very low seasonal month in the California market.

Q. A few minutes ago, Mr. Eichner, I believe you stated that during the daytime hours jets that were flying relatively full from the passenger standpoint did not have much room for cargo? Is that about what you said?

A. No, I said they had less room available for cargo.

Q. Do you happen to know how much room the 131 aircraft has for cargo on top of all baggage expected when it is flying full in the configurations that TWA normally flew it then?

A. Well, normally you would use a figure of somewhat less than 10,000 pounds depending upon the reserve fuel policy of the pilots.

Q. One more question on this general line. Are you familiar with the Post Office policy which is sometimes referred to as the flight of value consideration?

A. Yes.

Q. I wonder if you could just briefly describe what that policy is.

A. During this period, somewhat later than June, 1959, but during 1961 or 1962, the Post Office Department had been having problems in getting its mail transported [Tr. 10,224] because the mail was moving in the evening and there were very few flights provided by the airlines to move this mail at the time the Post Office desired. They wanted departures around 11 o'clock or midnight from the New York area, for example, to go to the West Coast.

No airline—there was not enough passenger traffic to put on such a flight, and no airline was willing to put on

such a flight without some assurance that the Post Office Department would continue to give it the mail loads once it put it on and had experienced the passenger losses, which it was bound to incur such as Flight 15 demonstrated.

The first flight that I believe that was put on was an American Airlines flight out of New York to the West Coast, and it was designated by the Post Office Department. United Airlines and TWA promptly tried to match it with a non-stop flight to the West Coast and they were not given any air mail on their flights.

This has since spread to a few other markets.

Mr. Tenney: Would you read back the last part of that answer?

(The answer was read.)

Q. It is quite possible, is it not, that an aircraft flown for the specific purpose of attracting that type of cargo, air mail cargo, might, in fact, be overall profitable [Tr. 10,225] while an analysis directing attention solely at passenger revenues would make it appear to be unprofitable? Is that not possible?

A. Yes, Mr. Tenney. As we said before, this would be a desirable refinement in our report if we could have punched all the mail, express, and freight information and if we could have obtained accurate yield information rather than using averages such as these in TWA Exhibit 424 which we know are incorrect.

Q. But, of course, by your ranking system if one of the lower ranking aircraft were moved up in relative profitability, its numbered space would just automatically be taken up by another aircraft which was forced down by your method, is that not correct?

A. We are dealing with historical facts and figures and that is correct, because we are dividing up the pie of rev-

enues between these flights and we were in a situation of excess capacity.

If you make one loser profitable then you have to make another profitable plane a loser.

Q. If an analysis of an apparently unprofitable airplane proved that it were profitable by making a closer examination, a refinement I think you have called it, of its revenues from air mail and similar sources, if, as I [Tr. 10,226] say, such an analysis showed that this apparently unprofitable airplane were profitable, then quite without any necessity of making some other airplane unprofitable, doesn't your method automatically force down in ranking something to fill up that last hole that you have there?

A. Yes.

Q. Just one more point as to how some of these identifications work which I would like to illustrate by reference to the CV-880s for the months of August, September and October, 1962 and first Appendix A.

Would you turn to those pages, please?

In each of those months, I find under the heading "ACNUM" which we have identified as being a unit aircraft which you have determined from your examination of the routing charts—I find in each of those months an Aircraft No. 150.

Can you confirm that for me?

A. Yes, sir.

Q. In the month of August, Aircraft No. 150 ranks as No. 7, if I have this correctly.

I am not entirely sure we have the right example here, but essentially, and I think perhaps you can simply give me an answer without my making the statement which might be a little inaccurate as to which aircraft is involved.

[Tr. 10,227] This 150 which appears as No. 7 in August of 1962, and then the 150 which appears as rank No. 11 in September of 1962—excuse me.

No. 16 in September of 1962, and then has still a different rank number in October of 1962 of 11—those are not only not necessarily the same physical aircraft but they are not even necessarily the same routing pattern, are they?

A. That's correct.

As I see, Flight—Aircraft No. 150 in August involved Flight 185, which went from New York to Kansas City to Albuquerque, and Flight 184 from Albuquerque to Kansas City, and Flight 46 from JFK to Boston.

Whereas, in September, Aircraft 150 became an even shorter haul jet operating between points such as New York and Columbus and Chicago with a very short average length of hop.

Q. And in October of 1962, it has still a third entirely different pattern, is that not correct?

A. In October of 1962, the aircraft, the 880 aircraft designated as 150 was operating trips 91, 132, 159 and—excuse me. Just those trips apparently. No, 157 and 160.

Q. That does not necessarily mean that the other trips were not being operated also, perhaps under some other [Tr. 10,228] aircraft identification number?

A. The other trips are shown in GG—all of the other trips which were scheduled with 880s are shown in GG, and the numbers, as I stated before, are purely for identification so that we may discuss them.

Q. For identification, they should be relied on only on an individual month basis? And that is the point I am trying to get across. You cannot follow that number from

month to month and in any sense at all regard it as being a development of a particular plane, is that correct?

A. That is correct as far as the aircraft number is concerned.

Mr. Tenney: I just wanted to get that clear and I think this would be a good time for a luncheon recess.

The Special Master: All right, 2:00 p.m.

(Whereupon, at 12:30 p.m., a luncheon recess was taken.)

[Tr. 10,229] * * * Q. Mr. Eichner, for my next point, I would like to refer to a particular month that I have chosen by way of illustration—it involves a number of months—and that is the month of June of 1960 for the B-331 aircraft.

Table GG is our source—I believe for the seat miles offered in that type of aircraft in that month, and for the passenger miles which were carried. I don't think it is printed out in Appendix A.

Am I correct in that?

[Tr. 10,230] A. That's correct.

Q. The totals for the month by fleet type are not printed out in your Table GG, but they can be added up and actually, as we have ascertained, totals of that type can be obtained from the tape, the computer tape that you provided us with by simply writing a program to tell the computer to add them up and print out the results.

Am I correct in that?

A. Yes, you are correct. Many types of analysis can be made from GG and the GG tapes.

Q. We have added up the seat miles and passenger miles for the B-331 aircraft for the month of June 1960 from GG and we get for seat miles 17,887,020 and for passenger miles 15,623,310.

We have done the same thing for July of 1960 and obtained the figures respectively of 38,585,418 for seat miles and 28,397,467 for passenger miles.

We have checked TWA Exhibit C and C3(2), which is TWA's Schedule 3-70M, which are operating statistics for TWA's Domestic Division for those particular months, and to our surprise we have obtained in each case approximately a third more seat miles and a third more passenger miles according to TWA's operating statistics than are reflected in your Table GG.

[Tr. 10,231] I believe that that which is illustrated by these two months is true in substantially every month.

Are you aware of that and can you give me some explanation?

A. Yes, I can explain this.

Mr. Markham has been furnishing me with the routing charts and he is not here right now, so I will do it from memory, subject to check.

But as you recall, as we said in the book, we used the routing charts to route out the different fleets.

In this particular month the 331s, as I recall, are on the 131 routing charts. And there is only one 331 routing shown which is the one which appears in Table GG and which also appears in Table A as 010, making a profit of some 355,000, a very profitable transcontinental trip.

However, there is a note at the top of the routing charts that Flights 90 and 91 are also routed but are not shown on the routing chart.

Flights 90 and 91 are shown in the employees' timetables as being operated with 331s, but they were not shown on the routing charts, so we did not know what the complete aircraft day was of the routing, so we don't put them in the IBM runs.

[Tr. 10,232] I have priced them out manually and I found that they were marginally profitable. But that's the reason they don't appear in here and that's the reason they don't appear in the discrepancy. It was in the underlying material that you furnished us.

Mr. Tenney: I ask that this table be marked as TWA Exhibit 425 for identification.

This is a document I have just shown the witness.

(Table headed "June and July 1960—Comparison of Table GG and TWA Exhibits C and C-3(2) (Schedule 3-70M)," marked TWA Exhibit 425 for identification as of this date.)

By Mr. Tenney:

Q. TWA employed B-331s for its international routes, did it not?

A. Yes, sir.

Q. On many occasions were there not domestic legs of flights that also had an international leg as an otherwise continuous flight?

A. Yes, sir.

Q. We have tried to determine from Table GG whether the domestic legs of international flights have been taken into account at all and our best impression—we [Tr. 10,233] can't be absolutely sure, but our best impression is that the domestic legs of international flights have not been reflected in your Appendix A or Table GG and it occurs to me that perhaps the flights that you were referring to, which I don't happen to know the details on, might be an example.

Do you happen to know whether in general domestic legs of international flights have been for some reason excluded from your analysis?

A. In general, if they do not appear on the domestic routing charts, they have been excluded from our analysis because, as we said, we only included flights shown on the domestic routing charts.

This happens to be an unusual circumstance that you are calling attention to and I don't recall very many other occasions when we found a routing chart with notes such as this one has at the top: "Does not include Flights 90 and 91 B-331, 405 hours, 1480 miles."

This was a flight that happened to operate as a round trip between New York and Chicago. It is the first New York-Chicago flight TWA put on.

And I have no idea why they specifically excluded it from this routing chart. The other 131 that operated, Flight 100 and Flight 1, which were transcontinental trips [Tr. 10,234] from Los Angeles to New York, are included. Evidently, there was some special reason which we do not understand, which they do not explain to us, so we do not include it.

Mr. Perkins: Did you mean to say 131?

The Witness: 331. But it is on the 131 chart.

Q. So that there are at least those two types of situations—one, the unusual situation you have called attention to on this particular routing chart, and the other, the situation involving a domestic leg of an international flight in which your 331 statistics in Appendix A are incomplete, am I correct?

A. They are complete for what is shown on the routing chart, Mr. Tenney.

Q. You had comparable information for international flights, did you not, Mr. Eichner?

A. I understood from the Special Master that we were to exclude the international operations from this supplemental report.

Q. The domestic legs of these international flights are part of the Domestic Division operations, are they not?

A. But they are not shown on the domestic routing charts, that's correct.

Q. I go back to my original question. In at least [Tr. 10,235] these two respects, the statistics that you have set out with respect to the B-331 aircraft in your Appendix A are incomplete, are they not?

A. Yes, with regard to the very small number of international trips which operated domestically, they are excluded. But as far as international passengers which occurred on the domestic trip shown, of course they are included in the on-board data.

Mr. Tenney: Would you read the answer back?

(The answer was read.)

By Mr. Tenney:

Q. But you have not reflected those statistics in your Appendix A, have you, Mr. Eichner?

A. No, sir.

Q. I really only have one other thing I would like to get on this point, Mr. Eichner. You have said it was very small.

We have not checked the totals, but we have checked those two months that are set out in TWA Exhibit 425 for identification, and we spot-checked four other months, two of them in 1960 and two in 1961—I shan't bother setting out the figures—but in every case we had just about the same proportion as is shown here on [Tr. 10,236] TWA Exhibit 425 for identification.

Whether it is very small or very large, is that about the proportion, overall, that has been omitted from your computations? Do you know the answer to that?

A. I know the answer to that. And the answer is no, that is not the proportion, overall, which has been omitted from our computations, because I did a comparison to satisfy myself that we were getting reasonably complete answers in this initial run of GG in Table G which supports Appendix B.

And I took the entire B-131 fleet and the Convair 880 fleet and the entire B-131B operation, and I found out—because these were the major things we were speaking about in this case, the deliveries of the 131s and the 880s, for example. And these were the planes that were showing very large losses during the damage period.

And I found out that we had accounted for 97 per cent of the B-131 passenger miles in 1959, 97 per cent of the B-131 passenger miles in 1960, 93 per cent of the B-131 passenger miles in 1961, 88 per cent in 1962 and 86 per cent in 1963.

I found that on the 880s we accounted for 99 per cent in 1961, 90 per cent in 1962 and 89 per cent in 1963.

[Tr. 10,237] I found that we similarly accounted for very high percentages of the aircraft days which means of the depreciation and of the aircraft miles. And I will be glad to furnish you this table.

Now—

Mr. Tenney: I move that so much of Mr. Eichner's answer be stricken because I am clearly asking him a question with respect to the B-331s.

The Witness: Excuse me, Mr. Tenney. I had understood your question to be directed to Table GG.

Mr. Tenney: I believe that my question clearly is directed to the proportion of omitted material wit

respect to B-331s, as indicated by the samples shown in TWA Exhibit 425 for identification.

The Special Master: Let us read the question back.

(The question was read.)

The Special Master: I will allow the answer.

By Mr. Tenney:

Q. You just heard my question, Mr. Eichner. Would you understand it, please, as confined to B-331s and can you answer that question?

[Tr. 10,238] A. I believe that the answer is that more of the 331 statistics are omitted from GG because the routing chart information which we got was much more—much poorer on the 331s than it was on the other major fleets.

The Special Master: What percentage?

The Witness: I would estimate that approximately 80 percent of the 331 operations are included. Should I answer—give a reason why this happened?

The Special Master: No.

Mr. Tenney: I think you already have, Mr. Eichner.

The Special Master: Yes.

The Witness: Okay.

By Mr. Tenney:

Q. I believe among other things you testified, did you not, that you did not consult the routing chart information and comparable information with respect to international flights that was made available to you; is that not correct?

A. That's correct, we did not use the international routing charts.

Mr. Tenney: I offer TWA Exhibit 425 in [Tr. 10,239] evidence.

Mr. Perkins: No objection.

The Special Master: Received.

(TWA Exhibit 425 received in evidence as of this date.)

• • • • •

[Tr. 10,241] Q. I would like to compare that aircraft with another Convair 880 which appears in the table for the month of November of 1961. That Convair 880 is designated as aircraft unit 030.

Do you see that aircraft on that table?

A. Yes, sir.

Q. It is listed as having an average stage length of 753 miles—correction—734 miles. It is within less than a mile of the average stage length of the first aircraft I called your attention to.

It has an average load factor indicated of 60.53 which is two and a half per cent higher than the load factor for the first aircraft that I called your attention to.

I shan't bother reading the total revenues and total operating expenses, but it has a net loss figure opposite it of $13,723.

Do you see those figures on the table?

A. Yes, sir.

Q. Just to be complete with another potentially significant figure, we find on Table GG that this aircraft had 109 departures in the month of November 1961, which compares with 108 for the other aircraft. So there is a difference of only one departure. That, of course, [Tr. 10,242] you could confirm from Table GG, if you wish.

Can you explain to me why two aircraft of similar type flying precisely the same average stage length, almost

identical number of departures in the months in question, should produce a significant loss for the aircraft with the higher load factor as opposed to a significant profit for the aircraft with the lower load factor?

A. Yes, sir.

Q. Will you please explain that to me?

A. In 1961, TWA's aircraft maintenance and maintenance burden expense per revenue block hour which is the basis for the expenses in this report were $294.82 for the Convair 880. They were $311 in 1962 and in 1963 they dropped to $183.15 per block hour.

This is a substantial reduction in block hour cost on the 880s. And it was due to the reversal of maintenance reserve in 1963 as I recall, but that is subject to check as an explanation for this very large difference.

Large variations in expense like this from time to time are one reason why it is dangerous to deal in averages in forecasting what revenues and expenses and profits are on individual aircraft flights and why [Tr. 10,243] this detailed analysis that we have done is the only proper way to do such an estimating job.

Q. I take it that the total block hours for the two aircraft in the two months in question were very close, is that not correct?

Actually, I have 194.77 for A/C No. 30 in 1961 and 190.45 for A/C 50 in 1963.

The Witness: May I have that question read again, please?

(The question was read.)

A. Yes, the total block hours were very close if you multiply 195, rounding off, times 295, which is about $111 or $112 higher than the block hour cost for maintenance used in June of 1963 for aircraft No. 50. You come up with a differ-

ence of approximately $20,000 out of the $26,000 difference in aircraft operating expense shown in Table AA.

In Table AA, for November 1961, aircraft No. 030, as I read it, had an aircraft operating expense of $169,053.

In June 1963, for 190 block hours, aircraft No. 050 had an aircraft operating expense of $133,159, some $36,000 less, less than $36,000 less.

The most of this difference can be accounted [Tr. 10,244] for by the difference of some $112 per block hour cost in maintenance.

Q. Would you compare the ground and indirect expenses for those two aircraft, please?

A. The ground and indirect expenses for aircraft No. 30 in 1961 were $109,528 and the ground and indirect expenses for aircraft No. 50 in 1963 were $95,680.

Q. Can you explain that difference?

A. Well, one difference that occurs without looking at any inputs is the fact that general administrative expense varies. As we have explained—as Mr. Simat explained before, with all other cash operating expenses.

If you have a very large difference in cash operating expense due to the difference in maintenance cost then a difference was occurring in the general and administrative expense as well.

Q. In your opinion, would that be associated with a change in 1963 as you testified the other was associated?

A. I'm sorry. I am afraid I don't understand the question.

Q. I believe you testified that in the case of [Tr. 10,245] the direct operating expense the principal part of the difference was associated with an accounting change in 1963. This change in indirect expense, does this result from a change in 1963 as well that makes it different from 1961?

A. Well, if your general administrative costs reflect your all other cash operating expenses and TWA's accountants decided that their cash operating expenses had been overstated, and consequently were understated for 1963, then this correction would take place in the general administrative expense accounting method as well.

The Special Master: I think the question is, did that in fact happen?

The Witness: Yes, it did in fact happen from the figures I see before me.

Q. Let us take a comparison that is in the same year then. I would like to refer you to two B-131 aircraft, one in the month of February 1960 and one in the next month of March 1960.

The one in February 1960 has been designated by you as aircraft No. 090, and the one in March as [Tr. 10,246] aircraft No. 130.

The average stage lengths are almost precisely the same, 2,478 in one case and 2,474 in the other.

The load factors are close, 64½ per cent in February, 65.9 per cent in March.

Once again the aircraft in February makes a significant profit, $31,500 and the aircraft the next month with a slightly higher load factor makes quite a lot less money, only $6,585.

Can you explain that, please?

Mr. Tenney: While you are looking at those figures, Mr. Eichner, I am going to ask that this paper which sets out the figures that I have been referring to, all taken from your report and its work papers be marked as TWA Exhibit 426 for identification.

(Document headed "Comparison of Selected A/C Numbers from Appendix A," marked TWA Exhibit 426 for identification, as of this date.)

Mr. Hayes: While Mr. Eichner is working may I ask the stenographer to read back the question to me, please?

(The question was read.)

A. Not offhand. Just looking at your selection [Tr. 10,247] of numbers it is apparent that the difference is in the aircraft operating expenses, because the differences in total revenues and in indirect expenses are relatively small.

So I would want to work through the calculation by hand and see just what caused it. And I will be glad to report back to you on this.

Q. Mr. Eichner, if you are going to check back, I think perhaps I should—to make sure that I give you examples that pick up whatever explanations you wish to make about these results that seem a little unusual—I think I ought to suggest that you check also one or two other aircraft which might illustrate other points. I do not know.

Aircraft No. 120 in February of 1963—that is a Convair 880—and 110 in December of 1963, Convair 880 have very similar statistics as far as stage length goes. Again, the higher load factor makes a lot less money.

I don't want to do just cumulative things. There are quite a few like that.

Mr. Perkins: Why don't you give us a list of them all, Mr. Tenney? We will be glad to check any of them for you.

[Tr. 10,248] Q. To take one example of a B-331 and making this one also in the same year, indeed consecutive

months, aircraft No. 030, December 1960 and 020 in November of 1960 have almost precisely identical stage lengths and the higher load factor is a loss operation and the lower load factor is a profit operation.

While you are checking, you might as well check those and perhaps you can report back on it tomorrow—

A. I can report back—

Mr. Perkins: I was just going to ask if the reporter would read back those numbers just so I can be sure we have those right and we don't have to wait for the transcript.

Mr. Tenney: Surely.

(The question was read.)

The Witness: It was a very simple explanation and it should have occurred to me at the time.

I checked the analysis we had made of the TWA on-board reports for aircraft No. 90 in February of 1960, and I find that TWA reported that the 74,356 miles which this plane flew only required 148 and a fraction block hours.

I find that the on-board reports for aircraft [Tr. 10,249] No. 130 showed that for only 71,746 miles flown in March of 1960 this aircraft required 172 block hours.

So there was approximately a difference of 23 block hours for fewer miles flown as reported by TWA in their on-board reports and this is reflected in the direct operating costs.

Q. Can you explain why that should be?

A. No, sir. We did not go behind the data furnished us by TWA.

Q. In the data furnished you by TWA, it discloses, does it not, which direction these aircraft are flying in?

A. Yes, sir.

Q. These were transcontinental flights, were they not?

A. Yes, sir.

Q. Aircraft No. 090 with the shorter block hours, do you happen to know which direction that airplane was flying?

A. That was an eastbound flight.

Q. Which direction was the other aircraft flying in?

A. It is a westbound flight.

[Tr. 10,250] Q. That produces substantial differences in the operating results of those two flights, does it not?

A. Yes, sir.

Q. Is it possible to fly an airplane eastbound and just leave it there and then continue to fly all your flights eastbound?

A. No, sir.

Q. So if you are going to fly a flight eastbound you have to fly it westbound some time, don't you?

A. That's correct. That's why we believed it was necessary to look at the whole pattern of the aircraft days and of the planes rather than just individual flights.

Q. However, in this case you have treated an eastbound operation separately from a westbound operation and deduced differences in operating profit and loss which have resulted in affecting plainly the ranking as to profitability of these aircraft, have you not?

A. We merely reflected what occurred, Mr. Tenney, and that is correct, that it did cost less to fly eastbound than westbound.

Q. But by your arbitrary separation of a total fleet and routing pattern into individual aircraft units, some of which are going only in one direction, [Tr. 10,251] you have

produced a distorted comparison of the units themselves, have you not?

Mr. Perkins: I object to the form of the question. It contains a characterization that is arbitrary.

I suggest that you ask the question without including that adjective.

Mr. Tenney: I think it is a perfectly fair cross-examination.

Mr. Perkins: That is your characterization. There is no testimony here to that effect.

Mr. Tenney: I think it is perfectly proper cross-examination.

The Special Master: We have characterized things much worse than that.

A. Different hours produce different aircraft operating costs.

Q. Is that your best answer, Mr. Eichner?

A. No, sir, it is a historical fact.

Q. You called attention on those two aircraft to one difference and that was a block hour difference.

I notice another difference from your Table GG in that the eastbound flight you have allocated $90,856 of hull insurance and depreciation to, and on [Tr. 10,252] the westbound flights you have allocated $97,123 of hull insurance and depreciation too.

Is there anything in your analysis of hull insurance and depreciation that calls for that to be varied in that way between eastbound and westbound flights?

A. Would you read off the numbers please?

Q. $90,856 in the case of eastbound flight aircraft unit 090, $97,123 in the case of westbound aircraft unit 130.

A. The explanation which is contained in the writeup of how we did this costing is based on the number of air-

craft days that the planes were in service. February is a 28 day month. March is a 31 day month. The plane assigned to this run which was only used for one transcontinental trip received the full burden of hull insurance and depreciation during the month of March and because it was a very low utilization on this plane—only some four or five hours a day—it consequently had to take the entire burden on that one trip.

Q. Do I understand that answer, Mr. Eichner, correctly? Did you mean to say that in February, it being a shorter month, you charged less insurance and depreciation? [Tr. 10,253] Is that correct?

A. We said that we did it on the basis of aircraft days. There were more days in the month of March. And you will find as you go through our reports that 30 day months are charged 30 times the daily figure, 31 day months are charged 31 times the daily figure and 28 day months are charged 28 times the daily figure.

Q. So you have assumed that the aircraft had an operating day for each day in the month as long as it was available for service in that month, is that correct?

A. The way the depreciation, hull insurance and equipment rental charges were assigned, and as explained in our volume, was that we took the number of aircraft days as reported in the Form 41s, we divided into these fixed charges to get a daily charge which was applied throughout each active aircraft for the number of days that is shown on the routing charts for each month.

If this plane was shown for a 31 day month it got 31 days times that charge. If it was shown for a 30 day month such as April or June, it gets 30 days times that charge. And if it is shown for February it [Tr. 10,253A] gets 28 times that charge.

Mr. Perkins: Except in 1960 which I think was a Leap Year.

The Witness: 29 days.

[Tr. 10,254] Q. It does happen, as I believe TWA Exhibit 426 for identification shows, that this February aircraft had 30 departures and consequently greater usage in that month of February than Aircraft 130 in March had which had only 29 departures.

Doesn't your formula for allocation produce a distortion in that case?

A. As a matter of fact, Mr. Tenney, to do it any other way would produce a distortion.

No, it does not. If we do not do it in this way, then we would end up charging in the month of February—suppose we had divided it on a monthly basis—we would charge appreciably more for each flight, if we made the depreciation charges in the month of February equal to the depreciation charges for the month of March.

Depreciation and hull insurance are not a function of the number of miles that you fly a plane each day or the number of hours that you fly it each day. They are a function of obsolescence and time passing.

And this method is an accurate reflection of those costs as applied to these trips.

The Special Master: What run was this plane on, this 090?

The Witness: It was—090 operated from Los [Tr. 10,255] Angeles to JFK.

The Special Master: How could it have 30 departures in February then?

The Witness: They probably ran an extra section. And it would be counted as a scheduled flight.

Whereas, probably 130 which was flying from JFK to LAX probably had a couple of cancellations due to weather.

Q. TWA does not record its hull insurance and depreciation in the way you just described, does it?

A. Do you mean in its public records?

Q. In any records that you know about.

A. Internally they may very well use it because it is a very accurate way of doing it when you are trying to forecast revenues, expenses or measure the profitability of equipment. They should do it if they do not.

Mr. Perkins: You don't know how they do it?

The Witness: I do not know how they would do it.

• • • • •

[Tr. 10,274] • • • Q. I would like to refer back to an aircraft that we were looking at before, because it illustrates a different point, and that's the pattern that you have identified as Aircraft No. 090 in February of 1960 for the Boeing 131s.

For this purpose I would appreciate it if you would take a look at your routing chart, which is dated effective January 11, 1960.

Can you tell me, Mr. Eichner, what this aircraft number that you have identified as 090 does in February of 1960, that being a period in which this routing chart is effective?

A. The routing chart shows that Flight No. 10 was an airplane which left Los Angeles at 9:00 o'clock in the morning, having turned over Flight 81, which arrived at approximately 11:15 the night before. It went to New York and arrived there at approximately 4:45 p.m., New York time, which would be some four hours scheduled flying time later. And then it sits on the ground from 4:45 p.m.

until the next day, having gone through a maintenance check [Tr. 10,274A] A or check C, and goes out at 3:30 p.m. on Flight 43 the following day.

[Tr. 10,275] Q. That operational pattern is the pattern that you have designated as aircraft unit 090, am I correct?

A. That's correct.

Q. A large part of that operating pattern for that 24 hour period is taken up with their check A or C, is it not?

A. A large part of two planes in the winter of 1960 was taken up with this check A or C, not only with flight 10s airplane taken up with that, but also the flight which operated No. 43 and which appears as aircraft No. 130.

But for simplicity, we can concentrate on the one that you have as 090, and that operating pattern consisting of one transcontinental flight and the rest of the time spent on the ground for maintenance purposes? Is that a summary of the situation of that operating unit?

A. There is no way of telling from the routing chart, Mr. Tenney, whether this particular plane that evening spent its time on the ground for this maintenance check. The flight the next day is designated check A or C and you could make that assumption if you wished.

As you will see, flights 10 arriving at 4:45 [Tr. 10,276] and flight 43 departing at 3:30 a.m. means that TWA at this period of time set aside a plane almost 24 hours a day for check A or check C operation at JFK.

Q. That was 3:30 p.m.?

A. 3:30 p.m., yes.

Later on, they did have a maintenance spare set aside full time at some stations. This is practically a full time maintenance spare which they have designated as two active aircraft.

Q. The way this routing chart works, each of the other operating units in turn would go through this pattern, would it not? Or perhaps I should say each number, each actual physical aircraft would go through this pattern so that some time at some periodical interval it would find itself flying this pattern and having this period of time for check A or C?

A. That's correct.

Q. The expenses and lack of revenue associated with a plane being on the ground for the better part of a day for maintenance purposes is a necessary concomitant of operating the entire flight, is it not?

A. The minimum amount of time required to pull these checks is a necessary concomitant but frequently we find that low utilizations which are shown [Tr. 10,277] as maintenance checks and which may represent maintenance work or it may just represent a lack of desire to operate the plane in a very high utilization.

You will notice up at the top of this page that utilization on this fleet at a time when TWA claimed they were short of aircraft, jet aircraft, at a time when the jet aircraft cycle was very new, was only 8 hours and 56 minutes.

TWA has achieved much higher utilizations on these fleets since then. They have tightened up maintenance procedures because in later years they found that they could use planes profitably.

So this may or may not represent 23 hours of maintenance time required for this plane.

Q. Isn't it the customary experience of TWA and of other airlines that during the early months of operations of a completely new type of aircraft, it is impractical to obtain as high utilizations as can be obtained later?

A. Yes.

Q. Isn't that what happened with American as well?

A. Yes, the utilizations did—

Q. Isn't that what happened with BOAC as well?

[Tr. 10,278] A. I beg your pardon?

Q. BOAC.

A. I don't know BOAC's utilization patterns.

Q. I believe that it is in the record amply from Mr. Simat's testimony last year that this pattern does exist.

You have called attention to the fact that there is an 8 hour and 56 minutes average utilization.

You have also testified that there is at least an average of one aircraft on the ground for maintenance purposes under the routing chart.

If you took out that maintenance unit—that overhaul unit—excuse me—I am sorry—I misspoke.

The aircraft operating units in the upper left hand corner show a total of 15 operating units of which is shown as an overhaul unit.

Do you know whether that overhaul unit is included in the computation of utilization?

A. I assume that the utilization is the overall utilization because it gives all the numbers up there and we did divide 856 into 125 and we come up with 15 aircraft. So it is the total utilization on the fleet.

Q. If you took out this unit that is in overhaul, [Tr. 10,279] your utilization would be over ten hours a day, would it not?

A. Your active utilization which is a different figure, Mr. Tenney.

Q. Going back to the flight that we were examining here, you testified a few minutes ago that keeping an aircraft on the ground for the better part of a day for maintenance purposes was a necessary concomitant of operating a fleet.

You then went on to give a further explanation but I just want to recall that general testimony to you.

In this instance, that particular operating unit for your analysis purposes in Table GG and Appendix A bears the entire burden of this absence of revenue and existence of expense which is associated with the not immediately productive maintenance activity, is that not correct?

The Witness: Would you read that question back to me?

(The question was read.)

Q. Do you understand my question?

A. No, sir.

Q. I will try to restate it.

You have testified, I believe, that—

[Tr. 10,280] The Special Master: That part is clear. You have in mind your prior testimony on that.

The Witness: Yes.

The Special Master: You can just ask the question, I think.

Q. The aircraft operating unit that under this routing chart has as part of its pattern a maintenance layover has less opportunity to earn revenue and relatively a greater expense burden than operating units that do not incorporate in their patterns these maintenance layovers, is that generally correct?

A. That is generally correct.

Q. In your analysis, however, there is no attempt to allocate to other aircraft than this operating unit No. 090 this burden, although this burden, because of the rotating pattern of flying this jet is, in fact, applicable to each of the aircraft in turn, is that not correct?

A. The burden which you say would be allocated is solely in the fixed cost per day.

There is no special burden in the aircraft operating expenses which are only on the block hours of flight 10 and flight 43 that it turned on.

So that it would make no difference there [Tr. 10,281] whether that were one plane coming in as flight 10 and going out as flight 43. It wouldn't make no difference in the aircraft operating expense column. Or if they were divided up with two planes. It would make no difference in the indirect expense column because depreciation, hull insurance and flight equipment rental does not enter into that computation.

So the only difference that we are talking about is in the amount of depreciation expense charged to this plane.

Now, there is an alternate way of charging this depreciation expense. Or there is a couple of alternate ways.

One way is that we could have charged the depreciation, hull insurance and the other fixed daily charges on an aircraft mile basis. Or we have charged it on an overall block hour basis.

This is a method commonly used before a fleet is routed out when you are trying to estimate whether an additional trip or an additional plane would be a profitable one.

We have tried both methods in addition to the one we selected, and we have found that it made no appreciable difference in the overall results because [Tr. 10,282] TWA still showed a large number of jets losing money even when we did something as extreme as charging these fixed charges on an aircraft mile.

Now the reason for this is if we reduced these fixed charges per day on planes which are engaged in check A or check C, we have to add the fixed charges to some of

the other planes in the fleet. And the planes which are not engaged in check A or check C would have to bear that burden of expense.

Q. But it does change the relationship between these operating patterns, does it not?

A. It changes the relationship between the operating patterns to a small degree but it is not enough change to keep from having planes which are losing money.

• • • • •

[Tr. 10,560] • • • By Mr. Perkins:

Q. Beginning at page 10,284, you were questioned rather extensively, Mr. Eichner, about a footnote in your report which referred to an unassigned 880 aircraft [Tr. 10,561] in the routing chart for, I think, October 17, 1963. Is that the only instance in the 880 routing charts when an aircraft was listed as unassigned?

Mr. Tenney: I object. It's outside the scope of the cross-examination.

Mr. Perkins: I don't see that it is. You evidently attached great importance to this fact in view of the very extensive cross-examination you gave to it.

I think the record should show that this is not the only occasion on which aircraft were so listed in the routing charts.

The Special Master: I will allow it.

A. No, there was another 880 on the routing chart effective as of March 29th, which was shown as unassigned, and this was in a month when there were two additional aircrafts and spares and one for air training.

Q. Did you state the year?

A. 1963.

Q. Were there some occasions with other fleets when aircraft were listed as unassigned?

A. Yes. We found that on the B-131 fleet routing charts for September 23, 1962 and for October 1, 1962, there was one unassigned aircraft shown on each routing [Tr. 10,562] chart and for the 131-B fleet for September 5, 1962, we also found an unassigned aircraft, which remained unassigned through September 23, 1962.

Q. At page 10,319 and following, you were questioned about the effect on 880 operating profits of Flights 107 and 108, which were added to the routing chart effective November 17th and the questions related to the month of December 1963.

Would you state the segments on which those added flights were operating?

A. The added mileage in the added segments were between New York and Baltimore, St. Louis and Kansas City, in both directions.

The balance of the operation of Flight 108, as the record shows, was a replacement of Flight 136 from San Francisco to Los Angeles to Kansas City.

Q. At the time those flights were added, was there existing jet service with 880s over those segments?

A. There was existing jet service with 880s over the Kansas City to St. Louis portion of the trips, in both directions.

There was jet service with the 131-Bs between the St. Louis and Baltimore, and over the Baltimore to New York segment. [Tr. 10,563]

So there as jet service over the entire—over all three new segments, some of which was by 880 and some of which was by the other fleet.

Q. Can you tell us what the operating profits realized by TWA were on those segments before and after the addition of Flights 107 and 108, taking the complete months of October as the before period and December as the after period?

A. Yes. The profit for the month before the flight was added over those segments netted out at $30,700, as shown in Table GG. And after the profit netted out as $14,800, a drop of over 50 per cent. We are rounding this out in dollars.

Q. At page 10,347, it was suggested to you by Mr. Tenney that one reason which might impel TWA to operate jet flights at a loss over certain segments was that it was certificated for those segments and might be in danger of losing its franchise if it didn't conduct such operations.

Is there any requirement, Mr. Eichner, under the certification, that any service be provided with jets rather than pistons?

A. None that I know of.

Testimony of Damage Hearing of Van Court M. Hare, Jr.

• • • • •

[Tr. 10,601] • • • *Direct examination by Mr. Tenney:*

Q. Mr. Hare, will you outline briefly your educational and work background, with particular reference to your qualifications in the field of statistics?

A. Yes. I attended the Massachusetts Institute of Technology and received a Bachelor of Science in Electrical Engineering in 1950, after working for two years on the statistics of electronic applications and radiation counters.

I attended Columbia University and obtained a Master of Arts Degree in the field of sociology, specializing in social [Tr. 10,602] statistics.

I then entered the Engineering School of Columbia University and in 1961 I received the Ph.D. in Operations Research. The title of my thesis was "Queues With State Dependent Service Times," a statistical topic.

During the intervening years between 1953 and 1961, I was employed first as a research assistant and, later, an instructor in operations research at the Case Institute of Technology.

As a result of that association, I developed a number of consulting assignments which I have continued and widened since that time, again in the field of computer applications, for a number of the country's largest corporations.

I am presently—or in 1962, rather, I was invited to join the staff of Columbia University, as an assistant professor.

In 1967, I was promoted to associate professor with tenure.

Between those two dates I was a visiting professor, a visiting assistant professor at the Case Institute of Technology and this fall I have been invited to be visiting pro-

fessor of operations research at the University of Massachusetts.

[Tr. 10,603] Have you published any material in this field?

A. Yes, I have published both articles and contributed to a number of technical books. Beginning in 1956, two of the books to which I contributed portions, chapters to the books, were called "Introduction to Operations Research" and "Progress in Operations Research" published by John Wiley.

My latest full length book is entitled "Systems Analysis: A Diagnostic Approach," and it was published in the spring of 1957 by Harcourt, Brace & World. And for the five years preceding last fall, I was also the editor of the Bulletin of the Operations Research Society of America. I resigned that position to become consulting editor to Harcourt, Brace & World in the field of information technology. I still have that contract.

Q. Prof. Hare, are you familiar with the testimony of Mr. Simat in connection with the second volume, which is Vol. B of his supplemental report, which has been marked Defendants' Exhibit 359B?

A. Yes, I am, and in particular with the traffic regression equation and the later work entitled "The Alternate Estimate."

I believe I have also either heard the oral testimony of Mr. Simat or have read the transcripts dealing [Tr. 10,604] with this subject.

Q. Have you specifically reviewed in this connection the transcript of the hearing of last Friday, March 22nd?

A. I have.

Q. Prof. Hare, I show you a series of computer printouts of certain regressions which have been marked as TWA

Exhibits 436A, B and C (handing to witness) for identification, and I ask if you are familiar with these documents.

A. Yes, I am familiar with them. At Mr. Tenney's direction I personally had caused these regressions to be generated, wrote the program for the generation of the random numbers involved.

The purpose of this example or exercise was to demonstrate a mathematical or an arithmetical fact as follows:

If you generate a series of random numbers and rank them in order and then fit a regression line to those numbers, as a first step and at the second step cut the range of the variability of the Y variable in half and repeat the process, the index of determination R^2 and the corresponding correlation coefficient will be unchanged.

[Tr. 10,605] The reason for that fact is that the formula for computing R^2 contains in both the numerator and the denominator values of Y, both of which have been adjusted by the same constant.

Thus, when you cancel out that constant both above and below the line, you are left with the original equation and this fact, of course, would hold for any constant that was used in multiplying the original values of Y.

Q. Can you explain what changes would occur in the various mathematical relationships involved under those circumstances?

A. Yes. I believe that we could do this most clearly by reference to a graph which I have prepared for this purpose.

• • • • •

By Mr. Tenney:

Q. I show you a graph marked TWA 440 for identifica-
[Tr. 10,606] tion, Prof. Hare, and ask if this is the graph

that you prepared and that you just now referred to (handing to witness).

A. Yes, it is.

Q. Will you proceed with your explanation, please?

A. In order to clarify the point, it is easier first to assume that we have not dealt with random numbers, but, rather, with numbers which are uniformly declining over the range.

The range shown here for the value of Y is between zero and 1 million. The range shown for X is shown between zero and 24, and if we divide the range for X into 24 equal intervals, we can speak of a rank order going from the largest value of Y to the smallest, that value of Y being taken at the midpoint of each of the 24 intervals.

To illustrate what the values of Y would be, we have not plotted the 24 points, but, rather, for artistic clarity, have drawn the simple line showing how those numbers would decline. They would decline from a value at the first rank of 1 million and would reach a value of zero at the 24th rank under this situation.

It turns out here that the slope of Line A is easily determined as 1 million divided by 24 or approxi- [Tr. 10,607] mately minus 41,670 and, of course, the numbers would drop off as you moved to the right at each interval by that amount.

The point that we are attempting to illustrate first is shown in Line B, in which the original range of the numbers instead of going from zero to 1 million, goes from zero to 500,000, and they note that the intercept is reduced by one-half and that the slope of the line also is reduced by one-half.

In this illustration, of course, again, the correlation coefficient both in Line A and Line B would be 1 and it is unchanged by this arithmetic transformation.

In the same way, going back to the original range of 1 million, if I decided not to have 24 observations which had been ranked, but, rather, 12, so that we had picked 12 numbers, such as that at the 12th rank, we would be down to zero and at the first rank we would be up in the million. We note that the effect there is not to change the intercept, but, rather, to increase the slope of the line to double it over the value in Line A.

I believe if we referred to Appendix D of Mr. Simat's report, we will see an example of this same type in which the reduction in the number of observations which have been ranked increases the slope of the cor- [Tr. 10,608] responding line. I refer to page 3 of Appendix D, which refers to 707-131 aircraft. And for the first three months of 1959 there are a small number of data points, 4, 6 and 7, respectively, and we note there a slope factor ranging between a minus 111,000 and a minus 44,000; whereas, if we now progress to a case where we have a higher number of observations, for example, January 1961, where there were 15 observations, the slope drops because of the larger range of the X values to minus 11,000.

This is just an arithmetic fact. That is a consequence of the ranking procedure. That was the purpose of this chart, to illustrate that arithmetic relationship.

Q. Could you relate the explanation that you have just given to TWA Exhibits 436A, B and C, which you testified that you prepared?

A. Yes. In that exhibit, you will discover that the same relationships hold for the random number series, at least approximately. The reason for using the same set of random numbers in each of the exhibits lettered A, B and C was so that we could demonstrate the arithmetic property I have just mentioned rather than add in the additional com-

plication of generating successive samples of different random numbers.

[Tr. 10,609] We will note, for example, in that exhibit, that we have an intercept value of about 1 million and that we have a B-value or slope value of minus 38,140.

You will recall theoretically the number we would get from Exhibit 440, Line A, would have been about minus 41,000—a difference in both of these cases is due to the sample variation that occurs when you select a limited number of random numbers.

Q. 436B: could you explain what relationship is shown by 436B in terms of the principal factors we have under discussion?

A. Yes. 436A and B correspond respectively to Lines A and B in TWA Exhibit 440. Line C is not so duplicated in the random number set. I might add, however, that Exhibit 440C can also easily be—pardon me.

Q. 436C.

A. 436C could also be illustrated by the graph. The arithmetic argument is that if I were to subtract a constant value from each of the observations used, it would have the effect simply of dropping the line down parallel to itself. The intercept would be reduced by the constant of the subtraction. The slope would in no way change and neither would the correlation coefficient, for the same arithmetic reason that we mentioned before, and that is [Tr. 10,610] illustrated again in the random regressions shown in TWA 436C.

Q. Last Friday, March 22nd, at transcript 10,435, Mr. Simat suggested the possibility that the random number series which had been shown to him might constitute a special selection out of a larger group of random number series which had been generated and that the remainder might not show the same patterns.

Did you perform any other random number analyses in connection with the particular study contained in TWA Exhibits 436A, B and C?

A. No. These are the only regressions that were run for this particular exhibit. There was no selection whatsoever.

Q. In his comment at that point, I think that the context indicates that Mr. Simat was also referring to certain earlier random number series which I had shown him on a preceding occasion, which have been marked TWA Exhibit 435.

I show you a copy of TWA Exhibit 435 and I ask you if you are familiar with that document (handing to witness).

A. Yes, I am. I was also, at your direction, responsible for generating these exhibits, generating [Tr. 10,611] both the random numbers and running the regression analysis.

Q. TWA Exhibit 435 contains and performs certain operations on a number of series of random numbers. In connection with that study, did you generate any other random number series not included therein?

A. Yes. We generated two sets of random numbers in addition to those presented here.

Q. Did they show any different pattern?

A. They showed the same identical pattern of high coefficient correlation that this set does. They were, however, in the first instance a set of fifty 3-digit random numbers and in the second instance a set of twenty 6-digit random numbers.

The reason that those were not used was that under the direction of Mr. Tenney, I believed that we should generate figures more nearly like those used by Mr. Simat. We restricted our further study to 6-digit random numbers in sample sizes of four, six, fifteen and twenty-four. Those regressions are available for inspection, if desired.

Q. Do you recall in approximate terms the correlation coefficient that you obtained in those regressions?

A. As I recall, they were on the order of .97 or [Tr. 10,612] .98.

Q. At transcript 10,436 of last Friday, immediately following the passage that I have just now referred to, Mr. Simat stated that in his opinion if instead of taking the same group of random numbers and arithmetically constricting its range, if I may call it that, by multiplying by .5, as you have done in TWA Exhibits 436A, B and C, if instead different groups of random numbers were generated from a larger range of figures and from a smaller range of figures, then on the average the results with respect to random numbers produced from the smaller range would show lower correlations.

Have you performed since that occasion an experiment to see if this is so?

A. Yes. The Saturday morning following Mr. Simat's testimony, at your direction, I generated six additional regressions to examine the results doing the calculation as suggested.

• • • • •

Q. I show you a copy of TWA Exhibit 441 for identification and ask you, Prof. Hare, if this is the study that you made on Saturday that you have just now referred to.

A. Yes, it is.

Q. Will you explain what this study consists of?

A. This study is designed to illustrate the same point that we had illustrated before. The first three runs used random numbers which ranged between zero and 1 million, with 24 observations, three replications of 24.

In the bottom three, we have constrained the range of the random numbers not by using the same random numbers as in TWA 436A, B and C, but, rather, causing different random numbers in the constrained range to be produced by the computer.

The same process performed before is repeated here and the summary results shown. We note that the intercepts and the slope of the fitted line is reduced by [Tr. 10,614] one-half.

The standard error is reduced by one-half, which is the standard deviation of Y about the average value of Y. Yet the correlation coefficients or the coefficient of determination, as shown here, remains unchanged.

The slight differences that occur between the two are due to the sample variation and one would expect this when generating different sets of lines from a random number table.

I might point out, however, that it is not difficult to prove, statistically, that the exercise carried out here is mathematically equivalent to the simple arithmetic case we have illustrated in TWA 440.

Very simply, if you generated random numbers across the entire spectrum between zero and 1 million and divided that range into 24 intervals, the expected value that you would get is the long-range average. If you kept making samples, the expected value or long-range average that you would get at any particular interval would be at the midpoint of that interval, and since that is the case, it reduces to the arithmetic situation that we originally described for TWA 440.

Q. Were these all of the random number series you generated in connection with this study?

[Tr. 10,615] A. Yes. Only six were generated and we have them here.

Q. Have you at any time in connection with this case performed any other regressions upon random number series?

A. No. Every regression that I have run has been mentioned.

Mr. Tenny: I offer in evidence TWA Exhibits 436, 440 and 441. In the case of 436, of course, this is a re-offer. I offered it previously, last Friday.

Mr. Perkins: I have no objection. I, of course, will have a few questions to address to the witness about them.

The Special Master: Received.

(TWA Exhibits 436A, B and C, 440 and 441 received in evidence as of this date.)

Mr. Tenny: I also offer TWA Exhibit 435, which apparently I failed to offer at the time.

Mr. Perkins: No objection.

The Special Master: Received.

(TWA Exhibit 435 received in evidence as of this date.)

[Tr. 10,616] By Mr. Tenney:

Q. On Friday, at transcript 10,478, Mr. Simat used the term "significant," and he has used that term and another term "statistically significant." Does the word "significant" have a special meaning when used in connection with statistical analyses of the type that we have been dealing with here?

A. Yes. The word "statistically significant" has a special meaning. It is possible to make statistical significance tests. With reference to regression analysis, one would test the coefficient slopes, intercepts and perhaps the correlation

coefficient to see whether they differ materially from zero, especially could they have been achieved as a result of chance due to sampling.

I hasten to add that the standard tests of significance have some fairly strong assumptions in the field of regression analysis. In particular, the residuals that one obtains from the analysis, that is the difference between the actual values and the observed values, must be independent. They must have a normal, so-called normal distribution, which means they have a symmetry above and below the line and a number of other requirements of that sort.

If those requirements are met, it is possible to [Tr. 10,617] make a probability statement about the values of the coefficients in the equation as they differ from zero.

If the probability is very small of achieving such a result, we say that the coefficients are significant and, therefore, we would have to reject the hypothethis of no relationship.

Q. When you say that a relationship is statistically significant, what does that imply as to the utility of the equation?

A. As it occurs in most measurement applications, in order to answer such a question, one must state the purpose for which the measurement was undertaken.

There are basically two purposes for which regression analysis is carried out. The first one is of an exploratory nature, experimental nature, to test the theory that certain of the variables have an association with each other.

In that application, if the assumptions required for making statistical tests have been passed, then we can apply the tests and come up with a statement regarding the significance of the association which has been found.

In such a situation, the finding of a significance tells the investigator that he has some support for his theory, that there is perhaps something worth looking into [Tr. 10,618]

further, and the second application of regression is essentially an extension of the first, that is, for estimation and prediction.

In the case of estimating and predicting, the questions that we ask are generally somewhat different from the questions we would ask in the first instance. Namely, we ask ourselves, is the regression equation, when used for prediction, much better than essentially doing nothing at all! which would amount to taking the average value of Y as the estimate without regard to the values of the independent variables.

There are various ways of assessing or answering that second question. Many have been repeated here on several occasions. I thought it might be illuminating to try to summarize those by saying that there is a dependent relationship between the standard error of the estimate and the correlation coefficient, again an arithmetic relationship.

The standard error of the estimate is a measure in a sense of the precision with which one can estimate. It gives an absolute sort of number that one may compare with the value estimated.

In order to illustrate how a change in the level of precision changes with the change in the correlation [Tr. 10,619] coefficient, we have prepared an exhibit which shows those values. I am indebted to Prof. A. J. Duncan of Johns Hopkins University, who inspired this table by suggesting it in his handbook, "Quality Control and Industrial Statistics."

• • • • •

[Tr. 10,620] Q. Is TWA Exhibit 442 for identification the exhibit that you were just now referring to?

A. Yes, it is.

Q. Will you explain it, please?

A. This table is a modification of the table printed in the Duncan book on page 663. Professor Duncan stops his tabulation at a correlation coefficient of .6 and has a number of intervals between .6 and one.

For the sake of simplicity, I have tabulated the table for correlation coefficients between zero and 1 and at intervals of 1/10th. The extreme column to the right, number 5, represents the fractional reduction in the standard error one achieves by using the regression equation as opposed to doing nothing at all, in which case the figure corresponding to the standard error would simply be the standard deviation of the Y values. We note, for example, that if a correlation coefficient is one, we, of course, have removed all or reduced the precision or the imprecision by one, whereas if the correlation coefficient is zero, we have done nothing or accomplished nothing by using the regression equation.

I note in this table that when R equals .4, that the amount of variability which has been explained by an equation having that value of R, is about 16 per cent.

[Tr. 10,621] The unexplained variability is about 84 per cent. The coefficient of alienation is .913. The last column which turns out to be one minus the coefficient of alienation, tells us that we have actually improved things by using such a regression equation only about 9 per cent over doing nothing at all. Other values of R, of course, can be related in the same manner.

I would continue with that point to say that I think practically most investigators who had in the back of their mind making estimates particularly where the estimates involved substantial amounts of money, would not be overjoyed at seeing a result that only improved their estimates and precision in terms of 9 per cent and the usual consequence would be that a search would be continued for more varia-

bles that would, in an explanatory way, reduce the variability and thereby increase the precision of the equation.

Mr. Tenney: I offer TWA 442 in evidence.

Mr. Perkins: No objection.

(TWA Exhibit 442 marked for identification, received in evidence, as of this date.)

Mr. Tenney: You may examine, Mr. Perkins.

Cross examination by Mr. Perkins:

[Tr. 10,622] Q. Mr. Hare, you stated that your special field of expertise, in addition to statistics, was operations research and systems analyses and without burdening the record at any great length, I wonder if you could state in a sentence or two what sort of things you do in that field.

A. These are fields which have grown up since World War II in which analyses of a mathematical and statistical nature are made of operations in order to more clearly define them and improve them by understanding how they work. Within that field one would find individuals working in the problems of scheduling factories, for example, of inventory production control, of the allocation of economic resources, using mathematics.

Q. What kind of work have you done?

A. I have largely within that realm engaged in fields such as inventory and production control forecasting for that purpose, including a fair amount of market statistical work, collecting information for these other fields.

Q. Have you had any experience in the airline industry or consulting with them apart from what you have done in this particular case?

A. Within the restricted framework that I have [Tr. 10,623] just mentioned, I am not certainly an expert in the

operation or the scheduling of an airline itself. I have, on a number of occasions, consulted in the area of inventory control statistical applications and so on, with TWA and with Eastern Airlines.

Q. But not in the area of scheduling aircraft, traffic estimates or anything like that?

A. I am not an expert at all in that area.

Q. I note that—well, it's at the top of the fourth page, which seems to be marked—excuse me, at the top of the third page of TWA Exhibit 441, it states, "These are the random numbers generated to simulate observations," and I wonder if you could explain what kind of observations were being simulated?

A. This exercise or experiment was conceived as a sampling experiment in which each of the sampled random numbers taken from a population ranging between zero and one million, could be considered an experimental observation of the character of that population. So that we have collected at random 24 numbers which in the sampling sense could be called observations. They were then arranged in order and a standard regression program was used to fit a line to.

Q. That doesn't imply that you were attempting [Tr. 10,624] here to simulate observations, for example, on the profitability of aircraft?

A. There is, of course, no relationship between this specific set of numbers and any dollar value. The pattern which emerges, however—

Q. I am not asking about the pattern. I was just wondering about the simulation of the observations.

A. These are not dollar values and the word "observation" has to do purely with the random number generated.

Q. As I understand it, if this series of random numbers —I am going to refer here for simplicity to TWA 441, your

last exhibit, but I think the same questions and answers would apply to all of the other exhibits. Taking your first sample, which is drawn—there are 24 of these observations, drawn randomly from numbers ranging from 1 to 1 million, if those are truly selected in a random number, would you say that there was an equal chance to any number in that range to be selected by your program?

A. That is a definition of the random number. In the range of integers between zero and 999,999, each of those has a probability of selection of one in a million.

Q. Would it then be true, at least on the average, [Tr. 10,625] if you took a number of these samples, about 50 per cent of the numbers in any sample would be in the range from one to 500,000 and the other 50 per cent would average out in the range between 500,000 and 1 and one million?

A. Yes, that is true. However, because of the 24 sample observations, there can be, of course, some variation from that theoretical value, from sample to sample, and it's not difficult to calculate for a sample of 24 what that range of variation, let's say around 50 per cent, is. It's simple.

Q. But if you took enough samples it would tend to approach 50 per cent?

A. Yes.

Q. And likewise, if you divided your million into ten parts of 100,000 each, then on the average, about ten per cent of the numbers would show up in each 100,000 range, is that correct?

A. That's correct, and of course the same thing that I just mentioned with regard to the samplings variation holds here too, except the variation would be somewhat greater because you are grouping fewer things together.

Q. Likewise, if you divided your numbers into [Tr. 10,626] six equal parts, you would expect to find roughly 16⅔ per cent of the numbers with each of those six parts?

A. Roughly.

Q. I have verified this theory against your first three samples and if my count is correct, I found that in the first one there were—well, might I say, if you have a sample of 24 observations, one-sixth of them would be, of course, four observations. So that on the average you will find four observations in the top six, the numbers above, roughly, 833,000 and you would likewise on the average find another four in the bottom range, from one to, say, about 166,000?

A. That is true. Again, there would be a substantial variation because of the small numbers that will end up in each of the categories you have mentioned.

A test can easily be made of this and if you apply that test, which is called the Chi² test, you will discover that the variation that you have noticed here is in no way—it is a property of random number generation.

Q. As I was stating when I interrupted myself, I made a count of the numbers appearing in the top six and the bottom six of the first three samples and if my count is correct, I have had six in the first and ten in [Tr. 10,627] the second and seven in the third, which makes 23 and dividing by three gives an average of 7⅔, which is pretty close to the number 8 which you would get if you presumably had enough samples.

A. Yes, that sounds right.

Q. Is it possible, with a computer or otherwise, to randomly select, say, 24 numbers from a million numbers, which would fall within the normal distribution pattern?

A. Yes, it is, of course, by adjusting each—this is a number in which each observation has equal probability. One may weight that probability by a multiplier and thereby generate any distribution that you would like to reproduce. All computers, however, start out with the equal probability random number.

Q. If you did generate random numbers with the normal distribution, would you expect to find as many as 16⅔ per cent in the upper sixth of the numbers or the lower sixth of the numbers?

A. No, you would not and that is the definition of the normal distribution. Most of the numbers would be clustered about the average of that distribution, whatever you chose to make it.

Q. What percentage would be approximately—would [Tr. 10,628] you know what the percentage would be in the upper sixth or in the lower sixth?

A. A smaller percentage—I was attempting to think of the range.

Q. Two per cent?

A. Something between two and five per cent. I might add, Mr. Perkins, that if you did generate the normal distribution numbers and rank them, then you certainly would not end up having a straight line result because of the bunching that would occur towards the center of the range. It would be a distinctly non-linear result. It happens to be a mathematical consequence of ranking random numbers if they are approximately equally spaced, so that when you rank them they go downhill in equal increments, then you end up with a straight line. This was precisely the pattern that Mr. Simat referred to in his alternate estimate. The similarity between these two patterns is all I want to point out.

Q. If you make the assumption that profits of individual aircraft or of aircraft operating patterns, were clustered around some middle or average point typical of a normal distribution and you then ranked those different profit numbers, as Mr. Simat has done, would you obtain the type of

line that you have obtained in [Tr. 10,629] your regressions of random numbers?

A. No, you would not, Mr. Perkins. You would get a distinctly non-linear result and you couldn't fit a straight line to it. It would be a different case entirely. If my memory is correct, Mr. Simat did make a test and discovered that his data did not follow that particular distribution but rather another one.

Q. You ranked in each case, referring specifically to 441, where each sample consists of 24 observations, you have ranked them and obtained a regression with a high coefficient of correlation.

If your program for any of these samples were to generate a 25th number, would your regression tell you anything about the size of the 25th number? In other words, you couldn't fit it into that equation, could you?

A. You would have to recompute the entire thing, if you added another observation. I have no way of telling, from looking at the random numbers, of course, what the next random number would be that would be generated, so I really can't answer your question.

Q. I would like to give you just a couple, I think, simple hypothetical examples, where the numbers are presumably not random that deal with ordering.

[Tr. 10,630] Your first example: Assume that you have a class in one of your courses of 25 students and you give them a test and on the day of the test 24 of them show up and take the examination and you grade them, say, somewhere, from 90 to 60, if you gave them a numerical grading system, it would then be possible, would it not, to take the highest grade and assign a rank number of one to that and the second highest grade and assign a number of two to that and so on down through 24, would it not?

A. Yes, it would.

Q. You could then run a regression analyses on that relating the grade on the rank number? That would be a conceivable operation, would it not?

A. It's conceivable but I think it would not be too meaningful because in the example you picked you wouldn't get an appropriate spread between all the pupils. I don't know who has ever found a class that had the appropriate distribution so that a straight line would make sense.

Q. If you couldn't fit a straight line you could fit a curve?

A. Yes.

Q. And you might have a regression and it might have a fairly high coefficient of correlation?

[Tr. 10,631] A. Yes.

Q. And now your 25th student takes a makeup examination of equal difficulty and you grade him, would your regression tell you anything about what his ranking would be?

A. Well, no, it would not. We would have to, of course, in order to determine the individual's rank, we would have to place him in the sequential order of all of the 24 previous students. Therefore, the specific series might be changed but in terms of that single individual's influence on the fit of the curve, I can't answer specifically without knowing the grade that the man achieved.

Q. But if you had a descending slope and No. 24 of your students had a grade of 60, you couldn't fit him into that and predict that your 25th would have a grade of 58 or a lower grade, could you?

A. No, each time you added a new observation and in this case you would have to rerank and redo the regression.

Q. I would like to give you just one more hypothetical example. I will write these numbers down. I think we all know that when a company advertises, its purpose is to in-

crease sales and hopefully, profits. [Tr. 10,632] I am not calling on any expertise but isn't that a matter of general knowledge?

A. I think that's the general theory.

Q. Let's consider a company that advertises and an analysis has been made of the relationship of the amount that it invests in advertising to the added profit that it makes and assume it's been determined that an investment of $1 million would add $500,000 to profits and an investment of $2 million would add $800,000 to profits and an investment of $3 million would add $900,000 to profits, while an investment of $4 million would add, again, only $800,000 to profits. One way of analyzing this, and I am not asking you to agree that it would be a good or appropriate way, but one way would be to look at what each additional million dollars did to profits and you will find the first million dollars added $500,000 and the second million added $300,000 more than that and the third million added $100,000 more than that and the fourth million made a negative contribution of $100,000. You could rank those, could you not. One million is given a rank of one against 500,000. The second, 300,000. 100,000 is ranked as three and minus $100,000 is ranked as four and you could perform a regression—of course I picked very simple numbers—but [Tr. 10,633] even if the numbers were not rounded numbers and were more complicated, you could still perform a regression on those numbers, could you not?

Mr. Tenney: Mr. Brownell, up to this point I thought I discerned some connection between the questions including the hypothetical questions that Mr. Perkins was addressing to the witness and the witness' direct testimony but at this point I do not see such a connection and I object to the question as outside the scope of the direct.

The Special Master: We will allow it through for a little while.

Q. You could perform a regression, could you not?

A. I am not sure what you are attempting to measure by the regression. The relationship between—

Q. I am asking whether you could—

The Special Master: Expenditures and profits.

Q. The $500,000 you rank as one and the $300,000 you rank as two and the $100,000 you rank as three and the minus $100,000 you rank as four. So that you have a rank order of those numbers and a series of numbers and you could relate them by means of a regression to the numbers, could you not?

[Tr. 10,634] A. One could certainly fit a curve to that particular example. I would have to make an observation from a practical point of view, outside of the hypothetical question. I believe if someone came to me and said that he could assure me that if I spent $1 million I would achieve additional sales of exactly $500,000, I would be very suspicious.

Q. An additional profit?

A. I would be even more suspicious of that because I don't know of anyone who could easily collect data to define such a relationship.

The Special Master: This is posited.

Mr. Perkins: I can assure you that there are many advertising agencies that spend millions of dollars on just this kind of analysis.

The Special Master: Of the client's money.

A. Yes, looking at the numbers, a straight line would now result because we do have equal increments between the values given to me.

Q. Having done that and assuming, as I posited, that this was a reasonable type of an analysis that has been made, based on the judgment of those making it, as a reasonable analysis, wouldn't then your curve give [Tr. 10,635] you some kind of tool for estimating what rank number five would be?

A. Again, the result of such an estimate would depend, in my mind, not on the mechanics of fitting the line to the data but rather to the amount of data that you had and also to the accuracy or the variation inherent in the data points themselves. Thus, I could fit a line in one case and have a very good fit and in the case of data points which were widely scattered and you have given me a situation which I believe has only four points and requires the fitting of a curve—

Q. I state this is merely by way of illustration and you can imagine for the purpose that we have 24 observations.

A. In that case you would then have to look at the result that would occur at each of the observations. I would like to have for example, more than one observation result in your middle column, the profit column, for each of the experimental manipulations in the experimental budget. To argue from one point is certainly not a statistically sound practice, in my viewpoint.

Q. I agree, you need lots of observations and you want to be sure the figures were accurate and all, but if you assume that and having a regression of this kind, [Tr. 10,636] wouldn't it be reasonable to conclude from it that if there were 24 observations, that if you took the 25th, if you wanted to know what the effect of the 25th million was or whatever the unit is, it would not be somewhere up in the middle or near the top?

A. The answer to that question, of course, how far it would be, up or down, would depend on many factors. I

think, again, the problem here is not one of a mechanical calculation but one of the data. For example, let's suppose that I did in fact spend the next million dollars in the advertising budget and by some fluke of circumstance in the area of my products sale, let's say I am selling beer, the Army opens up fortuitously in the area a new Army camp. It may well be that the next data point that you bring to me as a result of an additional million dollars to the advertising budget, will in fact, show a tremendous increase as a result of that particular observation. So it would depend, in my mind, I couldn't tell you on a single point. I would need to have a replication of those points and a number of data points.

Q. In a sample of this kind, isn't the order of the data a very different thing from ordering a set of random numbers which will tell you nothing where the 25th [Tr. 10,637] number will be or a number of grades, which tells you nothing where the next grade would be if you performed a regression on the grades as ordered?

A. Yes, if you have assumed and can assume that there is a meaning to the rank, that there is some relationship between the rank and the variable, for example, that you have indicated here, namely, the additional million dollars in the budget, one could make such an analysis.

Again, I think the problem here is not one of the hypothetical cases but the practical application of that, in which the way the data is arrived at, is of paramount importance.

Q. And you have made no study here of whether it would or would not be reasonable, in terms of experience, to rank profitability of individual aircraft?

A. No, I have made no such study.

Excerpts from Transcript of Deposition of Robert W. Rummel

[Docs. 224-227]

[Dep. Tr. 227] * * * Q. At that time, namely, 1943, what other plans or programs were underway at TWA with respect to aircraft acquisition or the development of an air fleet?

Mr. Barr: May I have that read, please?
The Special Master: You may.
(The question was read.)
Mr. Barr: Thank you.

[Dep. Tr. 228] A. I don't recall any specific programs, Mr. Davis. This was in 1943, and the size of most airlines had been reduced or, let's say, expansion plans were not being fulfilled because of the war effort, the airplanes simply weren't coming along.

I don't know of any specific programs. I think, as I recall, the company was trying to look at a number of possibilities to see—to be poised, you might say, to try to move if conditions would warrant moving.

Part of my initial work was to look at various airplanes, see if they could be converted, what they could be converted to, or what they might produce if they were converted, to talk, which we sometimes did, with the manufacturers with respect to what they might be planning for the post-war undertakings.

Q. Will you describe what you were doing along those lines, identifying the manufacturers, the kind of activities that you were engaged in at that time?

A. By "that time" I assume you mean 1943, 1944, in that area?

Q. In that period, right.

A. Rather than—

Q. Rather than what?

A. Rather than right after I joined the company. I [Dep. Tr. 229] was simply getting on my feet at that time. Answering this question will involve covering some period of time.

I looked at various interior configurations of the DC-3, including three-wide and four-wide seats—that is, three across and four across the cabin seats—payload range characteristics of converted DC-47s, the same for C-54s, the same for C-69s—

Q. C-69s?

[Dep. Tr. 230] A. Yes. (Continuing) —we analyzed commercial application of a very large double deck six engine Convair, one or two of which were being built for the military, we considered the—we considered a commercial—we considered commercial possibilities of the Lockheed Constitution, which was then being built, as I recall it, we looked at possibilities of adapting the large Douglas transport—the number I don't recall at the moment—to post-war work, we even had a look at the Hughes flying boat, we had a look at the Northrop all wing bomber, we looked at the Budd Conestoga—

Q. Budd—

A. (Continuing) —B-u-d-d Conestoga—it was an all-stainless steel cargo airplane—we took a rather quick look at the Curtiss-Wright wood cargo airplane, we looked at the Curtiss C-46, which was the commercial development of—no, I said that wrong—we looked at the C-46 converted on paper into a post-war airplane and the CW-20, which was the commercial development of the C-46, we looked at various preliminary designs that Convair, under McLaddon, were working up from time to time, we did the same with Ed Burton at Douglas, and Boeing managed to pro-

duce a few thoughts on post-war airplanes even then, and would review them with us from time to time.

Numbers of these meetings with manufacturers and [Dep. Tr. 231] the undertaking of these study projects were on direction from Jack Frye to Franklin and to myself. I occasionally would meet with Frye on some of these things. There could have been others. Now, some of these were extended studies, some were quite brief.

Q. Were these activities in connection with an effort to develop a program post war or in anticipation of the end of the war, is that what you were doing during this period?

A. Yes. I think it could probably be summed up by saying that we desired to be in a position to recommend definitive action at such time as definitive action might be in order, depending on how the war turned, and so on and so on.

* * * * *

[Dep. Tr. 248] * * * Q. Were you ever told, was it ever suggested to you by anyone, that you should not approach anyone to explore the possibilities of their having a useful product?

A. Well, yes, I have been, but not at this particular time, as I recall it.

Q. Will you identify the time, then, when you were?

A. Well, not precisely, but it was essentially later on, I was asked not to approach various manufacturers at times in different areas, sometimes on the basis it wasn't [Dep. Tr. 249] timely, sometimes on the basis of simply that this wasn't to be done. I realize that isn't very specific.

Q. Can you be specific?

A. Yes. I was asked not to do much with Douglas during the jet period, early jet development, on the basis that we couldn't get with them anyway.

Q. On the what?

A. Basis that we really couldn't get with them anyway. There were times I was asked not to work with Lockheed in certain specific areas. I believe I was told at one time not to work with Boeing on the jets. That was likely in the 1953-1954 period. I was definitely asked not to work with Convair on the 990.

That's all I seem—that comes to mind.

Q. All those instances related to the so-called development of jet aircraft or jet age? How would you describe this period?

Mr. Williams: Before we pass to any other question, I will ask the Special Master if he will ask counsel to fix—when he says he was asked—to fix the person, the time and place of such conversations.

Mr. Davis: May I do so in my way?

Mr. Williams: I think this is the time to do it.

The witness has said he was asked to do some [Dep. Tr. 250] thing. I want to know who it was.

Mr. Davis: May I do it my way?

Mr. Williams: I think there comes a time—

The Special Master: I think he is entitled to have it developed as a part of this examination.

Mr. Davis: I intend to.

The Special Master: You may do it in your own way.

• • • • •

[Dep. Tr. 273] [Mr. Williams] • • • Let's not be diverted from the objection which I raised, that when you elicit from a witness an answer with respect to a conversation we are entitled, no matter what your purpose, or what you want to do, or how clever you

may be, to have the name of the participants in that conversation.

I would like to ask, Mr. Special Master, that the witness and counsel be required to state who it was who asked him not to get in touch with these various airplane manufacturers.

The Special Master: I will sustain the objection, and direct that at this point the inquiry be made as to who made this instruction each time, and then I will give you a full opportunity to develop every situation to the fullest extent so that there could be no misunderstanding about the context in which it was given and any surrounding explanation or reasons for the direction.

Mr. Davis: Mr. Special Master, I, for the record, want to state that I believe it to be my right to conduct this discovery as I see fit.

[Dep. Tr. 274] I have no objection to interrupting my discovery to allow either the Special Master or Mr. Williams to ask this witness any questions as to any area as to which he has already testified.

The Special Master: I will interrupt it myself, and I will ask the witness to state on each of these ocassions that he has described who gave him such directions as he has described and when. Take them one at a time.

The Witness: The initial instructions on the 990 were through the Hughes Tool Company representatives. This was repeated later on by Mr. Hughes in a phone conversation to me, that is, that I should not have anything to do with the 990.

The Special Master: Did he give you any reason for that instruction at the time?

Mr. Davis: I don't believe we have on the record what the instruction was yet, do we?

The Special Master: Tell what the instruction was.

The Witness: The instructions were that I should not participate or allow the participation in either contract or specification development activities, that we should not inspect any 990 parts or components at [Dep. Tr. 275] the Convair facility, and that we should not discuss the 990 with Convair.

The Special Master: Was any explanation given to you at that time as to why you should not have such discussions?

The Witness: Well, Mr. Hughes generally wasn't in the habit of explaining detail or reasons for instructions. The impression I had was that he preferred to either work himself on the 990 or have Tool Company representatives do it. It was clear that I was not to.

The Special Master: Did you understand from him there was some reason that you personally should not do it?

The Witness: Well, if it was a personal reason, I don't think I understood it.

The Special Master: You didn't understand that it was something involving your own personality in the contact that you might make?

The Witness: My personality?

The Special Master: Yes.

The Witness: No, I certainly didn't so understand it.

The Special Master: You just understood that he was instructing you not to get involved in the 990?

[Dep. Tr. 276] The Witness: That's right.

The Special Master: Did you understand that that included all the TWA people, that instruction?

The Witness: Yes. Well, it included all the TWA people that I had any jurisdiction over.

The Special Master: And there was no further explanation than you have given?

The Witness: Not that I can recall. I say, the impression I had was that these were areas in which he preferred to work himself, or have others work, rather than have me work in the areas.

The Special Master: By that—

The Witness: By that I mean TWA in this case, or as a representative of Hughes Tool Company, either one.

The Special Master: He thought someone other than TWA people might do it more effectively?

The Witness: I can't say that was either stated or inferred, Mr. Special Master. It simply was that he did not want me to work in this area.

The Special Master: What was the next time that he instructed you not to work with some manufacturer?

The Witness: This also was a phone conversation. I can't be real specific on the time, but it had to [Dep. Tr. 277] do with the Lockheed Electra. Let's take the Lockheed Electra as the next one that I mentioned earlier. The impression that I had then was that he was working with Bob Gross and possibly others giving consideration to possibilities of procuring the Electra, and that it simply wasn't timely for any activities on my part. I got the impression that rather than having the issue confused that I should not do anything but bide my time.

The Special Master: What was the next instruction?

The Witness: These are not really in sequence. The conversation relating to Boeing was that he did not want any promotional work done at Boeing, by that I mean he didn't want TWA to influence the Boeing design to make it a better design, he didn't want anything done on deliveries, and I got the impression, and I can't, again, recall it word for word, but I recall having the impression that he felt this was a premature effort, until he had time to give it further thought, presumably, and I say "presumably" advisedly, in consultation with me and others, I am sure he talked with many people on airplanes, until such time as it appeared that we could center our attention on a [Dep. Tr. 278] product which would permit us to take a lead, and this might or might not at this time turn out to be the Boeing.

The Special Master: I get the impression from what you say that you understood that he was asking you not to do more with Boeing with the idea that he did not want you to help develop an airplane that would not be fully satisfactory for TWA purposes, and wished to wait until you had worked out the state of the art to such an extent that you could have the best plane possible. Is that what you are saying?

The Witness: Well, partially. We had had a number of cases previous to that time wherein TWA's negotiation effort had produced airplane improvements which TWA did not finally avail itself of, but the competition did.

The Special Master: You really helped your competitor, then, in those efforts?

The Witness: Well, this, I think, was a general thing that he was trying to avoid. I don't recall

whether or not this specific thing was stated in the conversation or referred to, but I understood his feeling on this, in fact I shared it to a great extent. We had, in the past, done a number of things, and [Dep. Tr. 279] developed airplanes in negotiating efforts which we didn't finally buy. The DC-6B, for example, which I mentioned yesterday, was one of them. I don't say it wouldn't finally be developed, but that is what developed.

The Special Master: What is the next instruction that you recall? Did you mention something about Douglas during your testimony?

The Witness: Yes. I would say Douglas might have been more a discussed understanding between us than a specific instruction as such, but I took the effect to be the same.

The Special Master: What do you mean by a discussed understanding? You must have had some communication.

The Witness: Yes. I had numbers of phone conversations with Mr. Hughes on various jet airplane developments as I had understood them. The Douglas situation was not particularly a happy one at this time.

The Special Master: Did you discuss that with Mr. Hughes, the fact that it was not a happy situation with Douglas and TWA at that time?

The Witness: Yes. As I recall it, I did discuss that. The unhappiness, if you like, was not so much between TWA and Douglas as it was between Douglas and [Dep. Tr. 280] its thoughts concerning its prospects for dealing with Mr. Hughes.

The Special Master: I see.

The Witness: It seemed to have the conviction that it could never complete a deal with Mr. Hughes.

The Special Master: Did Mr. Hughes say anything to you about that in this instruction, about whether there was a possibility of making a deal?

The Witness: I really can't recall the discussion quite that clearly. The net result I do, which was that we would let Douglas go their way, and if there were to be any contacts with Douglas, that Douglas would have to contact him first. It was that kind of a situation.

The Special Master: Had that continued for some period of time, that kind of a situation?

The Witness: Yes. Well, not—it came to a head I think with the Douglas decision to build commercial jets. In a way, Douglas was saying that they would be happy to deal with TWA, in fact, I had a call on that line, but that they didn't feel they could conclude a deal with Mr. Hughes, and they felt that they would devote their effort in other areas.

The Special Master: Did you report that to Mr. [Dep. Tr. 281] Hughes?

The Witness: I don't recall reporting it in those specific terms, but there was—as I say, the discussion embraced this general situation.

The Special Master: What did Mr. Hughes say then? Did he make it clear that if Douglas didn't want to deal with TWA by avoiding him that that wasn't to be done?

The Witness: Well, as I remember it, he took the attitude that Douglas would have to come to him before we did any more with them, and we did not work with Douglas. I think on top of all this the

impression I had from Douglas was that Douglas feared we were trying to do them one better, and were simply trying to find out what they were doing, which, of course, was not the case.

• • • • •

[Dep. Tr. 354] • • • Q. And subsequently did AVRO offer any other type of aircraft to the U. S. Airlines?

A. Well, as far as I know, AVRO did not offer anything to the U. S. Airlines at large, although they might have without my knowledge, obviously.

AVRO worked with me and with Mr. Hughes over a fairly extended period of time toward the development of a transport airplane. This was subsequent to the small four engine jet period that I just mentioned.

As I recall it, this was 1954, 1955, and I think into 1956. I am not saying that we worked continuously. There were a number of meetings, and AVRO from time to time had produced plans and information for review.

I might say too, Mr. Davis, this was one of those projects which was highly confidential and extremely restricted in TWA as to the numbers of people that knew about it or had anything to do with it.

Q. Was there any particular reason for that secrecy or restriction?

[Dep. Tr. 355] A. Well, first, it was Mr. Hughes' desire. Secondly, it was my understanding that we were trying to explore possibilities toward developing an airplane better than the competition could develop, and the last thing we wanted at that stage was to have the story out.

Q. Then what happened to this subsequent effort by AVRO to develop a suitable commercial jet transport?

A. As I understand it, you are asking what the end point of all this was?

Q. Yes.

A. Well, the end point was it wasn't produced.

Q. It was not produced?

A. No.

Q. When you say "not produced," you mean AVRO never in fact produced any commercial jet transport, is that correct?

A. We didn't contract for them, or Hughes didn't contract for them.

Q. I understand that, but my question is whether or not any other airline contracted for them or—

A. No. They weren't produced. As far as I know, there were no contracts for them, and as far as I know, and I certainly can speak only from what I know myself here—

Q. I understand.

[Dep. Tr. 356] A. (Continuing)—this was such a secret venture, let me say I would be surprised if AVRO talked to other airlines. Now, this doesn't go to say that they didn't, or that they might not have. Perhaps there was other understandings I didn't know about.

• • • • •

[Dep. Tr. 362] • • • Q. Mr. Rummel, I believe we had about completed your description of the extent to which Canadair was a factor in the availability of aircraft to the commercial airlines of the United States, isn't that correct, you had finished your description of that aspect?

A. I believe so.

Q. Before I leave Canadair, however, during that period which you have identified was Canadair a subsidiary of General Dynamics, another division comparable to Convair?

A. I believe they were during a substantial part of that period, at least. I am not certain as to the date of that affiliation.

Q. The next manufacturer which you have identified, according to my notes, at least, is DeHavilland of England. Will you give us the same type of information with respect to that manufacturer?

A. My first direct contacts with DeHavilland were—began I think in 1952 or 1953. DeHavilland were developing the Comet airliner, which was a four-engine jet. In fact, it [Dep. Tr. 363] was the first long range high speed jet that was produced, and it was viewed as a highly advanced airplane. The AVRO I mentioned earlier was a small low speed, relatively speaking, jet, not in this category.

I visited the DeHavilland factory, looked at the production line, which was then primarily empty, and looked at a Comet. I may have that 1952 year wrong. In any event, to pin it down, if it requires pinning down, it was shortly after the first Comet had flown, maybe a few months, that I was there.

DeHavilland had kept I think all airlines and all prospective customers, at least, this is my impression, they certainly did us, advised generally of the progress they were making, the kind of airplane they were producing, and clearly England wanted to use it as a vehicle to break into the world air transport market.

There were a number of subsequent meetings with DeHavilland. As I recall it, we fairly seriously considered the procurement to the Comet on two occasions. I am not clear as to the exact timing here.

I discussed the Comet with Mr. Hughes numbers of times by telephone, and obtained delivery information and that sort of thing, which I also made available to TWA.

As I recall it, at one point our board of directors [Dep. Tr. 364] met in London and had a short ride in the Comet, although I had no part of making that particular arrange-

ment, didn't know about it until afterward. I viewed it as—I assume it was a courtesy demonstration of some sort.

Pan American in fact bought or committed to buy a number of Comets. I recommended against the Comet for a number of technical reasons. This was before the Comet had run into serious technical difficulties. Mr. Hughes seemed to agree with this view. In any event, no commitments were made either by Hughes or by TWA.

After the series of crashes and the resulting redevelopment of the Comet, approximately during the time when this was being implemented, the line was being re-established, again, I am not certain precisely the year, but I would suspect that it would be in 1955, I think, 4 or 5, maybe 1955, DeHavilland was demonstrating I believe a Comet somewhere in Canada. In any event, there was a group of DeHavilland people in Canada flying some airplane, and as I recall it, it was a Comet, but I am not certain.

In a phone conversation with Mr. Hughes, I remember I was home at the time, in Kansas City, he made—this is probably why I recall it this clearly—what was an unusual and challenging but I think unimportant, in a sense, request, he asked that I get ahold of—contact a certain individual [Dep. Tr. 365] I know, whose name is Frank Lloyd, at DeHavilland, that I was to do this without letting the operator know at the other end who I was, where I was calling from, I was not to contact anyone else before speaking to him—there were some limitations that bring this back to mind. I don't think it is important to this testimony, but I did succeed in getting hold of him on the third try, as I recall. I had no idea when I started where he was, except that he was in Canada.

In any event, the Hughes' request was to contact Frank Lloyd, and determine what they could really do for us with

respect to early airplane deliveries, get their thoughts on airplane price, and then discuss it with him.

He suggested—

Q. "He" being Mr. Hughes?

A. (Continuing)—Mr. Hughes suggested that Lloyd and I get together right away, but that no one in TWA be permitted to know a thing about this.

I called Lloyd, as I say, Frank, and got ahold of him, and arranged to meet him in Chicago. In fact, I had the hotel room set up through the West Coast Hughes' office to maintain security, and I met Lloyd—let me say I got ahold of him late at night—I met him the next evening in Chicago, and as I recall it, it was the Blackstone Hotel.

[Dep. Tr. 366] After discussing the situation with him, after he went through a series of documents and things on deliveries and whatnot, I got Mr. Hughes on the phone as he had directed that I do. I might say that it was not normally possible to simply call Mr. Hughes except by his agreement that he should be called or by some prior arrangement. But I got him right away, and talked to him very, very briefly, whereupon he discussed this situation with Mr. Lloyd.

* * * * *

[Dep. Tr. 370] * * * Q. I was going to ask you that question anyway, Mr. Rummel, and while I am at it, could you tell me whether or not this expiration of the Pan Am order took place before or after the decision by TWA to abandon further efforts to procure the Comet?

A. Well, I don't know of any TWA decision. Maybe you didn't mean it that way. As I said, it was between Hughes and myself and Lloyd, and I recommended to Hughes, as I recall it, and there was a full discussion between us, and the net result of it all was that we didn't move.

Q. I understand that. My question then is did this Pan Am abandonment of their order take place before or after your recommendation to Mr. Hughes?

[Dep. Tr. 371] A. I am just not sure about that now.

Q. But you are clear, or are you clear, that your decision and recommendation was not influenced or predicated by the action taken or lack of action taken by Pan Am?

A. Well, we tried to take cognizance of our equipment position as it would be with the airplanes and without the airplanes, as we understood that others would be.

As I recall it now, we had in mind putting the Comet in service in the U. S. rather than overseas. I can't state that as a fact, except that it is what I presently recall, in order to get a jump on the competition, and possibly undercut airplanes like the Electra. At least, we gave consideration to the possibilities of this type, and I am quite sure this was one of them at the time.

Q. My question was whether or not your recommendation was influenced by the fact that Pan Am had abandoned its procurement program of Comets, or whether that was a factor at all in the decision which you reached in connection with your recommendation.

A. I don't recall, Mr. Davis. I certainly wasn't blind to what Pan Am was doing, as nearly as I could find out what they were doing.

Q. In the course of your description of the discussions with DeHavilland you referred to several conversations with [Dep. Tr. 372] Mr. Hughes, and then you described some of them.

Have you—

A. I described one of them, I think. Anyway, excuse me.

Q. I thought there was at least one as to how to contact your friend Mr. Lloyd, and one in Chicago—

A. Oh, yes, sir.

Q. Then presumably there was one when you made your recommendation not to go ahead with the Comet?

A. This is right.

Q. Is that right?

A. Right.

Q. Because what I want you to do now is to give us the full nature of whatever discussions you had with Mr. Hughes relative to DeHavilland. By that I mean at least by describing the subject matter you were discussing in such further detail as you care to give, but I am not trying to turn this into a technical discussion of all the technical aspects of the aircraft.

A. Mr. Hughes always had great interest in the design aspects of airplanes, the power plant installation, for example, structure, he was interested in—greatly in pressurization aspects of the airplane with respect primarily to safety. In fact, he was interested in safety [Dep. Tr. 373] aspects in almost every aircraft design of the airplanes on which we worked.

One of the areas that I am certain we discussed was the use of material in the Comet, the fact that they used prestretched skin, extremely thin skin. We considered a number of structural factors.

We were—talked about the fact that the engines were buried, built within the wing, the wing surrounded the engines. This introduced questions, such as the likelihood of or the problems of containment of fire if fire should occur, the effect of an explosion at such a vital structural area, not that we predicted explosions, but I mean, these things were discussed.

We discussed performance aspects of the airplane. As I recall, this was of particular interest. Range, payload. We had run some studies on predicting the operating cost of the airplane, and by that I mean the direct operating cost. These were reviewed at one time or the other during this period, probably several times.

[Dep. Tr. 374] I might interject this, and say that De Havilland were offering several versions of the Comet. This wasn't one airplane. It was one, a succeeding model, and then one they were thinking of, that kind of thing.

We talked and discussed airplane price, I think we talked about the general ability of a manufacturer like DeHavilland to produce aircraft that would measure up to standards that we were accustomed to, I think we talked about CAB approvals.

It was an effort to evaluate, let's say, and judge the wisdom of proceeding or not proceeding.

Q. Then you had discussions about the necessity or desirability of secrecy?

A. Yes. This stemmed from Mr. Hughes.

Q. I would like you to describe or give us your recollection as to the nature of those discussions.

A. Well, it was just a clear statement that I wasn't to talk to anybody, including the people in TWA, about this exercise. I am referring now to the particular sequence just before and then following the Chicago meeting.

The earlier investigations, while there were discussions with Hughes, as I recall them, were not particularly secret.

[Dep. Tr. 375] Q. What I am trying to understand, Mr. Rummel, is what reasons or explanations, if any, were given to you by Mr. Hughes in connection with this secrecy aspect.

A. I don't recall any specific explanations, Mr. Davis.

Q. What was your understanding—excuse me.

A. I don't recall any specific explanations. My understanding was that I wasn't to say anything.

Q. What was your understanding as to the reason for the request?

A. Well, I don't know, but it wasn't a particularly unusual request, as I recall it.

Q. It was not unusual?

A. No, to deal quietly, so to speak, in dealing in matters in which Mr. Hughes was interested.

Q. Do you recall whether or not Mr. Hughes gave you any reasons or explanations for not discussing these matters internally at TWA?

A. No, I don't recall.

Q. Who was the chief executive officer of TWA during this period which you have been describing? Mr. Damon died in 1956, did he not?

A. That's my recollection.

Q. Subject to correction, let's take it—

A. Yes. I think Mr. Damon was still there at this [Dep. Tr. 376] time.

* * * * *

Q. Now I would like to go back to these instructions you received from Mr. Hughes relative to secrecy, more particularly, secrecy involving the internal organization of TWA, and I would like you to tell us your recollection as to how Mr. Hughes made that request and your understanding at the time of the reason or basis for the request, if you had any understanding.

A. As I recall it, I don't recall Mr. Hughes explaining to me the reasons for this in this particular instance. [Dep. Tr. 377] He might have. I don't recall it. Anything

beyond that that I would say I think would simply reflect a general assumption on my part as to what might or might —might have led him to say that, and I don't know what led him to say that specifically. He said it, I didn't.

• • • • •

[Dep. Tr. 509] • • • Mr. Davis: What decision was made by TWA, if one was made, as to what they would pursue with these various manufacturers?

Here we have testimony of this witness that Sud came to them with a potential program.

Boeing was doing what they were doing.

Douglas was doing what they were doing.

I want to know what decision TWA made.

Mr. Williams: I object on the ground that we have gone into this in detail. That the witness has particularized the degree of consideration given to each program. Whether it was preliminary or serious, the very type of plane—and I have notes here, which if I need to argue it, I could, but I don't think we need to go through all this again.

The Special Master: I have the impression of the testimony that the witness said that during this period of time they considered not offering, but the type, and they conferred with Sud about it, but they [Dep. Tr. 510] did not take any steps to procure it.

Is that correct or not?

The Witness: That is certainly correct from TWA's point of view.

The Special Master: Isn't that the question?

Mr. Davis: No, sir. I want him to describe how this decision was arrived at, what they decided to do, if anything. We know they didn't get Caravelles,

they got something else eventually. That is a record which even Mr. Williams can't question.

The witness testified about Mr. Hughes' interest. He testified about some program with a possibility of TWA going into the manufacture, or the Tool Company going into the manufacture of Caravelles.

What I don't understand yet is what, if any, decisions were being made by TWA management as a result of the situation which he has now finished describing.

In other words, sir, I point out that we had a situation where during this period of time the airline was interested in pursuing some course of action with either one or more manufacturers. I am interested in getting a description from this witness as to what decision was made, how it was arrived at, [Dep. Tr. 511] who participated in it, and what TWA did.

The Special Master: You may ask him the question if whether or not there was a decision made with regard to this Caravelle program in the period from 1952 through 1954.

Mr. Davis: May I point out, Mr. Special Master, that this witness is likely to address himself merely to the Caravelle program, if phrased that way, and the Caravelle was an aircraft of competitive potential with other type of aircraft.

What I am interested in at this point is the testimony of this witness as to the decision, if any was made, with respect to which type or category of aircraft, jet aircraft, they were interested in pursuing, or as he previously testified, what they did in order to develop some competition among manufacturers so as to have a choice.

The Special Master: I will consider the other types of planes after you get into this one, and get this buttoned up.

By Mr. Davis:

Q. Will you describe, then, Mr. Rummel, what decisions, if any, were made by the TWA management with respect to [Dep. Tr. 512] this offering by Sud?

A. I don't recall TWA management making any decision with respect to the Sud offering. I am speaking now of the decision with Sud that led to the consideration that airplanes be manufactured over here.

Q. Who was that discussed with? Was that discussed within TWA, and if so, by whom?

A. Not to any appreciable extent at all. It was discussed primarily between myself and Sud, and myself and Hughes, and then to the extent that Sud was able to talk to Hughes about it.

Q. What I don't understand is why TWA gave any consideration to the manufacture of aircraft at this period.

A. This was essentially a discussion between Hughes and myself, and just what may have been in Hughes' mind at that time I couldn't say. I don't think it would be correct to say that TWA gave any management consideration to the manufacture of aircraft as such. This possibility was explored by myself on behalf of Hughes.

Q. What conclusion, if any, did you reach as to the economics or desirability of acquiring some Caravelle jet aircraft as an addition to the TWA air fleet?

Mr. Barr: From the context, may I request Mr. Davis specify who he means by "you"?

[Dep. Tr. 513] The Special Master: Will you explain by that in which of your capacities you consider you were acting at that time?

The Witness: In a good many cases, Mr. Special Master, it seemed to me the interests were parallel. It would be hard to say to what extent representing TWA and Hughes. At that time I was a special agent of the Tool Company.

The Special Master: If you think you were acting on behalf of both, just so state.

The Witness: With respect to representation of what might fit the airline, I was reflecting TWA. With respect to the manufacture of airplanes, it was exploratory on behalf of Hughes, and I was not reflecting any views expressed to me by TWA management at all. In fact, this investigation was conducted in almost complete secrecy from TWA management.

• • • • •

[Dep. Tr. 531] *** Q. Mr. Rummel, before I enter into another area is there anything that you would like to say, explain or add to, with respect to the testimony that you have given us [Dep. Tr. 532] to date?

A. Yes, there is, Mr. Davis.

On further reflecting on the Caravelle situation, and recalling what was said yesterday, it seems to me that there might be some confusion as to the timing of the Caravelle demonstration here in the States.

You may recall I mentioned that we held on to a facility in Kansas City and that at Mr. Hughes' request I contacted Mr. Burgess. I also contacted some others in this regard. But this was during the Burgess regime, obviously, which was in 1957. As I recall it, you kept interrogating me about a competitive situation that existed more toward the beginning of the Caravelle exercise, 1952 to 1954, and then 1955, and I said I wasn't exactly sure when this trip was, but I

thought it was late in that period, and I just want to be clear, on further recollection I can establish that the Caravelle tour was in 1957. I think it was the first half of the year, but I am not sure of the exact dates even now.

Q. So that in 1957, and after orders had been placed with Boeing and Convair for jet equipment—

A. This is correct.

Q. (Continuing) —TWA was still giving active consideration to the possibility of the Caravelle program, is that [Dep. Tr. 533] the fact?

A. Well, the Caravelle sequence I mentioned yesterday with respect to exploring whether or not a construction program should be undertaken was primarily between Hughes and myself and the Sud Aviation people.

As I mentioned, Ray Hopper was involved. I don't know whether Ray had the background fully or not.

TWA was not a direct party to any extent I can recall to this exercise. I think it would be fair to say that some of us at TWA recognized the ultimate need for a smaller short-haul type jet at such time as we could move forward with such program. By "such program," I mean program to procure one way or the other short-haul jets.

Q. What is not clear to me from your last answer is what you were discussing with Mr. Burgess, then, with respect to facilities in Kansas City in 1957.

A. Well, only this, Mr. Davis: As I indicated yesterday, TWA was then moving from its Fairfax airport airplane and engine overhaul facility to a new facility, also in the vicinity of Kansas City. This made this facility at Fairfax available.

TWA was negotiating, as I recall it, through George Clay's office with Kansas City, Kansas, to release [Dep. Tr. 534] the facility back to the city. When Hughes and I dis-

cussed the possibility of manufacturing the Caravelle, the question of where this could be done arose, and Hughes suggested that we try to hold on to this facility until the question was resolved.

I contacted both Clay and Burgess. I did not explain to either of them the reason for it. I simply said there was a request to hold on to the facility for a while.

Q. Those facilities were subsequently disposed of?

A. Yes. After the Caravelle negotiation, that is, this particular negotiation, was concluded, and when nothing came of it, then I took it upon myself as being an obvious thing to go ahead and release the facility.

I do not recall specifically inquiring of Hughes at that time whether I should release it, but I did release it by simply advising Clay, as I recall it, that it was no longer needed.

There was one or two memos memorializing the request that it be retained and its release, as I recall it, but they were entirely non-denominational, insofar as the Caravelle or any other specific project was concerned.

Q. Do you recall approximately when it was that you [Dep. Tr. 535] released those facilities?

A. No, I don't know. I say, it was following this particular exercise.

Q. You can't give me a year—

A. Well, I guessed a few times on years yesterday. I can't be specific. Presumably, it would have been following this period. I know it was following the period, but I don't know exactly when it was.

Q. You understand that when I am asking you for a date I am not asking you for a specific day of the year, or even month of the year. A year, or part of the year, would be enough for me, and always subject to correction when

you confirm what the more exact date is. You understand that, don't you?

A. Yes. That was the nature of my comment this morning, to try to clear the air, because we were talking about a rather broad period of time yesterday, and while I did identify it with Burgess, it seemed to me there could be some confusion on the point.

Q. Who was Clay?

A. Mr. Clay was then our corporate secretary.

Q. Isn't it true, though, that in or about 1957 is when you arranged for this demonstration of the Caravelle?

A. Yes.

• • • • •

[Dep. Tr. 537] *** Q. Then, as I recall, the ship, that is, the Caravelle, went to Los Angeles for the specific purpose of giving Mr. Hughes an opportunity to either fly it or examine it or what have you, is that right?

A. It was flown to Los Angeles.

Q. For that purpose?

A. For that purpose.

Q. My question was whether it is a fact, therefore, that as late as 1957 TWA or you and Mr. Hughes were still giving active consideration to the possibility of procuring some Caravelles. Is that true or not?

A. Everything he said suggested complete seriousness on his part, and I certainly was serious, following through with what I was supposed to do as a result of my conversations with him.

• • • • •

[Dep. Tr. 619] *** Q. Let me ask you this. Are you familiar with the circumstances or decisions made in connection with the reduction of the number of 880s which

TWA was to acquire from 30 to 20 or 24, or some other figure?

A. I am not familiar with how the decision was made or who made it.

Q. But you are aware of the fact that that event did [Dep. Tr. 620] take place?

A. A reduction from 30 to 20?

Q. Yes.

A. Yes, I certainly am.

Q. When did that take place, do you recall?

A. It seemed to me to dance around—there were various numbers back and forth. As I recall it, TWA's understanding that it would get 20 was made during Thomas' regime. I don't remember exactly when, but that is my recollection. It was during his regime, and then did not from that time on change from 20.

Q. Did you or your group make any studies or evaluations as to the desirability of reducing the number of 880s from 30 to 20, in terms of TWA's need, the size of its fleet, the economic use of the aircraft?

A. My personal recommendation throughout was that TWA should have 30 airplanes. However, we did make a study showing what TWA could do with 20 when it was requested that we do that.

Q. Who requested you to do that?

A. I am just a little vague on that. I think we were advised that it was 20, and I think we then in our projections included 20.

Q. Did you have any discussions at any time—

[Dep. Tr. 621] Mr. Williams: Just a second.

A. That was all.

Q. Did you have any discussions at any time with Mr. Thomas or any other senior executive at TWA as to either Mr. Thomas' views—

A. Yes. I recall recommending to Mr. Thomas that we go for more than 20 airplanes.

Q. Do you recall what he said?

A. He seemed to favor 20.

Q. Can you tell us what transpired? What happened?

A. As I recall it, we were sitting in his office talking. I think at one such meeting Mr. Leslie was there. I believe Mr. Thomas expressed the view that he would rather have an airline somewhat underequipped rather than overequipped. Let me say I got the impression that 30 wasn't at that point even an admissible number somehow. I think my effort was to try to change a prior decision.

At least that is the impression I have now of what was taking place. I don't recall precisely what was said.

I think Leslie's view was pretty much the same as Mr. Thomas', although as I recall it, his view varied from time to time as to how many airplanes he thought TWA should have.

My own view was consistent. It was that we should have the 30. I still think we would have been better off as [Dep. Tr. 621A] an airline to have them. That's neither here nor there at the moment.

• • • • •

[Dep. Tr. 622] By Mr. Davis:

Q. Mr. Rummel, perhaps I can direct your attention to what I have in mind more effectively through this document. May I have this marked as a defendants' exhibit? Those are handwritten notes of Mr. Thomas supplied to us by his counsel in response to a subpoena.

(Handwritten notes of Mr. Thomas marked Defendants' Exhibit 155 for identification, as of this date.)

Q. Are you familiar with Mr. Thomas' handwriting?

A. Not particularly.

Q. I am not going to ask you to authenticate this document. On page 2 of what has been marked as Defendants' Exhibit 155, the following appears:

"When Dillon, Read started to work on a permanent financing plan, Mr. Hughes sent word that 25 Boeing 707's and 20 Convair 880s would be made available to TWA, and the financing should be predicated on that basis. This reduction followed TWA's management's recommendation, and was perfectly acceptable."

My question to you, Mr. Rummel, is are you familiar with TWA's management recommendation to the effect that the Convair 880 program, so far as TWA was concerned, should be reduced from 30 to 20?

Mr. Barr: Could I have that question read?

[Dep. Tr. 623] (The question was read.)

Mr. Barr: I object to the form of the question.

The Special Master: Why?

Mr. Barr: Because "from 30 to 20 of the management's decision" referred to reduction.

Mr. Davis: The witness testified his recommendation was 30, and was still his recommendation.

Mr. Barr: That is not the management decision referred to in that memorandum.

By Mr. Davis:

Q. For the reduction of the 880 program to 20 from whatever it was prior thereto.

The Special Master: Is there any objection in that form.

Mr. Barr: No, sir.

The Special Master: You may answer it.

A. The first recollection that I have, Mr. Davis, of No. 20 is hearing it from Leonard Schwartz in a phone call. As I recall it, Leonard was in New York, and I was in Kansas City.

Q. I am trying to refer you to the recommendation of TWA's management. I am asking you if you are familiar with the recommendation of TWA's management, either to [Dep. Tr. 624] Mr. Thomas or to Mr. Hughes or to anyone, to reduce the procurement of 880s downward to 20 aircraft.

A. I don't recall ever having participated in that kind of a recommendation.

Q. Let me then read to you the paragraph on that same page 2, of Defendants' Exhibit 155, which reads as follows:

"The commitments of the HTC for jet aircraft at this time was for 33 Boeing 707's, and 30 Convair 880s. I had stated several times that I thought the airlines had overbought on jets, and recommended that the HTC cut back on some of those orders if they could. This would make it possible to start jet operations with a good basic jet fleet, and then after a year or so operating record and appraisal of the market know what additional jet planes were needed and the type that best suited to keep TWA in the forefront of the industry."

Mr. Barr: Before you ask the question, Mr. Davis, I don't have this before me, but for the record could you state what the date these notes of Thomas bear?

Mr. Davis: Yes. They are dated March 1960, I believe. That is my information. It does not appear on the face of this particular exhibit, Mr. Barr, what the date of these handwritten notes were. [Dep. Tr. 625] My information is from the balance of the

material furnished to us, and I believe to you and counsel for TWA by Mr. Thomas, that they were in March 1960. Page 7 of that exhibit refers to the morning of March 21st at 10:00 a.m. On page 4 there is a sentence which reads:

"The 2nd of December, 1959, and sufficient planes after January 1, 1960, to commence service in March 1960."

In other words, I think that you have to read the document itself and the events which were taking place to satisfy yourself that the date of these handwritten notes relate to a period in March 1960.

Mr. Barr: Thank you.

By Mr. Davis:

Q. My question to you, Mr. Rummel, is whether or not you are familiar with or ever heard of those views being expressed, either by Mr. Thomas or other senior officers at TWA?

A. Yes, I recall Mr. Thomas expressing the view at one time that if we obtained relatively few Boeings and Convairs, that in his view we would be in somewhat better shape, or maybe in a better position, if you like, to procure succeeding models that might be superior to those [Dep. Tr. 626] that were then being offered. However, this was long, long after the phone conversation I referred to a moment ago with Mr. Schwartz.

I recall, I think, that this took place with Thomas some time during 1960. I don't recall exactly when. I think at the same meeting he expressed the view that he personally thought the industry had overbought. I remember arguing with him some on that.

I believe Mr. Fellows was present at the meeting, and argued against that idea too.

I recall Thomas having commented pretty much as I understood you to read this, but this was quite late in the game, and long after the Schwartz conversation.

Q. Is that your full and complete recollection relating to that point of view? Did any other senior officers at TWA express comparable views?

A. I think Leslie did. I don't know that he expressed comparable views as to the reasons for his views, but I think he did express a view that 20 was enough.

Q. Do you recall views being expressed, either by Mr. Thomas or any other senior officer at TWA to the effect that it would be desirable not to over-commit TWA for a jet fleet until it could be ascertained useful and profitable, they could be operated, what improvements might be [Dep. Tr. 627] made, and subsequent models of jet aircraft, until after more experience had been gained as to their operation, or words to that effect—I mean thoughts to that effect?

A. I don't think any of us wanted to over-commit. It was a question of how we viewed over-commitment. For example, I recall Mr. Cocke taking quite the opposite views, as I recall it at least, he wanted 30, but I believe that both Mr. Thomas and Mr. Leslie did on occasion express the view that was stated.

Q. Do you recall the matter being seriously discussed at committee meetings or board meetings?

A. Not as to a decision process at all. As I say, I was advised that it would be 20.

* * * * *

[Dep. Tr. 656] * * * Q. You considered the 990 type of aircraft so different from 880-M?

The 880-M, by the way, is just an 880 with some modifications to it? What is the difference between the 880-M and the 880?

A. There were several 880s. There was a group of 880-Ms initially manufactured to Capital Airlines specifications, as I recall. Additionally, at one point we received a proposal from Convair for the manufacture of new 880-Ms, built substantially in compliance with the TWA 880 specifications, or Hughes Tool 880 specifications, if you like.

[Dep. Tr. 657] The salient or, I would say, significant differences that I recall between the 880-M and the 880 as types, setting aside for the moment detail differences that would come out of a direct comparison of specifications, but looking at only those items that are the same, the 880-Ms had leading edge devices on the wing which were slots and slats to improve the airflow during takeoff primarily and to some extent the smooth airflow during some of the approach conditions. As I recall it now, Convair had an airflow problem at one point, and they thought this might help it.

The 880-M I believe was offered with more fuel capacity and a somewhat higher rated engine in terms of power output, but I don't recall that difference being other than a transient one. That is, the 880 would finally catch up with it through engine modifications.

Essentially, but broadly speaking, the 880-M was closer as a type by far to the 880 than the 990 was.

Q. Were those differences that you have described sufficient to require a classification of that aircraft as a different type of aircraft for fleet operations? In other words, from the point of view of TWA, and the problems of operating an air fleet, are those differences which you have described such that you would categorize an 880-M as a different type of aircraft than an 880?

[Dep. Tr. 658] Mr. Williams: He didn't do so.

Mr. Davis: Please. Yes, he has, in effect, because earlier I asked him to identify the three types of aircraft in the fleet, and he said "What we were talking about was the 990, the 880-M and the Caravelle," and I am asking him now to explain what the difference is between the 880-M and the 880, which they already had in their fleet.

Mr. Williams: All right.

Mr. Davis: You will have an opportunity to cross examine him.

Mr. William: I only want the question to be clear. I have to understand it too.

Q. Will you try to answer my question, Mr. Rummel, so that I can understand the nature of the problem of an air-carrier when procuring additional aircraft and integrating additional aircraft into an existing fleet?

A. When we considered the 880-Ms that had been procured for Capital we had to recognize the differences in configuration between that airplane and the 880s that we were receiving, and by configuration I mean in this case the differences in systems, in cockpits, the items that I discussed heretofore. We tried to estimate the cost of standardizing those things which it made sense to standardize economically.

[Dep. Tr. 659] As I recall it, we looked at the estimate of the added cost of training pilots on the basis that we would not standardize the airplanes to see how that would come out. We looked at the costs of standardization and the cost of pilot training if the airplanes were standardized, and we compared the two. We took the added training costs over whatever it was, probably a five year period, and so on.

In other words, we tried to determine by analysis and estimating techniques the cost of adding this additional group of airplanes.

Now, I use the word "type" loosely, I guess, Mr. Davis. I think an 880-M is a different type because this designated a different type, and in this case it in fact was quite different from the 880s that we had.

The figure that comes to mind, and I can't be certain of this, was that the total estimated cost for mods, and it was a loose estimate in some respects, I think was a little less than $200,000 an airplane, but I am not completely sure of that. But this would indicate to some extent the differences, but in arriving at that we didn't totally standardize. We tried to standardize things which had economic or cost significance, or safety implications, so to speak.

Since the 880-Ms were different from what we had, and since they were being considered as to advisability of [Dep. Tr. 660] procurement, we viewed this as an additional type.

I am repeating somewhat, but we set out to determine how well it could be integrated with what we had, or if not, then what the added cost would be.

I might say we also considered the effects—I am quite sure now, I don't recall specifically, but it would have been certainly natural to consider the revenue loss from time out of service and items of that character.

• • • • •

[Dep. Tr. 874] • • • Q. Do you recall whether or not you discussed this report or study with Mr. Hughes?

A. No, I do not. We certainly discussed—I certainly discussed these airplanes with Hughes from time to time. Whether I specifically discussed this study, I sure couldn't say this many years afterward.

Q. Do you recall whether or not there was any discussion within the TWA management group or with top management at TWA relating to the subject matter of these recommendations?

A. No, I don't recall any. I remember making it a point to try to keep people like Mr. Collings, Mr. Damon, advised of pertinent equipment developments, that is, to try to place the airplanes in perspective as we saw them from time to time.

It certainly is not at all impossible that this report was issued, but I don't—I simply don't recall.

Normally reports that were issued were either issued in draft, but were normally fully approved reports.

Q. That is only what TWA has furnished to us, Mr. [Dep Tr. 875] Rummel. I don't know.

Let me ask you, normally, such a report, when prepared, would it be submitted to Mr. Hughes, or would it be submitted to the top management people at TWA?

A. Well, the report would not be submitted to Mr. Hughes as such. Mr. Hughes had some rather strict instructions about submitting anything of printed material or in writing or anything of record to him, and it was on only extremely rare exceptions that it was broken.

The standing rule was not to send things to Mr. Hughes but rather to discuss it on occasion with him.

Q. So you would ordinarily discuss with Mr. Hughes the result of reports or studies undertaken by your department?

A. From time to time we did. We tried to be responsive to his questions.

Occasionally we would undertake special studies in order to answer his questions.

This could have been such a study, Mr. Davis, but I simply don't remember if it was or not.

Q. I appreciate that. I am only trying to establish the fact that such a report would have been prepared in this

form for consideration or use by TWA's management group.

[Dep. Tr. 876] A. Well, reports are written in a good many different forms as such. We didn't have, as I recall, a particularly standard form.

The reports were more or less tailored to what we were—what the occasion called for.

Q. Look at Defendants' Exhibit 157. You see the paragraph beginning, "In discussion, and based on a more normal traffic growth and assuming TWA continues with its plan to acquire 30 Convair . . .," and let's stop at that point.

At that time, namely, about August 1956, Mr. Rourke was aware of a plan of TWA to acquire thirty Convair 880s?

A. Well, that is the way he would have put it in any event, Mr. Davis. We never had the practice of including Mr. Hughes' name in our internal documents.

* * * * *

[Dep. Tr. 890] * * * Mr. Hughes had a very keen interest in the design characteristics, features of the airplane, the estimates of availability, and, as I said, participated personally in a number of these meetings.

The meetings I am referring to were held intermittently and irregularly. It was when Convair had something to present, then a meeting would be held. They were held in all parts of the country, and this certainly is not exact, but I suppose not oftener than once every four months. But it wasn't on any specific schedule. But that was the order of the activity with respect to the review activity.

I received a call or calls from Hughes, and here I have to deviate some from the Convair situation in order to

cover the Convair situation, during 1954, I don't remember the exact time of the year, but I think during the summer, possibly toward the fall, with respect to the 1449-A, which was a turbo-propeller airplane that he had been discussing with Lockheed.

We got into a negotiation with Lockheed on that [Dep. Tr. 891] airplane, and it was finally ordered by Hughes. As I remember, it was December 23, 1954. I am quite sure, at least, it was December 23rd.

Well, this particular project ran into difficulties. This was one I mentioned earlier that I had recommended against and the TWA preference at the time, as I had understood it, was for the DC-7C. The reason I was opposed to it, and tried to prevail with Mr. Hughes, was that I felt that it was an uneconomical airplane.

Since I am really trying to get back to the Convair situation, let me summarize this, and if you want me to, I can try to fill this in later on.

In any event, Pratt & Whitney withdrew the turbo-prop engine, and Lockheed was prevailed upon to put in a Wright engine or decided to put in a Wright engine. It became the 1549-A, and then later became the 1649-A, and that airplane was delivered in quantity to TWA during the Burgess regime in 1957.

It was during the—that negotiation, that is, as I recall it, the resurrection, if you like, of the 1649-A out of the 1449-A debris, that work began in earnest at Convair on the development of the model 18. I recall this because I was on the West Coast at the time, and was asked to conduct the two negotiations simultaneously, to keep [Dep. Tr. 892] the Lockheed negotiation going, and to undertake negotiation with Convair for the model 18.

I might say, the model 18 was not the model 880. It was a larger predecessor generally similar to what Boeing finally built, but at that time believed to be somewhat better than either Boeing or Douglas' offering, and to explain that I perhaps should say that my recollection is that at that time Boeing and Douglas were both offering domestic jets, and had not taken the step to international jets, where we were seeking, Hughes and I, to get an airplane that could serve both areas. I think I viewed all these efforts as representing TWA's best interest, and I certainly wasn't aware of any conflicts of interest.

The model 18 development spanned quite a period of time, during which specifications and contracts were developed. I reported to Hughes from time to time. I was cautioned not to discuss this with TWA management on numbers of occasions.

Mr. Hughes, however, knew and understood that I was bringing in TWA experts from time to time to aid and assist in specific areas.

Now, I am not saying that each and every person was cleared. I think he had that confidence in me. [Dep. Tr. 893] He simply knew that I was doing this because I would ask if this would be quite all right, and he said on a limited basis, certainly, but keep the group small, as I recall it.

Hughes had numbers of discussions with Convair or let me say Convair reported he had had such discussions and while I can't be specific, I am quite sure that Mr. Hughes mentioned it a time or two.

• • • • •

[Dep. Tr. 896] Mr. Hughes showed fairly keen interest over the phone, as I recall it, in the double-deck airplane. I at the moment do not recall Mr. Hughes seeing

the actual layout, but there could have been a meeting along this line.

This got to the point where Convair did become interested, and the project, as far as I was able to determine, had the support of the San Diego management, at least it had that support to the extent that it presented the plan for building this airplane to the General [Dep. Tr. 897] Dynamics board, or at least it was so reported to me.

The board, as I indicated earlier, turned it down. The only explanation that I recall is that it was simply too much to undertake, and also that to undertake a big jet at that time, with Boeing and Douglas moving forward, and having already captured orders, did not make too much sense, because while all this was going on at San Diego, the delivery positions toward the end of this operation were in fact being snapped up by our competition at Boeing and Douglas.

Now, it was during part of this that we—I say "we"; it was a discussion with Hughes now that I am referring to—gave consideration to the need for TWA having jet aircraft, at least contemporaneously with our competition, and preferably before. We had not been unmindful of the time it would take to develop airplanes, but the emphasis was on developing these newer airplanes, and it became very clear that serious consideration should be given to procuring Boeings or Douglases.

Now, Boeing had a distinct advantage, in my view, in two areas. One was the background of experience in building big jets, and the other was that they had a significant lead over Douglas in initial production.

Negotiations were undertaken with respect to [Dep. Tr. 898] holding delivery positions, and some change, as I recall it now, in specifications and preliminary contracts with

Boeing in this period, and this finally led up to procurement of the eight, I think it rather quickly became nine 131s.

Hughes and I had discussed this in light of a hedge. This would get us in the business, permit us to—that is, "us," TWA—to at least have a toehold until this bigger, better airplane could be produced, if ever. I remember we also discussed ultimate use of the 131s along the line, well, maybe it could become a sky coach airplane.

[Dep. Tr. 899] Now, during this period I was trying to influence Hughes to go the Boeing route, particularly the latter part of the period, because while I was highly interested in TWA having the best airplanes that could be built, it became very obvious that we would have to move.

Otherwise a significant gap in time would exist between when our competitors had airplanes and we would. It was also during this period of time, not as a constant thing, but it was interwoven, during this period of time that attention was given to a development by AVRO. This was a large, as I remember it now, six engine airplane designed for low supersonic speed cruising.

By that I mean it was a fairly slow supersonic airplane that would cruise, I think, between 900 and 1200. I don't recall the exact figure. Miles an hour that is.

It was during this period of the model 18, model 19, and model 20 at Convair, after the General Dynamics board pulled the plug, so to speak, activity at Convair, on my part, at least, pretty much ceased.

We went to work more in earnest with Boeing, reviewing specifications, and I will get to the Boeing story, there were numbers of discussions and a few meetings in Beverly Hills, a couple in San Diego and so on, I received a call from Mr. Hughes advising of the development of the 880 [Dep. Tr. 900] proposal by Convair. He asked that I review it. He

described it briefly. He advised that Convair would be getting in touch with me.

The thing that sticks in my mind here that recalls this is that I had another commitment which prevented my seeing the Convair people right at that time, but it turned out that I saw them anyway, but under conditions somewhat different than had been planned. They chased me from Kansas City to Seattle, and we met at Seattle, and I believe this is the first time that the 880 was reviewed by myself or Rourke.

It was considerably smaller than the airplanes we had been working on. This was in the winter, I think, between 1955 and 1956, but I don't recall what month. I think fairly late in 1955.

We, as I recall it, were not particularly favorably impressed with the 880, and tended to favor, from TWA's point of view, placing a larger Boeing order. However, we continued to work with Convair.

• • • • •

[Dep. Tr. 959] • • • Q. I am confused only in this respect, Mr. Rummel. Looking at Exhibit E, you see "Assuming medium range operation of nine 120s in conjunction with the following fleets," so the eleven appears to be something in addition to the nine, and therefore my question still remains as to where did the eleven come from.

[Dep. Tr. 960] A. I couldn't say. I see what you mean all right, I think, but I couldn't say where the eleven come from. At one point, as I recall it, eleven were ordered by Hughes Tool. Now, whether this was being thought of as an order for eleven in addition to the nine, or whether the leading sentence was simply poorly constructed, I don't know, Mr. Davis, I just can't tell you that.

Q. Have you given us your total recollection as relating to the placement of an order for eighteen 331 Boeings on or about March 1956?

A. I have already touched on circumstances relating to the placement of the order of eighteen from time to time in prior testimony. I think I last said that the development of the contract in detail and the specification was to some extent conducted concurrently with the development of the contract and the spec for the 131s, and that the 331 order was actually placed by Hughes a month or two following the placement of the 131 order.

The 331 at that time was viewed as a more permanent type investment than the 131, and as I recall it, the order for the 331 was placed following the breakdown in negotiations at Convair for the models 18, 19 and 20.

However, at the moment I don't recall but I am quite sure that the project Mexico City, which was the [Dep. Tr. 961] AVRO, and the project Greenland were still active.

Now, the project Greenland may have become active after this. This was the project that I had referred to earlier, perhaps not by the code word, but as, to identify it, as the one that involved the filing in Washington with respect to—that is, before the CAB, as I recall it—with respect to Hughes obtaining permission to build airplanes for TWA.

What I am trying to pin down, though, in mind, and I guess I am doing a poor job here, is whether at the time the order for the eighteen airplanes was signed we might have abandoned the AVRO, but I don't think so. The reason I don't think so is that the order for the 300 engines bore a relationship to either the AVRO or an AVRO-like project.

As I recall it, the order for the engines was placed before we went firm on the 880. At the moment I can't recall whether it was after we placed the order for the—well, no,

I guess—well, I am not certain of my recollection, but it probably was after the order was placed for the 331s, but it might not have been.

I realize I may be being a bit confusing. I am trying to recall out loud probably what I ought to think through before I speak. Let me give you a reference that [Dep. Tr. 962] would pin this down more, and that is this, that the thing that initially brought about the placing of the order for engines with Pratt & Whitney was the fact that Pratt & Whitney had announced a price rise—as I recall it, it was 5 per cent—in engine price to the industry. This had been announced a number of months before it was effective.

The down payment required to be made for Pratt to accept the order was also, as I recall it, 5 per cent, or thereabouts.

Since engines were generally in short supply, at least during the initial period, or it was thought they would be, because everybody, Douglas, Lockheed—excuse me—Douglas and Boeing, was clammoring for engines, and engine availability, as I recall it, was pacing the availability of the airplanes, since they were in short supply, it occurred to me that it would be a good move to order our spares and save the 5 per cent, because if we didn't order we would lose 5 per cent, but the worst that could happen, if we ordered and then something occurred so we didn't fulfill the obligation, would be to lose the 5 per cent down payment.

On the other hand, they were in short supply, and it seemed to me that it wasn't a bad investment.

The date would help bring this in focus. This is [Dep. Tr. 963] a date which I am sure could be found somewhere, the price rise, the effective date of the price rise.

Now, I went to Hughes and saw him personally at this time. As I recall it, I had mentioned this engine problem, the proposition, on the phone earlier. I had occasion to see

him—I think it was in the Beverly Hills Hotel—along with a chap from AVRO, and I took the opportunity to point out that we had a deadline on the engines, that if we were going to move, and he wanted to save this 5 per cent, and I thought he should, that we—he should be moving, and he at that point authorized me to negotiate with Bill Gwinn.

As I recall it, the instructions weren't specifically limited to talking to Bill, but dealing with the top people at Pratt & Whitney. But the idea was to obtain assurances of delivery positions, as I recall it, without actually ordering, and to obtain premium delivery positions.

Now, at this same time we were—well, this would help fix the date—as I recall it, we were still jockeying for delivery positions to some extent with Boeing, and certainly it was a factor in the AVRO consideration, so that we—in any event, let me say, Hughes wanted the earliest possible positions that he could get.

I undertook a telephone negotiation with Gwinn, [Dep. Tr. 963A] asking that, in effect, that positions be preserved, but that we put off the day of formal commitment. [Dep. Tr. 964] In the end, and it was some time later, a substantial order for spare engines was placed for the JT4, far in excess of the 60 that represented our estimate for the number that would be required to go with a fleet of eighteen, and for I believe 40, if I recall correctly, JT3s.

I might say the reasonableness of these numbers against the size of the fleet went like this, that if TWA obtained all of the airplanes, then it would need these engines. If another airline with somewhat comparable routes obtained the airplanes—I am not suggesting that this was a specific plan; I am just saying this was the reasonableness of it—that in that event, then it would probably require the same number of engines.

Now, if the fleet somehow became split between airlines, and were operated as two groups, or three or four, then reasonably the number of spare engines that would be required, I must say all things are not equal, but as a reasonable thing the total number of spares in that event that would be required would be greater than that which would be required for one airline and one fleet. But in any event the orders were finally placed.

• • • • •

[Dep. Tr. 1129] • • • Q. These are the only notes of yours which have been furnished to us, Mr. Rummel, and I would like to put to you a question I put to you earlier today, and that is, is it your recollection that these notes reflected by Defendants' Exhibit 160 are the only notes of yours of which you are [Dep. Tr. 1130] aware, which relate to your activities at TWA, involving aircraft acquisitions or procurement?

Mr. Williams: Now in existence?

By Mr. Davis:

Q. Now in existence.

A. I don't know what is in existence. All I know is that we tried to turn over every bit of information that we had, and I assume that the files were thoroughly combed by all concerned. There is no doubt as we went through the years I wrote more than this.

Q. Do you have any recollection of destroying any notes throughout the years, or cleaning out the files?

A. Not particularly. I am quite sure that some of the dead deals, rather than have things laying around with Hughes' name on, I may well have thrown things away. I don't recall any specific instances of that, but probably I did in some cases.

Q. I am interested in the fact that the notes, the only notes we have, are the ones which relate to the Convair and 880, and I am wondering whether it was your practice to maintain comparable notes with respect to other procurement activities or negotiations.

A. Hughes had the long-standing, and quite often repeated instructions not to make notes, not to have records [Dep. Tr. 1131] of any kind of what went on between us or between he and TWA.

Most of his deals were considerations or prospective undertakings, and were cloaked in various degrees of secrecy. This became almost a standard practice, I would say.

A lot of the notes that I made I am sure didn't bear Hughes' name at all, and sometimes they were of such a nature, and deliberately so, that others on reading them would not have the vaguest idea of what they contained, but they meant something to me.

• • • • •

[Dep. Tr. 1342] • • • Q. I didn't mean to interrupt you, I am interested in how that meeting came about, and—

A. It was called by Mr. Hughes.

Q. This was on the subject of the performance characteristics of the 1449A?

A. That's my recollection, yes.

Q. Please proceed.

A. Before all this got under way, that is, before the negotiation became advanced, we had analyzed the DC-7C and other airplanes that were being considered, I believe including turbo-prop possibilities of the Constellation, and had recommended that TWA procure the [Dep. Tr. 1343] DC-7C. The DC-7C was a DC-7 with more wing and more fuel capacity. It may have had a fuselage one seat row

longer than the DC-7, but I don't recall that at the moment. This recommendation had been concurred in by Mr. Damon and Mr. Collings, and I am quite sure had been passed along to Mr. Hughes.

It may have been this recommendation that sparked the negotiation at Lockheed, but I don't recall specifically that that in fact was the case.

But in any event, the Lockheed negotiation started about this time, or shortly thereafter, for the 1449A.

I recall on numbers of occasions advising Mr. Hughes that the 1449A, in my opinion, was uneconomical, and that it was a poor risk, that I didn't feel we had reasonable technical assurance that either the engine or the airplane, but my main worry was the engine, could be reasonably expected to produce the fuel consumption characteristics that Pratt & Whitney was claiming for it and that Lockheed was relying on.

At one point we looked at wing tip engines on the 1449A and found that with normal operating practices, as I recall it now, the airplane could only fly non-stop about halfway across the continent. That was with the tip engines on.

[Dep. Tr. 1344] I simply point that out to avoid confusion. We also, as I recall it now, looked at operating these tip engines part way across to get a speed boost and cutting them off and letting them fly along for the ride. We looked at all sorts of possibilities.

Mr. Hughes seemed determined to move forward with the 1449A. At one point I recall risking his anger by raising the question as to whether or not he wanted a vehicle with which TWA could make money. I realized there could be other considerations.

He indicated that he certainly did want airplanes that TWA could make money with, and that he recognized there

was a difference of opinion between TWA and Lockheed on the merits of the airplane. I tried to dissuade him from moving forward with the 1449 because I did not believe it to be a worthwhile venture for TWA, and certainly not in comparison with the DC-7C.

[Dep. Tr. 1345] There was an additional meeting, as I recall, at Lockheed attended by Mr. Damon, I think Mr. Collings, myself and Mr. Rourke. As I recall it, Bob Gross, Kelly Johnson, possibly Courtlandt Cross, Leonard Schwartz, and I think a few others, were there for Lockheed.

This was arranged before by Mr. Hughes in order for Lockheed to convince TWA that the airplane and one that they should be fully interested in, and possibly additionally to resolve some of the technical positions that we were apart on, but I don't remember that particular aspect being front and center at that time.

The 1649—I am sorry—the 1449A contract was signed by Hughes Tool—well, let me say, I didn't see anybody sign it, but it was wrapped up for signing. I guess I am not sure whether it was signed in California or Houston, but at least the signatures authorized on December 23, 1954, I think. I think it was December 23, 1954.

The meeting on December 23rd took place in the evening at the Beverly Hills Hotel. I recall that Raymond Cook, Mickey West, myself, I believe Harry L. West, were present, and I believe—well, I am certain the principal Lockheed representative was Leonard Schwartz, and I am sure there were a few others there.

[Dep. Tr. 1346] I believe one was Kirk Yost, but I am not absolutely positive. We were in a largish green colored room downstairs.

It was some sort of a dining room. I forget what it was called.

Lockheed had the long paneled room on the other side of the building downstairs, and Schwartz was running from that meeting back and forth, conferring on various points with his people and then reporting them to Mr. Cook, who had the lead, as I observed it, in closing the deal.

I continued to try to prevail with respect to my views on the worthwhile nature of the airplane throughout the negotiation, and continued to do so that evening. As I recall it, at just about every opportunity and every free moment I tried to convince Mr. Cook, to some extent Mickey West—I say "some extent" because he was fairly new; I think that's the only time I saw him in relation to this particular deal—and I recall that at one point toward the end of the evening Mr. Cook was talking to Mr. Hughes, presumably either about the deal or the effect of the deal on the Hughes Tool cash position, or other considerations with which I was not directly involved or concerned, but Ray, knowing my long-standing feeling, [Dep. Tr. 1347] urged Mr. Hughes talk to me, he had asked that I stand by, and after this was said several times through the course of the conversation, at the close of the conversation Mr. Hughes did talk to me, and I remember advising that I felt it was a poor bet—I don't recall my exact words—that it was an airplane which I felt was exceedingly risky and one which, from all that I could see, even at that stage, would simply be an uneconomical undertaking.

As I recall it, Mr. Hughes indicated that he felt that Lockheed would do a pretty good job, that he felt that Lockheed would do a better job than the papers indicated, and something to the effect that if they did not they would certainly lose a long-standing customer, or something to this effect.

I think he mentioned that he had an agreement with Lockheed—I don't recall what it was—either on the weight of the airplane, or some such thing, that he felt would improve the outlook.

I assume this was verbal. At least, I never saw it later, and it didn't come up again.

I did my best at that time to make it clear, at least as far as I was concerned, as a professional opinion, if you like, to Mr. Hughes that this was not the way to go, either for TWA or himself. However, the papers were [Dep. Tr. 1348] signed.

• • • • •

[Dep. Tr. 1443] • • • By Mr. Davis:

Q. The part that I particularly want to call to your attention, you note Mr. Tillinghast was referring to what transpired at a meeting of the executive committee of TWA, in the course of which he referred to discussion relating to the 1649A situation.

At page 6550, Mr. Tillinghast says:

> "My recollection, Mr. Davis, is that I raised the question of whether there might be a specific complaint related to the 1649As based on discussions I had had with Mr. Rummel, during the course of which he had told me that he had been very, very much against the 1649; that he had thought the ship would turn out to be a poor one and an uneconomic one to operate, and that this had become true, and that he could never understand how Mr. Hughes had bought the 1649s."

Then he goes on to say:

> "As I recall the meeting . . ." the meeting of the executive committee ". . . both Mr. Leslie and Mr.

Cocke said that we had better not complain about that because at least part of the management of TWA had been very anxious to get the 1649s, and that this was far [Dep. Tr. 1444] from a one-sided situation."

Now, I understand your testimony about your feelings from your point of view about the 1649A, whether it developed at the time of negotiating with Lockheed or disappointment that developed subsequently.

What I am interested in now, Mr. Rummel, is your identifying and describing that part of management of TWA which may have reflected a desire to obtain 1649s, if any, or if you know of any.

A. Yes. Well, as I said the other day, the company management felt that it needed additional aircraft and that it should have an additional aircraft to satisfy traffic needs. The preference as to type of aircraft was that we wanted the DC-7C. I remember specifically Damon and Collings and myself feeling strongly that way.

I think Damon and Collings accepted the recommendation that I had put forth to them along that line.

I believe that Mr. Cocke also felt that way, but I don't recall that as clearly as I do with respect to Damon and Collings. I don't remember what Leslie's attitude was, if he had one on that particular item.

We evaluated the DC-7C in relation to the Lockheed airplanes that existed, and as negotiations continued, through Hughes' efforts, as I recall it, the 1449A was [Dep. Tr. 1445] finally brought out as a proposal, and his negotiations concentrated on that.

I already explained what happened to the 1449A, how it became, as a proposal, at least, the 1549, and finally the 1649A.

By the time the 1649A rolled around, which was, or came into being, let's say, which I think was in the spring of 1955, thereabouts, the delivery potentials that we had contemplated as being available for the DC-7C were not there.

Douglas had been quite successful in selling that version to numbers of airlines. At that time there was a delivery advantage of going to the 1649A route.

As I recall it, it was the feeling on the part of a number of people, and I suspect this included Mr. Cocke, I am not certain about the others, but they definitely wanted to move forward with the 1649A in order to have airplanes for the summer season of nineteen—well, so they would have airplanes as soon as possible and before the DC-7Cs.

I don't remember what the original delivery schedule was at the moment on the 1649A. I think they were finally late in being delivered.

Just how this word got to Hughes, if it did, at that [Dep. Tr. 1446] point, I don't know. But that would be all that I recall with respect to anyone wanting the 1649A. It was simply, as I recall it now, there wasn't much other choice if we wanted airplanes; it then at that point had to be 1649As or miss a season's airplanes.

• • • • •

Excerpts from Transcript of Deposition of Charles C. Tillinghast

[Docs. 210-222]

[Dep. Tr. 4427] [Mr. Sonnett] • • •

Now, as to where Mr. Hughes may now be, the record is replete with statements by Mr. Davis, by [Dep. Tr. 4428] Mr. Cook, and by Mr. Holliday—I have the record references here—statements made in this proceeding, in which Messrs. Davis, Cook and Holliday disclaim any knowledge as to where Mr. Hughes is.

In the record before the Special Master it is established that there is at least one address to which mail is customarily sent by people who are trying to reach Mr. Hughes, and that is 7000 Romaine Street, the communications center.

The Special Master will recall that at one time I wrote Mr. Hughes a letter there asking whether he would be prepared to accept a subpoena.

I also sent copies of that letter to the Beverly Hills Hotel and to the Hughes Tool Company in Houston, Texas. I had a reply from Nadine Henley saying that she picked up the mail at Beverly Hills, and she wasn't currently in touch with Mr. Hughes, but would bring the matter to his attention when she heard from him.

[Dep. Tr. 4429] The Master will recall that pursuant to his direction Mr. Davis wrote to Mr. Hughes, in which a certified copy of the order for production of documents was forwarded. That letter went to 7000 Romaine Street, but so far as I know, Mr. Davis has not yet informed us whether he had an answer to that letter. If he has it, I would like to see it. It should be made a part of the record.

Finally, there is now evidence that Mr. Hughes himself in financial transactions has used and designated 7000 Romaine Street as his mailing address. He did this in a promissory note when he borrowed $11 million from the Bank of America, according to documents recently produced.

So that our problem is not an easy one, and it seems to be a problem which Mr. Davis and Mr. Cook and Mr. Holliday have had as well as counsel for TWA. With that in mind, we constructed these interrogatories so as to ascertain under oath the information that officers, directors or attorneys of Toolco may have concerning where Mr. Hughes was in the 30 days preceding the expected date of the answer to the interrogatories, where he was or will [Dep. Tr. 4430] be on the date of the answer, and where he is expected to be, so far as they know, in the period up to July 1st.

* * * * *

[Dep. Tr. 4432] * * * The disclosure of information as to where Mr. Hughes can be served therefore is an essential prerequisite to our carrying out that program; and I would therefore urge that the Master direct that the answers to these interrogatories be made very promptly, the interrogatories themselves having been served on May 2nd.

I think that completes what I have to say, unless you have some questions, Mr. Rankin.

The Special Master: Any other party other than the Tool Company care to comment on these motions for interrogatories?

Mr. Davis?

Mr. Davis: It is quite apparent, Mr. Special Master, that counsel for TWA is still trying in one way or another to change or upset the priority for the taking of depositions which has been established, may I say repeatedly, by the Court.

• • • • •

[Dep. Tr. 4437] • • • I am quite conscious of the fact that the Special Master did rule that TWA might serve interrogatories upon the Tool Company relating to the location of Mr. Hughes. Now we must examine what those interrogatories are and whether or not they are objectionable.

I have tried to follow the amendments and [Dep. Tr. 4438] correction that Mr. Sonnett expressed today.

Before I go to that, let me add one other factor. Mr. Sonnett has made a rather full statement of alleged difficulties that he has encountered. I don't question anything that Mr. Sonnett has said. But those seem to me again statements of fact, and it seems to me statements of fact which are not before us, or if they are before us, I would like to have them in some form which I may be permitted to address myself to.

I don't believe it is relevant, really, to the issue. The issue is, and I submit primarily, whether or not or the extent to which TWA at this time is to be permitted to interfere with the Tool Company in its efforts to conduct its discovery proceedings in an orderly fashion, and permit at the same time what amounts to a simultaneous or contemporaneous discovery proceeding conducted on the part of TWA directed to the Tool Company.

I respectfully submit that from the decisions that we have had to date that is not what the rules contemplate, nor what is proper or orderly.

Mr. Sonnett refers to the fact that the [Dep. Tr. 4439] rules, new rules, will come into effect in July. So be it.

The Special Master: Mr. Davis, before you leave that point, I wish you would tell me anything you know about the law that supports your position that interrogatories cannot be developed and ordered when a priority with regard to discovery in the taking of depositions is granted by the Court.

I found no decisions to that effect. In fact, I found cases directly to the contrary, that interrogatories could be addressed to the parties at the same time that there was a priority established concerning the taking of depositions.

Mr. Davis: Mr. Special Master, as you may recall, I was engaged in Washington before the CAB at the time that this matter was argued here, and it is my understanding of the cases, but I may be wrong, but it is my understanding of the cases that interrogatories, written interrogatories, are a form of discovery procedure, and the Courts have so recognized it, and it is also my understanding that in this district, at least, without Court permission and a special showing to justify the serving of interrogatories, it is regarded as an interference [Dep. Tr. 4440] with the discovery proceeding which a party may be engaged in, and the Courts have held, absent permission by the Court, that an opposing party may not independently engage in discovery proceedings addressed to the person who is actually

engaged in discovery proceedings, and I believe there is authority to that effect.

The Special Master: If you can find any—

Mr. Davis: I would have thought it would have been submitted to you for consideration in connection with the memoranda that was submitted in opposition—

The Special Master: If you can find any such authority, I will give you until Friday morning at 10 o'clock. The cases I found were to the effect that this was under an entirely different rule from the provisions as to discovery otherwise, and also in regard to taking depositions, and that it was independent and could be proceeded with at the same time.

I think that is a very important legal proposition as far as your position is concerned, and I wanted to inquire, without interrupting you any more than necessary, as to what support you might have for the position.

[Dep. Tr. 4441] Mr. Davis: I am not in a position to refer you to a particular case, Mr. Rankin.

It was or it has been my understanding, it has been my understanding, that a person engaged in oral depositions was not thereby precluded from also serving written interrogatories.

In other words, the mere fact that a party was engaged in the taking of oral deposition did not preclude him from also using other means of discovery proceedings.

But I am referring to my understanding of the practice, which I believe is supported by decisions—I may be wrong as to that, but it certainly has been

my understanding—that while a party is engaged in discovery proceedings the other may not, during that period, commence its discoveries, be it by oral depositions or notice of the taking of oral depositions or interrogatories, without permission of the Court.

I may not be able to cite a case squarely in point on that. Certainly it seems to me that the reasoning underlying the matter would lead to that conclusion, even if we are to assume that this is a novel question.

* * * * *

[Dep. Tr. 4453] * * * The Special Master: Mr. Davis, as I indicated to you before, the reason that I was willing to consider an application for the right to present such interrogatories was only so that when we reached the time that they were entitled to depose Mr. Hughes in the development of their case they wouldn't then have to try to find him.

If you could give me some help on that problem so that we could be assured, and I don't mean just by your promises, because while I have complete confidence in you and your promise I won't let you be in a position where you promise for Mr. Hughes in this particular situation.

Mr. Hughes has a right to at least-at this time not allow himself to be served if he can avoid [Dep. Tr. 4454] it, and unless he put himself into such a position that I could rely upon it, representing the Court, insofar as being assured that we would have him with a service of the law so that he could be deposed at a certain time, then we have the problem

of whether or not we shall arrive at the time for his deposition and have to go through the spectacle of the Federal Court trying to get an important witness in this case to depose in order to develop the truth that is necessary to the trial of this case, and I don't intend to have a Federal Court put in that position if we can avoid it under the law.

I mean no reflection of any kind on you or counsel on your side in this matter, but I do think we have to face up to that problem, and that is the only reason that I would allow this much interference with your priority action, even though I don't think under the law, as I understand the cases, that interrogatories have been held to be an interference, depending on how far they go and other considerations that are in the discretion of the Court.

Nevertheless, for the limited purpose of making sure that when this witness is reached in proper order he will be available to develop whatever [Dep. Tr. 4455] he can contribute to the case, that is the reason that I am interested in what you have to say concerning that problem.

Mr. Davis: My comments on your objections, Mr. Rankin, are these:

I recognize and have no objection to the Court, through you, taking whatever steps may be necessary in order to insure the availability of whoever is a proper witness in this proceeding. But let us look at the facts in a realistic manner, if I may suggest it.

* * * * *

[Dep. Tr. 4456] * * * Mr. Hughes long ago, but following the decisions of the Court as to the priority

of the taking of deposition, was informed as to the likelihood as to when he would be likely to be needed.

Counsel before Judge Ryan, in seeking—I am referring to counsel for TWA—before Chief Judge Ryan, in order to obtain the designation of a particular Judge, called that an important case, referred it to a case with which he had had personal experience, the Ford-Ferguson case, referring to, in that case, a deposition going on for four years, and, if my memory serves me correctly, indicated that he thought in this case the depositions would be—of all the parties—would probably be as lengthy if not lengthier.

That was a justification for the relatively unusual step of assigning this matter to a single judge.

The point I am making is that there is no emergency either for the protection of the Court or the protection of the parties to be able to serve Mr. [Dep. Tr. 4457] Hughes tomorrow or the next day.

Counsel by his statement, which I am sure is a well-informed statement, has indicated that Mr. Hughes, if his information is correct, was believed to have been a number of places, including outside of the country.

That is nothing so very unusual, and there is no reason or basis for believing that that will continue indefinitely.

I could understand the concern of counsel and of the Court, perhaps, if we were delaying or interfering with the rights of the parties to obtain information from a needed witness because he was not available to the Court. But that is not what is before us.

I indicated to counsel for TWA and the Special Master that I have reason to believe that I will hear from Mr. Hughes in the reasonably near future.

I am not in a position of committing myself to a particular date, but I believe that, and certainly don't know of any fact that would tend to indicate that Mr. Hughes is not likely to be available whenever his proper turn arrives.

• • • • •

[Dep. Tr. 4463] • • • Mr. Sonnett: Would the Master inquire of Mr. Davis whether he has had a reply from Mr. Hughes to Mr. Davis' letter of March 29, 1962, in which Mr. Davis, in a letter to Mr. Hughes, sent to Houston, Texas, copy to 7000 Romaine Street, copy to the Special Master and to counsel for all parties, pointed out that Mr. Hughes was familiar with the motion schedules already, and in which Mr. Davis said that in reliance upon Mr. Davis' earlier inquiries he had already reported on the record that everything had been produced, and nevertheless the Master had directed that the inquiry be made of Mr. Hughes, and enclosed a certified copy of the order, accordingly it was being forwarded, and Mr. Davis' letter concluded by saying "In order to fully comply with the request of the Special Master, I should be advised in [Dep. Tr. 4464] writing whether or not you have in your personal possession or control any documents described in the schedules attached to the enclosed motions.

"If you should have any such documents, they should be delivered to me promptly for production."

The letter was March 29th, sent airmail. I think it would be appropriate to ascertain whether or not there was a response, and if so, what the response was.

The Special Master: Mr. Davis, have you received a response?

Mr. Davis: No, Mr. Rankin, I have not received a response from Mr. Hughes. As I previously indicated, those familiar with the papers or files that might be regarded as files in his personal possession as distinguished from those that are in the possession of the Tool Company relating to the subject matter have all been produced. But I have not heard from Mr. Hughes.

Mr. Sonnett: With respect to Rule 4, I think Mr. Davis is overlooking the fact that the judges of the Southern and Eastern District, based on their familiarity with many so-called big cases, have seen fit unanimously to change a policy that was [Dep. Tr. 4465] judge-made here in this district for some years, and that is to take away the premise of Mr. Davis' entire argument, because when they provided in Rule 4 that from and after the 40th day after commencement of an action the service of a notice to take a deposition of a party or witness or the pendency of any such deposition should not prevent any other party from taking a concurrent deposition of any party or witness.

I think they knew exactly what they were doing. They were changing the rule of automatic priority in the so-called big case to provide for a new approach to a very difficult problem of judicial administration.

When they placed on counsel, as they did in that rule, an express duty for all attorneys to make every reasonable effort to stipulate as to the taking of all such concurrent depositions, the judges of the Southern District knew what they were doing. And when they said if the lawyers couldn't arrange it the Court would, they knew what they were doing.

The Court has given to Judge Metzner the responsibility for the entire case. He in turn has appointed the Master with complete authority over the [Dep. Tr. 4466] discovery aspects of the case, subject only to appeal to Judge Metzner.

It seems to me that the record is perfectly clear that Judge Metzner, when he devised the schedule quite awhile back, long before the amendment to Rule 4, that Judge Metzner then believed that we would have finished the deposition of Mr. Hughes by now. At least he specifically directed that we were to have started it in April of this year.

I don't think it advances the cause any for Mr. Davis to approach the matter as if Rule 4 had not been adopted. It was a very thoughtful and carefully planned amendment to the rule by the bench designed to eliminate problems just like the problems we have in this case on delay of discovery.

Certainly the judges believed that it would promote the purpose of Rule 1, just, speedy determination of controversies, to make this change, or they wouldn't have made it.

What we have run into, and it is perfectly clear, is a calculated tactic of trip, stumble and delay for over a year in discovery proceedings. So the premise of Mr. Davis' argument is invalid. The practical

problems of locating Mr. Hughes are [Dep. Tr. 4467] obvious.

I don't know what better proof we need of the difficulty than the statements of Messrs. Davis, Cook and Holliday. Mr. Holliday, before the CAB, recently was asked the following question:

"Q. Mr. Holliday, the discussion we just had on the record about Mr. Hughes is or may be, that is, where he is or may be, do you know where Mr. Hughes is now?

"A. I have no knowledge at all as to where Mr. Hughes might be.

"Q. Do you know where he is in the United States?

"A. No, I have no knowledge at all as to where he might be."

The one point, it seems to me, that is overriding, and it is a point the Master has made, is that whatever Mr. Hughes' idiosyncrasies, he must be responsive to the process of the courts of the United States like anybody else, idiosyncrasies or no idiosyncrasies.

So far as the constant barrage and implication about publicity, I will make a proposal right now to solve the problem if Mr. Davis will undertake [Dep. Tr. 4468] to carry it out.

I will accept an affidavit signed by Mr. Glenn and Nadine Henley of their personal service of a subpoena on Mr. Hughes in this case returnable July 1st or at such date as you may fix or the Court may fix in lieu of the answers to these interrogatories.

I want the affidavit by two people who have been close to Mr. Hughes for many, many years. If he has some personal problem about people coming close to him who are strangers, that will resolve that.

I have no wish to embarrass the man, and I have not been giving statements to the press, contrary to the practice of Hughes Tool Company.

It is a perfectly simple solution to the problem, if they wish to follow it. All I want is an affidavit before a qualified notary public, I will supply the subpoena, of service of that subpoena on Mr. Hughes by these two people, and I will take their word under oath, and the entire problem is resolved.

I don't know what else I can do. That would be the easy way to do it. I am not even suggesting that I want to send a U. S. Marshal in to do it. That can be done very easily, very privately, and very quietly, if they wish it to be done that way.

[Dep. Tr. 4469] Otherwise it seems to me there is no alternative except to use the process of the Court, which we are using here, I submit, very properly and correctly.

As to Mr. Holliday, Mr. Holliday is in default. Under the rules, his answer should be stricken, or such other terms imposed as the Master may deem proper. I gather from the papers that there may have been some oversight on the Holliday aspect, and certainly I have no desire to seek any forfeiture. As to our Holliday motion, I would not object to a disposition by the Master to the effect that if Holliday does not answer the interrogatories within a reasonable period of time, say by Friday this week, that his answer then be stricken.

Mr. Davis: I take it that Mr. Sonnett is now addressing himself to his motion with respect to the interrogatories addressed to Mr. Holliday. As my letter to you, sir, copy to counsel, indicates, it was

an inadvertent oversight on the part of counsel for Mr. Holliday not to have had the objections that were made apply equally to the interrogatories addressed to Mr. Holliday, at least to the extent to which they would be applicable.

[Dep. Tr. 4470] The position on behalf of the Tool Company or Mr. Holliday—after all, Mr. Holliday is an officer of the Tool Company, and the interrogatories addressed to the Tool Company were broad enough to cover all officers of the Tool Company, including Mr. Holliday—is substantially as indicated by the papers before you, sir.

First of all, I wish to call to your attention that leave was sought merely to serve interrogatories upon the Tool Company, and the permission granted was permission granted to serve interrogatories upon the Tool Company. I am not going to suggest that that justifies the inadvertency of the oversight, because those would have been simply two additional points that we would have made.

However, I appreciate Mr. Sonnett's candor when he refers to the testimony of Mr. Holliday under oath in the CAB proceedings, during which time a representative of the Cahill firm was present throughout, or substantially throughout those proceedings, and he has his answer. To the extent to which the interrogatory is genuinely designed to elicit what Mr. Holliday knows, Mr. Holliday has answered that under oath. Mr. Sonnett did not give the date [Dep. Tr. 4471] as to Mr. Holliday's testimony before the CAB.

Do you have it, John?

Mr. Sonnett: I don't have the date of it, but let me say—

Mr. Davis: It was subsequent to the time the interrogatories were served.

Mr. Sonnett: To dispose of that point that Mr. Davis is making, the CAB isn't in this case, neither is this case in the CAB proceeding. We are entitled to an answer. If that is Mr. Holliday's information, let him give it under oath here. All he has to do is sign and swear to it.

Mr. Davis: The point, Mr. Rankin, is obviously that the objection that we are asserting is not a desire to deprive TWA of information to which they are entitled. It is perfectly apparent if Mr. Holliday under oath in the CAB proceeding did not know or answered as he did, that that would be the same answer he would give to the interrogatory if his counsel sent the interrogatory to him for the purpose of answering it. To be sure, the question was not phrased to information and belief, or whatever it may be. The point is what we are here objecting to is basically what we previously indicated with [Dep. Tr. 4471A] respect to the interrogatories to the Tool Company, addressed to the Tool Company. [Dep. Tr. 4472] Counsel for TWA clearly recognized by the procedure that he followed that the service of interrogatories was an interference, asked for permission to serve interrogatories upon the Tool Company, not upon Mr. Holliday. We believe that the interrogatories actually served upon the Tool Company are improper, even if it is concluded that TWA may interrupt in that fashion the discovery of the Tool Company in which it is currently engaged.

I recognize that if it is assumed that leave for the filing of interrogatories addressed to Mr. Holliday

was not required, and that they were therefore properly served, that I as counsel for Mr. Holliday in this proceeding should have filed objections to the filing of those interrogatories before this, and to the extent to which the failure to include objection on behalf of Mr. Holliday occurred, I apologize.

The Special Master: I will overrule the motion to strike the answer of Mr. Holliday. I further order and direct that unless Mr. Hughes authorizes his counsel or some other person in writing, in form satisfactory to counsel for TWA and the Special Master, to accept service of a subpoena to appear for the taking of his deposition on or after July 1, 1962, at [Dep. Tr. 4473] such time as it may properly be reached under the orders of the Court, by June 20, 1962, that Hughes Tool Company answer the interrogatories as presented, except as modified by the statements of Mr. Sonnett this morning.

I did not direct that Mr. Holliday personally have to answer the interrogatories, because I interpret the interrogatories as reaching such information as Mr. Holliday has.

Mr. Barr: If this matter is concluded—

The Special Master: I want to make it clear on this record that where I provide that the order will not require the answering of the interrogatories if Mr. Hughes authorizes the acceptance of a subpoena, it is only a subpoena for his appearance for the depositions, and I am not requiring that he authorize the service of process in this case upon himself. I want to make that clear in the record.

Is there any question?

All right, Mr. Barr.

• • • • •

[Dep. Tr. 4669] Q. I am interested in criticism or critical remarks that Mr. Leslie may have made relating to the allegations of this complaint.

A. The only thing I can say on that, Mr. Davis, is that at—on one occasion, sometime after this action had been brought, Mr. Leslie said to me that he thought that the lawyers had brought the wrong suit, that the suit they should have brought was a suit based upon the fact that Mr. Hughes wouldn't let TWA be run like a business, and he said, so far as this matter of financing is concerned, that he always felt that Hughes Tool Company had plenty of money that they could come up with if they really wanted to, and he shouldn't have been criticized, impliedly or otherwise, for having failed to arrange financing, because, he said, it was always—"I always knew if Mr. Hughes really wanted to he could provide the financing."

[Dep. Tr. 4670] So I suggested that he go and talk with Mr. Sonnett, and explain his views fully to Mr. Sonnett. That is the only occasion that I can recall. I am quite sure it is the only occasion when he was let's say critical of the lawsuit, to my knowledge.

Q. And when did this take place?

A. Oh, I would guess that this was sometime in the fall of 1961.

Q. Before Mr. Leslie went to the hospital?

A. Oh, yes. It was well before then.

Q. Wasn't Mr. Leslie referring to a proposed affidavit that had been submitted to him?

A. I know that at the time he spoke to me—well, I want to put this right.

I know that the time that he spoke to me was at a time when he was having some conversations with Mr. Sonnett.

So far as I know, no affidavit was ever submitted to him for signature, Mr. Davis.

Q. He spoke to you more than once on this subject, didn't he?

A. No, I think he spoke to me only once.

Q. Wasn't there a time as a result of which you suggested he go see Mr. Sonnett and discuss his views with Mr. Sonnett?

[Dep. Tr. 4671] A. This is the time about which I have just testified.

Q. After he had an opportunity to discuss the matter with counsel for TWA did he bring the subject up again with you at all?

A. No, I have no recollection of his having mentioned it again.

Q. Did you mention it to him?

A. No.

Q. Did you ask him if he was satisfied now that there was merit to the lawsuit?

A. No, I didn't, Mr. Davis.

Q. This subject of the manner in which equipment had been financed was one which was important to you, was it not?

A. Well, it wasn't important in the current operations of the company. It was important to the lawsuit.

Q. Don't you recall a telegram from Mr. McCone suggesting that a thorough investigation be made of the manner in which equipment had been made available to TWA in the past, or financed, in connection with what the attitude of TWA should be toward 990s?

A. Well, on the subject of Mr. McCone's telegram, if you are referring to the one I think you are, it had to do with the question of whether there was any obligation

[Dep. Tr. 4672] on the part of TWA to buy 990s from Hughes Tool Company, and I satisfied myself, as I have already testified several times, that there was no obligation.

Q. I understand that, but I also gathered from your prior testimony that as a result of the inquiry being made by Mr. McCone, possibly others, you undertook to inquire as to the facts, I thought from Mr. Leslie and Mr. Rummel. Am I wrong in that?

A. I undertook to inquire as to whether or not there were any facts that would give rise to an obligation on the part of TWA to take the 990s from Hughes Tool Company, and I satisfied myself that there was no obligation.

Q. Yes, but in connection with that I thought that you previously testified that you had made inquiries as to the past practices of the Tool Company in its relationship with TWA.

A. Only to the limited extent of determining whether any obligation exists, and as I think I already testified, most of my conversations were with Mr. Rowe, who had personally been familiar with this whole situation, and who was quite positive that there was no obligation, and indeed, subsequent circumstances have made that abundantly clear.

Q. Can you give me as fully as you can just exactly [Dep. Tr. 4673] what it is that Mr. Leslie said to you at the time that you suggested he go see counsel?

A. I don't think I can give you any more than I have already told you, Mr. Davis.

Q. Following that have you ever been told by anyone what the details were that Mr. Leslie had to support those general conclusions?

A. No, I have not.

Q. Did you discuss that with Mr. Reed, counsel for the voting trustees?

A. I don't believe I ever discussed that with Mr. Reed.

Q. Mr. Breech?

A. No.

Q. Did you ever tell him about the incident?

A. No.

Q. Did you tell Mr. Leithead, the chairman of the special litigating committee, about this incident?

A. This was long before Mr. Leithead's committee was formed, Mr. Davis, and I don't believe I have ever told Mr. Leithead about it.

Q. Since it was formed you had no occasion of telling Mr. Leithead about it?

A. No.

Q. Do you recall discussing that or mentioning it to [Dep. Tr. 4674] any of the directors of TWA?

A. I have no recollection, Mr. Davis, of having discussed that with anyone but counsel.

Q. By counsel you are referring to Mr. Sonnett, or members of his firm?

A. And Mr. Rowe.

Q. Would you tell me what your discussion with those gentlemen was?

Mr. Sonnett: I am not quite sure I know what Mr. Davis is intending to ask. If the question is intended to be as broad as it sounds, I object to it.

Mr. Davis: I am only interested in the discussion had with counsel relating to what Mr. Leslie had said, what facts Mr. Leslie claimed were pertinent to his criticism of the lawsuit, or relating in any way to the lawsuit.

Mr. Sonnett: I think I, on that basis, must press the objection. I think conferences between this witness and counsel with respect to the preparation of this case, and the possible testimony of any witness, it seems to me, are clearly within the work product rule, and I don't think Mr. Davis should be allowed to get at this through the back door, which he is trying to do.

[Dep. Tr. 4675] Mr. Davis: I understand, Mr. Rankin, from this witness, that this occurred not in connection with preparing anybody as a witness, but in the fall of 1961 Mr. Leslie, an officer of the company, who heretofore had been described as one familiar with the facts, went to the chief executive officer of the company to explain to him the facts that he knew which were pertinent to the merits of the lawsuit, and the chief executive officer referred him to counsel, and apparently the chief executive officer, rather than going back to Mr. Leslie and finding out from him just what the details of it were, found out what Mr. Leslie was saying through counsel.

The Witness: That is not correct, Mr. Davis.

Mr. Davis: I don't understand the basis of the objection.

Mr. Sonnett: In the first place, the first objection is you have misstated the record of the witness' testimony rather badly. The witness did not testify as you have described his testimony.

The Special Master: The inquiry can be made of the witness as to what he said to counsel about this matter, and as to what counsel related Mr. Leslie said to counsel.

[Dep. Tr. 4675A] But if you are getting into the question of any advice that counsel gave concerning—

Mr. Davis: I am not seeking that.

[Dep. Tr. 4676] Q. Mr. Tillinghast, I am not asking for any advice given to you or to anyone else at TWA by counsel. I am merely asking you to describe the discussions that you have had insofar as what you told counsel with respect what Mr. Leslie had told you and what they told you as to what Mr. Leslie had told them.

A. Well, Mr. Davis, all of my discussions with counsel have related to the question of whether or not there ought to be an amendment of the complaint or a separate action for the purpose of stating certain additional and alternative causes of action.

Q. I am not interested in the advice of counsel with respect to the form of the complaint, Mr. Tillinghast.

I am interested solely as to what Mr. Leslie said or what counsel reported to you Leslie said.

I don't assume that Mr. Leslie was purporting to act as a lawyer. Was he?

Mr. Sonnett: I am afraid he was. He was trying to improve this complaint.

A. Mr. Davis, I will repeat, if I may finish my question, my answer, that all of the conversations I have had with Mr. Sonnett and Mr. Rowe about what Mr. Leslie had to say had been in the context of whether or not there should be additional or alternative counts or suits or [Dep. Tr. 4677] causes of action, and I cannot separate any discussion I have had with them of what Mr. Leslie had to say from the subject of advice as to causes of action that should or should not be pleaded.

Q. You mean that you are unable to separate the facts told to you by counsel, what Mr. Leslie told them were facts, transactions, the manner of operation of TWA prior to the time you became chief executive officer, the facts relating to whatever conduct took place between the Tool Company and TWA, you cannot separate those from the advice you were receiving from counsel as to the kind of a cause of action that ought to be brought, is that what your testimony is?

Mr. Sonnett: Mr. Rankin, may I, in the first place, object to the form of this question. Secondly, it seems to me perfectly apparent that what Mr. Davis is trying to do is to find out whether in the course of my interrogation of Mr. Leslie Mr. Leslie gave me his version of facts, and whether I transmitted Mr. Leslie's version of the facts to this witness.

If I did, it clearly is within the work product rule. Whether I told it to this witness or to the special litigation committee doesn't deprive it of the work product character. There is no waiver at [Dep. Tr. 4678] all. Mr. Davis will have ample opportunity to examine Mr. Leslie when he testifies, and to get his version of the facts, and to find out why Mr. Leslie thought that TWA's case against Hughes could be strengthened by the cause of action which struck him as most important, Hughes' refusal to let TWA be run as a business. The witness is going to be here. This is just a back door attempt to get at work product that he can't get at directly.

The Special Master: You may answer this question.

A. Mr. Davis, neither Mr. Sonnett nor Mr. Rowe has ever stated to me the facts stated to them by Mr. Leslie.

Q. And you made no effort to obtain those facts from Mr. Leslie through anyone else?

A. That's correct.

Q. A moment ago you testified that you did not know of any affidavit submitted to Mr. Leslie for his signature. Now my question is whether or not you ever learned that Mr. Leslie had a draft of a proposed affidavit which he discussed with his own counsel and which disturbed him.

A. No, I have no knowledge that Mr. Leslie had a counsel or discussed a draft of affidavit with him. The only thing that I know is that about the time that I am [Dep. Tr. 4679] speaking of there was a question of whether or not it would be advisable to prepare affidavits or to have various of the officers of TWA prepare affidavits.

So far as I know, no affidavits were prepared for anyone or submitted to anyone for signature.

Q. But you do recall a point at which consideration was given to the desirability of having various officers of TWA—

A. That was discussed, yes.

Q. When was that discussed?

A. This would have been some time in the fall of 1961 also.

Q. Do you recall those who participated in that discussion?

A. Well, these were discussions I had with Mr. Sonnett and Mr. Rowe.

Q. Just the two of them?

A. Yes.

Q. You never discussed that with Mr. Rummel or Mr. Cocke or Mr. Leslie?

A. No, I don't recall ever having discussed it, except that I mentioned before that at one point Mr. Rummel gave me a draft of a statement of fact that he was preparing, and if my recollection is correct, at the time it was [Dep. Tr. 4680] contemplated that that might be embodied in an affidavit. But to the best of my knowledge, that was never done.

Q. Don't you know or weren't you told that at about the same time or around that time, in the fall of 1961, Mr. Cocke was also presented with, say, a draft?

A. I don't know, Mr. Davis. I might further illuminate this by saying if I recall correctly, this was at a time when it was thought that there might be a motion to dismiss or a motion for summary judgment, and when it became apparent that Hughes Tool Company wasn't going to press that motion I believe that the matter of possible affidavits sort of just disappeared.

Q. Now you remember, don't you, the conferences and activities within TWA to prepare affidavits to oppose this motion of the Hughes Tool Company?

A. No, I do not, Mr. Davis.

Q. Did Mr. Cocke express to you some difficulties in subscribing to facts reflected by a draft submitted to him?

A. No, he did not.

Q. Did he express to you some criticism of the allegations of the complaint or the facts which TWA was trying to put together?

A. No. The only thing even approaching any criticism [Dep. Tr. 4681] on the part of Mr. Cocke was a question that Mr. Cocke raised as to what the legal theory of the complaint was, and he once raised a question as to what he thought about public relations effects of a technical case, which he apparently regarded this might be. But

that is the extent of any misgivings of any sort that Mr. Cocke expressed.

Q. Was that about the same time, in the fall of 1961, about the same time that Mr. Leslie was expressing—

A. No, as I recall it, this was considerably before that, and relatively shortly after the complaint was filed.

Q. You have given me a description of what Mr. Cocke said. Can you tell me more specifically the substance of what he said, other than in terms of conclusions?

A. I have great difficulty at this point in recalling exactly what he said, Mr. Davis. The only thing I can recall is that he said that he thought some people would have question in their minds as to whether Hughes had done more good or more bad for TWA, and I remember saying to him that it wasn't a question of whether on balance there was more good or more bad, it was a question of whether there had been a violation of the antitrust laws, that that was a technical legal question, that, as I conceived it, the broad issue of where the greater good or [Dep. Tr. 4682] evil lay wasn't involved in the action, and that is all I can remember of my conversation with Mr. Cocke.

Q. There came a time when Mr. Cocke's duties and responsibilities were transferred to someone else?

A. That's correct.

Q. In fact, Mr. Cocke was transferred to a status of semi-retirement?

A. No, I wouldn't say semi-retirement.

Q. How would you describe it?

A. Well, he was transferred into a new position, in which he is very active.

Q. When did that take place?

A. September 1st.

Q. 1961?

A. 1961.

Q. Was that fairly soon after Mr. Cocke had described to you his views?

A. I can't be sure, Mr. Davis, what the concatenation of events was. It may have been either before or after. It would, as I recall it, not have been long distant in point of time, but whether it was before this or after this, I just couldn't tell you.

Q. Do you recall whether or not it was before or after this motion that had been made by the Hughes Tool [Dep. Tr. 4683] Company?

A. Can you tell me when that motion was made?

Q. Shortly after the complaint was filed, August.

A. Well, it—I had my conversation with Mr. Cocke, as I recall it, my conversation relative to his change of position, about ten days prior to September 1st.

Q. Prior to the shift in position, will you describe generally what the scope of Mr. Cocke's duties and responsibilities was before this change took place?

A. He was system general manager.

Q. What does that mean?

A. Well, he was the general manager of the operations of the system.

Q. Was he the senior officer in charge of the overall operation aspect of the airline?

A. That's correct.

Q. How long had he had that position?

A. Oh, a couple of years, I guess.

Q. What had he been prior to that?

A. He had been general sales manager.

Q. So he had been system general manager during 1959 and 1960?

A. Not assistant general manager.

Q. No, he had been system general manager?

[Dep. Tr. 4684] A. Yes.

Q. During the years 1959 and 1960, is that correct?

A. Well, I don't know just when he went in, Mr. Davis, but I have known the date. It was when the reorganization under Mr. Thomas took place, and that was some time in—I think it was some time in 1959, yes.

Q. During the reorganization that Mr. Thomas put into effect at TWA, while he was president of TWA, Mr. Cocke was made system general manager, is that right?

A. That's right.

Q. How old a man is he?

A. Mr. Cocke?

Q. Yes.

A. He is 58 at the moment, I believe.

Q. Then, in September 1961, a decision was made to relocate Mr. Cocke, is that correct?

A. No, the decision was made in August.

Q. Do you recall when it was made in August?

A. Well, it would have been about ten days—well, the decision, I guess, was in the process of being made during the first half of August, and I talked with Mr. Cocke a week or ten days before September 1st, when Mr. Hall took over as system general manager.

Q. What duties were assigned to Mr. Cocke as a result [Dep. Tr. 4685] of this change?

A. Well, Mr. Cocke is now in charge of what we call industry affairs, and as such, he is in charge of public relations, he is in charge of tariffs, he is in charge of relations with other airlines, which includes jurisdiction over the Air Transport Association and the International Air Transport Association, and you might say that he is in charge of external affairs.

Q. By external you mean outside of the country?

A. Well, outside of the company. Dealings with other airlines, public relations, matters of that sort.

Q. Was his compensation affected as a result of this—

A. There was—no change was made in his compensation.

Q. That was a change that you discussed with some of the directors?

A. Yes.

* * * * *

[Dep. Tr. 4686] * * * Q. Will you now describe the discussion you had with Mr. Breech as to the desirability or lack of desirability in making this move with respect to Mr. Cocke, and with particular reference to the impact it might have on the lawsuit or his availability as a witness, things of that kind?

A. To the best of my recollection, Mr. Davis, I never discussed with anyone any impact that it might have on this lawsuit, with anyone.

I discussed with Mr. Breech the fact that we seemed to be falling substantially behind our forecasts, we had been having a very bad season, and I felt that we needed [Dep. Tr. 4687] to strengthen the system management, that I felt that Mr. Cocke was not the man who would bring the greatest strength to this position. I said for one thing I felt that he had been through so many crises and discouragements over a period of years that he—well, that his ambition and spark to do better had been somewhat dulled. I felt that our problem was of a magnitude that it would be better handled by a younger, less disillusioned, more aggressive person, and that I felt Mr. Hall would bring more drive and imagination to the position.

Also, I said that I felt that Mr. Cocke was by nature not a planner, and that I felt that the position needed somebody in it who was more of a planner than Mr. Cocke. I said that Mr. Cocke could be very useful to me filling this other position, to which I didn't have time to do justice

and that our external affairs needed more time and attention, particularly with the coming retirement of Mr. Pierson, who over the years had handled IATA and a number of other external matters.

Mr. Breech, who then felt, and I believe still does today, the highest regard for Mr. Hall, agreed with me completely that Mr. Hall would do a more effective job. I should also add that I told him that I was getting the impression that there were a good many people in the system [Dep Tr. 4688] that felt that Mr. Cocke lacked the leadership that was needed in this position, and I felt that they were restive, and that, among other things, a change in this position would have the enthusiastic support of the system people, and would give them new hope, would improve their morale, and generally give us a more effective operation.

Q. Do you recall what Mr. Breech said in response?

A. Only that Mr. Breech agreed very vigorously, and felt that Floyd Hall would bring new strength and vigor to the office, and that it was a move that would be very advisable to make.

* * * * *

[Dep. Tr. 4689] * * * Q. Mr. Cocke was at the time a director?

A. He was.

Q. Is he still a director?

A. He still is a director. And I would like to add that so far as I have been able to discern, the change has worked out excellently. It has had Mr. Cocke's enthusiastic acceptance, and I think in his present job, relieved of the great pressures that inevitably are on the system general manager, he is happier, more effective, and that things worked out very well.

* * * * *

[Dep. Tr. 6113] * * * By Mr. Davis:

Q. Mr. Tillinghast, did anyone ever tell you that the contention that there ever existed a conspiracy between Atlas and Hughes Tool Company relating to a Northeast merger was a lot of nonsense, a lot of bunk?

A. Yes.

Q. Will you identify who those people were?

A. Well, just one person. Mr. Stretch.

Q. I had in mind anyone connected with TWA.

[Dep. Tr. 6114] A. No, he did not.

Q. No one ever did?

A. No one ever did.

Q. Did you ever discuss this matter with Mr. Reed?

Mr. Williams: "This matter" being the inclusion of Atlas Corporation as a co-conspirator?

Mr. Davis: The feeling that at least a serious question existed as to Atlas being a co-conspirator, yes.

Mr. Williams: Did you ever discuss that with Mr. Reed?

A. Well, I discussed that, as I recall it, with Mr. Reed in the course of a conference which Mr. Sonnett, Mr. Rowe and I had with Mr. Reed and his partner, Mr. Surbeck, at a time when they, Mr. Reed and Mr. Surbeck, reviewed a draft of the complaint, and discussed with Mr. Rowe and Mr. Sonnett their comments.

Q. Who else was there besides yourself?

A. My recollection is we were the only ones, those that I have just mentioned.

Q. When did that take place, approximately, do you recall?

A. Well, that was rather shortly, as I recall it, before the filing of the complaint, Mr. Davis. I can't tell [Dep. Tr.

[Dep. Tr. 6115] you exactly when it was, but it would have been in the last two weeks of June.

Q. Will you describe exactly what was said in that conference?

* * * * *

[Dep. Tr. 6121] * * * A. Well, Mr. Davis, as I recall that meeting, we had before us a draft of complaint, and we went through it from more or less beginning to end.

As I recall the discussion, it related mostly to legal theory.

I remember that there was rather a lengthy discussion of the affect, the legal affect of Civil Aeronautics Board orders, particularly as it related to the Section 7 cause of action. It is a little difficult for me to recall all that was said at the time on each of these subjects.

I think, as I say, that most of the time was consumed in the—in a discussion of legal theory.

Q. I am interested in facts at the moment, Mr. Tillinghast.

Mr. Sonnett: You want an answer or an argument? You asked him what was said, and he told you, Mr. Davis. Why don't you withdraw the comment, or keep it to yourself.

Q. May I have your complete and total recollection of what was said relating to the facts which supported any of these legal theories?

A. Well, I don't recall, Mr. Davis, that there was any extensive discussion of the facts as such. I think that the [Dep. Tr. 6122] discussion related to the legal affect of the fact and to the legal theories involved in the complaint.

Offhand, I can't recall any specific discussion of factual questions, although there may have been.

Mr. Williams: May the witness be excused? He does have a 5:00 o'clock appointment uptown. He has answered this question and several more.

If counsel wants to pursue it further, he can do so when we resume.

Mr. Davis: I would like to pursue it now, if I may.

Mr. Williams: I don't agree to this procedure, your Honor. I think you set a time for stopping.

You asked him to answer the question.

He has answered it as best he can.

If counsel isn't satisfied, let him ask some questions on Thursday.

The Special Master: I think that the inquiry should reach the range of the conference, and after that is established, then we will excuse the witness.

Mr. Davis: Yes.

Q. Whether the discussion of the facts was extensive or not, and whether or not they related to legal theories, I want you to give me at this time your total recollection [Dep. Tr. 6123] of the facts which were discussed at that conference, facts which were mentioned in that conference.

Mr. Sonnett: If any.

A. Well, facts were mentioned, such as the fact that various of these things had been submitted to the Civil Aeronautics Board, that Hughes had pre-empted to himself the matter of equipment, that he was the one who controlled financing.

I would think, Mr. Davis, that—my recollection is that this complaint we were discussing was pretty close to the form of the complaint that was finally filed, and you might say that in a sense we discussed all of the facts that are set forth in that complaint.

I have to say once again that this discussion was a discussion more—primarily of legal theory of the complaint rather than as to the underlying facts, and the facts, as I recall it, were discussed only as they were incidental to a discussion of the legal questions.

Q. What facts were discussed relating to the existence of a question as to Atlas Corporation being a co-conspirator?

Mr. Williams: If any such facts were discussed.

A. Offhand, I don't recall any facts relative to that that were discussed as such.

Q. I don't refer now to a discussion of facts as such. [Dep. Tr. 6124] I am referring to anything mentioned, adverted to, referred to.

A. Well, at the moment, Mr. Davis, I have no recollection of any specific discussion of the Atlas side of things, although I have no doubt that it was touched on at some point in the course of the discussion.

Q. Will you describe the nature or extent of the participation of Mr. Reed and his partner in this discussion of the allegations of the complaint?

A. Well, as I recall it, Mr. Reed's participation in the discussion of the complaint was a rather limited one, and that most of the burden of the discussion was carried by Mr. Surbeck, who is an antitrust expert.

I remember, so far as factual discussions, that we had a discussion of the relative virtues of bringing an antitrust type of proceeding as opposed to a what would ordinarily be a derivative stockholders type of suit.

I remember, so far as facts are concerned, that Mr. Sonnett stated that he felt so far as any common law or equity cause of action by TWA against Mr. Hughes or Hughes

Tool Company that he felt he wanted to investigate the matter considerably farther than he had been able to, and hoped to have an opportunity of either voluntarily or in some proceeding talking or—talking with or examining Mr. Hughes [Dep. Tr. 6125] relative to certain facts.

I remember we discussed the airplane that Mr. Hughes pre-empted in, oh, 1956, or whenever it was, and lived in for a matter of some months, I remember Mr. Sonnett's taking the position, with which Mr. Reed agreed, that one of the advantages of bringing an antitrust action was that it avoided the matter of—well, let me put it this way—that it didn't carry the social stigma that certain other types of actions might, and that therefore very likely would involve less the creation of a personal gulf or a personal vendetta with Mr. Hughes.

With respect to the facts that were discussed, this is all that comes to mind at the moment, Mr. Davis, although I am sure that in the course of the discussion a good many more things were touched on.

• • • • •

[Dep. Tr. 6283] • • • Mr. Davis: We will come to that.

The Witness: Mr. Davis, it is my recollection that at this meeting we had a general discussion of the conclusions to which Mr. Cahill and Mr. Sonnett were in the process of coming, so to speak. As I recall it, Mr. Cahill or Mr. Sonnett, and I can't recall at this juncture just who did the talking, said that they had by no means completed their investigation, but they had come to some tentative conclusions.

The conclusions were that rather than to become involved in the details of an equity action involving possibly multiple assertions of wrongdoing, which

would involve considerably more factual investigation and determination of detail which they had not had an opportunity to pursue, they felt that they very likely would recommend to TWA the institution of an antitrust action, based upon the fact that Mr. Hughes had pre-empted to himself the procurement of planes and the financing of TWA's operations.

They said, as I recall it, that they had talked with Mr. Thomas in California, and that he seemed most reluctant to talk very freely, but that out of [Dep. Tr. 6284] those discussions some things had appeared very clearly.

Among those were the fact that when he had taken over as president of TWA, there had been an understanding between him and Mr. Hughes that he was to have nothing whatever to do with the procurement of equipment, nor the working out of financial arrangements of the company, nor with advertising, all of which Mr. Hughes was keeping to himself.

They said that they felt it was clear that in these—

By Mr. Davis:

Q. Excuse me, but when you said "they said it was clear," I would appreciate if you would identify who "they" is.

A. Mr. Cahill and Mr. Sonnett. That Hughes had pre-empted these areas to himself. They said they also thought it was clear that TWA had suffered very substantially from the delay in getting equipment, and that they had received from both Mr. Leslie and Mr. Fellows separate estimates that TWA had been damaged by this to the extent of approximately $35 million.

They had said, as I recall it, or Mr. Sonnett said this, I am quite sure, that he felt as he looked at [Dep. Tr. 6285] this situation and saw the dispute that had come up over the Boeing acquisition and the pressures that the Tool Company had brought to try to interfere with that, that there wasn't likely to be any real solution to this problem, short of a divestment of Hughes' interest in the airline.

He said, if I recall correctly, that when the voting trust was set up, people felt that at last they had this problem solved and had stability, and then it was just a matter of time before another controversy arose.

He said, "I think you have to face the fact that it is very unlikely that you will ever be free of controversy, so long as this relationship exists, and for that reason he thought a divestment proceeding was what was really needed in order to solve the problem.

He said that it seemed abundantly clear that TWA was too large and too important to its stockholders and employees and the public to be the plaything of an eccentric man, and that he felt that in the last analysis a Court would come to the conclusion that a continuation of this relationship was just inconsistent with the public good and with the good of others having a legitimate interest in the company.

I remember he referred—

[Dep. Tr. 6286] Q. "He" being who?

A. I believe this was Mr. Sonnett—to the then fairly recent decision in the Panagra case, and he also referred to the duPont decision.

Mr. Rowe, I recall, raised the question as to the effect on any action of this sort, of the fact that certain of these things had in a sense been submitted to the Civil Aeronautics Board and approved as specific transactions.

To that Mr. Sonnett said, if I recall correctly, he felt that the Panagra case estabished beyond any real doubt that if there was an underlying antitrust situation, the approval of specific transaction done pursuant to the conspiracy which in and of itself might be legitimate and proper would not save the conspiracy from being the subject of judicial action.

As I remember it, and I can't remember everything that was said on the subject, a large part of the discussion revolved around what I will refer to as the CAB question, and what the effect of the CAB action was, both as it related to Section 7, and as it related to the question of an antitrust conspiracy generally.

That is as much as I remember at the moment, Mr. Davis, although undoubtedly there were a good many other [Dep. Tr. 6287] things said.

* * * * *

[Dep. Tr. 6294] * * * By Mr. Davis:

Q. Will you identify the information that you have relating to what you have described as the efforts of Mr. Hughes, or of this conspiracy, to monopolize or otherwise pre-empt the procurement or financing of aircraft by TWA, without repeating anything which you have already testified to?

You may repeat it as much as you care to if you are uncertain as to whether you have already testified to it.

A Mr Davis, it is my understanding that from prior to the time that Mr. Thomas became president, that Mr. Hughes has insisted on personally approving all purchases of aircraft and all financial arrangements. And when Mr. Thomas became president of TWA, it was distinctly understood that he would have nothing to do with those two subjects.

It is further my understanding that the motivation
Mr. Hughes sprang from the fact that Mr. Hughes is a ve
rich man, that the Hughes Tool Company made substanti
profiits, and that if those profits were paid out in the norm
course as dividends, that the vast majority of them woul
go to Uncle Sam in the form of taxes.

[Dep. Tr. 6295] And as a consequence of that, M
Hughes was concerned with means of having Hughes To
Company in the business of running an airline, and to h
so fixed that it would have demands on its cash which woul
make it impossible to pay dividends, and thus would mak
it possible to avoid a 102 tax problem that obviously woul
exist in the absence of this need.

It is further my understanding that towards the end o
each year, at least in the earlier days, Hughes conferre
with the financial people for the purpose of reviewing thi
problem and seeing to it that there were commitments tha
would offer ample protection against any 102 type of claim

It is further my understanding that for some reason
which I have never fully understood, Mr. Hughes insisted
on keeping percentage interest in TWA at a point just un-
der 80 per cent, thus enabling him to treat this as an inte-
gral part of the Hughes Tool Company business without
getting him in the position of consolidating earnings for
tax purposes.

From what I have been told in these regards, I have con-
cluded that the interests of TWA were sacrificed to the per-
sonal interests of Howard Hughes and both the personal
whims and the personal tax problems of Howard [Dep. Tr.
6296] Hughes, and that the welfare of TWA from the stand-
point of being free to finance itself and to raise capital, even
though it meant a dilution of the Hughes interests and to
itself, go out and make its own arrangements for plane

were treated as secondary to Hughes' primary interest in his own welfare.

As I know, I read the article to which frequent reference has been made here, called "The Spook and the Bankers" or "The Bankers and the Spook"—I can't remember which—which recounted many of the problems faced in trying to work out the 1960 financing.

I have been told several times by Mr. Wadsworth of Dillon, Reed, and others, by Mr. Sessel, that it was next to impossible to work anything out with Mr. Hughes because things would get about to the point of decision, and then nothing would happen. That he would constantly stall and postpone, and that several attempts to really straighten out TWA's financial condition were thwarted by the fact that Hughes insisted on being the person to decide such things, and that either it was impossible to get decisions from him, or he would refuse to do what seemed to be necessary to the achievement of the ends required.

I have also been told, principally by Mr. Leslie, [Dep. Tr. 6296A] I think, that Mr. Hughes refused to let TWA be run like a real business organization, and in particular prevented it from having the continuity of management that would enable it to be run as well and as profitable as its competitors.

That is perhaps a bird's eye view of the matter.

[Dep. Tr. 6297] Q. Have you identified now all the areas?

A. I am sure I haven't identified every single one of them, but I think with my prior testimony I have identified certainly the important areas which characterize my thinking or knowledge on the subject.

• • • • •

[Dep. Tr. 6302] * * * By Mr. Davis:

Q. Among the various matters identified in your last answer, Mr. Tillinghast, you referred to an understanding that you had that Mr. Hughes resisted the procurement of aircraft or financing without his personal approval.

My question to you is: What is your understanding based upon? Who told you that?

A. I have been told that by many people, Mr. Davis.

Q. Anyone at TWA, or anyone claiming to have personal knowledge of the facts?

A. Yes.

Q. Who?

[Dep. Tr. 6303] A. Mr. Rummel and Mr. Leslie, Mr. Rowe, Mr. Pierson.

Q. Mr. Pierson?

A. Yes. Those are all that come to mind at the moment, but I am sure that numerous other people have remarked on this. I have always understood this to be something about which there wasn't the slightest question whatever.

Q. But those are understanding on oral conversations with those people. You never received anything in writing in the form of a report or memorandum, or you never saw any such writings or memoranda purporting to set forth facts or examples of this?

A. I don't recall any writings that dealt with this problem. I have never known any occasion within TWA for anyone to write it.

Q. Do you know of those people whom you have identified, do any of them claim to have had direct communication with Mr. Hughes in that regard?

A. I know Mr. Leslie and Mr. Rummel have.

Q. Does Mr. Rowe claim to have had direct communication with Mr. Hughes on that subject?

A. I don't recall his having claimed to have had direct communication with Mr. Hughes on that subject.

Q. Mr. Pierson?

A. I just don't know so far as Mr. Pierson is con- [Dep. Tr. 6304] cerned. Mr. Davis, as I recall what Mr. Pierson said on the subject, it was just a casual remark in the course of a conversation with him in the early days.

Q. Was anyone else present at the time he made that remark?

A. Not that I recall.

Q. You also testified as to your understanding relating to the alleged motivation of Mr. Hughes in connection with tax questions, 102 problems, and the like?

A. Yes.

Q. What is the basis of your understanding as to the motivation of Mr. Hughes?

A. Well, it consists principally of a conversation with Mr. Leslie.

Q. Anyone else? Mr. Slack?

A. Yes, Mr. Slack.

Q. Do you recall the occasion when you discussed that with Mr. Slack?

A. Yes, I recall the occasion when I discussed it with Mr. Slack, because the way this came about was that one day I was thinking about this complaint, and this would have made it, I guess, June, maybe May—I can't remember just when—and I was wondering really what had been the point of all this running of airplanes through [Dep. Tr. 6305] Hughes Tool Company. As I was thinking about it, occurred to me that maybe it was a 102 problem that was

responsible for all this, and I walked down the hall and went into Mr. Leslie's office, as I recall it.

I asked Mr. Leslie, or I said to Mr. Leslie, as I recall it, "It just occurred to me what this procurement is all about. It seems to be obvious that Mr. Hughes has a 102 problem, and that this would be a convenient way of solving that problem."

I can't remember just exactly what he said in response to that, but then he went on to say that for years, I believe both when he was with Hughes Tool, and after that, when he was with TWA, in the latter part of the year there would be a conference in which they would discuss this problem.

He said Hughes was one of the best taxmen that ever lived, and he was completely pre-occupied with the subject of taxes, and personally completely absorbed in this tax problem, and it was one that had been a perennial problem year after year.

(Mr. Cook entered the hearing room)

I am not sure whether it was the same day—as a matter of fact, I think I have my chronology a little bit wrong here, because I think my conversation with [Dep. Tr. 6306] Mr. Slack was before my conversation with Mr. Leslie. I was thinking first it was after, but it wasn't; it was before.

I asked Mr. Slack the same question. Mr. Slack gave me a long speech about how he had been Mr. Hughes' attorney, and had professional obligations, and didn't feel free to talk about the subject, and so forth and so on, but from what he said I got the very distinct impression that I had hit the nail on the head.

This was obviously about the time of a board meeting, because Mr. Slack was there in New York.

Q. And following this conversation with Mr. Slack, you went to see Mr. Leslie?

A. I think it was in that sequence. It may have been the other, but I think I talked with Mr. Slack first, and then talked with Mr. Leslie.

Q. Can you tell us a little bit more specifically what it is that Mr. Slack said to you?

A. It is hard to be exact, but he said he had been very close to Mr. Hughes. That he had represented him in many ways as his personal counsel. That one of the things that he had dealt with was what I was asking him about.

Q. The 102 tax problem?

A. That's right. That Mr. Hughes had given him, [Dep. Tr. 6307] many provocations, but that he took great pride in his professional rectitude. He didn't use exactly that word, but his professional obligations. That so far he had not breached his obligations, vis-a-vis Mr. Hughes, and that he hoped that I would not urge him to or force him into something of that sort.

Whereupon, I said that I wouldn't think of doing it, and the conversation stopped there.

* * * * *

[Dep. Tr. 6363] * * * The Special Master: He may answer the question as to his understanding of the position of the Cahill firm.

A. As I think I testified the other day, Mr. Davis, the Cahill firm recommended an antitrust action as opposed to just an equitable action for a number of reasons.

One was they felt what Mr. Sonnett has just said, that it would not be in the interests of TWA or in the interests of working out some solution of this problem to charge Mr. Hughes with personal misconduct, the feeling being that this would increase feelings to the point that any feasible solution might become impossible.

They also recommended, as I testified the other day, that the only ultimate solution to this problem was a divestiture by Mr. Hughes or the Tool Company of its interest in TWA so that TWA would not be the tail to somebody else's kite.

They also stated that while they were familiar with such things as his commandeering the 1649 airplane at a time when it was very badly needed by TWA, their investigation of this aspect of the matter was quite incomplete. They felt that it would take a good deal of time. They felt that if this were to be developed it would be desirable to have [Dep. Tr. 6364] an opportunity to question Mr. Hughes and people at the Hughes Tool Company, which had not yet been a possibility. They felt that the damages that could be recovered in an antitrust proceeding would certainly be sufficient to cover miscellaneous damages suffered by the corporation by reason of individual acts of malfeasance, and recommended that rather than to hold this up until they had fully investigated that end of it and were prepared to make a definitive recommendation that we should proceed with the antitrust action.

Q. And this was a subject which was discussed at this June 21 meeting, where Mr. Sessel was present?

A. This was discussed in part at that meeting, yes.

* * * * *

[Dep. Tr. 6379] * * * Mr. Davis: That is what I intend to try to establish, and I think I am entitled to try to establish that.

Mr. Sonnett: That is not the state of the record.

Mr. Davis: If this witness or TWA was told by anyone, whether it be the Cahill firm, Mr. Rowe, or anyone else, or a lay person, that the only way to achieve an objective was to use this kind of a complaint, I am entitled to establish that as a fact with-

out having to first establish that that is in fact what Mr. Sessel told Mr. Gordon.

The Special Master: I don't understand your question, Mr. Davis, to be what you just now described, as to whether there were such discussions or such advice. I understood your question was whether or not this statement was true.

Mr. Davis: That is the way I started the line of questioning.

The Special Master: Yes.

Mr. Davis: Then Mr. Sonnett, in order to save time, pointed out that taken literally I might be trying to get this witness to testify as to whether or not this was in fact what Mr. Sessel said to Mr. Gordon, [Dep. Tr. 6380] and by this statement I am not trying to suggest that I am trying to confirm at this point the telephone conversation itself.

I then said I wanted to know whether or not it was in fact true that TWA was told or believed that the only way to get an official divestment order was by alleging an antitrust action.

The Special Master: Is that your question now?

Mr. Davis: That is my question now.

The Special Master: You may answer that question.

The Witness: Excuse me. Would you read it back to me?

(The record was read.)

The Witness: Not that I recall, Mr. Davis.

Mr. Davis:

Q. That is not the substance of what Mr. Sonnett or Cahill told TWA at the June 7th meeting?

A. No, Mr. Davis. I don't recall ever being told or believing that that was the only way that it could be achieved. I believe at that first meeting that they did advise us that this a direct and efficacious way of dealing with what they conceived to be the fundamental problem, and that they recommended it for that reason.

Q. What fundamental problem are you referring to?

[Dep. Tr. 6381] A. The fundamental problem that I testified to previously, Mr. Davis, the inconsistency between proper and orderly administration of the affairs of TWA and its use as a plaything or a thing of whim by Mr. Hughes.

Q. In other words, in order to solve that problem you were told the way to do it was by bringing an antitrust action?

A. We were advised that the relief that would be available in an action like this represented, in their view, the most expeditious way of dealing with this fundamental problem.

Q. Let me refer you to your testimony at page 6285. Look at line 8, which reads:

"He said, if I recall correctly"—by "he" who were you referring to? Mr. Sonnett I believe you said. Is that right?

A. I believe so, yes.

Q. (Continuing)—"Mr. Sonnett, if I recall correctly, that when the voting trust was set up, people felt that at least"—

A. "That at last."

Q. (Continuing)—"that at last they had this problem solved."

What problem was that referring to?

Mr. Sonnett: If you read back in the testimony a prior paragraph you will find out.

[Dep. Tr. 6382] Mr. Davis: May I get the answer from the witness, please?

Mr. Sonnett: I object to your taking a portion of a witness' answer and quoting it back to him without quoting the entire answer.

Mr. Davis: He may read this entire record, so far as I am concerned, in connection with his answer. I think this witness is quite capable of refreshing his recollection however he wishes to, including conferring with counsel.

All he has to do is ask for it.

Mr. Sonnett: All I want you to do is put proper questions, and I object to your taking a portion of an answer out of context.

The Special Master: You may answer the question.

A. Mr. Davis, I believe that this problem is the problem referred to in the immediately preceding paragraph of my testimony.

Q. What is that?

A. If you would read the preceding paragraph you would find it stated there.

Q. You mean the dispute about the Boeing acquisition and the pressures that the Tool Company have brought?

A. No, Mr. Davis. What I was trying to say was this, [Dep. Tr. 6383] that—

Q. Let me interrupt you for a moment. What do you mean by the preceding paragraph? You mean the one that starts at line 24 of page 6284?

The Special Master: Mr. Davis, I don't think he finished his answer.

You may proceed with your answer.

The Witness: Would you go back and give me what I was saying when I was interrupted?

(The answer was read.)

A. (Continuing) —that there had been these problems for years resulting from the fact that TWA had not been run as an independent free business, but rather as an adjunct of the Hughes Tool Company, and according to the whims of Howard Hughes, that at the time that the voting trust had been set up many people thought that this basic problem had been solved, but that no sooner had the voting trust been set up than controversy reappeared again, and as evidenced by this Boeing controversy, the question was presented of whether or not TWA was going to be run in the interest of TWA and its stockholders or as an adjunct of Hughes Tool Company, in accordance with the dictates of Howard Hughes, and in the discussion to which I have referred Mr. Cahill and Mr. Sonnett took the position that they felt that there was probably [Dep. Tr. 6384] just one solution to this continual—continuing problem, and that was a divestment of the interest of Hughes Tool Company in TWA.

Q. How was this divestment to be accomplished?

A. By the action which they were recommending that we bring.

Q. An antitrust action?

A. That's correct.

Q. With particular reference to Section 7 of the Clayton Act?

A. Among other things.

Q. What other things?

A. Well, they were talking about both a conspiracy—a Sherman Act case and a Clayton Act case.

Q. At that meeting you were discussing the purpose for which the voting trust had been set up?

[Dep. Tr. 6385] A. No, I don't recall that we were discussing the purpose for which the voting trust was set up, merely that those who had felt that when the voting trust was set up the problem was solved had been rather disillusioned, and now we were again in the middle of problems and controversies.

Q. Did you discuss your testimony with counsel, particularly the testimony that relates to these meetings?

Mr. Sonnett: What is this?

Mr. Davis: I want an answer to the question, if I may.

Mr. Sonnett: I object to it. I resent the question, and I don't like your insinuation, and I don't like your manner either.

The Special Master: He is entitled to an answer to the question. You may answer.

A. The answer is no.

Q. You have not discussed your testimony with counsel relating to these meetings?

A. That's correct.

Q. Did you discuss it with anyone else other than counsel?

A. No.

Q. Referring to your testimony which begins at line [Dep. Tr. 6386] 8 of page 6285, when you identified that the "he" in that line referred to Mr. Sonnett, I recall that a moment ago you said that the problem there referred to was described in the "preceding paragraph."

Let me refer you to the preceding paragraph which begins at the bottom of page 6284, line 24.

A. Well, it refers, in line 5, to any real solution to this problem. It is the same problem, Mr. Davis, and to get the whole context you just have to go read back and get the whole preceding testimony to which this is tied.

Q. Now let's start reading from line 24 at page 6284. You see there where you say "They"—"they," referring to Mr. Cahill and Mr. Sonnett, isn't that right?

A. That's right.

Q. (Continuing) —"They . . . or Mr. Sonnett said this, I am quite sure, that he felt as he looked at this situation and saw the dispute that had come up over the Boeing acquisition," let me stop at that point, "the dispute that had come up over the Boeing acquisition."

This was on June 7th, this meeting, is that right?

A. Yes.

Q. Are you referring to the dispute that had come up over the Boeing acquisition as a dispute which has [Dep. Tr. 6387] previously been identified, testified about, by these documents, Defendants' Exhibit 11, which have previously been identified, or are you referring to any other kind of dispute?

A. Mr. Davis, I don't think the documents testified to the dispute. I testified to the dispute. The documents are part of the dispute. I hate to—

Q. I don't want to quibble with you either, Mr. Tillinghast. I am merely asking you whether or not at that time the reference was to the only dispute that existed as of June 7th as a dispute that has been described in this record.

A. No, that isn't the only dispute that existed as of June 7th, Mr. Davis. A number of things had occurred prior to June 7th.

As I understand it, the voting trust had no sooner been set up, and an attempt made to function under the voting

trust, than the Tool Company directors refused to appear at directors' meetings and constitute a quorum, and as a consequence there had to be a special meeting of the stockholders, and a reorganization of the board of directors, and the Boeing dispute, to which there has been testimony at length, was merely the latest episode in the matter.

[Dep. Tr. 6388] Q. Have you now fully described the nature of the dispute that existed prior to June 7th?

A. I am not sure that I have fully described it, Mr. Davis.

Q. Please do so at this time then.

Mr. Sonnett: If Mr. Davis is asking the witness whether he has anything to add to the record of his testimony from the beginning up to now, I have no objection, on the so-called Hughes problem. If he wants him to repeat any portion of it, I do object.

Mr. Davis: As a standing rule, Mr. Sonnett, I never ask the witness to repeat what he has previously testified to. All he has to say is what he has previously testified to is his complete testimony on the subject.

Mr. Sonnett: Your standing rules I don't find any place in the books, Mr. Davis. I do find the burden on you to put appropriate questions.

Mr. Davis: The Special Master has ruled on more than one occasion and directed the witness that he does not have to repeat prior testimony.

Mr. Sonnett: Why don't you say so in your question?

Q. You don't have to repeat prior testimony, Mr. [Dep. Tr. 6389] Tillinghast, and unless I say otherwise, you may assume that to be a continuing construction of my questions.

A. As I try to think back over the testimony, Mr. Davis, the matters that have been described by my testimony or which appear in the documents, I would say that perhaps the only thing that I haven't touched on that now comes to mind, and perhaps I have adequately covered this, is statements attributed to you to the effect that Mr. Hughes was going to insist on controlling TWA, and that there couldn't be any solution to these problems unless and until TWA was prepared to recognize that control.

Q. Will you identify who attributed that statement to me?

A. I believe Mr. Reed or Mr. Sonnett or Mr. Rowe, or maybe all of them. I am not altogether clear, Mr. Davis.

Q. Do you recall when?

A. Oh, during this letter-writing period prior to—

Q. June 7th?

A. Well, I am not sure that—well, yes, it would have been, as I recall it, in or about this time, yes.

Q. But you cannot recall who of these three gentlemen, or is it your testimony that all three reported the same thing to you?

[Dep. Tr. 6390] A. My recollection is that it was the commonly held viewpoint, and it is a little difficult for me to remember just who said what about what you had actually said to them, but I would be sure it came at least from Mr. Reed and I think from one of the others as well.

Q. Do you recall how this came up or how you were told that, the circumstances?

A. Oh, in the course of discussions about this campaign that you were carrying on at the time.

I might say, I distinctly recall your having told this to me directly yourself, but that was well after this period of time.

Q. What do you recall me telling you, Mr. Tillinghast?

A. That there could be no solution to these problems unless TWA was prepared to be responsive to the wishes of the Tool Company.

Q. Do you recall whether I put it responsive to the wishes of the Tool Company or responsive to the wishes of the stockholders or owners of TWA?

A. The Tool Company.

Q. Do you recall when that took place?

A. Yes. That was in my office, I believe, in October of 1961.

• • • • •

[Dep. Tr. 6573] • • • Q. At or in connection with your meetings or conferences with Mr. Sonnett or Mr. Cahill, or perhaps at the executive committee meeting of the 29th, you mentioned the fact that the problem or the question of a sealed complaint was discussed. Do you remember your testimony in that regard?

A. Yes, I remember it.

Q. Did counsel at that time describe to you what consequences would flow from obtaining a Court order sealing the complaint?

A. Well, I recall that counsel said that it would not be available to the public in the Clerk's office, and as a consequence, there would be no publicity on it. I don't recall much beyond that, Mr. Davis.

Q. Do you recall whether or not he informed the meeting that if an order sealing the complaint was obtained TWA and its officers should not, in violation of such order, make the complaint available to outsiders?

A. No, I don't recall any such discussion.

Q. Was there any discussion at that meeting as to any plan for seeking to obtain an order for the examination

[Dep. Tr. 6574] of Mr. Hughes simultaneously with the filing of the complaint?

A. I believe there was, Mr. Davis. I believe that was part of the package, so to speak, that Mr. Sonnett presented that morning.

Q. Will you describe what was said in that connection?

A. So far as I can recall, that it would be desirable to obtain a priority with respect to depositions, and that they hoped to—or that they planned to make a motion to obtain Mr. Hughes' deposition first, and that it was a matter of conjecture whether they would be successful or wouldn't be successful, but they thought it desirable to get the priority of deposition if possible.

Q. Was there any statement or comment made as to the nature of the desirability?

A. Mr. Davis, I am not sure I understand your question.

Q. Was anything said to describe or identify why it was desirable to obtain as soon as possible an order for the taking of the deposition of Mr. Hughes?

A. I don't recall anything beyond what I have just testified to.

Q. You are quite sure of that?

A. That's correct.

• • • • •

[Dep. Tr. 6576] • • • Mr. Davis: May I have these handwritten notes marked as Defendants' Exhibit 117.

(Photostat of handwritten notes, dated 7/19/61, marked Defendants' Exhibit 117 for identification, as of this date.)

Q. Look at Defendants' Exhibit 117, Mr. Tillinghast. They are notes which we obtained from the Bank of America, and they appear to be notes by Mr. Carver of a

telephone conversation with Mr. Gordon in which Mr. Gordon described to Mr. Keith Carver Mr. Gordon's telephone conversation with Mr. Sessel, and you will note it is dated July 19, 1961.

You note in the first paragraph there is a statement "Tillinghast and Leslie will talk to banks next Tuesday." That is after making reference to the summer losses, et cetera.

Do you know whether or not you and Mr. Leslie talked to the banks on the Tuesday following July 19th?

A. Well, I know, Mr. Davis, that we had a talk with the banks in the latter part of July. I think July 25th is the date, although I wouldn't be absolutely positive [Dep. Tr. 6577] of it.

Q. Will you please just identify the subject matters that were discussed at that meeting with the banks, and in so doing identifying who was present at that meeting?

A. Oh, dear, Mr. Davis. Each of the banks had a representative. I am not sure that I could identify them each by name at this point.

Q. You are referring to the banks involved in the 1960 financing?

A. That's right.

Q. What was the subject of discussion, the purpose of the meeting?

A. Well, let me finish my—

Q. Please do.

A. And then each of the two insurance companies had a representative there. I remember Mr. Keehn was there. I am not sure who else from the Equitable. I believe there were a couple of people from the Equitable and a couple of people from the Met.

The purpose of the meeting was to discuss our financial situation, and the need to roll over some of our maturities in order to improve our year end cash position.

Q. You notice that the next item is "This presumes that Toolco may have to come up with some money on its [Dep. Tr. 6578] guarantee."

Do you recall a discussion at that time as to the possibility of the Tool Company having to come up with money on its guarantee?

A. No, I do not.

Q. Can you identify the guarantee this refers to?

A. Well, I would only be speculating as to it, Mr. Davis.

Q. You are not familiar with the provision in the 1960 financing under which the Tool Company gave a guarantee as to the working capital needed by TWA or for maintaining a particular level of working capital?

A. I know there was such a provision, Mr. Davis, that applied until all of the Convairs had been delivered. Whether this refers to that or not, I can't be sure.

Q. Now look at the next entry there, after the note which says "May not tell other banks," "knew HRH scared by Cahill lawsuit."

Did you have any discussion or participate in any meeting with Mr. Sessel indicating that Mr. Hughes was scared by the Cahill lawsuit?

A. Well, Mr. Davis, we had a board meeting on the 19th of July, I believe, which is this day. At that lawsuit we discussed, among other things, the settlement [Dep. Tr. 6579] negotiations that were then taking place with Mr. Bautser, and I think that the view was expressed that Mr. Hughes appeared very, very concerned about the lawsuit, and looked as if he was making serious efforts to try to get it settled.

Q. You see the next note, which is "But worse than expected."

Now will you tell me what was said or discussed at this board meeting on the 19th tending to indicate that Mr. Hughes was scared by the lawsuit but much worse than expected?

A. Mr. Davis, I can't recall anything being said.

Q. Isn't it true, Mr. Tillinghast, that one of the purposes of the lawsuit was to scare Mr. Hughes?

A. No, Mr. Davis. The purpose of the lawsuit was to get some claims of TWA settled, and to bring an end to the warfare that then seemed to be going on, and our interest was in getting something settled, not in scaring Mr. Hughes.

Q. Look at the next entry or sentence, "They," refering to the Cahill law firm, "have concluded if get him on stand would keep him there for two or three months."

Were you or Mr. Sessel or the board of directors ever told that?

[Dep. Tr. 6579A] A. Oh, Mr. Davis, I am not sure of that. It may have been. It certainly would by my judgment, that if he were on the stand he would certainly be there a matter of months before this whole thing was unraveled, at least judging by my own experience.

[Dep. Tr. 6580] Q. What I am trying to get you to tell us, Mr. Tillinghast, is what was said at the board meeting of the 19th or any meeting which you can recall at which Mr. Sessel may have been present.

A. I don't recall, Mr. Davis. It is entirely possible, when speculated, that he would be on the stand for months once he got on, but I have no distinct recollection of it.

Q. Do you recall what was said about the general strategy of starting a lawsuit, deciding upon an antitrust cause of action, getting an order to show cause for the deposition of Mr. Hughes, the advantages of forcing talks with the

Tool Company, and the threat of what could take place in the lawsuit—you remember that kind of a discussion?

Mr. Sonnett: Mr. Rankin, that is obviously a misstatement of the entire record, and I object to it.

It also implies some reflection on the professional standing and ethics of myself and my firm, which I resent.

The facts are not as Mr. Davis summarized them. The evidence in this record is quite clear.

Insofar as Mr. Hughes is concerned, he will be on the stand for a good two or three months, and I make no secret of that, and never have. Like anybody else, he will submit to the procedures of the courts.

[Dep. Tr. 6581] Mr. Davis, by putting argumentative and erroneous questions, is seeking to create a record which I intensely dislike.

The Special Master: I will sustain the objection to the form of the question.

Q. Do you recall whether or not at this July meeting of the board a report was made that the lawsuit would be sealed until August 1, 1961?

A. Yes, I am quite sure that the status of the sealing was reported to the meeting, Mr. Davis.

Q. Do you recall also a report being made at that same board meeting as to the effect the lawsuit had had to date?

A. On whom or what?

Q. Was there a report to that effect made, a description by you or someone else at that meeting describing the effect that the filing of the complaint had had?

A. Only, Mr. Davis, insofar as I have already testified. As I recall it, what was said at that time was that the institution of the action had been followed by very vigor-

ous talks between Mr. Bautzer and Mr. Reed, that we had the impression that Mr. Hughes was very seriously concerned about the suit, and that real progress seemed to be made in coming to some sort of an understanding, that, having in mind Mr. Hughes' unpredictability, that it would be rash [Dep. Tr. 6582] for anyone to predict what was going to happen, and that until we had a settlement that we shouldn't count on it, but that to that date things appeared to be proceeding seriously and constructively, and that there was at least a hope that we might get everything washed up and come out with a permanent settlement that would enable TWA to operate without the harassments which had marked the recent past.

Mr. Sonnett: Mr. Rankin, may I call to your attention, and for the sake of the record, the fact that on July 7, 1961 Judge Dimock of the Southern District entered an order which provided, in Paragraph 1, "The order of June 30, 1961 sealing the complaint and all other papers filed herein is hereby extended and the Clerk of this Court is directed to keep under seal the complaint and all other papers filed herein until 10:00 a.m. on August 1, 1961, subject to further order of this Court," and that that order was jointly applied for and consented to by my firm and by Mr. Davis.

Mr. Davis: That is part of the record in the file of the Court.

* * * * *

[Dep. Tr. 6647] * * * A. Mr. Davis, I don't, as I say, recall any particular discussion of it at this time. I am sure, as I have already testified, the matter of an application to seal the complaint was discussed. As I recall it,

this was all against the background of facilitating Mr. Reed's discussions with Mr. Bautzer, and putting him in a position whereby on the one hand we would not run the risks that we would run if we hadn't started the suit, and on the other hand, he would be as free as possible to carry out those things that Mr. Bautzer was requesting him to do.

My recollection of the order to show cause, and the examination and everything else, was that we were trying to get our ducks in a row, so that there was no chance of our being scooped or prejudiced by going through the period of delay which would be involved in Mr. Reed's [Dep. Tr. 6648] talking with Mr. Bautzer. I am not sure that answers your question, but that is my best recollection of the matter.

Q. Are you saying, among other things, that Mr. Reed had been discussing with Mr. Bautzer the commencement of this action?

A. No. Mr. Reed had not been, so far as I know at least, discussing with Mr. Bautzer the commencement of this action. Mr. Bautzer, as I understand it, had several times said to Mr. Reed that before this—or that when this special committee had made its report, and before TWA did anything, he hoped that he could sit down with Mr. Reed and discuss the problem, and hopefully work out some settlement of it so that there wouldn't be the need for any action.

What we were aiming to do in this whole matter was to put this thing in a posture, whereas I say, we wouldn't be prejudiced by any delays, but Mr. Reed would be in a position to explore with Mr. Bautzer what it was that Mr. Bautzer wanted to talk about.

Q. Was there any discussion as to the probable reaction of Mr. Hughes if Mr. Sonnett were successful in obtaining an order to show cause for the taking of the deposition of Mr. Hughes?

[Dep. Tr. 6649] A. Mr. Davis, I don't recall any particular discussion of that. I would say I am sure, I think, it is very likely somebody commented on the fact that Mr. Hughes wouldn't be very happy, but I really don't recall any particular discussion about it.

Q. Do you have a general recollection as to what was said in that connection?

A. Not beyond what I have already testified to, Mr. Davis.

Q. You discussed it with Mr. Sessel and Mr. Slack, didn't you?

A. What?

Q. The probable reaction of Mr. Hughes of what he would be likely to do rather than forced to testify?

A. I don't recall discussing that with Mr. Sessel and Mr. Slack, except at one of the board meetings in July, I think it was, when we were discussing settlement of the action.

Q. Isn't it a fact that this meeting, one of those present said "This lawsuit will never go to trial because Mr. Hughes will be forced to settle this before we will be faced with that necessity"?

A. Not that I recall, Mr. Davis.

Q. Would you recall it if it had been said, in sub- [Dep. Tr. 6650] stance?

A. I think very likely I would, but I don't recall.

Q. Do you recall at the meeting Mr. Sonnett reporting that he had not completed his investigation of the facts?

A. I am sure that in the course of the conversation Mr. Sonnett said, or somebody pointed out at that meeting that that was the fact. That the investigation of the facts hadn't been completed so far as it related to so-called equitable causes of action.

Indeed, I believe it was at that meeting, I think Mr. Sonnett observed, as he had once before, or at least once before, I guess several times before, that the relief that would be obtainable in an antitrust action would, in fact, make TWA whole for any damages that it had suffered, and that the best people were defendants in antitrust actions, and that he felt that one of the reasons for bringing an antitrust action was that it didn't have the social approbriums attached to it that some other types of action did, and he thought Mr. Reed's chances of working something out with Mr. Bautzer would be improved rather than diminished if we avoided anything that would point an unpleasant finger at Mr. Hughes personally.

Q. Did anyone suggest at that meeting that before making any final decision as to the kind of action to [Dep. Tr. 6651] bring, the investigation should be completed?

A. No.

Q. What was the conclusion of the meeting?

A. I think the conclusion of the meeting so far as Mr. Reed and Mr. Surbeck were concerned, was that Mr. Surbeck said in substance "I think you have got a good cause of action."

• • • • •

Excerpts From Transcript of Deposition of Emmett Osborn Cocke

[Docs. 228, 231, 233, 235]

[Dep. Tr. 1349] * * * Q. Can you tell me what was said with respect to this action authorizing Mr. Tillinghast to proceed with the filing of this complaint when in his judgment the filing is timely? Do you see that in the notes?

A. Yes.

Q. "President authorized to proceed when in his judgment the filing is timely."

A. There was a feeling expressed at the meeting that the filing of a suit by the Hughes Tool Company was imminent, and it was felt, is my recollection, that Mr. Tillinghast should have the authority to file the suit in his judgment, depending on whether he thought the Tool Company was going to file a suit, or if the Tool Company would file a suit he would be authorized to file TWA's suit.

Q. In other words to file first?

Mr. Williams: That isn't what he said. You are asking now? Is that a question?

Mr. Davis: I am asking him.

A. I recall when the suit was filed by Mr. Tillinghast, [Dep. Tr. 1350] or authorized to be filed, that at that time he indicated that he had understood that the filing of a suit by the Hughes Tool Company was imminent.

The Special Master: That doesn't answer the question, Mr. Cocke.

The Witness: I am sorry, I didn't understand the question.

The Special Master: Will you read the question?

(The question was read.)

Mr. Williams: Do you understand the question?

A. Yes, I believe that was part of the consideration.

By Mr. Davis:

Q. Was that in effect said, "Mr. Tillinghast, you are authorized to file this suit whenever you think the Tool Company is likely to start an action, so that TWA can file its action first"?

A. That is my recollection.

Q. Of what in effect was said?

A. Yes.

Q. Can you tell me who said that?

A. I have no clear recollection of who said it.

[Dep. Tr. 1351] Q. Was there any discussion "suppose the Tool Company was not going to file a lawsuit," then this lawsuit was not going to be filed.

Mr. Williams: That is not a question.

Mr. Davis: That is my question.

Mr. Williams: Put it in the form of a question.

By Mr. Davis:

Q. Is that what was said—if the Tool Company did not file, then Mr. Tillinghast was not to file?

A. No.

Q. Can you tell me what was said at that meeting or prior to that meeting in connection with this authorization given to Mr. Tillinghast, because it is not clear to me what was taking place at that time.

Mr. Williams: Mr. Special Master, I think the witness has already said or testified as to what was said.

The Special Master: You can testify to anything in addition to what you have said, Mr. Cocke.

The Witness: I have nothing to add.

Q. Nothing to add at all?

A. No.

Q. Was there any discussion that you recall with respect to the filing of this complaint in secrecy under [Dep. Tr. 1352] seal? Do you have any recollection of any discussion along those lines?

A. Yes. It was decided to file the complaint on, I think it's called a sealed basis, so that the possibilities of a settlement of the controversy would be greater during the period that the complaint was sealed, rather than after it became public.

Q. Do you remember any more that was said in that connection?

A. No, I can't.

Q. Do you have any recollection of anything being said by anyone relating to examining Mr. Hughes?

A. No, I do not.

Q. Nothing at all?

A. No, I do not.

Q. Do you recall any discussion or any statement by anyone relating to the probability that Mr. Hughes would settle rather than testify?

A. I recall that opinion was expressed, yes.

Q. Can you tell me who expressed that opinion?

A. No, I can't.

Q. Do you recall any discussion at all about filing that complaint at the same time, making some move to compel [Dep. Tr. 1353] Mr. Hughes to testify? Do you remember that being discussed at all?

A. No, I don't recall it.

* * * * *

[Dep. Tr. 1470] * * * The Witness: Mr. Special Master, if I may at this time, I recall in reviewing my

testimony that I had become confused. I believe I stated that the board of directors of TWA reviewed the complaint and authorized the Executive Committee to act upon it. I find in reviewing the material that I was in error. That the Executive Committee acted upon the complaint, and the board of directors then ratified the action. It just occurred to me while I was looking at this meeting, and I would like to change the record.

The Special Master: You may.

By Mr. Davis:

Q. I was asking you if by looking at this testimony of Mr. Tillinghast, that would assist you in any way recalling the circumstances of when you first saw or received a draft of this proposed complaint.

Mr. Daly: There are two questions—when he first saw it or when he first received the complaint.

By Mr. Davis:

Q. The first time you saw one.

A. I believe the first time that I saw a copy of the [Dep. Tr. 1471] complaint was several days before the Executive Committee meeting on June 29th.

Q. In other words, you have no recollection of a discussion of a draft of the complaint taking place at a board meeting?

A. I have no recollection of this being discussed or these documents being issued. I may be in error. It may have happened, but I just don't recall it.

Q. I will take that date, a few days before June 29th. My question to you now is, what recollection, if any, do

you have of any further discussion with respect to the subject matter which was discussed at the March 1st meeting, relating to these possible claims that TWA might have against either the Hughes Tool Company or other organizations that you testified about already. I want your recollection now of any other discussion or conversation as to which you have any knowledge or information with respect to that subject matter, between March 1st and this date when you first saw this draft of the complaint a few days prior to June 29th.

A. Could I have that question read back?

The Special Master: Read the question, please. (The question was read.)

Q. Do you understand my question, Mr. Cocke?

[Dep. Tr. 1472] A. I believe I do, Mr. Davis.

Q. Let me make myself very clear to you.

I understand your testimony that on March 1st at a meeting of the board there was a discussion in which you participated. Mr. Slack made some comments, and others there, that you already testified about, relating to damages to TWA and the desirability of hiring special counsel to investigate the relations of TWA with the Tool Company or other organizations.

You remember your testimony in that regard, do you not?

A. Yes.

Q. Then I understand that a few days prior to June 29th for the first time you saw this draft of the proposed complaint?

A. Yes.

Q. What I am inquiring about is whatever knowledge or information you have now, today, with respect to what

discussions or conversations took place relating to that subject matter of what cause of action, if any, TWA had against the Tool Company or other organizations.

Mr. Daly: Between what dates?

Mr. Davis: Subsequent to March 1st, and up to the date when he first saw this draft of the complaint.

[Dep. Tr. 1473] Mr. Daly: Do you understand that now?

The Witness: Yes.

Mr. Davis, I think I mentioned several things that I recall discussing regarding the complaint. Whether that was at the Executive Committee meeting or whether it was prior to that or after that I have a difficult time recalling.

I have only just recalled another comment that may have been made at the Executive Committee meeting, and it may have been made at a board meeting and that was discussion in connection with whether or not the lawsuit should be filed as an anti-trust action or as a civil suit.

I recall a comment being made "If you file as an antitrust action there would be treble damages, and if you lost the antitrust action you could still then file a civil suit."

Who said that, I am trying to give you the best of my recollection—it was said at some meeting. I recall the comment being made.

By Mr. Davis:

Q. Apart from that do you have any knowledge or information, irrespective of when it took place—

A. Mr. Davis, I just cannot recall anything more. I'll [Dep. Tr. 1474] try.

• • • • •

[Dep. Tr. 1625] * * * The Special Master: I am going to ask, Mr. Davis, that you ask the witness whether or not he has a recollection of the particular matter that you are inquiring about. The reason for that is, in the first place I think that should properly be established.

Beyond that I am disturbed myself at the conflict in some of these documents, and where the truth does lie amongst them. I don't want them to be used in such a way as to unintentionally persuade the witness that the facts may be in one respect when we will find sooner or later that the facts are contrary to that, as we might well suspect in regards to some of these documents.

It is very possible that someone started out to write the minutes. They kept notes one way, and later for various reasons or legal reasons decided they needed to be amplified, and the witness might say, "Well, that isn't what happened."

Mr. Davis: Mr. Rankin, I think everybody appreciates that we are not here at a trial to establish the facts. We are trying to discover [Dep. Tr. 1626] evidence with respect to what may have taken place.

I don't believe this witness is in a position of being so naive as to testify to something which he does not recall. His problem has been, as I understand it, in recalling something, and as was stated by his personal counsel yesterday, his tendency, if there was a tendency on the part of this individual witness of saying he does not remember unless in fact he did remember.

It seems to me that whether these documents correctly reflect a fact or not is not the problem and not

the issue here. I am not trying to establish the truth of the contents of this document. I am trying to direct the witness' attention to matters, to apparent recollections of other persons, to be sure, to see to what extent his memory could be refreshed.

My question is whether or not he has any recollection or to give us whatever recollection he has as to whether or not Mr. Sonnett outlined possible courses of action which were available to the corporation, and then I will pursue that.

Mr. Daly: Let him answer that question.

The Special Master: You may answer that.

A. Yes. In looking at the minutes, and I think I [Dep. Tr. 1627] have testified before, that there was a great deal of discussion as to the way in which this action was to be taken.

I notice from the minutes, as I have testified before, that it was TWA's counsel's opinion that he agrees to the filing of the suit, but expressed a different opinion on whether it should be an antitrust, or minority stockholder type of action.

In searching my memory, Mr. Sonnett either at this meeting, and I would assume it was at this meeting because of the comments made by Mr. Rowe—that there was a discussion as to whether it should be held as an antitrust action, or whether it should be filed as a civil damage suit.

I believe I stated that one of the conversations was that it should be filed, that it was Cahill's opinion that it should be filed as an antitrust action—they felt it was an antitrust action with evidence they had discovered or studies that they had—they felt it was an antitrust action. If the antitrust action failed, the corporation could still

fall back on a civil suit. The reason it should be filed as an antitrust suit, as was explained to me, was because in an antitrust suit you would get triple damages, but even if you lost the antitrust [Dep. Tr. 1628] suit, you could then go back and sue for damages on the other basis.

I remember that discussion. That is, as far as I can remember, is the main thing that was discussed.

There was a discussion of when the suit should be filed. The reason for this Executive Committee meeting, as I recall it, was to enable Mr. Tillinghast to have the authority to file this suit when in his judgment he felt it would be in the best interests of the corporation. The reason that was being discussed, as I think I have stated, was that there was some feeling on the part of the people at the meeting—I had no knowledge of why this came up—but that the Hughes Tool Company were going to file a suit against TWA. There was some legal comment that if TWA filed first, I think the term is that they would have the right of prior deposition.

As far as this meeting is concerned, I realize that it was an extremely important meeting—that I had reviewed the complaint, I believe a few days before. If I remember correctly, this date was June 29th, which was just before the 4th of July, but that has no bearing on what I was saying. Mr. Tillinghast wanted the authority to file this suit so that he would be able to move quickly, and it would not be necessary to have the Executive [Dep. Tr. 1629] Committee called, or to have a board of directors meeting called, but it was the feeling and recommendation of counsel that Mr. Tillinghast be authorized so that he could file this suit on his own authority, and that he had the right to do what he thought was in the best interests of the corporation.

I just can't think of anything further that I can add to my testimony in connection with this meeting.

Mr. Davis: Mr. Rankin, I want to point out that I have listened to the interpretation or conclusions of this witness as to the reasons for the meeting, and why people were saying various things at this juncture, and I understand the only purpose of my examining this witness at this time was to see to what extent he had a recollection of what in fact transpired.

What I would like to do—perhaps his counsel could elicit it more easily from him, having had the benefit of private discussions and consultations with the witness—is whether or not this witness has a recollection of the substance of what Mr. Sonnett said, what Mr. Tillinghast said, of what Mr. Rowe said, or Mr. Sessel who was present at the meeting said, so that we can get the facts.

[Dep. Tr. 1629A] If he is unable to do that, I will accept that as having given him a fair opportunity to identify what was said.

[Dep. Tr. 1630] Mr. Daly: Mr. Davis, I am sure that Mr. Cocke has given you his best recollection of everything that he remembers about this meeting. If you want to go ahead and ask him does he remember what somebody else said, what "A" said, what "B" said, what "D" said, I certainly have no objection to it.

It is possible that the mention of some name might spark a recollection that he doesn't have at this time, but I think up to this moment at least, you have certainly exhausted his recollection of what occurred at this meeting, and he just can't tell you anything more.

If you have something that might refresh his recollection, show it to him. We have spent now two days on this meeting, and all I have heard all day is Mr. Cocke repeating precisely what he said before.

Mr. Davis: When I show him something, you feel that what I show him may not be proven or established and you feel it is not fair to the witness.

Mr. Daly: I have never made an objection on that score at all. What I objected to was your assuming in your question that something was established. You have a perfect right to show Mr. Cocke anything that might refresh his recollection.

[Dep. Tr. 1631] You can go out and pull a door in from outside and pull it in here, and if that will refresh his recollection, you can show it to him. I haven't made any objection on that ground.

What I have objected to is that you are assuming on the record that a certain state of facts exist. Anything that you have to show Mr. Cocke that will refresh his recollection, you show it to him, and I at no time ever objected to that.

But I do object to assumptions in your questions, because that is the sort of thing that gets a witness into trouble.

If you have anything, show it to Mr. Cocke. I will certainly have no objection, but I do have objection to your stating when you are showing him something that this is something that says something that is so.

I don't know that it is. It may or may not be. But if it refreshes Mr. Cocke's recollection, show it to him. That has been the only basis for my objection.

The Special Master: Mr. Cocke, I am interested in whether or not you can remember what anyone

said at this meeting, any individual, beyond what you have [Dep. Tr. 1632] already told us.

Mr. Tillinghast, Mr. Sonnett—just take them one at a time—all those that you know were there—and tell me whether you can remember what any of them said.

Mr. Barr: Mr. Special Master, it is clear that Mr. Cocke in the answer that Mr. Davis just characterized did tell us some of the things at least that Mr. Rowe said, and some of the things at least that Mr. Sonnett said, and some of the things that Mr. Tillinghast said. I can remember him telling about Mr. Tillinghast's introduction.

The witness has not failed, as Mr. Davis suggests, to tell us anything about the substance of what was said at the meeting. He said what these people said on many occasions.

I certainly am interested, as you are, in finding out if he knows anything in addition to this, but I just want it to be clear on the record, at least in my mind the witness has told us the substance of what at least some people had said, at least a part of what some people said.

The Witness: Mr. Special Master, I just do not recall a detailed discussion at this meeting on this complaint. I just don't recall it was gone over [Dep. Tr. 1633] in detail.

I say it may have, but I don't recall it. I am sure if there had been a lot of discussion I should have recalled it.

I would say that in reading the complaint, I did not understand the complaint. There were allegations of antitrust action, and buying and selling of airplanes.

I am just not able to make any comments on the right or wrong of what was done, and I just in my own mind, because I don't recall detailed conversations—as I said before, I think, the meeting only lasted two hours. We discussed two other subjects at the meeting.

I notice some place here that Mr. Sessel left at 12:45. If there was a detailed discussion at this meeting, I just do not recall it, sir.

By Mr. Davis:

Q. Do you recall any statements made by anyone relating to the desirability of trying to obtain some kind of a divestiture of the Tool Company's holdings in TWA?

A. I am familiar that the question of divestiture is in the complaint. I recall being told or of reading some place that under an antitrust action was the only way in [Dep. Tr. 1634] which divestiture could be accomplished. Again, whether it was talked about at this meeting or if I read it some place, or if someone told me, I am familiar with and remember the fact that in an antitrust action that was the only action in which Mr. Hughes could be forced to divest himself of his stock in TWA.

Q. Do you have any recollection of anything that was said relating to the desirability or lack of desirability of filing the complaint under seal?

A. There was some discussion as to whether or not the complaint should be filed under seal, and it was felt in the best interest of the corporation, and I certainly agreed with this, that if there was any possibility of avoiding a litigation—and before this time I did not know such a process was possible—that it was possible that the suit could be filed and sealed.

As I recall, from what I was told, or what my knowledge of it is, if the case was sealed and there was no publicity on it, in that kind of situation, which I can well understand, it would be a great deal simpler to reach a settlement of the differences of the two parties rather than after it had been unsealed and the case had started, and things had happened, where people said things. That it would certainly make it more difficult to reach a settlement [Dep. Tr. 1635] than when it was sealed.

Whether it was at this time—I certainly felt that filing it under seal, if that should be done, it certainly would be fine as far as I realized it, because I felt that I did not like to see TWA as an airline become involved in litigation.

Q. In your answer you have referred to how you felt. I can understand that. What I am interested in knowing, Mr. Cocke, is whether you are able to testify as to what was said, or the substance of what was said by anyone there present at the meeting?

Mr. Daly: Could you ask him whether he expressed that feeling to anybody at the meeting?

A. I am sure I expressed that feeling. I can't say whether it was at this meeting that I expressed the feeling.

In listening to whatever discussion someone was telling me about the fact that it would be filed and sealed, I don't recall anyone objecting to filing it under seal.

I think it was the consensus of everything that I heard anyone say that this would be the best thing to do in the hopes that this litigation could be avoided and a settlement could be reached before it broke open to [Dep. Tr. 1636] public knowledge.

By Mr. Davis:

Q. What was said with respect to the possibility of obtaining a settlement? Do you have any recollection of what anyone said at that meeting relative to that subject?

A. I would like, Mr. Davis, to say that these recollections, I would not be characterized or have it said that it actually happened at this meeting.

I am trying to give my best recollection to the questions that you ask me. In the discussions as to how the settlement was to be arrived at, whether it was at this time or later, there were many discussions and many ideas or proposals to settle the litigation.

I remember that there was, I believe, a settlement, where it appeared it was going to be settled the day before.

Mr. Daly: The day before what?

The Witness: The day before the suit was unsealed, if that is the proper term. I recall in reviewing this material that there was a deadline set by TWA of acceptance, I believe, at 9:00 o'clock in the morning, before it was unsealed.

I recall there was a difference of opinion between Mr. Bautzer and Mr. Davis. In the notes that I [Dep. Tr. 1637] reviewed—I was either told or read some place that Mr. Bautzer indicated he would be willing to settle on that basis, and Mr. Davis said he would not be willing to settle on that basis. No agreement was reached, and the decision was made by TWA to unseal the suit.

By Mr. Davis:

Q. I am primarily interested in the discussion that took place at the time this decision was made on June 29th, Mr.

Cocke. Do you have any recollection of what, if anything, was said about what efforts would be made to obtain the deposition of Mr. Hughes?

A. Again I am not limiting myself to this meeting. There was discussion that I recall, that one of the reasons TWA was to file the suit first was to obtain the right of prior deposition.

I am not completely familiar with these legal terms, but I can only say that it was obvious if TWA had the right of prior deposition, that the deposition of Mr. Hughes would be taken before the deposition of any of the TWA witnesses.

Q. What I am interested in is what was said in that connection, if anything was said in that connection. Is there anything else you recall?

[Dep. Tr. 1638] For example, did anyone say anything to the effect that if a court order was obtained for the deposition of Mr. Hughes, that would insure a settlement on particular terms, or anything like that?

A. There had been discussions that if it was necessary for Mr. Hughes to make the deposition, that there would be a probability that it would be easier to reach a settlement, yes.

Q. Do you recall anyone saying anything about Mr. Hughes' attitude about taking his deposition, or what he would do or not do depending on whether or not his deposition was ordered?

A. There have been discussions as to the opinion, and I believe Mr. Slack made the statement, that if Mr. Hughes would not want to make a deposition, and that if he was forced to make a deposition, or that when that time came, the possibility of settlement would be greater.

Q. Did anyone say anything at that time with respect to what tendencies or inclinations Mr. Hughes had displayed in the past, or was anything said in that area as to what would be likely to happen, what Mr. Hughes would be likely to do?

A. Some people—I think Mr. Slack, and I am not sure who else—had the feeling that Mr. Hughes would not want [Dep. Tr. 1639] to make a deposition.

I recall, in thinking over this, that I disagreed with that opinion. I brought up the fact that Mr. Hughes had made a deposition in Washington many years ago in connection with Senator Brewster, and I didn't have the same opinion, that Mr. Hughes would feel that a settlement would be made if it was necessary for him to make a deposition.

• • • • •

[Dep. Tr. 1646] have any recollection of what was said by anyone relating to the desirability for obtaining a divestiture order, or the reasons for wanting a divestiture order, or anything in that area?

A. I believe the reasons that I recall was the fact that Mr. Hughes controlled 78 per cent of TWA, and that there were problems that had been involved in connection with the control of TWA by the Hughes Tool Company.

Mr. Davis: May I have the answer read to me?
(The answer was read.)

By Mr. Davis:

Q. Can you identify what was said with respect to either the problems or control?

A. I would in substance say that the problem because of the fact that Mr. Hughes or the Hughes Tool Company would not agree to the financing plans that had been offered by the lenders.

Mr. Daly: This was the substance of what was said by somebody to you at some time, is that right? Is that what you want to know?

Mr. Davis: I want to know what was said. I don't want your interpretations.

A. In substance I recall that comment being made.

Q. You don't know by whom?

[Dep. Tr. 1647] A. I don't know where or who made the comment. It was a discussion of the Hughes' problem. That to the best of my recollection is the substance of what was told me of the Hughes' problem.

Q. Do you recall anything being said as to whether or not there would be more or less social stigma or social opprobrium in bringing an antitrust action rather than some other kind of action?

A. No, I do not.

Q. In your prior answers you made a number of references to Mr. Slack. Can you identify more clearly what your recollection is as to what Mr. Slack said that relates to the testimony you gave with reference to Mr. Slack?

A. I don't believe I can. I think, as far as my recollection is concerned, I testified in substance as to the comments Mr. Slack made as to the various questions that came up.

Q. Can you identify more than you already have the nature or substance of what Mr. Slack said, when, to whom?

A. As I recall it, I have stated that I recall Mr. Slack had stated that he didn't feel that Mr. Hughes would agree to any settlement of the litigation until he was called upon to make a deposition.

I think I have also said—I may not have Mr. [Dep. Tr. 1648] Slack, I think as I recall it, commented that he did not feel that the antitrust action was the right action to have filed. He felt that it wasn't an antitrust suit, that it was a civil suit.

Q. Can you identify a little more clearly or more specifically what your recollection is as to what Mr. Slack said with respect to the kind of a claim that TWA had against the Tool Company?

A. No more than what I have said. I believe I testified that Mr. Slack felt that because of the delays in the financing which delayed the equipment, and which caused the damages to TWA, that there was a basis for a claim for damages from the Hughes Tool Company.

Q. I am interested in your prior answer relating to Mr. Slack's remark relating to his thinking that the antitrust action was not the proper or right action. I am interested in getting your complete total recollection of what Mr. Slack said in that area.

A. I don't recall his exact words. I said, as I recall, Mr. Slack making that comment that he felt that the antitrust suit was not—in effect, the question of whether there was an antitrust action.

Q. That is all?

A. That is the substance of the conversation.

[Dep. Tr. 1649] Q. Was that a conversation with you that you recall, or was that something said at a meeting of some kind that you recall, or can you identify more clearly the circumstances under which that comment was made?

A. May I go off the record for a minute, Mr. Special Master?

The Special Master: Yes.

(The witness conferred with Mr. Daly.)

Mr. Daly: Mr. Cocke has just told me he is somewhat concerned that perhaps the question would lead to answers that the plaintiff would want to claim privilege on. Isn't that the problem? Let me go into conference again.

(Mr. Daly conferred with Mr. Cocke.)

Mr. Daly: It is a question of possible privilege. I don't know and I don't make any representation that it is privilege.

Mr. Davis: Isn't it a fact that all the witness is concerned about is whether or not he recalls comments or conversations which may have taken place after the lawsuit was started?

Mr. Daly: That is right. He doesn't know either, but he is concerned that you may be going into a privileged area, and he thought it should be [Dep. Tr. 1650] called to the attention of the people here. He just doesn't want to do anything improper.

The Special Master: Mr. Zeller, in regard to that, is there any claim by the plaintiff that Mr. Slack acted as counsel in connection with any of these matters?

Mr. Zeller: No, your Honor.

The Special Master: He was only a director.

Mr. Zeller: And acting as such, like a good many other men who have been lawyers in the past, they have a hard time forgetting their legal knowledge.

The Special Master: I will instruct you, Mr. Cocke, insofar as any communications with Mr. Slack are concerned, they are not claimed by counsel for TWA to be privileged, and so you may relate those so far as you recall them.

A. I recall Mr. Slack making comments at a board meeting, the substance of which I have related, the question in his mind as to whether the antitrust approach substance was not a proper action—whether there was a legal basis for an antitrust suit.

(Mr. Cook entered the hearing room.)

By Mr. Davis:

[Dep. Tr. 1651] Q. My question is to try to develop a little more clearly the nature or substance of what was said, rather than your conclusion.

Mr. Daly: I do object to two characterizations there. First, I think what he said was very clear, and secondly, I don't think he was giving conclusions. He was giving the substance of the conversation.

The Special Master: I will sustain the objection.

By Mr. Davis:

Q. Can you give us any more of the substance of the conversation than you have?

A. I don't believe I can. As I said, the substance was, I recall Mr. Slack making a comment that he didn't feel this was an antitrust action.

[The following document, which is not part of the Record of this case, has been printed in this Joint Appendix at the instance of defendants.]

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK

Civil Action No. 2018/1963

MARY RICKMAN JONES, individually and as a stockholder of URIS SALES CORPORATION, suing on behalf of herself and all other stockholders of URIS SALES CORPORATION,
Plaintiff,

—against—

URIS SALES CORPORATION, and MORTON PENN,
Defendants.

REPORT OF SPECIAL MASTER

I. *The Complaint, the Judgment and Order of the Court.*

This is an action brought by plaintiff individually and as a stockholder of Uris Sales Corporation ("Uris") on behalf of herself and all other stockholders of Uris against Uris and Morton Penn ("Penn"). It is important at the outset that the allegations in the complaint and the prayer for relief in the complaint be carefully examined because of the law which is applicable in cases like this in which defendants' answer has been stricken.

Plaintiff alleges that Penn made certain representations to her on the basis of which she bought 50% of the stock of Uris, which was engaged in the business of selling and supplying merchandise to post-exchange establishments in

military camps and installations. Among the representations were "that he would use the monies paid by the plaintiff for said stock as part of its capital and apply same for and towards clearing all of its then liabilities . . . " (Par. 5). Plaintiff claims that the representations were false and fraudulent in that Penn "did not use or intend to use the monies paid to him by plaintiff for said stock as part of the corporation's capital or for or towards the development or expansion of its business . . . " but "wrongfully and fraudulently conducted and managed the affairs and business of said corporation so as to divert its assets, business, customers, profits and benefits from defendant corporation to his own benefit and advantage by various schemes, artifices and devices, among them those hereinafter set forth" (Par. 7); that Penn organized other corporations owned or controlled or in which he had a financial interest for the purpose of engaging in the same or similar business as Uris and diverted to such business enterprises opportunities properly belonging to Uris (Par. 8(a)); that he concealed the assets and proceeds of the defendant Uris to deprive the stockholders of their rightful share and interest in Uris (Par. 8(b)); that he manipulated and falsified the books of Uris to make it appear that the corporation was indebted to him and to hide and conceal loans made to Uris by plaintiff (8(c)); that he prosecuted a system of fraud and forgery by which he withdrew or charged substantial sums to Uris for non-corporate purposes (8(d)), that he refused to grant plaintiff access to the books and records of Uris (8(e)) and that he "committed other wrongful schemes, frauds and irregularities at present unknown to the plaintiff." (8(f)).

Plaintiff in her prayer for relief asks for judgment (1) "directing the defendant Morton Penn to account to the

defendant corporation for all assets, monies, profits, business opportunities lost, wasted, dissipated, embezzled or diverted from the defendant corporation by him", (2) "directing the defendant Morton Penn to restore to the defendant corporation the amounts lost, dissipated, embezzled or diverted from the defendant corporation together with appropriate interest thereon", (3) directing that a trust be impressed upon the assets of businesses in which Penn has an interest, (4) restraining Penn from paying any further sums to himself from the assets of defendant, (5) appointing a receiver, and (6) awarding plaintiff and her attorneys allowances for fees, costs and disbursements.

The order of Hon. Lloyd F. MacMahon, dated November 12, 1964, directed that the answer of defendant be stricken, that plaintiff be awarded judgment for the relief demanded in the complaint together with costs and disbursements, that Penn be fined $500.00 for his misconduct and contempt of court, and appointed me as Special Master to determine and assess the damages and relief to which plaintiff is entitled and to report to the Court. Defendants appealed from the order and asked that the proceedings before me be stayed. I was advised, in February 1965, that the Court of Appeals had denied defendants' application and I then scheduled hearings.

II. *Proceedings Under Order of Reference.*

Testimony was taken during 10 hearings held in my office commencing February 24, 1965 and ending August 19, 1965.

The transcript is over 547 pages (the pages were incorrectly numbered by the reporter). Plaintiff submitted 51 exhibits, several of which consisted of many documents. Defendants submitted 9 exhibits. Plaintiff called 14 witnesses and the defendants 2. At my request, the attorneys, during the hearings, held many conferences, in several of which I participated, which resulted in stipulations which

shortened the record considerably. Plaintiff has submitted to me a 57-page memorandum of fact to which is attached a 13-page memorandum of law and 5 appendices. Defendants have submitted a 56-page memorandum.

Attached hereto as Appendix A are my rulings on all matters with respect to which I reserved rulings during the hearings.

III. *The Issues.*

A. Preliminary Statement.

Plaintiff's claims for money damages fall into two broad categories. The first category consists chiefly of individual transactions between plaintiff and Penn, which plaintiff claims resulted in damage to her. The second category consists of plaintiff's claims that Penn diverted corporate opportunities to other of his businesses to the damage of Uris.*

B. General Principles of Applicable Law.

Rule 54(c) of the Rules of Civil Procedure provides:

> "(c) Demand for Judgment. A judgment by default shall not be different in kind from or exceed in amount that prayed for in the demand for judgment. Except as to a party against whom a judgment is entered by default, every final judgment shall grant the relief to which the party in whose favor it is rendered is entitled, even if the party has not demanded such relief in his pleadings."

Moore's Manual of Federal Practice and Procedure states:

> "A default judgment cannot give to the claimant greater relief than the pleaded claim entitles him to; and Rule 54(c) provides that such a judgment 'shall

* Although plaintiff does not, in the complaint, ask for damages to herself as an individual, in her memorandum she asks for "individual judgment in favor of plaintiff". (p. 55-56).

not be different in kind from or exceed in amount that prayed for in the demand for judgment.' Since the prayer limits the relief granted in a judgment by default, the prayer must be sufficiently specific that the court can follow the mandate of the Rule.

"Judgments by default are of two kinds: for want of appearance; for failure to plead or otherwise defend as provided by the rules, although the party has appeared in the action. It is arguable that, as a matter of policy, the limitations of the Rule should apply only to a judgment by default for want of appearance and not to a default judgment where the defendant has appeared. In the latter situation a party who has put in an appearance is entitled to receive notice of all proceedings in the action, including a written notice of the application for judgment at least 3 days prior to the hearing on such application; and only the court can render the default judgment where the defending party has appeared. These factors would warrant a rule authorizing the court to render such a judgment as the complainant proved himself entitled to, no matter what the initial pleading may have requested. But Rule 54(c) does not go that far; it makes no distinction in the type of judgment by default; and hence all judgments by default are subject to its limitations." (§25.04 (7) at pages 1839-40).

It would seem, therefore, that when a defendant's answer is stricken for contempt and he is in default, the judgment cannot be different in kind from that prayed for in the demand for judgment.

The general rule is that a defendant in default is foreclosed from contesting the truth of any of the allegations in the complaint. This is true when the allegations of a

complaint are definite, distinct and positive, but when the allegations of a complaint are indefinite and the demands of the complaint are in their nature uncertain, the requisite certainty must be afforded by proof. *Thomson* v. *Wooster,* 114 U.S. 104 (1885); *Ohio Cent. R. Co.* v. *Central Trust Co.,* 133 U.S. 83 (1890); *Clifton* v. *Tomb,* 21 F.2d 893 (4th Cir. 1927); *State Reserve Bank* v. *Swift & Co.,* 32 F.2d 590, 593 (8th Cir. 1929). In the *Ohio Central* case, the Court said:

"The bill was taken as confessed; but that fact did not, in itself, justify giving complainant more than it claimed. In *Thomson* v. *Wooster,* 114 U.S. 104, 5 Sup. Ct. Rep. 788, the general nature and effect of an order taken on a bill *pro confesso,* and of a decree *pro confesso* regularly made thereon, and of our rules of practice on the subject, are discussed in the opinion of the court by Mr. Justice BRADLEY; and it is there held that under the rules and practice of this court in equity 'a decree *pro confesso* is not a decree as of course, according to the prayer of the bill, nor merely such as the complainant chooses to take it; but that it is made, or should be made, by the court, according to what is proper to be decreed upon the statements of the bill, assumed to be true.' If the allegations are distinct and positive, they may be taken as true without proof; but if they are indefinite, or the demand of the complainant is in its nature uncertain, the requisite certainly must be afforded by proof. But in either event, although the defendant may not be allowed, on appeal, to question the want of testimony or the insufficiency or amount of the evidence, he is not precluded from contesting the sufficiency of the bill, or from insisting that the averments contained in it do not justify the decree. Under the eighteenth rule in equity, where the bill is taken *pro confesso,* the cause is proceeded

> in *ex parte,* 'and the matter of the bill may be decreed by the court;' and hence, if a decree be passed not confined to the matter of the bill, it may be attacked on appeal for that reason." (113 U.S. at p. 90).

It is important to consider the above principles of law in evaluating plaintiff's claims for damages other than the claim asserted in connection with the allegation that Penn diverted corporate opportunities from Uris to his other companies. With respect to the diversion of corporate opportunities, it is clear that plaintiff alleges such diversion in her complaint clearly and positively (Par. 7) and that she asks for appropriate relief in the prayer in her complaint (WHEREFORE clause, Par. 1). The principles of law which are applicable in connection with the damages claimed as a result of the diversion of corporate opportunities will be discussed below.

C. The Damages Claimed by Plaintiff other than those Claimed to be the Result of a Diversion of Corporate Opportunities.

1. The $70,042.71 Claim.

The June 30, 1953 balance sheet of Uris (P. Ex. 2)* lists a debt due from Rickman Sales Company in the amount of $70,042.71. Rickman Sales Company was owned by Penn (MM p. 9-10).** Plaintiff in her memorandum claims that Penn "took" this amount from Uris "for his solely

---

* Reference is made to exhibits introduced at the hearing before the Special Master.

** Unless otherwise indicated, reference is made to the pages of the transcript of the testimony taken before the Master (Master's Minutes). The testimony referred to here was given by Penn on his examination before trial and was read into the transcript of the hearings before the Master. The reference to the page number of the transcript of the depositions before trial is not repeated in this report.

owned Rickman company". The only testimony that plaintiff cites in her brief in support of this claim is that Penn never tried to collect this amount from Rickman Sales Company for Uris "Because Rickman never had the money to pay it back." (P.'s brief, p. 3). An examination of the complaint discloses that there is no allegation to which this claim of damage can be associated. Penn is accused in the complaint of concealing assets, of falsifying records and withdrawing funds for non-corporate purposes but this claim does not fall within any of those allegations. If it is plaintiff's position that she is entitled to recover this claim under the broad allegations in Par. 8(f) that Penn "committed other wrongful schemes, frauds and irregularities ..." she would be required under the Rules set forth in the *Thompson* case and other cases cited (*supra*, p. 7) to prove the charges. There is no proof submitted. The only evidence is that Penn failed to take steps to collect a debt which, as far as the proof goes, was uncollectible. Accordingly, I find no damages for plaintiff in connection with this claim.

2. The $3,491.96 Claim.

The balance sheet of Uris, dated June 30, 1963 (P. Ex. 2) shows that Penn owes Uris $3,491.96. This appears to be a loan from Uris to Penn. There is no indication that this loan was authorized by the stockholders of Uris as required by §714 of the Business Corporation Law of the State of New York. Although the loan was unauthorized the borrower is obligated to repay it. This act of Penn as a director of Uris in loaning himself money without stockholder approval is, at the very least, an "irregularity" as alleged in the complaint (Par. 8(f)) and a "diversion of funds" which plaintiff in her prayer for relief asked that Penn

restore to Uris "with appropriate interest". There is no indication when this money was loaned to Penn but the loan does appear on the June 30, 1963 balance sheet, so the loan was made on or before that date. I find that Penn should restore to Uris the amount of $3,491.96 with interest computed at the rate of 6% per annum from June 30, 1963 to the date of such restoration.

3. The $6,827.71 Claim.

On the June 30, 1963 balance sheet of Uris it appears that Uris owes plaintiff $6,827.71 for monies loaned to Uris by plaintiff. Plaintiff does not claim any wrong-doing on the part of the corporate defendant Uris or by Penn. All that is claimed is a debt owed by Uris to plaintiff. There is nothing in the prayer for relief which would apply to this claim. Accordingly, I find plaintiff is not entitled to recovery of this amount.

4. The $79,692.87 Claim.

This claim is made up of several small claims lumped together without any attempt made to tie in the claims with the allegations made in the complaint or with the prayer for relief.* It will be necessary, therefore, to examine each individual claim and, where possible, to place each claim in an appropriate classification.

(a) The $15,000 check, dated March 27, 1951 (P. Ex. 3).

Plaintiff's Exhibit 3 is a check dated March 27, 1951, from plaintiff, payable to Penn and endorsed "Morton Penn, Post Merchandise Corp." There is a conflict in

* When these individual claims are added, they amount to a slightly higher figure than the $79,692.87 amount asserted by plaintiff.

the testimony whether this was a loan to Penn or a gift. Plaintiff claims that it is a loan. I find that the $15,000 check was, as indicated on its face, a "loan" which plaintiff expected to be repaid to her (MM 26-27) and which Penn treated as a loan and repaid in part (P. Ex. 1). There is no prayer in the relief demanded that money loaned by plaintiff to Penn be returned to her. Accordingly, I find that plaintiff is not entitled to recover on this claim.

(b) The check dated March 16, 1951 for $200 (P. Ex. 4).

Plaintiff gave Penn a check for $200 so that he could "come down and talk over business with me. He said he would see that I was repaid in time to come." (MM 27). This was the day before plaintiff made Penn the $15,000 loan referred to in subparagraph (a) above. This amount would seem to be a gift or at best a loan. In either case, there is nothing in the prayer for relief which would entitle plaintiff to recover this amount.

(c) The check in the amount of $15,000, dated January 5, 1952 (P. Ex. 5).

Plaintiff testified that this amount was in payment for the stock to be issued to her and that it was needed to pay "the lawyers in the bankruptcy and pay off the creditors, part of it" (MM 32). The check was endorsed by Sydney Basil Levy who represented creditors of the corporation. Since the check offered in evidence by plaintiff indicates on its face that it was used for a valid corporate purpose, it is difficult to see how Penn could have diverted to his own benefit this money paid to him by plaintiff for her stock. Even if I assume that the complaint is definite and certain with respect to the allegation that Penn wrongfully diverted money

paid to him for the purchase and sale of stock and therefore Penn cannot offer any testimony on his own behalf with respect to this transaction because his answer has been stricken, I cannot ignore the fact that the proof offered by plaintiff herself shows that this money which was to be in part payment for her stock was not used for a fraudulent purpose, but indeed was used for a legitimate corporate purpose. Accordingly, I find that plaintiff cannot recover damages with respect to this claim.

(d) The $15,000 cash which plaintiff claims she gave to Penn on January 5, 1952, the same day she gave Penn a check for $15,000.

Plaintiff testified that she paid Penn $15,000 in cash on January 5, 1952, the same day she gave Penn the check for $15,000 referred to in subparagraph (c) above, and that she received from Penn a receipt for the cash, which recites that it was for the purchase of stock. The receipt was read into evidence (MM 36-37). Plaintiff testified "this was by cash. He got this the same day he got the $15,000 for the lawyer. This is for the stock. He said he had to have this cash to give to his aunt because she wanted cash". Penn denies receiving this money and claims that the receipt was for the $15,000 check which he received the same day. I find that plaintiff paid Penn the $15,000 in cash for the stock. Unlike the $15,000 check dated the same day, January 5, 1952, which on its face, and which plaintiff's testimony indicates, was used for a valid corporate purpose, there is no acceptable evidence that the $15,000 cash was used for a valid corporate purpose. Since plaintiff alleges in her complaint specifically that she paid Penn money for stock which was

diverted from Uris to Penn for his own benefit (Par. 7), since her prayer for relief asks that this money be restored by Penn to the corporation and since defendants' answer is stricken, I must find that these monies were wrongfully diverted and that Penn be directed to account to Uris for this amount of $15,000, with interest computed at the rate of 6% per annum from January 5, 1952 until such restoration.

(e) Various checks and money orders totalling about $5,000 (P. Exs. 7, 8, 10, 13, 14 and 18).

These checks and money orders were sent by plaintiff to Penn "at his request under the same conditions." (MM 40-51). Plaintiff's testimony as to the requests by Penn for money and "the conditions" under which the money was sent to Penn is:

"Q. Mrs. Jones, did Mr. Penn from time to time—did you have conversations with Mr. Penn from time to time about money?

A. Yes, I did.

Q. What did he say to you?

A. He asked me what kind of partner was I? Didn't I trust him. He said he had to have money to operate the business. He said I should either wire to him or send him a check to help him along.

Q. Did he tell you who was going to repay the money?

A. He said the corporation and him would be responsible for it and I would get every penny back that I ever put in it and that he was giving me credit all the time for it." (MM 41-42).

There is no claim here that these monies were paid by plaintiff for stock in Uris. In her brief plaintiff

does not state which allegations in the complaint pertain to these monies or where in the prayer for relief she claims to be entitled to a recovery of these monies. There is no attempt to prove that these monies were used for other than valid corporate purposes or were used for Penn's own benefit. If it is plaintiff's claim that the allegations of Par. 8(f), that Penn "committed other wrongful schemes, frauds and irregularities ..." then there was an obligation on plaintiff to submit proof to that effect and no proof was offered. Accordingly, I find that plaintiff is not entitled to recover with respect to these monies.

(f) Western Union receipt for $1,000, dated August 31, 1963 (P.Ex. 19).

This appears to be an advance against commissions earned by Rickman Sales as the selling agent of Rickman Manufacturing Company. Claims for other such monies were withdrawn by plaintiff and it appears that plaintiff inadvertently failed to include this $1,000 item in the other withdrawals. If it were not intended to be withdrawn and plaintiff still asserts a claim with respect to this money, it would fall into the same category of claims discussed above in subparagraph (e) and, like the others, is disallowed.

(g) Check in the amount of $4,000, dated April 2, 1958 (P.Ex. 20).

The cash receipts journal of Uris reflects $4,000 as a loan payable to plaintiff. If it is a loan then it is not covered by the allegations in the complaint or in the prayer for relief. If it is not a loan it is, on plaintiff's testimony, money forwarded to Penn at his request, "under the same conditions" (MM 50) and falls under

the same category as those claims described in subparagraph (e) above, which are disallowed.

(h) Check in the amount of $2,500, dated November 1, 1953 (P.Ex. 21).

Plaintiff testified that this check, payable to "City Motors", was given in order to buy a station wagon needed by a salesman of Uris. "I bought the station wagon and paid for it." (MM 51-52). There is no allegation in the complaint or any prayer for relief which could possibly permit plaintiff to recover under this claim.

(i) Check in the amount of $3,500, dated June 15, 1953 (P.Ex. 22).

This is a cashier's check the proceeds of which were turned over to Penn. This money was, according to plaintiff "requested by Mr. Penn under the same conditions" as the money represented by the checks and money orders described in subparagraph (e) above (MM 52). Even if we assume that Penn did receive this money, this claim would fall into the same category as those described in subparagraph (e) above and is disallowed.

(j) Check in the amount of $750, dated November 12, 1954 (P.Ex. 23).

Like the check described in subparagraph (i) above, this was a cashier's check the proceeds of which plaintiff claims were turned over to Penn. No evidence at all is submitted with respect to the proceeds of this check not even that they were "requested under the same terms and conditions". This claim is disallowed.

(k) Four checks made payable to "Cash", in different amounts and on different dates, totalling $3,000 (P.Exs. 24A, B, C and D).

These checks, payable to "Cash", were endorsed by plaintiff's bookkeeper and, according to plaintiff, the proceeds were turned over to Penn when he visited her in Salisbury, North Carolina. Plaintiff testified that this money, like the other monies described above, was requested by Penn and transmitted to him "under the same conditions" (MM 53-54). Even if we assume that the proceeds of these checks made payable to "Cash" were turned over to Penn, plaintiff's claims with respect to damages must be disallowed.

(l) Check in the amount of $6,000, dated January 19, 1952, payable to "Mary Rickman" (P.Ex. 25).

This check is made payable to plaintiff's own order. Again, she testified that she "transmitted" the monies to Penn, who "requested them under the same conditions". Here, however, plaintiff adds that Penn needed the money to pay off the creditors of Uris Sales, that it was going to run better than $24,000 (MM 55). Even if we assume that the proceeds of this check were turned over to Penn, as plaintiff testifies, there is no proof or attempt to prove that the monies were used for anything but a legitimate corporate purpose. Accordingly, this claim is disallowed.

(m) Four checks, payable to "Cash" or to plaintiff, totalling $10,700 (P.Exs. 26A, B, C and D).

These four checks were made payable either to "Cash" or to the order of plaintiff. Three are dated in the spring of 1956 and the fourth in the spring of 1958. Plaintiff testified that she gave this money to Penn for travelling expenses. "I advanced it to him. He said he and his corporation, our corporation, would stand good for it and that we would make lots of money

with it". Again, plaintiff does not try to associate how this claim fits in with the allegations in the complaint and the relief demanded in the complaint. If, as plaintiff indicates, these monies were "advanced" to Penn and plaintiff claims that the advances constituted a loan which should be returned to her, there is no prayer in the complaint for such relief. Under all the circumstances, I find that this claim should be disallowed.

(n) Three checks, payable to "Cash" or to the plaintiff, totalling $2,000 (P.Exs. 27A, B and C).

Again, even if we assume that the proceeds of these three checks which were made payable either to "Cash" or to plaintiff were transmitted to Penn they were, according to plaintiff, transmitted by her to Penn "At his request and under the same conditions" and must fall within the category of the claims described above in subparagraph (e), which were disallowed.

5. The $52,799.06 Claim.

Apparently, it is plaintiff's contention that some of the monies transmitted to Penn by her as described above were treated on the corporate books as "loans payable to Morton Penn" in the amount of $52,799.06 instead of being credited on the corporate books as monies advanced by plaintiff (P.'s brief, pp. 10-22). Plaintiff in her brief asked for "Individual judgment in favor of the plaintiff against Uris Sales Corporation for $52,799.06, which is shown on the books as due to Morton Penn, but which is really money of the plaintiff, and an order cancelling and discharging the entry as due from Uris Sales Corporation to Morton Penn." (p. 55). Plaintiff read into the record parts of the transcript of Penn's examination before trial in which

he admitted the possibility that some part of the $52,799.06 reflected on the books of the corporation as a loan to him could have been monies advanced by the plaintiff (MM 21-22). Even if we assume that the allegation in the complaint which accuses Penn of falsifying books and records (Par. 8(c)) is applicable and that some of the monies advanced by plaintiff appear on the books of Uris as loans from Penn to Uris, the relief demanded by plaintiff in her memorandum that Uris pay her money individually cannot be granted. Nowhere in her complaint does plaintiff ask that Uris, the corporate defendant, repay any loans or monies advanced by her to the corporation, and I cannot find that plaintiff is entitled to something that she does not ask for in her prayer for relief (*supra*, pp. 5-7). Whatever plaintiff's claims may be with respect to this amount, and it is indeed difficult to determine precisely what her claims are, they are disallowed.

D. Plaintiff's Claim with respect to Alleged Diversion of Corporate Opportunities.

Plaintiff alleges "distinctly" and "positively" that Penn diverted corporate opportunities which belonged to Uris to corporations or businesses in which he owned, controlled or had a financial interest and thereby realized earnings and profits to which "defendant corporation is rightfully entitled". (Par. 8(a)). The prayer for relief asks that Penn be directed to restore to Uris the amounts "lost, dissipated or diverted" from Uris together with interest. Since (a) the allegations are distinct and positive, (b) the relief is prayed for in the complaint and (c) defendants' answer is stricken, I must find that Penn diverted corporate opportunities from Uris to International Service Corporation ("International").

The record is not at all clear as to Penn's interest in International or what equity, if any, he had in International. Penn did testify, however, on his deposition before trial, that his business activities on behalf of International were for him "personally" and were "never intended to be for the benefit of Uris". (MM 535-36).

Plaintiff introduced into evidence commission payments made to International from five of its accounts, Danvin, Inc., Garrison Sportswear, Botany Brands, Transistor World Corporation and Hazel Bishop. The bulk of these payments were made over a period of approximately two years, and totalled $215,720. At his deposition before trial Penn testified that International had 31 additional accounts. In her brief plaintiff states that there were 32 such accounts, but she inadvertently includes Crescent Toys of England as one of the accounts. Penn testified that he did not know whether this was an account of International (MM 322). Plaintiff claims that it was difficult, if not impossible, for her to establish the amount of commission payments made by the 31 other companies represented by International because a great many of the companies, particularly those whose offices were located in Europe, were not subject to subpoena.

Herbert Eurman, a certified public accountant, testified for plaintiff. For about 13 or 14 years Eurman audited the accounts of firms engaged in the business of representing manufacturers. He audited "ten or more" of such firms (MM 348). He testified that there "is an accepted practice in the trade, that a minimum commission from a single line should be no less than $5000 per year" (MM 353). He also testified that the "accepted net profit" on each account would be "no less than one-third of the gross commission" before taxes (MM 354). He had no knowledge as to the

actual operations of International or Uris (MM 355). No further foundation was laid for the testimony of Eurman except that described above.

Plaintiff's claim for damages comes down to this: From the five accounts with respect to which direct testimony was offered International received $215,720 in commissions. Each of the other 31 accounts provided International with, at least, $5,000 commissions each year. Multiply 31 by $5,000 and multiply that figure by three because the 31 accounts were "represented for at least three years". That figure is $465,000. Add the $215,720 to the $465,000 and divide that figure by one-third (the percentage of net profit), the resulting figure of $226,906.67 is the total damage suffered by reason of the diversion. Plaintiff then takes 50% of that figure and, in her memorandum, asks for "individual judgment" against Penn for $113,453.34.*

It is clear that plaintiff is not entitled to "individual judgment". In her complaint plaintiff asks that Penn be directed to account to Uris for the monies diverted from the defendant corporation to him and that is all she is entitled to get.

I will accept the testimony of Eurman that the 31 accounts would have produced minimum commissions of $5,000 each a year. It seems to me that this is something concerning which Eurman was qualified to testify. He was not simply giving an opinion as to what he considered reasonable, but testifying from experience as to what was customary in the business. This factual basis for his testimony was not controverted by defendant, except by way

* The amount sought in plaintiff's brief is $115,953.33, but I have reduced this amount because of the inadvertent inclusion of Crescent Toys of England as one of the accounts.

of argument. Moreover, the record regarding the five accounts with respect to which direct testimony was offered supports Eurman's testimony.

I must reject, however, plaintiff's claim that "these accounts have been represented for at least three years". The record does not support such a statement. The only testimony with respect to these 31 accounts and the length of time they were represented by International appears in the testimony of Penn on his examination before trial which was read into the record before me. This testimony was given in the fall of 1963 and the spring of 1964. I can make no assumption that these accounts are still represented by International. The testimony with respect to each such account and the duration of representation by International is summarized below:

1. Reeves Soundcraft—No period of time is given with respect to representation by International. This account was represented by Uris for "less than a year" and it was through International that Uris secured representation (MM 262), so the period could not have been more than one year.
2. C. A. Reid—"About six months" (MM 266).
3. Forstner Jewelry—"Possibly a period of a year" (MM 268).
4. Ohio Art Company—"A year or so" (MM 269).
5. Roeser—No time given (MM 273).
6. Tozo—No time given (MM 274).
7. Fuyija—"The past year" (MM 275).
8. Aristocrat Leather—No time given (MM 279).
9. Cameo Parkway Record Company—No time given (MM 279).
10. Kalimar—"Possibly for a year" (MM 304).
11. Taron—"Within a year" (MM 306).
12. Tokay—"Maybe a month or so" (MM 306).

13. Walther Brush Company—No time given (MM 307).

14. Trix—No time given (MM 308).

15. D'Orsay—"Possibly a year" (MM 308).

16. Mepps—No time given (MM 309).

17. Ytrio—"Six months or thereabouts" (MM 312).

18. Uher Co.—International represented Uher prior to Penn's meeting Uher, which was "possibly a year and a half or so ago" (MM 315).

19. Kurbi & Nggeloh of Germany—"I have no idea" (MM 316).

20. Bertram of Germany—"I don't know" (MM 317).

21. Gero of Holland—"About a year and a half, two years" (MM 318).

22. Leppington Cutlery—"About a year and a half, two years" (MM 318).

23. Senedesi of Italy—No time given but Penn visited them about "eight or nine months ago" (MM 319).

24. Rio of Holland—No time given (MM 320).

25. Narang of India—No time given (MM 321).

26. Torchio of Italy—No time given (MM 321).

27. Bianchi of Italy—No time given (MM 321).

28. D.A.M. of Germany—"I don't have any idea" (MM 322).

29. Bryant & Tucker of England—"Possibly the past year, thereabouts" (MM 325).

30. Decorel—"During the past year" (MM 268).

31. Ridgeway Pottery—No time given (MM 274).

Based on the foregoing testimony, I cannot agree with plaintiff that these accounts were represented for at least three years. It seems to me that the most that the record supports is that these accounts were represented by plaintiff for approximately one year and I find that plaintiff

represented them for an average of one year for the purpose of applying the $5,000 a year figure testified to by Mr. Eurman.

I have examined each of the checks issued to International from the five accounts with respect to which direct testimony was offered and have made the following compilations of the commissions paid to International for the following years:

Year	*Amount*
1961	$ 1,690.00
1962	115,930.91
1963	53,753.39
1964	36,678.81
1965	213.32

Regarding the 31 accounts, I have found that the approximate length of time they were represented by International was one year. As indicated above, the record does not show the exact periods of representation by International. The testimony with respect to such representation was given by Penn on his examination before trial at hearings held in the Fall of 1963 and the Spring of 1964. Because of the question of accrual of interest I have allocated the $155,000 in commissions which Uris would have earned from representation of these accounts one-half ($77,500) to 1962 and one-half to 1963. The total of such commissions and the commissions described above for the five accounts is therefore:

Year	*Total Commissions*
1961	$ 1,690.00
1962	193,430.91
1963	131,253.39
1964	36,678.81
1965	213.32

The only evidence available in the record regarding the financial condition of Uris indicates that Uris operated at a loss of $8,313.01 on gross sales of $72,313.46, $50,712.11 of which were commissions, for the six-month period ending June 10, 1963. There is no evidence Uris ever operated at a profit. Therefore, while the 33⅓% net profit figure testified to by Mr. Eurman might be an acceptable measure of damages in the case of an efficiently operated and profitable company, it does not seem appropriate here. Some consideration must be given to the fact that Uris was not being efficiently and economically operated and that, despite the increased revenue it would have received if the commissions paid to International were paid to Uris, it is unlikely that Uris would have realized net profits of 33⅓% on such commissions. It would seem appropriate therefore to discount this profit figure substantially.

It is, of course, impossible to determine with mathematical certainty what this percentage figure representing net profits lost should be. However,

> "The rule which precludes the recovery of uncertain damages applies to such as are not the certain result of the wrong, not to those damages which are definitely attributable to the wrong and only uncertain in respect of their amount." *Story Parchment Co.* v. *Paterson Parchment Co.*, 282 U.S. 555, 562 (1931).

See also, *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U. S. 251 (1945). Once the fact of damages is established, the risk of uncertainty as to their amount is upon the wrongdoer, not the plaintiff. *Dabney* v. *Chase National Bank*, 201 F. 2d 635 (2d Cir. 1953); *President and Directors of Manhattan Co.* v. *Kelby*, 147 F. 2d 465 (2d Cir. 1944). Where, from the nature of the case, damages cannot be ascertained

with certainty, it is enough to adduce facts and circumstances which have any tendency to show damages and their probable amount and from which an intelligible and reasonable approximation can be made. *Duane Jones Company* v. *Burke*, 306 N.Y. 172 (1953); *DeLong Corporation v. Lucas*, 176 F. Supp. 104 (S.D.N.Y. 1959). And certainly difficulty in computing damages with mathematical certainty does not warrant the refusal of any damages whatever for the wrong. *Federal Waste Paper Corp.* v. *Garment Center Capitol, Inc.*, 185 Misc. 818 (Sup. Ct. N.Y. Co. 1945).

The fact of damage has clearly been established in this case, as has a basis for their measurement, and I am obliged to arrive at a figure. Whether or not Uris would have made an overall profit had it received these commissions in the years in question, it certainly is entitled to some amount representing what it would have netted with respect to these particular accounts. Under all the circumstances, I find I should apply a figure of 15% in computing the net operating profits Uris would have made on these commissions. On this basis, Uris would have received, for the years in question:

Year	*Amount*
1961	$ 253.50
1962	29,014.64
1963	19,688.01
1964	5,501.82
1965	32.00

Accordingly, I find that Uris has been damaged in the amounts indicated in the table set forth immediately above and that Penn restore to Uris such monies, with interest computed at the rate of 6% per annum on $253.50 from

December 31, 1961, on $29,014.64 from December 31, 196[illegible] on $19,688.01 from December 31, 1963, on $5,501.82 from December 31, 1964, and on $32.00 from December 31, 196[illegible]

E. Legal Fees.

Plaintiff asks for legal fees in the amount of $50,00[illegible] plus disbursements of approximately $2,500. Plaintiff is entitled to reasonable counsel fees in an action of this sort, §626(a) of the New York State Business Corporation Law. In his affidavit, Mr. Hershbaum, attorney for plaintiff, claims that the time spent on the preparation of this case not including appearances in court, appearances on the examination of defendant Penn before trial or the appearances before me as Special Master was in excess of 300 hours. His affidavit shows that Mr. Hershbaum had court appearances or appearances on examinations totalling 24 days. Under all the circumstances and considering the result achieved I find that plaintiff is entitled to a reasonable counsel fee of $20,000.

The Order of Judge MacMahon, dated November 12, 1964, provides that the expenses of and incidental to the proceedings before the Special Master, including his fee, stenographer's fee, and other disbursements, are to be charged to and paid by the plaintiff and all such sums shall be included by plaintiff as taxable costs in her judgment against Penn. In order, therefore, for plaintiff to recover her costs, it will be necessary for her to itemize such costs and expenses rather than to approximate them and to include them as taxable costs in her judgment against plaintiff. With respect to my fee, I have already been paid $2,500 by plaintiff on account of my services as Special Master. Since defendant Penn will ultimately bear the cost of my fee, I will, immediately after filing this report, mee[illegible]

with the attorneys for plaintiff and for Penn and attempt to agree on an amount for the balance of my fee. Absent such agreement, I will make an application to this Court for the reasonable value of my services.

F. In her complaint, plaintiff asks that a trust be imposed upon the assets of all of the companies and enterprises of Penn to the extent of the damages sustained by Uris, that Penn be restrained from paying or causing to be paid any further sums of money to himself from the assets of Uris or from the assets of any of his companies, and that a receiver be appointed "with usual authority conferred upon receivers in such case".

It does seem to me that some restrictions should be placed upon Penn in his operation of Uris pending his compliance with any judgment entered by this Court. I recommend that Penn be prohibited, without the prior written consent of plaintiff or without the prior written approval of this Court from (1) paying to himself either directly or indirectly any salaries, commissions or expenses on any basis or in such amounts which would result in Penn's receiving more income from Uris than he was receiving as of the date of this report, and (2) that plaintiff be restrained from paying any dividends of Uris. I recommend that such prohibitions be enforced until ten (10) days after payment by Penn to Uris of the amounts described in subsections C and D of Section III above. It seems to me that after Penn has restored the above sums to Uris if plaintiff and Penn (each owns 50% of the stock of Uris) find that they cannot agree upon the operation of the business and the constitution of the Board of Directors of Uris plaintiff should pursue any relief to which she may be entitled under the applicable statutes and law with respect

to the dissolution of the company. In the meantime, she should have some protection that Penn will not be in a position to dilute the assets of Uris. Penn must, however, it seems to me, be permitted to withdraw some salary and expenses from Uris if the business of Uris is to continue. To impose upon Uris the costs and expenses which would necessarily be incurred if a receiver were appointed might be more than Uris could stand and continue to operate.

IV. Recommendations

A. On the basis of the foregoing, I recommend that judgment be taken against Penn in favor of Uris in the following amounts:

1. $3,491.96, with interest at the rate of 6% per annum from June 30, 1963 to the date of restoration by Penn to Uris (III.C.3 *supra*, p. 10).

2. $15,000.00, with interest computed at the rate of 6% per annum from January 5, 1952 until restoration by Penn to Uris (III.C.4(d) *supra*, p. 11).

3. (a) $253.50, with interest computed at the rate of 6% per annum from December 31, 1961 until paid;

(b) $29,014.64, with interest computed at the rate of 6% per annum from December 31, 1962 until paid;

(c) $19,688.01, with interest computed at the rate of 6% per annum from December 31, 1963 until paid;

(d) $5,501.82, with interest computed at the rate of 6% per annum from December 31, 1964 until paid;

(e) $32.00, with interest computed at the rate of 6% per annum from December 31, 1965 until paid.

B. That plaintiff have judgment against Penn in the amount of $20,000 for counsel fees.

C. That any judgment should provide that Penn be prohibited without the prior written consent of the plaintiff or without prior approval of the Court from (1) paying to himself either directly or indirectly any salary, commissions or expenses on any basis or in any amounts which would result in Penn's receiving more money from Uris than he was receiving at the date of this report, and (2) from paying any dividends of Uris. I recommend that such prohibitions be in force until ten (10) days after payment by Penn to Uris of the amounts described above.

Respectfully submitted,

PAUL J. QUINN
Special Master

March 29, 1966.

APPENDIX A

Rulings Reserved at the Hearings

Plaintiff in its brief has requested that I rule in its favor with respect to all matters on which rulings were reserved at the hearings (p. 54 of plaintiff's memorandum), but has made no effort to specify the particular questions on which it is still necessary to rule. Defendants have likewise given no indication in their brief of the matters on which they still desire specific rulings. I have, therefore, studied the record for this purpose and find that I reserved rulings on certain evidentiary and related questions. Since my obligations as Special Master include that of determining the relevance and weight of the evidence offered, any necessary resolution of these questions is encompassed in my findings. For purposes of clarity, however, the questions, with appropriate transcript references, and my disposition thereof are set forth below:

1. Defendants' objections to plaintiff's introduction of Exhibits 1-27C on grounds of "lack of connection". (MM 34, 37, 100).

Overruled.

2. Defendants' motion to strike testimony relating to "advances" made by plaintiff to Penn and/or Uris Sales Corporation as immaterial (MM 365).

Denied.

3. Plaintiff's objection to defendants introduction of excerpts from Penn's examination before trial except on the question of damages. (MM 345-346).

Sustained.

4. Defendants' request for ruling that no proof has been submitted entitling plaintiff to relief under the allegations of the complaint. (MM 368-369).

Denied.

5. Defendants' motion to strike "an accountant's report" as not the best evidence. (MM 366).

Denied.

Defendants.

REPORT OF HERBERT BROWNELL, SPECIAL MASTER

Introduction—Prior History of the Case

This is an action by plaintiff Trans World Airlines ("TWA") against Howard R. Hughes ("Hughes"), Hughes Tool Company ("Toolco"), and Raymond M. Holliday ("Holliday"), an officer of Toolco and a director of TWA at the time of the filing of the complaint. The complaint was filed on June 30, 1961. Service was made on Toolco at that time, but service of process on Holliday was not made until January, 1962. Both Toolco and Holliday appeared and answered the complaint. Hughes was never served, and he has not appeared in the action.

The complaint sets forth three claims. The first claim alleges violations of Sections 1 and 2 of the Sherman Act

and Sections 3 and 7 of the Clayton Act. The second claim, based on certain of the acts alleged in support of the first claim but only those acts committed since December 31, 1960, also alleges violations of Sections 1 and 2 of the Sherman Act and Section 7 (but not Section 3) of the Clayton Act. These two claims allege that TWA is a major U. S. air carrier with both domestic and international routes, that Toolco "was and is engaged . . . since in or about 1939 in the development, manufacture and acquisition of aircraft and related equipment from the manufacturers thereof . . . and in the sale or lease of such aircraft to air carriers", and that Toolco has acquired 78% of the common stock of TWA. The first two claims further allege that through various acts the defendants and Atlas Corporation (named as a co-conspirator but not as a defendant) required TWA to acquire all of its jet aircraft from Toolco and to boycott all other suppliers, provided financing for the acquisition of jet aircraft only on the condition that TWA purchase all its jet aircraft from Toolco, and sold and leased jet aircraft on the condition that the purchaser would not buy or lease from any competitor. The third claim, based on pendent jurisdiction, alleges malicious and wilful interference with the business of TWA through the same acts pleaded in support of the first two claims. The complaint seeks treble damages and also injunctive relief requiring defendants to divest themselves of all stock in TWA and to refrain from acquiring any interest in TWA or seeking to exercise control or domination over TWA. In its answer to the complaint, Toolco asserted various counterclaims against TWA and also against others.

In August 1961, the case was assigned to Judge Charles M. Metzner for all purposes, pursuant to Rule 2 of the

General Rules of the District Court. On February 7, 1962 Judge Metzner appointed J. Lee Rankin as Special Master to supervise the discovery proceedings.

Simultaneously with filing the complaint, TWA moved by order to show cause on June 30, 1961 to take the deposition of Hughes. This motion was denied, however, and Toolco was allowed priority in the taking of depositions. On February 7, 1962, in the same order appointing the Special Master, Judge Metzner established a schedule of depositions, which was subject to change by the Special Master upon application of either party. This schedule called for Toolco to continue with the depositions of some twenty-four witnesses which had then been noticed, with the plaintiff to commence depositions immediately upon completion of Toolco's schedule. The last deposition by Toolco was set for April 19, 1962, and the depositions noticed by TWA were to commence with the deposition of Hughes on April 23, 1962.

This schedule was subsequently amended by the Special Master. The deposition of Hughes was set for September 24, 1962, then adjourned to October 29, 1962, and finally set for February 11, 1963. Although Hughes himself was never served with process as a party, the Special Master ruled that Toolco would be responsible for his appearance at the deposition, and Toolco did not contest this ruling.

On January 10, 1963, Judge Metzner denied an application by Toolco to further postpone the deposition of Hughes, so that Toolco might continue with its own depositions. On January 14, Toolco moved to have the deposition of Hughes taken only on written interrogatories, and in the event that this was denied, further moved to have set down for hearing a motion which it had originally made in August, 1961 to dismiss the complaint. Characterizing

this motion as appearing to be "another attempt to put off the deposition of Hughes", Judge Metzner denied the request to have the deposition taken by interrogatories. As to the second branch of the motion, Judge Metzner observed that the case "is not in a posture for a meaningful disposition of the motions to dismiss the complaint or for summary judgment" and noted the agreement of Toolco on several occasions that such a motion was premature. However, the Court further stated that it "cannot prevent defendant Toolco from pressing these motions at this time" and set the motions down for argument.

After oral argument on February 6, 1963, Judge Metzner denied Toolco's motion from the bench and entered a formal opinion and order the following day. (Reported at 214 F. Supp. 106). In that opinion, Judge Metzner stated that "as to the merits of the motion, there is no doubt that the complaint on its face sets forth a claim against the defendants and is not subject to dismissal under rule 12(b)(6)". Judge Metzner further ruled that the acts of the defendants alleged in the complaint were not exempted from the antitrust laws by virtue of certain orders of the Civil Aeronautics Board, and that the C.A.B. did not have exclusive primary jurisdiction over the subject matter of the complaint.

Almost immediately thereafter, at a pre-trial conference before Judge Metzner on Friday, February 8, 1963, counsel for Toolco announced that Hughes would not appear for the deposition scheduled for the following Monday, February 11. Toolco also declared its unwillingness to produce as previously ordered certain income tax returns, as well as certain other documents for which a claim of attorney-client privilege had been made but rejected by the court. Toolco also filed a written "Notice of Position" dated February 8, which recited in part that:

"Toolco hereby elects, subject only to whatever relief it may hereafter obtain, to rest on the merits of its positions as heretofore taken so that it may avoid the burdens and expenses involved in further pre-trial and trial proceedings prior to the time that an appellate court has had the opportunity to rule upon the decisions and orders heretofore made herein."

Counsel for Toolco elaborated on this position at the pre-trial conference on February 8. Adverting to the earlier ruling of the Special Master that Toolco would be responsible for Hughes' compliance with the deposition subpoena, with the possible sanction of a default if the subpoena were not complied with, counsel stated that "the Tool Company did not seek a review of those rulings of the Special Master by the Court and accepted in effect the responsibility placed on it by that ruling." (Tr. of Feb. 8, p. 9). He also stated Toolco's awareness of the possible consequences of a failure to comply with the discovery procedures:

"I have also had occasion to describe to my client, the Hughes Tool Company, the sanctions available under the Rules by reason of a respectful declination or election to stand on the questions of law which have been decided to date and not to proceed any further with respect to discovery proceedings. I have particularly called to their attention the provisions of 37(d) —Rule 37(d)—of the Federal Rules, with respect to the sanctions which could be applied by the Court on the Tool Company. [Tr. of Feb. 8, p. 9]

• • • • •

"The Tool Company does want to rest on the merits of its position, and it does so fully aware of the sanctions which the Court, in its discretion, may impose upon the Tool Company. . . . [*Ibid.*, p. 11]

• • • • •

> "We are fully aware—my client is fully aware—that by insisting on a right to obtain a review on the legal questions which have been decided to date, and should it develop that they are in error, as indicated by your Honor's decisions and rulings, as a consequence they may be deprived of further defending on the merits, other than on the question of damages." [*Ibid.*, p. 12]

In response to questions from the Court, counsel advised that embraced within the contemplation of the "notice of position" was an advice to the Court that Hughes would not appear for the deposition on February 11, and that plaintiff could take any proceedings it is advised to take by way of sanctions under Rule 37. [Tr. of Feb. 8, p. 20] When counsel for TWA questioned whether Hughes would be bound by the anticipatory default, Toolco further waived the right to any defense against sanctions should Hughes in fact appear for the deposition:

> "The Court: • • • Now, Mr. Davis says that as far as the defendant Hughes Tool Company is concerned, they will admit today that Mr. Hughes will not appear on Monday and that as a result you may then take whatever steps you wish to pursuant to Rule 37 [sic].
>
> "I would also like Mr. Davis to state for the record that if by chance Mr. Hughes should appear at the courthouse on Monday, despite what has transpired here this afternoon, that will be no defense to any proceeding taken by T.W.A.
>
> "Mr. Davis: I will so state, your Honor." [Tr. of Feb. 8, pp. 48-49]

Toolco also re-iterated its intention not to produce the documents which it had been ordered to produce, and the Court summarized the state of the proceedings to counsel for the plaintiff and the defendants on the counterclaims as follows:

"The record is now set for you to take whatever action you wish to take on the counterclaims and for Mr. Sonnett to take whatever action he wishes to take on the claims based on the default of Mr. Hughes on Monday.

"Secondly, you have the failure to produce the tax documents, which is an individual and separatr [sic] ground for proceeding; and you have the failure to produce the attorney-client documents, which are a separate and individual ground for proceeding." [Tr. of Feb. 8, pp. 59-60.]

After counsel for Toolco again stipulated as to the binding nature of these acts, the hearing was adjourned.

Thereafter, on February 15, 1963 TWA moved to amend the ad damnum portion of the complaint and formally moved for default judgment pursuant to Rule 37. At the hearing on February 8, counsel for TWA had intimated an intention to increase the amount of damages which TWA was seeking. On May 3, 1963 Judge Metzner granted the motion to amend the complaint and directed that default judgment should be entered for TWA, with a hearing to be held to determine the amount of damages. The question of "the amount of the damages to be paid" was referred to the Special Master previously designated to preside over the discovery proceedings. The counterclaims were also dismissed with prejudice. The opinion is reported at 32 F.R.D. 604. As will appear hereafter, the commencement of the damage hearings was long delayed.

In granting this relief to plaintiff, Judge Metzner reviewed the history of the proceedings to date, and stated:

"It is clear that the deposition of Hughes is essential for the proper presentation of TWA's case. It is also clear that the failure of Hughes to appear on February

> 11th for his deposition was the result of a clear and studied determination by Toolco after all efforts to postpone the appearance of Hughes had failed. The default was deliberate and willful and justifies the court in entering a default judgment. . . ." 32 F.R.D. at 607.

The order was certified by Judge Metzner for immediate appeal.

On June 2, 1964, the Court of Appeals, Second Circuit, affirmed the propriety of the entry of the default and also the earlier decision of Judge Metzner relating to the Court's jurisdiction. The decision of the Court of Appeals is reported at 332 F. 2d 602. After ruling that the Civil Aeronautics Board did not have primary jurisdiction over the anti-trust activities alleged and that prior orders of the C.A.B. did not immunize the acts alleged in the complaint from the operation of the anti-trust laws, the Court went on to uphold the complaint as stating a cause of action under the anti-trust laws:

> "The defendants maintain that in any event the complaint fails to state facts sufficient to establish the jurisdiction of the district court. They claim that the allegations of antitrust violations in the complaint are wholly conclusory and that the specific transactions alleged to have been effected by the defendants do not state a cause of action under the antitrust laws. We do not agree. We cannot say that the specific transactions alleged in TWA's complaint—that Toolco refused to finance aircraft acquisitions by TWA unless TWA agreed to purchase planes from no supplier other than Toolco; that Toolco required TWA generally to boycott all other suppliers of aircraft; that the defendants have attempted through various means to monopolize a substantial segment of interstate and foreign air commerce—are on their face insufficient to

support a claim of antitrust violations, a claim which surely falls within the jurisdiction of the district court. The allegations state the outlines of a tying arrangement, an economic boycott of the defendants' competitors, and an attempt to monopolize commerce, all unlawful under the antitrust statutes. It would be particularly inappropriate to find these allegations insufficient to establish the district court's jurisdiction inasmuch as the defendants denied the plaintiff the right through pre-trial discovery to add more detail and substance to the allegations set forth in the complaint.

* * * * *

"We are satisfied that the complaint sufficiently states a cause of action and establishes the district court's jurisdiction." 332 F. 2d at 610-11.

With respect to the dismissal of the counterclaims with prejudice, the Court held that one such counterclaim against additional defendants should have been dismissed for lack of jurisdiction, but otherwise affirmed the dismissal of the counterclaims with prejudice as a consequence of the default. In doing so, the Court affirmed the rulings of the District Court that required production of the tax documents and those documents as to which the claim of attorney-client privilege had been claimed, and affirmed the propriety of granting a judgment by default in view of the non-compliance with these orders and the failure of Hughes to appear as ordered.

"The sanction of judgment by default for failure to comply with discovery orders is the most severe sanction which the court may apply, and its use must be tempered by the careful exercise of judicial discretion to assure that its imposition is merited. However, where one party has acted in willful and deliberate disregard of reasonable and necessary court orders

and the efficient administration of justice, the application of even so stringent a sanction is fully justified and should not be disturbed. [citations omitted]

"Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and Toolco seized upon every opportunity to forestall this event. To this end they demanded the production of a multitude of documents by TWA and the additional defendants and secured successive adjournments of the deposition. Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute. It was only at the very eve of the Hughes deposition—after the other litigants had been put to much delay and expense—that the defendants made a 'business decision' to terminate discovery.

"Hughes' conduct is particularly intolerable in a large and complex litigation such as this one. The protracted antitrust suit taxes the energies and resourcefulness of each party to the litigation; and it consumes much time of the court and the special masters it appoints. Tactics such as Hughes' serve only to frustrate the implementation of the discovery machinery devised by the federal judiciary to expedite the handling of such complex litigation. See Handbook of Recommended Procedure for the Trial of Protracted Cases, Report of the Judicial Conference Study Group on Procedure in Protracted Litigation, 25 F.R.D. 351 et seq. (1960).

"In the light of all these circumstances, the district court was not obliged to employ sanctions less severe than the dismissal of the counterclaims with prejudice. Whatever lesser sanctions might have sufficed with regard to the documents withheld by the defendants, it seems to us that a dismissal of the counterclaims was appropriate, in view of Hughes' intransigence after intensive and expensive discovery proceedings already protracted for more than one year." 332 F. 2d at 614-15.

The Supreme Court granted certiorari as to the decision of the Court of Appeals, but the writ of certiorari was subsequently dismissed as improvidently granted. 380 U. S. 248-9 (March 8, 1965).

On May 10, 1965, TWA moved before J. Lee Rankin, the Special Master, for an order adopting certain interim findings of fact, based on the allegations of the complaint. The interim findings were sought by TWA "as a basis for the submission of its further evidence as to the amount of its damages." On July 30, the Special Master entered an order which outlined the effect of the default and which tentatively adopted some of the proposed interim findings while tentatively refusing to adopt others.

The failure of the Special Master to adopt the omitted findings was appealed by TWA to the district court. On November 16, 1965, Judge Metzner entered an opinion and order which did not deal with specific findings but which further stated the law pertaining to the effect of the default and returned the matter to the Special Master. 38 F.R.D. 499 (1965). These two decisions by the Special Master and Judge Metzner, as well as a subsequent decision by Judge Metzner noted below, are described more fully elsewhere in this opinion.

Shortly thereafter, Toolco moved before Judge Metzner for an order calling on TWA to set forth the facts which would preclude a finding that Toolco had never been engaged in the manufacture or supply of aircraft in competition with any other manufacturer or supplier. This motion was denied by Judge Metzner on January 4, 1966.

J. Lee Rankin, who had been appointed Special Master to determine the amount of damages, resigned this position upon being appointed Corporation Counsel of the City of

New York. The undersigned was appointed as Special Master under the same terms as the original reference.

On May 2, 1966, the hearing on damages formally commenced with the submission of the plaintiff's direct testimony on damages in written narrative form. Defendants' direct testimony was also thereafter submitted in written narrative form. All witnesses were subjected to thorough cross-examination, which (together with the oral testimony of one rebuttal witness for plaintiff) covers nearly 11,000 pages. More than 800 exhibits were also introduced by both parties. The hearings closed on April 9, 1968, and printed briefs have been submitted by both parties.

Effect of the Default

The first question which must be considered is the effect of the default on plaintiff's case and the extent of the burden which plaintiff must still meet in order to justify recovery. Despite prior rulings in the case, this has been the subject of continuing disagreement between the parties in the damage hearings.

Prior to the commencement of the hearings on damages, plaintiff moved before Special Master Rankin, as noted above, for certain findings of fact based on the allegations of the complaint, which were requested on an interim basis as a foundation for the submission of its evidence on damages. Plaintiff took the position that the default justified the entry of such findings without further offer of proof by plaintiff. After full written and oral argument, Special Master Rankin entered on July 30, 1965 an opinion and order which discussed in detail the effect of the default and which adopted certain of the proposed findings on an interim basis. However, Special Master Rankin declined,

also on an interim basis, to adopt the balance of the proposed findings. A full statement of his opinion is required to properly evaluate the positions of the parties in the damage hearings. The Special Master described the effect of the default as follows:

"The default having been entered for the reasons indicated above, the question remains as to its effect. The default is an admission implied by law as a result of the default, which thereupon dispenses with any proof of the facts alleged in the complaint, except as to unliquidated damages. The default not only has the legal effect of an admission of the allegations, but precludes any showing of defensive matters in regard thereto except as to damages. When the damages are not liquidated, there is no admission as to the damages by reason of the default, and proof thereof is required. (See 3 Freeman, Law of Judgments, Secs. 1281-1282, pp. 2662-2664 (Tuttle's Ed. 1925).

• • • • •

"All parties agree that *Thomson* v. *Wooster,* 114 U. S. 104 (1885) is the leading case by the Supreme Court of the United States on the effect of a default. It is recognized in that decision that upon the entry of a decree *pro confesso* all matters alleged with sufficient certainty are admitted. However, it is as to those matters not adequately alleged with regard to certainty, or subjects which from their nature and the course of the court proceedings require an examination of details imposing an obligation on the complainant to furnish proof, that differences arise.

• • • • •

"While conclusions of law are for the court in the determination of any judgment to be awarded and it thus decides whether the damages proved did in fact flow from the violations of law alleged, the defendants after their default no longer have the right to contest

whether the asserted violations did in fact occur. They are limited to pointing out such information or evidence as may be in the record where the court should take judicial notice of records or facts which show that the allegations could not be true.

"When the plaintiff has pleaded a 'statement of claim' showing that he is entitled to relief (F.R.C. P. Rule VIII (a)), he may yet be unable to prove the case alleged. But that is not a problem in a default where the allegations are, in legal effect, admitted. Defaulting defendants are allowed to raise questions as to allegations contrary to judicially known facts because when a pleader states matter as facts which is not out of harmony with that which the court judicially knows, such averments in the pleading are disregarded. *Greeson* v. *Imperial Irrigation District,* 59 F. 2d 529 (9th Cir. 1932); *Interstate Natural Gas Company* v. *Southern California Gas Company,* 209 F. 2d 380 (9th Cir. 1953). See also In Re: *Woodmar Realty Company,* 294 F. 2d 785 (7th Cir. 1961); *Cert. Denied,* 369 U. S. 803 (1962) and *Glen Coal Company* v. *Dickenson Fuel Company,* 72 F. 2d 885 (4th Cir. 1934).

• • • • •

"Thus, at this stage of the case, the court is obligated to arrive at a judgment and that judgment must be just. Therefore, whenever a court would take judicial notice of the proceedings of public bodies such as the Civil Aeronautics Board or other Federal commissions or the files of the court or any similar matters and such records and information would satisfy the court that any allegation of the complaint or any part of an allegation could not be true, the court is not required by reason of the default to accept such allegation, or such part of it.

"The effect of information appearing in the record up to this date, or as hereafter developed, bearing upon the truth of the allegations of the complaint, is somewhat different. Where such evidence clearly shows

that the allegation or part of an allegation could not possibly be true, the court will not stultify itself by accepting such allegation or part of it in the face of such evidence. Where, however, the evidence merely may tend to show that the allegation may not be maintained and the defendants by reason of the nature of their default have materially interfered with the plaintiff's ability to produce evidence which might support the allegation or disprove such record evidence, the court is not required to reject the allegations. Such a result would reward the defendants for their interference with the processes of the court.

"For the reasons indicated the defendants, at this point, do not have the right to produce evidence to try to establish in any manner that the allegations of the complaint other than as to damages cannot be maintained. That opportunity was given up by their decision to default. The rights of plaintiff resulting from the default should not be taken away by any refinements and legalistic reasoning of any considerations that do not reach to the level of necessary and proper requirements for a fair and just hearing on the question of damages.

"On the other hand, it should not be forgotten that the court in entering a judgment of default is performing 'a judicial act'. *Pope* v. *United States,* 323 U. S. 1. Furthermore, Rule 55(b)(2), under which the court directed that this hearing be held recognizes that such is the nature of the responsibility, at this point in the default proceeding, by stating:

> 'If, in order to enable the court to enter judgment or to carry it into effect, it is necessary to take an account or to determine the amount of damages or to establish the truth of any averment by evidence or to make an investigation of any other matter, the court may conduct such hearings or order such references as to it seems necessary and proper . . .'

"It is within the framework described that the Special Master must proceed. Recognizing that it is his duty on behalf of the court to be satisfied of the liability of the defendants, as well as of the proof, according to law, of the amount of damages claimed, he must also be satisfied by a preponderance of the evidence that any damages were proximately caused by the violations of law alleged in the complaint. Therefore, in the belief that the damage portion of the trial will be advanced by his doing so, the Special Master has sustained a considerable portion of the plaintiff's motion and has adopted certain findings requested, but only on an interim basis, for the purposes of the hearings on damages. He is reserving the right, however, before such hearings are closed to modify any or all of said interim findings if he finds it desirable or necessary in order that justice may be promoted in this case. The Special Master has also declined to adopt certain interim findings proposed in the motion. The findings adopted are set forth in Exhibit AA attached to this opinion and order and made a part hereof as fully as if set out herein. [Exhibit AA is not reproduced herein.]

"The failure to adopt, at this time, any proposed finding is not a determination by the Special Master that such finding is false, or disproved, or that it will not be fully established by the close of the hearings on damages. Such proposed findings have not been adopted at this time because in each instance they appear directly or indirectly to have a bearing upon the question of damages, and may be affected either partially or wholly by the evidence which is adduced in proof of damages herein.

"The failure to now adopt such proposed interim findings, is not to be construed as placing such findings at issue, except to the limited extent that there is any information of which a court would take judicial notice, or there is evidence in the record which would prove such findings to be false or there may be evidence prop-

erly adduced as a part of these hearings on damages which would establish such findings to be false and is brought to the attention of the Special Master before the hearings close. The defendants are not allowed by the present refusal to adopt such tendered findings to contest them on the merits as they could do if there had been no default."

On appeal by plaintiff to Judge Metzner from portions of the Special Master's opinion and order, the legal effects of the default were again thoroughly briefed and argued orally. On November 16, 1965, Judge Metzner entered an opinion and order disposing of the appeal (reported at 38 F.R.D. 499). This opinion and order made no reference to any specific proposed findings which the Special Master had agreed or declined to adopt. It did, however, summarize generally the legal effect of the default, clarified a seeming ambiguity in the opinion of the Special Master relating to liability and proximate cause, and returned the case to the Special Master for proceedings in accordance with the Court's opinion. That opinion is, of course, controlling here.

Pointing out that the reference to the Special Master was made "to determine the amount of damages", Judge Metzner described the effect of the default as follows:

"Liability is not an issue for the Special Master except in a very limited sense. The sufficiency of the complaint has already been established by the denial of defendant's motion to dismiss. 214 F. Supp. 106 (S. D. N. Y. 1963), *aff'd*, 332 F. 2d 602 (2d Cir. 1964), *writ of cert. dismissed*, 380 U. S. 248, 85 S. Ct. 934, 13 L. Ed. 2d 817 (1965). By virtue of the default the defendant has admitted the truth of the well-pleaded allegations of the complaint. *Thomson* v. *Wooster*, 114 U. S. 104, 5 S. Ct. 788, 29 L. Ed. 105 (1885).

"Allegations are not well pleaded if they are shown to be indefinite or erroneous by other statements in

the complaint (*Thomson* v. *Wooster, supra*); or where they are contrary to facts of which the court will take judicial notice (*Glenn Coal Co.* v. *Dickinson Fuel Co.*, 72 F. 2d 885, 889 (4th Cir. 1934)); or where they are not susceptible of proof by legitimate evidence (*Cohen* v. *United States*, 129 F. 2d 733 (8th Cir. 1942); *Greeson* v. *Imperial Irr. Dist.*, 59 F. 2d 529 (9th Cir. 1932)); or where they are contrary to uncontroverted material in the file of the case (*Interstate Nat. Gas Co.* v. *Southern Calif. Gas Co.*, 209 F. 2d 380, 384 (9th Cir. 1953); *In re Woodmar Realty Co.*, 294 F. 2d 785 (7th Cir. 1961), *cert. denied*, 369 U. S. 803, 82 S. Ct. 643, 72 L. Ed. 550 (1962)). However, it may be shown by plaintiff, in the context of this case, that some matters of which the court may take judicial notice should not be so noticed. See McCormick, Evidence § 330 (1954). Where file material is involved, if the plaintiff did not have full opportunity to meet or controvert such material, then it should not be used to nullify the allegation. If evidence merely tends to show that an allegation is not true, the allegation must be taken as true in this default. Finally, the plaintiff is entitled to the benefit of all reasonable inferences from the evidence tendered."

Judge Metzner's opinion makes clear that the failure of the Special Master to adopt certain of the findings did not constitute a determination that the allegations on which they are based are not well-pleaded:

> "The Special Master stated that the failure to adopt any proposed finding is not a determination that such finding
>
> 'is false, or disproved, or that it will not be fully established by the close of the hearings on damages.'
>
> Such proposed findings are not at issue except to the limited extent noted above. The Special Master specifically stated that

> 'the defendants are not allowed by the present refusal to adopt such tendered findings to contest them on the merits as they could do if there had been no default.' "

It is thus clear from the Court's opinion that even those findings not adopted by the Special Master are admitted by the default except to the extent that they can be disproved within the framework of the well-pleaded allegations rule as set forth by the Court. Furthermore, the Court's opinion also establishes that the allegations are presumed to be well-pleaded, and that the burden is on the defendants to show that they are not:

> "Attempts by defendant to escape the effects of its default should be strictly circumscribed. It should not be afforded an opportunity to litigate what has already been deemed admitted in law. In the absence of an exceedingly strong showing that an allegation is untrue under the rules set forth above, the allegation stands as admitted."

A subsequent opinion and order by Judge Metzner on January 4, 1966 also shows that the defendants carry the burden of disproving each allegation of the complaint, despite the Special Master's failure tentatively to adopt a finding based on a particular allegation.

One of the findings which the plaintiff had requested but which the Special Master failed to make at that point in the proceedings was to the effect that Toolco was engaged in the development and manufacture of aircraft, as alleged in the complaint. The Special Master did adopt a portion of the same finding which stated that Toolco was engaged in the acquisition of aircraft from manufacturers in various states and in the sale and lease of such aircraft in interstate commerce, but failed to adopt a further position to

the effect that such sales and leases were "to air carriers in various other states". The defendants, as above mentioned, moved before Judge Metzner in December, 1965 for an order requiring TWA to set forth the facts on which TWA would rely in order to preclude the entry of a finding of fact as follows:

> "The facts before this Court establish that at no time during the period covered by the complaint herein were the defendants, or any of them, engaged in the manufacture or supply of commercial transport aircraft in competition with any manufacturer or supplier of such aircraft."

Despite the failure of the Special Master to adopt the findings noted above, Judge Metzner ruled that the burden with respect to these facts still rested on the defendants rather than the plaintiff, and denied the motion:

> "It asks that plaintiff come forward to negative a fact which defendant asserts as true. The shoe is on the other foot."

Finally, it may be noted that there is no procedural requirement for making such interim findings before taking evidence in the hearing on damages, and the Special Master's disposition of the request for findings appears to have been simply an exercise of the Master's power to regulate the proceedings before him, which is generally subject to review only for abuse of discretion. See 5 Moore's Federal Practice, ¶ 53.06. In fact, during oral argument before Judge Metzner on the motion to review the Special Master's failure to adopt certain of the proposed findings, both counsel for Toolco and the Court treated the Special Master's order as an exercise of discretion in the conduct of the proceedings. Counsel for Toolco asserted that the Mas-

ter could have denied all of the proposed findings without committing reversible error, and the Court agreed, stating that the Master "wanted to lay down some ground rules which could perhaps shorten the hearing." (Tr. of Sept. 28, 1965, pp. 15-16)

It is, therefore, clear that the burden of disproving *all* the allegations of the complaint still rests on the defendants, and the failure of the Special Master to adopt certain findings of fact has not created in the plaintiff a burden of proving those facts. Although the defendants have asserted that the findings which were not adopted represent "gaps" in plaintiff's case which plaintiff is required to fill in through proof, this contention cannot be and is not sustained.

The burden assumed by a defaulting party is a heavy one. Its weight is illustrated by *Thomson* v. *Wooster*, 114 U. S. 104 (1885), which was cited by Judge Metzner, and by other early Supreme Court decisions. In *Thomson*, the plaintiff sued for infringement of a re-issued patent on a folding guide for sewing machines. The original patent was dated October 5, 1858, had been extended for seven years in 1872, and had been re-issued in December 1872. The complaint alleged that numerous suits had been brought and sustained against other infringers, and sought an accounting of profits and damages. The defendants appeared but failed to file an answer to the complaint, and a decree *pro confesso* was entered. The case was referred to a master to determine the profits and damages. After an award by the master, the defendants appealed, asserting among other arguments that the re-issued patent was invalid because it was for an invention other than the one covered by the original patent, and also because an excessive amount of time elapsed between the original issue

and the re-issue, and as a further reason because the complaint alleged that successful suits had been brought on the original patent, whereas invalidity or inoperativeness were conditions precedent of a re-issue. These arguments were rejected by the Supreme Court.

"A confession of facts properly pleaded dispenses with proof of those facts, and is as effective for the purposes of the suit as if the facts were proved; and a decree *pro confesso* regards the statements of the bill as confessed.

• • • • •

"... it seems clear that the defendants, after the entry of the decree *pro confesso*, and whilst it stood unrevoked, were absolutely barred and precluded from alleging anything in derogation of, or in opposition to, the said decree. . . . The attempt, on the hearing before the master, to show that the reissued patent was for a different invention from that described in the original patent, or to show that there was such unreasonable delay in applying for it as to render it void under the recent decisions of this court, was entirely inadmissible because repugnant to the decree. The defendants could not be allowed to question the validity of the patent which the decree had declared valid. The fact that the reissue was applied for and granted fourteen years after the date of the original patent would, undoubtedly, had the cause been defended and the validity of the reissued patent been controverted, been strongly presumptive of unreasonable delay; but it might possibly have been explained, and the court could not say as a matter of law, and certainly, under the decree of the court, the master could not say, that it was insusceptible of explanation. And on this appeal it is surely irregular to question the allegations of the bill. If anything appears in those allegations themselves going to show that the decree was erroneous, of course it is assignable for error; but any attempt

to introduce facts not embraced in those allegations, for the purpose of countervailing the decree, is manifestly improper. The introduction of the original patent, pending the appeal, was clearly irregular." (114 U. S. at 110 and 114)

The Supreme Court then noted the argument of defendants that as a matter of law the re-issued patent must be void, since (quoting the defendants' assignment of errors),

"'... the bill avers that during the fourteen years of the original term of patent the validity of said letters patent was established in numerous suits in the Circuit Courts of the United States, and that all persons sued took licenses and paid therefor, as well as many others not sued, thereby averring, in substance, that the original letters patent were *valid* and *operative*:

"'Wherefore, appellants ask this court to hold that the original letters patent having been *valid* and *operative*, as averred by complainant, for over fourteen years, no reissue thereafter could be legally obtained, because *invalidity* or *inoperativeness* are conditions precedent to the grant of a reissue.'

"The answer to this assignment is obvious. The suits brought on the original patent may have been for infringements committed against particular parts of the invention, or modes of using it and putting it into operation, as to which the specification was clear, full and sufficient; whilst, at the same time, there may have been certain other parts of the invention, or modes of using it and putting it into operation, as to which the specification was defective or insufficient, and which were not noticed until the application for reissue was made; or, in the original patent the patentee may have claimed as his own invention more than he had a right to claim as new—a mistake which might be corrected at any time. At all events, the court cannot

say, as mere matter of law, that this might not have been the case." (114 U. S. at 115)

The Supreme Court's disposition in *Thomson* of the defendants' attacks on the validity of the allegations in the plaintiff's bill shows the exceedingly heavy burden assumed by a defaulting party who attempts to disprove the allegations of the complaint. Even when relying on matters appearing of record, the defendant must show that such matters conclusively, and beyond all doubt, prove that the allegations could not be true.

Another case illustrating this heavy burden is *Harshman* v. *Knox County*, 122 U. S. 306 (1887). Plaintiff had sued the county on certain bonds which the county had issued, and when the county defaulted, obtained a judgment of $77,374.46. He then brought a proceeding by mandamus against the Justices of the county court to compel them to levy a tax sufficient to pay the judgment. The county defended on the ground that the bonds were issued pursuant to a special statute (incorporating a railroad) which authorized a certain rate of tax to support the bonds, that the county had levied such tax and still had insufficient money to pay, and that there was no authority to levy additional taxes. Although the bonds, which were attached to the original complaint, recited that they were issued pursuant to that special statute, the plaintiff in his complaint alleged that the bonds were issued pursuant to a different and more general statute which granted unlimited taxing power. As recited in the Supreme Court's opinion,

"... the contention of the respondents in the Circuit Court was, that they were entitled to show by the recitals in the bonds themselves, in contradiction to those contained in the judgment founded upon them,

that they were in fact issued under the charter of the corporation, and not under the general law. On this point, the judgment of the Circuit Court was in their favor, denying to the relator the peremptory writ of mandamus, and this decision is now alleged as error, for which the judgment should be reversed." (122 U. S. at 316)

Noting that the question was whether the county was estopped to deny that the bonds were issued under the general statute, the Supreme Court opinion stated:

"The averment to that effect in the petition in the action, if material and traversable, was confessed by the default. * * * The averment as to the character of the bonds, and the grounds and authority upon which they were founded, so as to constitute them legal obligations of the county of Knox, contained in the petition, was clearly material to the plaintiff's cause of action. If the defendant had denied it by a proper pleading, the fact would have been put in issue, and the plaintiff would have been bound to prove it. * * * In the absence of a denial, the fact as stated in the petition of the plaintiff is confessed by the default, and stands as an admission on the record, of its truth by the defendant." (122 U. S. at 316-317)

The judgment of the Circuit Court was reversed, with directions to award a peremptory mandamus.

Proof of Basic Anti-Trust Allegations

Against the background of decisions such as these, and having established that defendants bear the burden of disproving the allegations in the complaint, regardless of the Special Master's interim findings, it must now be determined whether any of the allegations have been shown

to be disproved within the narrow confines of the "well-pleaded allegations" rule. The chief allegation which defendants claim to be disproved is the allegation that Toolco was engaged in the development and manufacture of aircraft and the supply of aircraft to air carriers. The defendants claim that this allegation is disproved by various C.A.B. opinions, orders and records which are said to be appropriate for judicial notice, and by certain exhibits introduced during the hearings on damages as well as by the testimony of certain of plaintiff's witnesses during the hearings.

The question of judicial notice is an important one, for it underlies a major portion of Toolco's defense on liability. However, Toolco's reliance upon judicial notice of official documents and records is misplaced. Although judicial notice may indeed be taken of official reports such as reports of administrative agencies, the notice extends only to the existence of the report and its contents, and not to the accuracy of facts recited in the report. For example, in *Stasiukevich* v. *Nicolls,* 168 F. 2d 474, 479 (1st Cir. 1948), Judge Magruder denied judicial notice as to facts recited in an official Congressional committee report:

> "The official report of a legislative or congressional committee is admissible in evidence in a judicial proceeding, as an exception to the hearsay rule, where the report, within the scope of the subject matter delegated to the committee for investigation, contains findings of fact on a matter which is at issue in the judicial proceeding. See Wigmore on Evidence, §§ 1662, 1670. Indeed, the court could properly take judicial notice of the report, without its formal introduction into evidence. But though the court may receive the report in evidence, or may take judicial notice of its existence and contents, this does not mean that the court must

accept the findings in the report as indisputable truth; the findings are merely evidence of the facts asserted. See Unitd [sic] States v. Aluminum Co. of America, 2 Cir., 1945, 148 F. 2d 416, 445, 446; Morgan, The Law of Evidence, 1941-1945, 59 Harv. L. Rev. 481, 485-86 (1946)."

McCormick on Evidence, §328 at p. 704, also notes that while courts will take judicial notice of official documents, this merely "dispenses with formal authenticating proof of the genuineness of the documents" and "does not mean that if the document is a statement of facts, such facts are themselves judicially noticed."

No authority has been cited to support taking judicial notice of facts merely because they are contained in the findings of an administrative agency, and indeed, such treatment would accord the findings of an administrative agency greater weight than is accorded the findings of a court of law. Determinations of fact by a court of law may be used in a separate proceeding only within the narrow confines of the doctrines of res judicata and collateral estoppel, and are not binding on other parties. A Court's reliance on findings of fact in another case may constitute reversible error. Cf. *Radovich* v. *Cunard,* 364 F. 2d 149 (2nd Cir. 1966). If judicial notice cannot be taken of facts contained in findings of a court of law, it would seem that *a fortiori* judicial notice may not be taken of facts simply because they are contained in findings of an administrative agency. Such findings may be of some probative value under the authorities cited above, and in the absence of a default the C.A.B. materials might be quite persuasive. However, they do not permit judicial notice to be taken of the assertion that Toolco was never a manufacturer or supplier of aircraft.

The existence and contents of an administrative order or a document filed with an administrative agency may under certain circumstances be of relevance to a judicial proceeding apart from the facts recited therein. This is true, for example, with regard to the question of whether an administrative agency has primary jurisdiction over the subject matter being litigated. *Interstate Nat. Gas. Co. v. Southern Calif. Gas. Co.*, 209 F. 2d 380 (9th Cir. 1953). However, the relevance of C.A.B. orders and filings to primary jurisdiction in this case has already been considered and disposed of by Judge Metzner and by the Court of Appeals.

Even if judicial notice were taken of the fact that no U. S. air carrier ever purchased a commercial transport aircraft manufactured by Toolco, this would not of itself be sufficient to disprove the allegation that Toolco was "engaged in" the development and manufacture of aircraft. In addition to the general allegation of "engaging" in paragraph 3 of the complaint, there is also an allegation that "defendants and General Dynamics Corporation (hereinafter called 'Convair') entered into an arrangement for the joint development of a jet-powered aircraft to be manufactured by Convair and to be supplied by the defendants to air carriers, including TWA" (Paragraph 14) as well as an allegation that "the defendants also entered into a plan under which Toolco would itself commence the manufacture of a jet-powered aircraft" with the intent that "Toolco would furnish this aircraft . . . both to TWA and to other air carriers." (Paragraph 15). While these efforts were eventually abandoned, they would appear to constitute "engaging in" the development and manufacture of aircraft. Also, they occurred at the period of time when TWA alleges that it should have been arranging for purchases from

other suppliers such as Boeing Aircraft Corporation (Boeing). Furthermore, there is evidence which would suggest that the development and manufacture of the Convair 880 aircraft, which did in fact take place, had elements of a joint venture between Toolco and Convair, with Toolco to benefit financially from the sale of such aircraft over and above the initial order for 40 placed by Toolco and Delta Airlines Inc. (Delta). There is also evidence that Hughes took steps to find buyers, including Delta, for the Convair 880. Defendants do not seriously contest these facts, and in many cases admit them. In view of the specific allegations of paragraphs 14 and 15 of the complaint, which are admitted by the default and which have not been disproved by the defendants under the "well-pleaded" rule, and in view of the additional evidence suggesting what might have been shown to be a joint venture between Convair and Toolco, it is not possible to find that the allegation of "engaging in" the development and manufacture of aircraft could not be true. The testimony of Robert W. Rummel cited at p. 55 of defendants' brief likewise does not show that the allegation could not be true, but at best tends to show that it may not be true. This is not a sufficient showing under the rules laid down in Judge Metzner's opinion:

> "If evidence merely tends to show that an allegation is not true, the allegation must be taken as true in this default."

The same holds true with respect to the allegations of the complaint that Toolco was a supplier of aircraft purchased from other manufacturers. The general allegation that Toolco was engaged in the supply of such aircraft to airlines (Paragraph 3) is supplemented by allegations

that Toolco purchased aircraft from Boeing and Convair (Paragraph 17), that defendants caused six of the Boeing aircraft to be "diverted" to the principal transatlantic competitor of TWA (Paragraph 18), that defendants caused six of the Convair 880 aircraft to be leased to Northeast Airlines Inc. (Northeast), of which three had previously been assigned to TWA (Paragraph 22), and that Toolco also agreed to purchase Convair 990 aircraft from Convair and sought to have TWA purchase these aircraft from Toolco, rather than purchasing additional aircraft from Boeing as TWA proposed to do (Paragraphs 37 and 38). There was also evidence that Toolco purchased a large supply of jet engines from Pratt & Whitney Aircraft Corporation, which it subsequently sold at a profit.

Toolco does not deny that it purchased aircraft, or that it sold aircraft to TWA. In fact, it asserts that all of the aircraft which it purchased were purchased for TWA and as a convenience to TWA, and that TWA would have been unable to purchase such aircraft itself because of financial considerations. It does not deny that six Boeing aircraft purchased by Toolco from Boeing were assigned to Pan American Airways Inc. (Pan Am), or that six of the thirty Convair 880 aircraft originally purchased by Toolco from Convair were leased by Convair to Northeast, but it does contend that these were merely the disposition of aircraft which had been determined to be excess to TWA's needs by TWA's own management. Furthermore, it contends that since all aircraft sold by Toolco were manufactured by Boeing or Convair, there can be no question of restraining competition by Boeing or Convair, while Douglas Aircraft Corporation (Douglas), the third major manufacturer, was not in the running for TWA's orders in any case.

Here again, it is difficult to say how the issues would have been resolved had this case gone to trial. However,

in the context of the default, it cannot be said that defendants have met the difficult burden of showing that the supplier allegations are not well-pleaded. While a prospective purchaser could purchase Boeing or Convair jets from Boeing or Convair rather than Toolco, the element of delivery time was a factor which might cause such a purchaser to turn to Toolco rather than to the manufacturer directly. Jet aircraft, being an enormously expensive commodity, are not manufactured and sold from open stock. A purchaser from a manufacturer at a particular point in time would be offered certain dates for future delivery, depending on the manufacturer's backlog and production facilities at the time of order. On the other hand, Toolco might be able to offer the assignment of aircraft which had been ordered previously and which were scheduled for delivery at dates earlier than those which the manufacturer could offer. To the extent that only one manufacturer is involved, then it is true that the total number of aircraft sold by that manufacturer remains the same. However, it cannot be said as a matter of law that Toolco's ability to offer certain delivery dates to Pan American for Boeing aircraft might not have influenced Pan American to forego purchasing from Douglas, or that Northeast might not have purchased or leased from some manufacturer other than Convair if the Toolco 880's had not been available. Furthermore, price increases over a period of time by a manufacturer might mean that the manufacturer's price at the time of negotiation with a new customer was higher than that paid by Toolco. In fact, this appears to have been the case with the Pratt & Whitney engines. The fact that Toolco in this litigation refused to make available certain documents and information which might have had a bearing on its sales of aircraft and engines and the

profits or tax savings which it may have derived therefrom, makes it particularly difficult to sustain Toolco's contention that it purchased only for the benefit of TWA. There is, moreover, an allegation in the complaint that "Despite repeated requests by TWA, Toolco refused throughout the period 1956 to 1960 to assign to TWA the rights to acquire" the jets which Toolco had ordered from Convair and Boeing (Paragraph 18). This allegation has not been disproved under the "well-pleaded allegations" rule and therefore stands as admitted. It tends to rebut the argument that the aircraft were ordered solely for TWA.

Much of defendants' argument that Toolco was not a supplier of aircraft centers around evidence that Hughes and Toolco were acting in an effort to secure "the newest and finest equipment" for TWA. (Defendants' brief, p. 74, and generally pp. 73-94). However, the fact that Hughes and Toolco were interested in securing good aircraft for TWA is not inconsistent with an intention to act as a supplier of aircraft to TWA and to other airlines as well. Nor is the fact that aircraft were ordered to TWA specifications of itself conclusive that such aircraft were intended solely for TWA, since certain of these aircraft were in fact sold or leased to other airlines, namely Pan American and Northeast. Furthermore, there is evidence that Toolco ordered Convair 990 aircraft which were to be built to the specifications of American Airlines.

Although there is evidence to suggest that Toolco may have been purchasing solely for TWA, this does not constitute a sufficient showing on the part of defendants. Furthermore, the intention of Toolco in ordering the aircraft is a subject which undoubtedly would have been developed more fully had the deposition of Hughes been taken. The default foreclosed fuller examination of this question.

Under all of the circumstances, it cannot be said that defendants have disproved the "supplier" allegations within the limits of the "well-pleaded allegations" rule.

In short, the evidence relied on by Toolco merely tends to support its position and does not conclusively establish that the allegations could not be true. Moreover, in addition to the allegations of the complaint cited above, it is also alleged that Hughes was the sole stockholder of Toolco and controlled its activities (paragraph 4) and that Toolco in turn had acquired more than 78% of TWA's common stock (paragraph 11), which is far more than a controlling interest. Judge Metzner in his opinion of May 3, 1963 stated that:

> "It is clear that during all of the times covered by the complaint the management of TWA was controlled by Hughes personally." 32 F.R.D. at 606

Therefore, even a conclusive showing that the six Boeing jets and ten Convair jets were declared excess to TWA's needs with concurrence of the Hughes-dominated TWA management would not necessarily establish as a matter of law that Toolco had no responsibility for the decision to cut back, which Toolco asserts was the sole reason for the sale of aircraft to carriers other than TWA.

One other allegation in the complaint which may require special comment is the allegation that Atlas, though not named as a defendant, was a co-conspirator with defendants in seeking to restrain competition. Since Atlas was not named as a defendant, it has not been represented by counsel at any stage of this case. Furthermore, the occurrence of the default has precluded any examination of whether there is any evidence to support the charge of conspiracy.

The law of the default appears to require that Atlas be deemed to have conspired with Toolco for purposes of this litigation. The complaint alleges generally that Atlas, together with the defendants, engaged in a conspiracy and attempt to restrain trade in violation of various provisions of the antitrust laws (paragraph 9), that the acts of Atlas were done in furtherance of the offenses charged and with anti-competitive intent, for the profit of Atlas (paragraph 10), and that more specifically, Atlas joined with Toolco in attempting to force upon TWA a merger with Northeast, which would have enlarged the defendants' captive market for aircraft and would have furthered the anti-competitive scheme (paragraphs 21 and 47). Since the allegations of conspiracy have not been disproved within the limits of Judge Metzner's order, they must be taken as admitted as far as the defendants in this case are concerned. The fact that Atlas was not named as a defendant does not prevent a charge that Toolco conspired with Atlas. *U. S.* v. *Griffith*, 334 U. S. 100, 103 (1948). However, the "fact" of the conspiracy is taken to be true only for purposes of this litigation and between the parties to this litigation. There is no intent to bind Atlas or to suggest what outcome would have resulted as to it had the allegations of the complaint been litigated.

Proximate Cause

Apart from the "well-pleaded allegations" rule, however, the defendants argue that under the opinion of Special Master Rankin, proximate cause is not admitted for any purpose by the default. They assert that plaintiff has the burden of proving that any injuries which it suffered were proximately caused by antitrust violations of the defen-

dants. Although admitting that the default may have established the existence of antitrust violations for purposes of this proceeding, they assert that the default did not relieve the plaintiff of establishing this causal connection by means of proof submitted in the hearing on damages. In support of this position, they point to the statement in the Special Master's opinion that he "must also be satisfied by a preponderance of the evidence that any damages were proximately caused by the violations of law alleged in the complaint", a requirement flowing from the Special Master's duty "on behalf of the court to be satisfied of the liability of the defendants, as well as the proof, according to law, of the amount of damages claimed . . . ."

However, defendants' position cannot be sustained. Judge Metzner in his opinion noted that the Special Master's mention of a duty "to be satisfied of the liability of the defendants" might appear to be inconsistent with an earlier statement by the Special Master that "the defendants, at this point, do not have the right to produce evidence to try to establish in any manner that the allegations of the complaint other than as to damages cannot be maintained." Referring to this as an "ambiguity . . . which may need clarification", Judge Metzner stated that the conflict in approach was only an apparent one in light of the Special Master's entire opinion, that the matter was referred to the Special Master to "determine the amount of damages", and that "[l]iability is not an issue for the Special Master except in a very limited sense." The sufficiency of the complaint had already been upheld, and the default admitted all well-pleaded allegations of the complaint. Therefore, liability was an issue only to the extent that the defendants could show, within the rules laid out in Judge Metzner's opinion, that particular allegations in the

complaint were not well-pleaded. Thus under Judge Metzner's opinion (which is binding here), the reference to proximate cause in the Special Master's opinion is interpreted to mean that the plaintiff (as is customary) has the burden of establishing proximate cause, but that this burden is satisfied as to liability if proximate cause is adequately alleged in the complaint, unless the defendants are able to show that such allegations are not well-pleaded. It does not mean that the plaintiff must always prove proximate cause with evidence, regardless of a default.

This conclusion is fortified by the few authorities which bear upon the subject. In the recent case of *Jones* v. *Uris Sales Corp.*, 63 Civ. 2018 (S. D. N. Y. June 27, 1966), *affirmed* 373 F. 2d 644 on the basis of the District Court's opinion on this issue, Judge MacMahon rejected a similar argument by a defaulting defendant that the plaintiff had the burden of proving proximate cause in a hearing before a special master on the question of damages:

> "Defendants' second contention, that even if the allegations are 'distinct and positive,' plaintiff must still prove 'a causal relationship between the allegation deemed admitted and the damage resulting therefrom,' is an obvious attempt to cripple the rule of *Thomson* v. *Wooster* by qualifying it. Defendants have cited no authority in support of their contention, and we seriously doubt that any exists. In any event, the causal relationship is stated distinctly in the complaint. . . ."

The implication of Rule 55, Federal Rules of Civil Procedure, also suggests that proximate cause can be admitted by a default. Under Rule 55, judgment can be entered without any hearing whatsoever if the amount of damages is fixed. Cf. *Ferraro* v. *Arthur M. Rosenberg Co.*, 156 F. 2d

212 (2nd Cir. 1946). If a plaintiff alleges that a defendant has proximately caused damages in a fixed amount, then clearly he is not required to submit further proof of proximate cause, since no hearing is required. It is only when the amount of damages is uncertain and unliquidated that a hearing must be held to fix the amount of damages. Furthermore, a plaintiff's proof of proximate cause may well require evidence in the possession of the defendant. To hold that a plaintiff must always prove proximate cause regardless of a default might allow a defendant to avoid a judgment by withholding such evidence, regardless of the sanctions of Rule 37.

Authorities applying state law, while also relatively scarce, also support this position. In *Putney* v. *DuBois Co.*, 226 S. W. 2d 737 (Mo. Ct. of App. 1950), proximate cause was deemed admitted by the default, and in other cases, a plaintiff was allowed to recover, apparently without offering proof of proximate cause. *State of Maryland* v. *Travelers Indemnity Co.*, 197 A. 2d 265 (Dist. of Col. Ct. of App. 1964); *Anderson* v. *Gallman*, 99 A. 2d 560 (Dist. of Col. Ct. of App. 1953); *Baltimore Transit Co.* v. *Mezzanotti*, 174 A. 2d 768 (Md. Ct. of App. 1961); *Osborn* v. *Gibson*, 309 S. W. 2d 15 (Mo. Ct. of App. 1958).

On the other hand, defendants (as in *Jones* v. *Uris*, *supra*) have been unable to cite any authority for the proposition that proximate cause, even if alleged, is not admitted by a default. The case of *E. V. Prentice Mach. Co.* v. *Associated Plywood Mills, Inc.*, 252 F. 2d 473 (9th Cir.), *cert. denied*, 356 U. S. 951 (1958), cited by defendants at p. 112 of their brief for the proposition that plaintiff must show proximate cause despite an admission of liability, is not in point. This was not a default case, and the defendant, while admitting a violation of the anti-

trust laws, specifically excluded the question of whether the plaintiff had suffered harm therefrom. Defendants' contention cannot be sustained, and plaintiff may rely on well-pleaded allegations in the complaint to establish proximate cause.

Insofar as required to explain the basis for award of damages in this Report, reference will be made in later sections hereof to other specific allegations of the complaint which are deemed to be well-pleaded. Unless a contrary conclusion is specified herein, all allegations of the complaint on which damages are awarded are taken by me to be well-pleaded.

Evidentiary Rulings

At the time that defendants tendered certain documents as their Exhibits 321, 322 and 323, judicial notice was taken of some portions (representing C.A.B. opinions and orders which were also contained in plaintiff's Exhibit 315), while decision was reserved as to the balance. Judicial notice will not be taken of these remaining documents.

For the most part, these remaining documents are motions, contracts and similar papers submitted to the C.A.B. in connection with the proceedings which resulted in the orders which have been noticed. Defendants have offered them either for admission into evidence or for judicial notice. Special memoranda of law have been submitted by both parties, and it is clear that defendants intend to use these documents to contest the allegations of the complaint, including paragraph 20 concerning conditions on the aircraft leases from Toolco to TWA. As indicated earlier, defendants do not have the right to introduce evidence to contest the allegations of the complaint as to liability, and

therefore the only question is whether these documents should be judicially noticed.

There is some question as to whether these documents are a proper subject for judicial notice. However, they will not be judicially noticed on grounds of relevance, even if they are viewed as otherwise fit for such notice. It is clear, as shown above, that judicial notice of these documents would at best be judicial notice of their existence and contents. It would not constitute judicial notice of the truth of what they contain. They would at best be mere evidence to be weighed with other evidence relating to such truth.

For judicial notice to be taken of a fact, the better view, in my opinion, is that such fact must be indisputable. While Wigmore in Volume 9 of Wigmore on Evidence, 3rd Ed., does take the position that a fact judicially noticed may be contested through the introduction of evidence and need not be indisputable, Morgan (in "The Law of Evidence, 1941-1945", 59 Harv. L. Rev. 481, 1946) takes the opposite view and holds that facts must be indisputable to be noticed. If indisputable, rebuttal evidence would be improper. McNaughton, in a preliminary draft of his proposed revision of Wigmore's chapter on judicial notice, accepts the Morgan view and holds that judicial notice should be limited to indisputable facts. McNaughton, "Judicial Notice—Excerpts Relating to the Morgan-Wigmore Controversy", 14 Vanderbilt L. Rev. 779 (1961). The distinction may not be of overriding importance in the normal case, since as a practical matter it may not make much difference whether the propriety of notice is argued before notice is taken or after. However, in a default case, the spirit of the Supreme Court cases dealing with the effect of a default and the rationale of Rule 37 require

that judicial notice not be used broadly to permit a contest on the merits of the complaint, and that judicial notice be limited to those facts which are indeed indisputable. It cannot be said that the facts recited in the documents submitted are indisputable, and that as a matter of law, plaintiff would not have been able to produce contradicting evidence. It must be remembered that in *Thomson v. Wooster,* the defendant was not permitted to introduce a government document (a patent) in his effort to dispute the allegations of the complaint. Even though that patent would have been strongly presumptive of the invalidity of a reissued patent, the court went to great lengths to point out hypothetical means by which the two might be reconciled.

Defendants also argue that the documents as to which decision was reserved should be noticed on the ground that they are necessary for a full understanding of those opinions of the C.A.B. which have been noticed. However, the meaning of these noticed opinions is clear on their face, and in any event, since they would not be sufficient to disprove the allegations of the complaint, there is no reason for further detailed elucidation.

Other C.A.B. documents which have been considered are those offered as Defendants' Exhibit 358A, B, C and D. These are reports filed by various airlines with the C.A.B. showing acquisition of aircraft, and are cited by defendants in an effort to disprove the allegations of the complaint concerning Toolco's engagement in the manufacture of aircraft (Defendants' brief, p. 56). Defendants' brief suggests at pp. 46-47 that plaintiff has objected to this exhibit. However, plaintiff did agree that the reports were appropriate for judicial notice (Tr. 9590), and although intimating that an objection might be made on other

grounds, no such objection was raised. This exhibit has been considered, but it is insufficient to disprove the allegations of the complaint, for the reasons set forth above.

Certain other C.A.B. documents were introduced which bore not on the issue of liability but rather on the amount of damages. Decision was reserved at the time as to these exhibits, Defendants' Exhibits Nos. 255, 259 and 261, which bear on the issue of overcapacity in the airline industry during the early 1960's when TWA claims that it should have had more jets. Exhibit 255 is a statement before the House Subcommittee on Appropriations on January 29, 1963 by the Chairman of the Civil Aeronautics Board. Exhibit 259 is a C.A.B. order relating to a United Air Lines fare proposal, and Exhibit 261 is a letter from the President of United Air Lines to the Chairman of the C.A.B. in response to that C.A.B. order. Judicial notice will be taken that Exhibits 255 and 259 were issued, and Exhibit 261 (which is of questionable standing for judicial notice) will be deemed admitted into evidence. Neither the Chairman of the C.A.B. nor the President of United were available for cross-examination, but their statements have been considered for their appropriate evidentiary worth.

One other ruling on an evidentiary matter was handled separately, at request of defendants' counsel. They requested a ruling prior to filing of briefs on the introduction into evidence of DX 364 for identification. On June 13, 1968, I sustained the plaintiff's objection to such introduction. Defendants' counsel in their brief have requested reconsideration of my ruling. I have reconsidered it in the light of said request, and adhere to my former ruling which is set forth below in full:

"During the hearing on damages (transcript page 10,698) defendants offered in evidence certain portions

of the deposition of Emmet Osborn Cocke, a director and officer of plaintiff Trans World Airlines, which were marked for identification as Defendants' Exhibit 364. This deposition had been taken in the course of the discovery proceedings prior to the entry of the default against defendants. Plaintiff objected to the receipt of Exhibit 364 into evidence, and a ruling on the objection was reserved by the Special Master. That objection is now sustained for the reasons set forth below.

"Although Rule 26(d)(2), F.R.C.P. permits the deposition of an officer or director of a party to be used by an adverse party 'for any purpose', Rule 26(d) nevertheless makes clear that a deposition may be used only 'so far as admissible under the rules of evidence.' To the extent that proffered evidence bears on the amount of damages, it is within the scope of the hearings on damages in this case and the normal rules of evidence apply. On issues of liability, however, the rules of evidence have been substantially modified by virtue of the default. As to liability, the default has admitted the well-pleaded allegations of the complaint, and allegations bearing on liability may be contested only within the limits set forth in Judge Metzner's opinion of November 16, 1965 (38 F.R.D. 499).

"An examination of the proffered pages of the Cocke deposition shows that they are concerned with issues of liability rather than the amount of damages. For the most part, they deal with the proposed merger between TWA and Northeast Airlines, certain aspects of TWA's jet acquisition program, and the circumstances surrounding the institution of the present antitrust action. These proffered pages do not qualify for consideration on such issues of liability under the rules laid down in Judge Metzner's opinion.

"The only portion of Judge Metzner's opinion which might justify admission of Exhibit 364 is the reference in that opinion to 'uncontroverted material in the file

of the case.' There is substantial question whether this deposition represents 'uncontroverted' material and whether plaintiff had 'full opportunity to meet or controvert such material.' However, aside from this question, the deposition would not appear to be entitled to consideration. Mr. Cocke's deposition was not admitted into evidence prior to the default and does not constitute a part of the formal record in this case. If Mr. Cocke were called as a witness at this time, his testimony would be inadmissible because it would constitute a presentation of evidence on liability which is prohibited by the default. It is hard to see how Mr. Cocke's deposition can be admitted into evidence if his live testimony could not.

"There is also some question as to whether the deposition is admissible in light of the contention that plaintiff has had no adequate opportunity for cross examination, and a further question as to the relevance of many of the pages offered. However, there is no need to reach these questions in light of the considerations set forth above.

"The objection is sustained."

Other evidentiary rulings more appropriately appear hereafter in the discussion of the damage claims.

Damage Claims

The plaintiff's damage claims will now be discussed in the following Sections:

I. Losses in operating profits due to inadequacy of jet fleet caused by delays in delivery and failure to deliver jets.

   (A) International division losses.

   (B) Domestic division losses.

   (C) B-331B's.

   (D) Mitigation claim.

   (E) Adjustment in interest cost.

   (F) Damages under Section I.

II. Losses due to being required to lease jets from Toolco instead of buying jets from the manufacturers.

III. Losses connected with financing the jets.

IV. Losses due to delay in disposal of displaced piston aircraft.

V. Losses due to disruption of business.

VI. Alternative over-all claim for damages based upon comparative profitability study.

VII. Interest on damage claim.

VIII. Recapitulation and final award.

I. *Losses in Operating Profits Due to Inadequacy of Jet Fleet*

The plaintiff has elected, in its damage claims, to present specific evidence of damages with respect to only a

portion of the allegations of the complaint. The damages claimed are confined to those said to stem from actions of the defendants in the period from early 1955 to the end of 1960 when the Hughes-dominated board of directors of TWA was replaced, for management purposes, by independent voting trustees. In its claim for damages due to the inadequacy of its jet fleet (Section I) the plaintiff takes the position that the main effect of these 1955-60 actions of the defendants was felt by TWA in a period beginning in 1959 (when the planes TWA "should have" ordered in 1955 would have begun being delivered in substantial numbers) through the end of 1963 (when TWA's independent management achieved "a more nearly adequate fleet"). While actions of the defendants at earlier periods are alleged in the complaint, they are referred to by the plaintiff in the damage proceedings primarily for background purposes.

The complaint states:

"During this period [in or about October 1955] when other United States-flag air carriers were placing orders for jet powered aircraft, and thereafter, the defendants caused and directed TWA to forego making any arrangements for the acquisition, by sale, lease or otherwise of any jet powered aircraft (par. 17) • • • TWA has further been injured in the following manner:

(a) TWA was prevented from obtaining jet powered aircraft and was deprived of opportunity for adequate use of jet powered aircraft during the years 1958, 1959, 1960 and to date with a resultant loss in profits." (par. 52)

The complaint (pars. 9 and 10) also alleges that these actions of the defendants resulted from and were in furtherance of defendants' antitrust offenses.

It is undisputed that by 1955 aircraft manufacturers including Boeing and Douglas had prepared plans and drawings for the manufacture by themselves of jet powered aircraft intended for commercial use. At the same time the major U.S. air carriers were devoting substantial efforts to determine whether and how the jet powered aircraft then being developed by Boeing, Douglas or others could be best utilized by them.

Commercial jet aircraft concededly have a very great competitive advantage over piston aircraft or turbo-prop aircraft both in speed, comfort, efficiency and operating costs. From the first introduction of the jets into commercial service, passengers having the choice have chosen to travel by jet rather than by piston aircraft.

The principal witness of the plaintiff in support of its damage claim for loss in operating profits due to inadequacy of its jet fleet was Mr. Robert W. Rummel, Vice President, Planning and Research, of TWA. He joined TWA as a senior engineer in charge of new aircraft studies and future fleet planning in 1943. He became Chief Engineer of TWA in 1949 and held that position until 1956, when he was elected Vice President, Engineering. In 1959 he was appointed to his present position of Vice President, Planning and Research. From 1956 through 1960 he was also employed by Toolco as a consultant and special representative in connection with the acquisition of jet aircraft from Boeing and Convair, and the acquisition of jet engines. As Toolco's special representative during that period he reported directly to Hughes. He had authority to commit funds under Toolco contracts, and the Toolco factory representatives at Boeing and Convair reported to him as special representative of Toolco responsible for the technical administration of the Toolco contracts with such manufacturers (TWA Ex. 2).

Rummel testified that since 1943 he had been actively engaged in all of TWA's major aircraft procurement programs and had been intimately concerned both with the aircraft actually acquired through Toolco and also with aircraft which TWA considered for procurement. He stated that his activities included negotiations with aircraft manufacturers with respect to technical specifications, performance characteristics, provisioning and spare parts, delivery schedules and acceptance tests. He was cross-examined extensively as to his qualifications as an expert. I find him qualified as an expert in these fields. I reserved decision on the admissibility of his prepared testimony (TWA Ex. 2) until I had an opportunity again to review it in the light of the case as a whole.

In accordance with the foregoing discussion of the effect of the default, defendants' general objections (Nos. 1 and 2) to the testimony of Rummel, which were also reasserted as to plaintiff's other witnesses, are overruled. The first objection was founded on the argument that plaintiff had the burden of proving all allegations which were omitted by Special Master Rankin in his Interim Findings, and the second objection was based on the argument that plaintiff bore the burden of introducing evidence to prove proximate cause, regardless of the default. Neither of these positions can be sustained, for the reasons set forth above. Decision had also been reserved as to certain of the specific objections in part 3 of the objections to the testimony of Rummel (specific objections 4, 5(a), 10, 11, 12, 13, 14, 15, 18, 19 and 21), and these objections are also hereby overruled.

Similarly, I reserved decision on the admissibility of the prepared testimony of the witnesses for the defendants. I now rule that such testimony is likewise admitted into evidence. I likewise decide that the experts called by

the plaintiff and defendants as witnesses in these proceedings were qualified for the purposes for which they appeared.

Rummel testified that although TWA's principal competitors, both on domestic routes and on international routes, were engaged in serious negotiations for acquisition of jet aircraft either with Boeing or Douglas during the last six months of 1955, TWA and Toolco, which were during this period in all respects closely controlled in aircraft procurement matters by Hughes personally, did not engage in negotiations reasonably calculated to preserve TWA's competitive position in the industry for early deliveries of jet aircraft. Rummel also testified that he had recommended negotiations with Boeing before and during this period for acquisition of a jet fleet for TWA, but that Hughes did not authorize negotiations with Douglas and informed Boeing that Toolco and TWA were interested in ordering the Boeing jets only if Toolco could obtain a large priority in delivery positions (vis-a-vis its competitors). He also testified that Boeing refused this demand on the ground that it would wreck its commercial program.

Rummel testified that in general the major air carriers which placed orders first obtained the most advantageous delivery positions. He stated that in order for TWA to obtain competitive equality in early jet deliveries, TWA, Pan-Am and American Airlines, Inc. (American) would have had to commence and continue serious negotiations looking toward a commitment with Boeing for long range jets at about the same time; also, all three carriers would have had to have placed orders for these Boeing aircraft at about the same time. He stated that "at about the same time" does not mean that the actual signing of contracts or letters of intent must be simultaneous, since execution

of such formal documents is not the significant factor; and that minor differences in final contract dates are not significant so long as the negotiations have been substantially contemporaneous. He also testified that the size of the order would play a role in priority of delivery positions; that in fact the major carriers did place large orders and got priority of deliveries; and that a carrier's potential total order was more important than the size of the first order. He testified in detail, as hereinafter set forth, as to his estimate of the delivery dates that the plaintiff could have achieved and would have achieved if it had not been prevented by the defendants from ordering jets during the period under consideration.

The defendants have failed to disprove, in any manner open to them in the light of their default, that they prevented TWA from entering into negotiations with Boeing as alleged in the complaint or that Toolco failed seriously to negotiate with manufacturers during the latter half of 1955, all contrary to Rummel's advice and to TWA's demonstrable competitive needs, with the result of keeping TWA from ever getting as favorable delivery positions for long-range jets as those obtained by TWA's principal competitors in the years in question.

Mr. Ralph Damon, the then President of TWA, advised the Board of Directors of TWA on December 9, 1955 of the substantial orders for jets by TWA's principal competitors and pointed out that these jets would be coming into competition with TWA possibly in 1959 and surely in 1960 and 1961, at which time "Every airplane which TWA now owns or has on order or option will be either totally obsolete or heavily outclassed in speed, comfort, passenger acceptability and economics on competitive routes." (DX 44).

In his report to the Board he also predicted that any airline which did not have comparable equipment by that time would be practically out of business soon thereafter. Rummel testified that Damon had been kept out of any participation in the consideration of jet equipment by Hughes.

Hughes finally authorized negotiations with Boeing for acquisition of jets, presumably for TWA, in late December 1955. A protective order for eight delivery positions for Toolco for B-131s was secured from Boeing on January 6, 1956 (D Ex. 47). A contract for eighteen B-331s was entered into on March 19, 1956. Additional B-131 jets were ordered in a series of contracts entered into between March 2, 1956 and January 10, 1957, with an ultimate total of fifteen (TWA Ex. 2, p. 8; Ex. R-1; Ex. R-2; D Ex. 66, 67). The numbers of B-331s and B-131s finally fixed upon were based upon discussions between Rummel and Hughes as to the proper number of Boeing aircraft for TWA's foreseeable needs for long range jets as of that date.

The delivery dates for these Boeing jets were later than those obtained by the plaintiff's chief competitors. These aircraft moreover were not to be purchased by TWA but were to be purchased by Toolco, with Toolco retaining the power to make a later decision as to their ultimate use and destination.

Later, in April 1956, Hughes caused Toolco to enter into a contract with Convair for thirty CV-880 medium range jet aircraft which had been recommended to him by Rummel for inclusion in TWA's projected jet fleet. (See complaint par. 17.) Here again Toolco retained the power to make a later decision as to whether the planes would go to TWA (TWA Ex. R-3, R-4.) The plaintiff does not complain that the medium range jets should have been ordered earlier but

does allege that the defendants interfered with the production of the planes and caused late deliveries of some of the jets and diverted others of them to Northeast and prevented delivery to TWA of still others.

Experts for both plaintiff and the defendants submitted estimates of the changes in TWA's operating revenues and expenses which would have occurred if the additional aircraft had been secured and the existing aircraft had been delivered earlier. Their estimates were made on the basis of the following premises:

(a) TWA would have received six additional Boeing B-331 aircraft (long range jet aircraft suitable for non-stop trans-Atlantic operations) which were diverted to Pan-Am.

(b) Fifteen Boeing B-131 aircraft (a slightly shorter range jet suitable for trans-continental operations but not well suited for trans-Atlantic operations) and twelve B-331 aircraft, which were actually received by TWA, would have been received on earlier delivery dates.

(c) Twenty CV-880 aircraft, which TWA actually received, would have been received on earlier delivery dates.

(d) Ten additional CV-880's would have been received.

Estimates of the delivery dates for the additional Boeing and Convair aircraft in categories (a) and (d) and of the earlier "reconstructed" delivery dates for the aircraft in categories (b) and (c) were prepared by Rummel. The B-131 and CV-880 aircraft were all used in TWA's domestic operations, and the delivery dates are discussed in the section of this opinion dealing with domestic operations. The B-331 aircraft were used in both international and domestic operations. As to these, Rummel prepared a table

showing the improvement in delivery position he estimated that TWA would have achieved, taking into account both the six additional planes (which had been diverted to Pan-Am) and the delays in delivery of the twelve other Boeing B-331 jets. The table, shown below, lists in the first column the actual receipt date for the twelve B-331's by TWA and the actual receipt dates for the six additional B-331's by Pan-Am. Since all eighteen were part of the original Toolco contracts with Boeing, the delivery dates for all eighteen would have been advanced by making timely orders. The actual delivery dates were earlier than the contract delivery dates, so are used by the plaintiff in computing its damage estimates. Opposite each "actual receipt date" is the "reconstructed earlier receipt date" fixed by Mr. Rummel on the assumptions hereinafter described.

Actual Receipt Date	Reconstructed Earlier Receipt Date
*November 5, 1959	*July 19, 1959
November 10, 1959	August 22, 1959
November 10, 1959	August 28, 1959
November 25, 1959	September 22, 1959
*December 15, 1959	*October 6, 1959
December 23, 1959	October 27, 1959
*December 30, 1959	*November 5, 1959
January 18, 1960	November 10, 1959
*March 23, 1960	*December 15, 1959
April 1, 1960	December 30, 1959
April 5, 1960	January 18, 1960
April 14, 1960	February 29, 1960
*April 29, 1960	*March 23, 1960
May 9, 1960	April 26, 1960
May 25, 1960	April 29, 1960
*June 8, 1960	*May 9, 1960
July 1, 1960	June 8, 1960
July 1, 1960	July 1, 1960

* Diverted to Pan-Am

(In the case of two of the planes, Toolco failed to make payment when they were ready for delivery so the "ready for delivery" date is used in the above table rather than the "actual receipt" date.)

Since the B-331 aircraft were used by TWA in both international and domestic operations, the added availability of these planes was allocated between the international and domestic operations of TWA in the same proportion as the allocation actually made by TWA of its B-331 aircraft during this period. The details of this allocation of the additional B-331 availability are shown in the sections of this report dealing with TWA's international and domestic operations. As to responsibility for diversion of the six B-331 aircraft to Pan American, I have already rejected defendants' argument that ratification of the assignment by the Hughes-dominated TWA Board of Directors is sufficient, under the rules of the default, to relieve defendants of responsibility for this portion of plaintiff's claim.

The Rummel testimony was corroborated in many significant aspects by the testimony of Mr. J. B. Connelly, Vice President and Assistant General Manager of Boeing's Aircraft Division. (TWA Ex. 3) Connelly testified that he was familiar with the development, production, sales and deliveries of commercial jet aircraft by Boeing during the period 1954 to 1961 and in particular the jet aircraft known as the Boeing 707-120 and the Boeing 707-320 series.

The policies followed by Boeing concerning the sale of commercial jet aircraft to commercial air carriers throughout the period 1955 to 1961 were testified to by Connelly. He testified that he participated in and was generally familiar with the negotiations between Boeing and Pan-Am, between Boeing and American and between Boeing and Toolco as well as other air carriers. He stated that in 1955

Boeing wished to sell substantial numbers of 707 jet aircraft to TWA. This included the 707-330 Series, long-range jets suitable for TWA international service. (The configuration later chosen from this Series for TWA's use was designated as B-331.) It also included the 707-120 Series, suitable for transcontinental service. (The configuration in this Series chosen for TWA was B-131.)

Connelly testified that Boeing would have afforded TWA substantially as early delivery positions as those afforded to other customers of comparable interest to Boeing. He stated specifically that had TWA commenced negotiations and ordered jet aircraft comparable in number to those ordered by Pan-Am and American, respectively, at about the same time as such other customers ordered jet aircraft from Boeing, Boeing would have afforded TWA substantial equality in early delivery positions with Pan-Am and American. He stated that Boeing would have sought to provide substantial equality of early delivery positions as between Pan-Am and TWA for planes used primarily on international routes and substantial equality of early delivery positions as between American and TWA as to aircraft used primarily on domestic routes. He stated that Boeing would have agreed, assuming that TWA had placed such orders, to deliver and would have delivered to TWA jets of the B-120 and B-320 Series earlier than such aircraft were in fact delivered under the Boeing agreements with Toolco. He further testified that he had examined the "Statement of Improvement of Delivery Positions", prepared by Rummel and hereinafter discussed, and expressed the opinion that it constituted a reasonable estimate of the improvement in delivery positions which TWA would have obtained. With reference to the six B-331 jets which were originally ordered by Toolco and were later

delivered by action of Toolco to Pan-Am instead of TWA, Connelly corroborated the testimony of Rummel as to the earliest delivery positions Pan-Am could have obtained from Boeing for six such jets if they had been ordered from Boeing in July 1959. The Connelly testimony was not seriously controverted.

The Rummel and Connelly testimony reinforce the above-quoted allegations of the complaint in respect of the inadequacy of the plaintiff's long range jet fleet caused by action of the defendants.

In view of the fact that the "reconstructed" TWA possessed six additional Boeing B-331 jets and ten additional CV-880 jets, it was assumed that this larger fleet would have rendered unnecessary certain additions to the TWA fleet which were made when the management of TWA was turned over from the Hughes interests to independent voting trustees in December 1960. It was assumed that TWA would not have acquired five B-331B (fan jet) aircraft which it leased in 1962 and 1963, and that it would not have acquired six CV-880 aircraft which it purchased in 1963. However, it was assumed that even with the larger "reconstructed" fleet, TWA would nevertheless have acquired the four B-720B aircraft (a later model Boeing medium range jet) which were leased during 1961 and 1962, and would also have purchased the eighteen additional B-131B aircraft (fan jets) which it received in 1962.

The foregoing assumptions, which set forth a hypothetical jet fleet for TWA in 1959-1963, constitute the basic equipment premises for the estimates of the expert witnesses for both plaintiff and defendants. As to the piston fleet which would have been operated by TWA during this period, each expert made such adjustments in TWA's actual piston operations as, in his opinion, would have accompanied the hypothesized jet operations.

Defendants argue that there is no certainty that the hypothetical jet fleet recommended by Rummel, which forms the basis for that part of the plaintiff's damage claims due to inadequacy of its jet fleet, would in fact have been implemented by the plaintiff under an independent management. They stress that Rummel was not chief executive officer of TWA nor in any position to impose his equipment views on the Board of Directors. They cite various inter-office memoranda, introduced into evidence, indicating that there was a running exchange of comments, and differing opinions, among TWA officers and staff members from time to time over the types and amounts of jet equipment to be purchased. Defendants also introduced in evidence various opinions expressed by CAB officials, trade magazine editors and airline executives, including some TWA officials, to the effect that airlines may have overbought jet equipment capacity and would suffer adverse financial consequences if they did not cut back their jet programs. They conclude that the plaintiff's expert testimony is too speculative to be accepted as a basis for damages.

Given the well-pleaded allegations of the complaint, however, the testimony of Rummel, who was chief procurement officer for the plaintiff at the time and an equipment procurement representative of Hughes, as well as the Connolly testimony, and the evidence that the assumed additional fleets of B-331s, B-131s and CV-880s were in fact ordered in the same type and quantity by a Hughes-dominated TWA, although at later dates, I am of the opinion that the hypothetical jet fleet and reconstructed delivery dates constitute a proper basis for computing damages under this Section I. The evidence of the plaintiff's experts as to the reconstructed jet fleet is well within the standards of distinctness and positiveness of proof allowable in default sit-

nations under the doctrine of *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946).

By way of orientation for the detailed discussion which follows showing the methodology used by the various experts in making up their estimates of damages due to the inadequacy of TWA's jet fleet, it should be stated at this point that estimation of the changes in TWA's operating revenues requires a consideration both of the added revenues and costs that would have accompanied additional jet operations and of the decreased revenues and costs that would have resulted from eliminated piston operations. The estimates of revenues and costs produced by the plaintiff's experts and the defendants' experts were dramatically different (see Tables pp. 59 and 83). The plaintiff's experts estimated that TWA would have experienced an increase in net operating profits after appropriate adjustment for depreciation for the years 1959 through 1963 in the amount of 51.7 million dollars, whereas the defendants' experts estimated that if TWA had acquired and operated the hypothetical jet fleet as assumed by the plaintiff, it would have experienced a decrease in net operating profits after depreciation adjustments for these same years, of 95.91 million dollars. The defendants' brief states at page 220:

> "It was not, of course, Simat's [expert witness of defendants'] opinion that the management of reconstructed TWA would have permitted such staggering losses to accumulate. Management could have drastically cut schedules * * * but while such measures might have avoided the dire consequences of operating Wemple's [expert witness of plaintiff] added plane miles, they would not have sufficed to put the added fleet in the black."

At this point I shall separate the claims of the plaintiff with respect to the adequacy of its jet fleet into divisions

A and B, i.e., between claims for loss of operating profits of its International Division and claims for loss of operating profits of its Domestic Division.

(A) *International Division*

It will be useful, I believe, from time to time while reading the ensuing discussion as to the International Division to refer to the table which follows, comparing the amounts of the estimates of experts retained by the plaintiff and defendants. The table is a portion of plaintiff's Ex. 420 (Sch. C).

(Table reproduced on following page)

As to the International Division, the plaintiff's claim as shown on foregoing Table is for $22.4 million damages. It may usefully be divided into two parts. First, the reduction of the plaintiff's projected Boeing jet fleet by the conceded diversion of six of the eighteen B-331 jets by action of Toolco to Pan-Am, TWA's principal transatlantic competitor, at a time when fierce competition existed for the lead in the jet service on international routes (cf. complaint, pars. 9, 10). The amount of damages claimed by reason of this diversion is $17.6 million. Second, the delays in the delivery of that fraction of the B-331 jets assigned to the International Division which resulted from the original equipment orders being delayed by Toolco until after the earliest delivery positions for the long range jets had been preempted by Pan-Am. This second claim is for $4.8 million.

Revenues—First Part

The plaintiff retained the firms of Coverdale & Colpitts (sometimes referred to as "Coverdale") and Price Waterhouse & Co. to calculate the change in operating profits based upon the foregoing assumptions.

Coverdale, with its predecessor firm, is a nationally known firm providing consulting engineering and financial services to industry and government. It conducts industrial studies involving mergers and reorganizations, management appraisals, transportation and product pricing analyses, plant location and operations studies. These studies have included all forms of transportation including air transportation. The Coverdale study in this case was presented through the direct testimony of Edward L. Wemple who has been a partner in the Coverdale firm since 1956. Studies in the airline field which have been made under his supervision have included analyses of operations programs for TWA, Flying Tiger Line and British Overseas Airways, as well as traffic and revenue studies for various airports, including O'Hare International Airport. He is a member of the American Institute of Consulting Engineers.

Before discussing the Coverdale report on the additional B-331 planes, it should be remembered that these planes were assumed to have obviated the leasing of five B-331B aircraft in 1962-1963. The international service actually operated with the B-331B aircraft were assumed to be performed by the additional B-331's. Revenue and cost figures were adjusted accordingly by all expert witnesses.

The Coverdale estimate of changes in operating profits relating to the six diverted B-331s will now be summarized. It starts with a computation from TWA equipment records of the annual average number of additional B-331 Boeing

jets that would have been available for commercial service for the International Division if there had been no transfer of the six B-331s to Pan-Am by action of Toolco and these planes had been in TWA's service (a jet in service for one-tenth of a year would show as one-tenth of a jet in the annualized figures):

The computation of such annual average number of additional jets is as follows:

1959	0.2	B-331s
1960	3.6	"
1961	3.7	"
1962	4.8	"
1963	0.9	"

Coverdale relied on actual TWA experience as to the time ordinarily elapsing between the date of receipt of a plane and the date of commencing service in fixing the date when an aircraft was "available for commercial service." Aircraft "available for commercial service" is a term which is defined to include not only aircraft actually employed in revenue-producing activities, but all other owned or leased aircraft on hand, once commercial service has been inaugurated with aircraft of the same type. (See TWA Ex. 4(c)(4), Ex. B, C; Tr. 4653-62, 4695-4703.) Thus the term includes aircraft not overhauled, aircraft being used for pilot training activity and other similar non-productive aircraft.

Coverdale assumed that an increase in the number of aircraft available for commercial service would produce a proportionate increase in plane miles flown, thus allowing for maintenance, training and other non-productive employment of the additional aircraft on a basis exactly proportionate to TWA's historical experience in the same year with aircraft of the same type. The Coverdale computa-

tions also implicitly assume that in any given year additional aircraft of any type would be employed in operations substantially similar in kind to those in which aircraft of the same type were employed by TWA in the same year.

The assumed additional aircraft available for commercial service in the International Division would have produced additional passenger revenue jet plane miles, as follows:

1959	0.1	million	miles
1960	6.3	"	"
1961	6.6	"	"
1962	8.4	"	"
1963	1.5	"	"

The estimates of these additional jet plane miles were obtained by applying the experienced annual utilization for the B-331s in a particular year to the assumed additional availability of that type of jet in the same year.

Coverdale then estimated the corresponding reduction of the number of piston aircraft miles. This estimate was based on determining the ratio between the increase in all jet plane miles flown historically in the International Division in a given year over those flown in the preceding year, and the decrease in all piston plane miles flown in this Division between the same two years, and estimating that a further increase in jet plane miles would have produced a further and proportionate decrease in piston plane miles for that year.

The corresponding reduction of piston passenger revenue plane miles was as follows:

1959	0.1	million	miles
1960	5.1	"	"
1961	1.6	"	"

These reductions would have been piston plane miles flown by Lockheed L-1649As and are obtained by applying

to the experienced annual utilization for the L-1649As in a particular year in the International Division their assumed lesser availability in that year.

The ratio of the number of transatlantic flights to millions of plane miles being fairly uniform, the number of assumed increased transatlantic flights was then computed on a basis directly proportionate to the net increase in plane miles; and on the basis of seating capacity of the B-331 aircraft, the number of increased available seats was computed, with the following results:

	Additional Flights	Additional Available Seats
1959	—	1.1 thousands
1960	228	89.1 "
1961	987	154.3 "
1962	1,793	251.0 "
1963	311	44.0 "

The additional seats in 1959 resulted from using aircraft of greater seating capacity, even though the number of flights remained the same.

The international operations of TWA consisted of transatlantic flights and continuation of certain of these flights "beyond the gateway" (the gateway being the point at which the eastward transatlantic flight made its first European stop). It was conceded there is no source to obtain the industry figures for the number of "beyond the gateway" scheduled passengers (Tr. 8498). It was accordingly assumed by Coverdale that increased TWA service for the International Division would have been divided between scheduled transatlantic operations and other international operations as historically divided.

During the years in question, the figures submitted by the plaintiff's experts showed a very close correlation between TWA's percentage of the total available transatlantic seats

and its percentage of total transatlantic passengers on all airlines constituting the members of the International Air-line Transportation Association (IATA). Their estimate of additional TWA transatlantic passengers which would have been obtained is therefore obtained by taking the increased percentage of seats and proportionately increasing the number of passengers.

Here it should be noted that in estimates for 1959-60, the additional seats offered by TWA would have been, in effect, a transfer of seats from Pan-Am to TWA, because TWA's additional aircraft would have been transfers of the six diverted B-331s from Pan-Am and there would have been no increase in the total U. S.-airline available transatlantic seats; but since Pan-Am could have obtained delivery of other similar jets from manufacturers in the spring of 1961, the annual total numbers of transatlantic seats available for the years 1961, 1962 and 1963 were assumed by the plaintiff to have been increased by the number of additional seats that would have been offered by TWA.

The industry competitive factors in 1959-60 were markedly different in international travel from the 1961-63 period. Notice of these differences is taken in discussing damage theories hereinafter.

The calculation of TWA's additional transatlantic passengers in accordance with the above premises produced the following results:

	Actual Passengers	Revised Number of Passengers
1959	146 thousand	147 thousand
1960	243 "	298 "
1961	208 "	275 "
1962	277 "	382 "
1963	359 "	377 "

There were then computed the additional revenues which would have been received by TWA in respect of these additional passengers. This was done by taking the actual International Division passenger revenues for each of the five years in question and increasing them by the same percentage as the increase in the number of TWA transatlantic passengers for each year in question.

The additional passenger revenues, so calculated, are as follows:

1959	$ 0.6	million
1960	18.9	"
1961	20.4	"
1962	29.5	"
1963	5.3	"

There was additional assumed revenue from mail, express, freight and excess baggage which all experts estimated at 5% of the assumed additional passenger revenue. The total estimated additional revenue from the assumed six additional B-331s was therefore $78.4 million for the International Division.

Hereafter we will discuss the estimates of the plaintiff's experts as to the amount of attendant increased operating expenses which amounted to $60.8 million leaving the net additional revenue of $17.6 million as the amount of the plaintiff's damage claim for the International Division with respect to the six additional B-331s transferred by reason of the action of Toolco to Pan-Am. Before reviewing the estimates for operating expenses, however, we will first discuss the computations of the defendants' experts with respect to the change in operating revenues related to the International Division from these six assumed additional B-331s.

The defendants retained as their experts to analyze the Coverdale estimates, and to prepare their own estimates

of changes in operating profits, the firm of Simat, Helliesen & Eichner, Inc. (sometimes referred to as "Simat").

The report of Simat was presented through direct testimony of Messrs. Nathan S. Simat, Robert I. Helliesen and L. John Eichner, officers of that organization. The Simat organization was formed in 1963 and engages in economic and transportation studies for government and private clients. It has conducted studies for various air carriers from every sector of the air transport industry. Simat was for many years employed by the Civil Aeronautics Board as a transportation economist. As Head Economist of the Analysis Division of the CAB, he prepared numerous operating and financial analyses dealing with air traffic, revenues and costs, feasibility of equipment purchase programs and he appeared in numerous commercial rate and mail proceedings. As Chief of the Certificates Section of the Routes Division of the CAB he prepared or supervised the preparation of studies dealing with the economic consequences of adding and deleting air services. He has acted in management and economic consulting capacities for Northeast Airlines and Sabena Belgian World Airlines.

Helliesen was for some years employed by American Airlines, Inc. in various economics and marketing capacities and held the office of Director of Schedule Planning and Business Research in that company. He has done economic research for the Air Transport Association of America in connection with the CAB general passenger fare investigation and has also been retained by the Convair Division of General Dynamics. He formed the Aircraft Exchange, which provided regular market reports of bids and offers for the purchase, sale and lease of used transport aircraft, and served as its head in 1958-1962. He joined the Simat organization in 1965.

Eichner served in responsible positions with Capital Airlines, Trans-Texas Airlines and from 1961 to 1966 was Assistant Vice President of Corporate Planning for American Airlines, Inc., where his duties included the preparation of special studies and forecast of revenues, expenses and ground facilities for various types of air equipment. He joined the Simat organization in 1966.

The Simat report assumed the same reconstructed earlier delivery dates for the jet equipment as the Coverdale report, and assumed all the other equipment assumptions of the Coverdale report, so that the size of the hypothetical jet fleet in both reports for the five year period 1959-1963 is identical. The defendants' experts used the Coverdale estimates for the number of added and deleted aircraft and aircraft miles and further used the assumption that all deleted piston aircraft services in TWA International Division had been operated with L-1649A aircraft. They also testified that it was not unreasonable to use the percentage share of available IATA transatlantic seats as a guide for estimating TWA's percentage share of transatlantic passengers and accordingly used the same number of TWA transatlantic seats assumed to be added.

It was their opinion, however, that Coverdale's estimate that TWA could increase its share of available transatlantic seats was erroneous. Simat's opinion was that the transatlantic market is the leading international air travel market in the world and the object of vigorous competition by nearly 20 air carriers exclusive of supplemental and charter carriers and that it was difficult, if not impossible, to conceive of a market where a likelihood of unilateral competitive action without response from other carriers in the market, is more remote.

Under this theory of "competitive response" developed by defendants' experts, and more fully stated hereafter, the reconstructed estimates for additional transatlantic passengers by Simat were:

1959	146 thousand
1960	281 "
1961	255 "
1962	343 "
1963	368 "

The opinion of Simat on this theory of competitive response was that Pan-Am, as TWA's principal transatlantic competitor, would have taken some of its long range jets off of its other international flights to maintain its "historic ratio" of available transatlantic seats vis-a-vis TWA, or else it would have retained some of the piston seats which were historically retired, or both. Simat was also of the opinion that foreign airlines would have likewise responded competitively. He selected the second and third quarters of the years 1960-63 (omitting the first and fourth quarters when various airlines observed different policies in the seasonal reduction of weekly frequencies) and noted that in these selected quarterly periods, for each flight (including pistons as well as jets) added by TWA, the following "pattern of competitive response" in annualized average additional planes was shown in 1960, 1961, 1962 and 1963: In the second quarter of said years Pan-Am added .07, 1.3, 2.1 and 1.9; foreign flag carriers added 3.3, 4.2, 5.4 and 5.3; and in the third quarter of said years Pan-Am added 1.7, 1.8, 2.5 and 2.7; foreign flag carriers added 4.4, 5.0, 4.4 and 6.4.

It will be illuminating to discuss the defendants' arguments separately for the 1959-60 period and for the 1961-63 period.

Simat estimated that in 1959 Pan-Am would have transferred .04 jet aircraft (on an annualized basis) to the transatlantic service from its other international routes but that the foreign competitors, since it was assumed that no increase in the total transatlantic service of U.S. airlines would be involved, would not have responded competitively. For 1960 Simat first estimated that for each flight added by TWA, Pan-Am would have responded competitively by adding one flight and other foreign competitors taken as a group would have responded by adding one flight; but since he did not assume that the additional seats generated by TWA through the replacement of piston flights by jet flights would have engendered a competitive response, he adjusted his estimates of competitive responses to the net addition of .85 transatlantic seats by Pan-Am and the same by the other IATA carriers for each seat that would have been added by TWA.

Conclusions as to Revenue Estimates

The severe worldwide shortage of jet equipment through 1960 was such in my opinion, as to make the assumed transatlantic competitive response unrealistic for the 1959-60 period. It is reasonable to assume that TWA's usage of the six diverted B-331s would have been proportionately the same as its usage of the curtailed fleet it did acquire, and thus that approximately one-third of the diverted six B-331s would have been used domestically by TWA. The total U.S. airline competition on the transatlantic route would thus have involved the use of two fewer jets during these years, thus appearing to rule out any probability of "competitive response" from foreign lines. As to Pan-American, piston aircraft with their higher cost and lower attractiveness were in no position to compete effectively

against jets. On cross-examination of Simat, it was brought out that essentially there was no "historical pattern" of response by competitors to additional TWA transatlantic service. The ratio of such TWA to Pan-American service, for example, varied from 53% to 82% in the years leading up to introduction of the jets (Tr. 8378).

Also it was shown that in 1960 TWA historically increased its percentage of transatlantic seats vis-a-vis Pan-Am, without competitive response, indicating that Pan-Am made a management decision that it preferred to use many of its jets on other international services to maintain or improve its position there. If Pan-Am had not received the diverted planes, it presumably would have been in an even less favorable position to exert a "competitive response" on the transatlantic service during the years in question. Pan-Am faced jet competition, for example, on the Pacific routes where Quantas and BOAC were operating jets. When Pan-American did receive B-331s in quantity, it transferred the B-131s theretofore used on the transatlantic service to the Caribbean service, thus further indicating the need on its part to distribute its jet equipment on a worldwide basis. All airlines dropped piston service on transatlantic routes as jets became available, because of customer preference for jets.

Finally, no testimony was introduced as to the effect financially on the other worldwide operations of TWA's transatlantic competitors of transfer of jet service from these other international operations to the transatlantic route. In the absence of such figures, and considering the facts summarized above, it appears to be sheer speculation to conclude that the managements of the competing airlines would have automatically made a competitive response in any given ratio to the changed conditions on the transatlantic route.

Support for this conclusion also may be found in an examination of Pan Am's Pacific operations and a comparison of the profitability of these operations with Pan Am's Atlantic operations. The table below, comparing Pan Am's Pacific and Atlantic divisions for both seat miles and operating profit, is taken from statistics in the C.A.B. *Handbook of Airline Statistics* 1965 Edition, which has been frequently relied on by both sides. This comparison shows that in the years in question, except for transition year 1959, Pan Am's Pacific operations were far more productive on a revenue per seat mile basis than were its Atlantic operations. It cannot be lightly assumed that Pan Am would have sacrificed its earnings on the Pacific in order to match T.W.A. flight increases on the less profitable Atlantic route.

COMPARISON OF PAN AM PACIFIC AND ATLANTIC OPERATIONS

(000's omitted)

	Pacific Division		Atlantic Division	
	Seat Miles (000)	Operating Profit ($000)	Seat Miles (000)	Operating Profit ($000)
1959	1,397,428	5,557	2,447,837	17,469
1960	2,108,703	18,672	3,220,514	16,593
1961	2,525,397	21,689	4,361,135	4,468
1962	2,915,237	30,965	5,123,207	12,489
1963	3,267,904	38,814	6,007,142	33,273

Source: C.A.B. Handbook of Airline Statistics, 1965 Ed., Part III Tables 83 and 85, Part IV Tables 83 and 85.

As to the availability of jet aircraft for foreign flag carriers from non-competitive sectors, it is not known whether or not the profitability of these non-competitive sectors would or would not inhibit the shifting of jet aircraft to the Atlantic. Also, it is not clear whether the individual non-

competitive sectors recorded by Simat were not merely intermediate portions of a longer flight, which could not be deleted if the longer flight was to be retained, or that these sectors were operated with jet aircraft suitable for transatlantic operations.

Finally, there is no evidence that scheduling considerations would have permitted the shifting of aircraft from their actual routes to the Atlantic. For example, elimination of a short non-competitive flight by Pan Am or some other carrier might not free enough jet hours for an additional transatlantic flight, and even if sufficient hours were available, there is no evidence that they would have been available at times which were commercially attractive for transatlantic operations.

The defendants' experts stated a further objection to the plaintiff's method of calculating changes in operating revenues in that the plaintiff's experts assume that the categories of passengers other than scheduled transatlantic passengers included in the International Division ("beyond the gateway" and charter service passengers) would increase in the same percentage as for IATA scheduled transatlantic passengers. Defendants' experts produced statistics designed to show that TWA's actual experience demonstrated that "beyond the gateway" International Division passenger revenues, as defined by them, increased during the years in question at only 52% of the rate of increase for transatlantic IATA passengers; that the percentage of "beyond the gateway" passengers, as defined by them, to the total TWA International Division passengers dropped from 40.4% in 1959 to 29.5% in 1963; and that in terms of absolute numbers such TWA "beyond the gateway" passengers remained relatively unchanged over this period except for a "spurt" in 1963, while its IATA transatlantic passengers increased almost fourfold.

The evidence was conflicting as to the proper basis for measuring the volume of "beyond the gateway" passengers (Tr. 8506; TWA Ex. 340).

The plaintiff's claim for the 1959-60 period, however, does not rest upon any increase in traffic from year to year. It assumes only that whatever traffic moved in the International Division area would have been proportionately redistributed in its favor, if it had the assumed increase in number and betterment in quality of equipment. Transatlantic passenger figures of the industry are used as a basis for computations because they are admittedly accurate and constitute the bulk of revenues for the International Division, whereas no one was able to produce satisfactory International Division territory figures for the industry for estimation purposes (Tr. 8498). As to overall charter service in the area served by the International Division, it seems reasonable to assume, as the plaintiff did, that it is obtained for the transatlantic service generally in proportion to capacity offered, assuming the same type of equipment is used.

The plaintiff points out, finally, that the defendants' experts assume that if TWA had failed to obtain a favorable customer response to a larger jet capacity offered to charter customers and to "beyond the gateway" customers, TWA nevertheless would have continued the same proportionate distribution of its International Division jet aircraft between transatlantic service and these other services as it did historically. They stated that any rational management, during this period of jet shortage, would have promptly redistributed its aircraft assigned to the International Division so as to take advantage of the demand on the more profitable segments. If the more profitable segments consisted of transatlantic service, then service would have been transferred by management from the "be-

yond the gateway" service and the charter service to scheduled transatlantic flights.

As to the 1961-63 period, competitive conditions changed materially from the 1959-60 period. Jets had become available in greater quantity and the industry load factor dropped. Economic conditions were less favorable for international travel during most of the period. Piston service on the transatlantic route ceased, and TWA's comparative shortage of jet equipment in 1961 caused it rapidly to lose its market position. The plaintiff has assumed that in this period the total number of seats offered by the industry in general transatlantic competition would have increased because Pan-Am could have received delivery from Boeing directly of six B-331s which it decided to buy in 1959. Accordingly the plaintiff has estimated that TWA would have obtained its historical share of passengers based on the increased industry capacity. The net increase in operating profits estimated by the plaintiff for these years (on the basis outlined above) is substantially lower than for the 1959-60 period. The figures are as follows:

	Gross Estimated Additional Revenue	Estimated Increased Costs	Net Estimated Additional Revenues
1961	$21.4 million	$19.6 million	$1.8 million
1962	31.0 "	28.5 "	2.5 "
1963	5.6 "	5.9 "	(.3) "

For background purposes, it is noted at this point that during the 1961-63 period, Pan-Am's Atlantic Division historically made an operating profit of $50.3 million; and TWA's historic operating profit for this period in its International Division was $25.1 million.

The defendants make the same two points in respect of the 1961-63 period as discussed above to dispute the validity of the plaintiff's estimates—i.e.—"competitive response"

and disproportionate increase assumed for "beyond the gateway" and charter service. In reply the plaintiff makes several additional points in respect of the years 1961-63: (a) It is unrealistic and speculative to assume TWA's foreign competitors would have weakened their competitive position on other routes to meet such increased transatlantic competition as would have been produced by Pan-Am's assumed acquisition of six additional jets early in 1961. Pan-Am would have had during this period, under the posited assumptions, exactly the same number of jets that it historically had, and presumably would have distributed them worldwide as it historically did. (b) It is reasonable to assume that an increase in jet service by TWA with resultant increase in its proportion of total service offered by the industry, would have correspondingly increased its proportion of total traffic carried in its International Division.

The reasoning of the plaintiff appears to me to be valid and accordingly I accept the added revenue estimates in respect of the six diverted B-331s as computed by the plaintiff's experts for the International Division.

Estimates of Operating Costs

The added costs of operating the six additional jets in the International Division were computed in detail by the experts for the plaintiff and defendants. (See summary thereof in table on p. 83.)

A brief description of the methodology used by the plaintiff's expert in estimating changes in operating expenses attendant upon the assumed additional TWA operations in respect of the six diverted B-331s is set forth below. Changes in operating expenses are separately computed for the increases in jet operations and the decreases in piston operations. As to each category, hereafter described,

a determination was made of the extent to which it varied historically in the years in question as the scale of operations changed, and an estimate was made based on the assumption that further changes in the scale of operations would produce further changes in expenses on a proportionate basis. Following are the categories and the method used for each in computing the changes in expenses for the assumed changes in operations.

Flying operations and maintenance expense incurred for operating and maintaining aircraft were changed in proportion to the assumed changes in plane miles or number of aircraft available.

Aircraft servicing expenses which have to do generally with ground activities for aircraft were computed on the basis that the estimated net increase of plane miles operated would have been proportional to the increase in number of flights processed on the ground and accordingly plane miles were used as the index for calculation of changes in this class of expense.

Passenger service expense which has to do with passengers while in flight was computed insofar as cabin personnel is concerned in proportion to plane miles operated; and expenses for food supplies and liability insurance were varied in accordance with passenger revenues.

Traffic servicing expense which has to do with handling passenger and cargo traffic on the ground were varied in proportion to transportation revenues.

Service and administration expense which has to do with supervisory and administrative activities for servicing of aircraft and traffic was varied in accordance with changes in plane miles.

Promotion and sales expenses were varied in accordance with changes in transportation revenues.

General and administrative expense which has to do with corporation matters in certain activities such as financial, accounting, legal and general administration were varied in accordance with changes in transportation revenues.

Depreciation and amortization were computed by Price Waterhouse & Co. and certified by it as being appropriate under the assumed changes in equipment.

The detailed changes in operating expenses are set forth in the Coverdale Report, Volume I and summarized at pages 37 and 38 thereof by years.

The total increased costs found by the defendants' experts for this facet of the case were less than those found by the plaintiff's experts by reason of the fact that the defendants' experts had calculated costs on the basis of a smaller increase in traffic. The total added costs under this facet of the case found by the plaintiff's experts was $60.8 million; the corresponding total found by the defendants' experts was $51.9 million. If the estimates of the plaintiff's experts as to increased traffic and revenues for the International Division are accepted, and the cost estimates of the defendants' experts are recomputed on that basis but using their own costing methods, the recomputed cost estimates of the defendants' experts would be at least as low as those of the plaintiff's experts. Since the estimates of the plaintiff's experts are accepted by me as to traffic and revenues, their estimates as to operating cost should be accepted. Accordingly, at this point no detailed discussion of the different costing methodologies used by the experts for the International Division is called for.

Revenues and Operating Costs—Second Part of Claim

The second part of the plaintiff's claim as to the International Division, as stated above, is a claim for $4.8 million damages caused by delays in delivery of the 18 Boeing B-331 jets (insofar as a fraction thereof is assumed to be used in the International Division service) which resulted from orders therefor being delayed by Toolco until after the earliest delivery positions had been preempted by Pan-Am. The assumed earlier delivery dates would have affected operations only in 1959 and 1960 since the last of the B-331s was historically delivered in 1960.

There is agreement between the experts that the annual average added B-331 aircraft for the International Division under assumption of the earlier deliveries of the twelve B-331 jets for 1959 would be .9 aircraft and for 1960 would be .6 aircraft; that the added jet aircraft miles would be 1.6 million miles for 1959 and 1.1 million miles for 1960; that there would be a reduction of 1.6 million piston aircraft plane miles in 1959 leaving the International Division total plane miles unchanged; that there would be no reduction of piston plane miles in 1960 and accordingly the net increased plane miles for the International Division in 1960 would have been the same as the gross increase, i.e., 1.1 million plane miles; that the additional transatlantic seats for 1959 would have been only from the difference in size between the jets and the replaced pistons and would have amounted to 17 thousand additional transatlantic seats; and finally that the additional transatlantic seats for 1960 would be 27 thousand. Translating these figures into increased revenue, on the same basis as was used in the case of the six additional (Pan-Am) planes,

and adding thereto the 5% for additional revenues from cargo, the plaintiff's experts estimate that the total additional International Division operating revenues from assumed earlier delivery of twelve B-331s would have been $4.5 million in 1959 and $6.4 million in 1960. The defendants' experts would reduce these figures, as in the case of the six additional (Pan-Am) planes for the factors of (a) competitive response and (b) failure of "beyond the gateway" and charter traffic to increase proportionately to the increase in transatlantic service. The defendants' experts' figures, with these reductions, show assumed additional operating revenues of only $2.79 million in 1959 and $2.03 million in 1960. For the reasons above stated, the plaintiff's estimates of additional revenues are accepted.

As to operating costs, here again if the plaintiff's estimates on increased traffic and revenues are accepted, and the defendants' cost figures are recomputed under its own methods of costing but on the basis of the plaintiff's increased traffic and revenue figures, the result would be a total of operating costs at least as low as the plaintiff's cost figures. The plaintiff's operating cost estimates are accordingly accepted.

A recapitulation of the damages awarded in respect of the International Division is set forth at the end of Section I of this discussion of plaintiff's damage claims.

(B) *Domestic Division*

The next division of plaintiff's claims for damages with respect to inadequacy of its jet fleet is for loss of operating profits in its Domestic Division. Here because of the greater variety of aircraft types compared to the International Division, the opportunity for changing segment

(stage) lengths of flights, the more complicated fare structure, and the difficulty of computing applicable load factors, the estimation of changes in operating results is more difficult.

As a beginning to a review of this aspect of the case, it will be instructive to examine the following table showing the historical jet competitive picture between the plaintiff and its chief domestic competitors, the quantitative extent to which TWA historically lagged behind its chief domestic competitors in acquiring jets in the years 1959-63, and comparative operating profits:

Domestic Operating Profit (Loss)

vs.

Percent of 1964 Jet Fleet[1]

	American			United[2]			T.W.A.		
	Operating Profit (000)	*No. of Jets*	*% of 1964 Fleet*	*Operating Profit (000)*	*No. of Jets*	*% of 1964 Fleet*	*Operating Profit (Loss) (000)*	*No. of Jets*	*%*
1959	$24,517	24	30.0%	$18,802	15	13.4%	$ 26,308	18	2
1960	24,720	34	42.5	9,429	44	39.3	(883)	21	2
1961	19,089	49	61.3	3,100	76	67.9	(10,226)[3]	42	5
1962	19,335	63	78.8	14,845	87	77.7	(7,391)	56	6
1963	39,004[3]	64	80.0	26,635	91	81.3	17,552	61	7
1964	61,245	80	100.0	49,865	112	100.0	50,892	83	10

Sources: TWA Exhibit 46A and CAB Air Carrier Financial Statistics

---

[1] Domestic year end inventories as a percent of 1964 year end invento

[2] Excludes special adjustments. If these are included, the tendencies more accentuated. Thus, for American in 1963 inclusion of the adjustment re in operating profit of $43,900,000 and in 1961 for TWA results in opera losses of $24,200,000.

[3] Excludes Capital 1959-1960. If Capital is included, the United opera profit is $19,100,000 in 1959, and $3,100,000 in 1960. United's 1961 and (to extent) 1962 operating results were affected by its acquisition on June 1, of Capital Airlines which had already incurred operating losses in 196 $3,400,000.

The subdivisions of the plaintiff's Domestic Division claims are:

(a) failure to receive certain B-331s which were diverted by action of Toolco to Pan-Am and delay in delivery of other B-331s; and delay in delivery of fifteen B-131s;

(b) delay in delivery of twenty Convair 880s;

(c) failure to receive an additional ten Convair 880s of which six were diverted by action of Toolco to Northeast Airlines.

It will also be useful I believe, from time to time, while reading the ensuing discussion relating to the Domestic Division, to refer to the tables which follow comparing the amounts of the estimates of the plaintiff's experts and the final (or Supplemental) Estimates of the defendants' experts relating to the Domestic Division. The first table is plaintiff's Exhibit 420, Schedule B, showing the comparisons of the two sets of experts for each of the years 1959-63, as well as the comparisons of the totals for five years. The second table is Schedule B1 of plaintiff's Exhibit 420. It sets forth the plaintiff's (Coverdale) estimates of each of said years by categories. Category II-1 relates to chapter II of the Coverdale Report dealing with the six additional B-331s. Category III-1 relates to chapter III of the Coverdale Report dealing with earlier receipt of B-131 and B-331 aircraft. Category IV relates to chapter IV of the Coverdale Report dealing with the delay in receipt of twenty CV-880 aircraft. Category V relates to chapter V of the Coverdale Report dealing with the failure to receive ten CV-880 aircraft.

The third table is Schedule B2 of plaintiff's Exhibit 420. It sets forth the final (or Supplemental) estimates of the

defendants' expert (Simat) for each of the five years—1959-1963. Simat, in its Supplemental Report referred to hereinafter, did not break down its estimates by categories (although it did so in its Original Report referred to hereinafter). The Final (or Supplemental) Simat Report gives, as will be noted, separate estimates for added jet revenues and costs, and for revenues and costs of deleted pistons, in lieu of breaking down the figures by the above mentioned categories.

(Tables reproduced on following pages.)

B331's and B131's—Plaintiffs' Position

(a) We will first discuss the plaintiff's revenue estimates (Coverdale) for the B-331s allocated to the Domestic Division. The facts with respect to failure to deliver and delay in delivery of the Boeing B-331s have been set forth above. We have also previously listed (p. 52) the reconstructed earlier receipt dates for the B-331s as computed by Rummel and have set forth the underlying assumptions by which they were fixed.

The Coverdale report computed the change in operating profits for the Domestic Division by a different methodology than used by it for the International Division claims in certain particulars. These are set forth in the discussion, which follows, to the extent the methodology is different. The annual average number of B-331s which would have been available for commercial service (after the above-described adjustment for the B-331Bs and for a non-controverted short-term lease of aircraft time to Northeast) was computed for the Domestic Division under the same method heretofore set forth. They were as follows (TWA Ex. 4(c)(1), pp. 13, 27, 42):

	Planes Allocated from the 6 Diverted B-331s	Planes Allocated from Late Delivery of the 12 B-331s
1959	none	0.6
1960	1.4	0.7
1961	2.2	
1962	1.0	
1963	0.5	

These assumed additional jet aircraft would have produced (under the method heretofore described) additional

passenger revenue plane miles as follows (*id.*, pp. 28, 43, 44):

For the Diverted Planes	For the Late Deliveries
1960 — 2.0 million miles	1959 — 0.8 million miles
1961 — 3.3 " "	1960 — 1.0 " "
1962 — 1.4 " "	
1963 — 0.7 " "	

Using actual seats per aircraft and actual TWA average load factors for B-331s in Domestic Division service for each year (except the B-131 load factor was used for B-331 computation for 1959 when no B-331s were in domestic service) the resulting passenger miles for the additional jet aircraft would have been as follows (*id.*, pp. 28, 43, 44):

For the Diverted Planes	For the Late Deliveries
1960 — 156 million miles	1959 — 74 million miles
1961 — 206 " "	1960 — 78 " "
1962 — 76 " "	
1963 — 42 " "	

The reduction of piston passenger revenue plane miles, based upon the actual annual TWA experienced ratios in domestic service of all piston plane mile decrease to all jet plane mile increase, was as follows (*id.*, pp. 29, 43, 44):

For the Diverted Planes	For the Late Deliveries
1960 — 2.9 million miles	1959 — 0.8 million miles
1961 — 4.2 " "	1960 — 1.4 " "
1962 — 0.9 " "	
1963 — 0.2 " "	

The reduced piston passenger miles were then computed by using the average number of seats based on the average for all TWA piston aircraft for the year and actual annual average load factors of TWA's piston aircraft used

in the Domestic Division during the years in question. The resulting figures were (*id.*, pp. 30, 44, 45 and by calculation):

For the Diverted Planes	For the Late Deliveries
1960 — 123 million miles	1959 — 38.4 million miles
1961 — 182 " "	1960 — 59 " "
1962 — 44 " "	
1963 — 9 " "	

The net increase in passenger miles was then computed. Using TWA's annual average yield (Domestic Division actual passenger revenue, combined jet and piston, per passenger mile) the increase in Domestic Division revenues for the B-331 aircraft operations was estimated at (*id.*, pp. 30, 44, 45 and by calculation):

For the Diverted Planes	For the Late Deliveries
1960 — $1.9 million	1959 — $1.9 million
1961 — $1.4 "	1960 — $1.1 "
1962 — $2.0 "	
1963 — $1.9 "	

The additional revenue for non-passenger traffic (mail, express, freight, excess baggage) was calculated at 5% of the estimated additional passenger revenue. The resulting total additional revenue estimate was:

For the Diverted Planes	For the Late Deliveries of B-331s
1960 — $2.0 million	1959 — $2.0 million
1961 — $1.5 "	1960 — $1.2 "
1962 — $2.1 "	
1963 — $2.0 "	

The total of additional revenues thus claimed in respect of the B-331s under subdivision (a) is $10.8 million.

Next we summarize the plaintiff's revenue estimates in respect of the late deliveries of B-131s.

Rummel prepared a table showing the effect on delivery positions by reason of the delays in delivery of the B-131s. His underlying assumptions in computing the reconstructed earlier receipt dates therefor were the same as those discussed above (pp. 48-56) in respect of the B-331 earlier delivery dates, and are accepted for the reasons stated above.

The list below shows the actual receipt dates for the B-131s and opposite each such date is the corresponding reconstructed earlier receipt date. (TWA Ex. 4(c)(1), p. 40.) Each plane, as in the case of the B-331s, was fully identified, and actual receipt date verified for the record, from official CAB records.

Actual Receipt	Reconstructed Earlier Receipt
1/29/59	11/30/58
3/17/59	12/31/58
3/30/59	1/31/59
4/ 3/59	2/27/59
4/18/59	3/30/59
4/29/59	4/ 3/59
5/10/59	4/18/59
5/13/59	5/10/59
5/24/59	5/13/59
5/28/59	5/24/59
6/13/59	5/28/59
7/ 1/59	6/13/59
7/10/59	6/29/59
7/14/59	7/10/59
8/ 1/59	7/27/59

On the basis of TWA's experience as to time between receipt dates and commencing service, Coverdale computed that revenue service for the B-131s would have commenced

January 6, 1959. Only the year 1959 is involved in the B-131 computations.

Coverdale, using the same methodology as described above for B-331s assigned to domestic service, computed the additional annual average number of B-131s available for 1959 in the Domestic Division at 1.4 aircraft. The additional jet plane miles were 1.9 million miles. The additional passenger miles were 176 million miles. The corresponding reduction of piston plane miles was 1.9 million miles. The deleted piston passenger miles (using the number of seats in the L-1649A times the actual load factor) were 89.6 million miles. The increased passenger revenue estimate resulting from these computations is $4.1 million. To this figure 5% is added for non-passenger revenues. The plaintiff therefore estimates additional revenue from the assumed earlier delivery of the B-131s for the Domestic Division of $4.3 million.

The total estimated increased revenues under subdivision (a) of the Domestic Division claim is thus $15.1 million. We note in passing that Coverdale estimated combined increased expenses for subdivision (a) at $6.1 million leaving estimated additional net operating revenue of $9.0 million as the amount of plaintiff's damage claim for subdivision (a) of the Domestic Division claims. Discussion of costs will, however, be deferred until later.

B331's and B131's—Defendants' Position

We will next review the revenue computations of the Simat Report for subdivision (a). The Simat estimates use a different method of computation of the average stage length over which the added flights would be operated, a different method of computing load factors and a different method of computing passenger yields. Coverdale

assumed that the added jet services would be operated at the same average stage lengths as existing domestic jet services for planes of the same or similar types in the year that the added services would be operated; that added jet aircraft and displaced piston aircraft would be operated at the same average load factor (per cent of available seats which are occupied) as all flights operated in that year by TWA with aircraft of the same or similar types; and that added jet services and displaced piston services would yield revenues per passenger mile equal to the average yield experienced by TWA per passenger for the year in which added for the same or similar type plane.

The basic differences between the two reports, according to the Simat, arise from certain erroneous assumptions from the Coverdale report. Simat testified that jet aircraft, as they were received by the various carriers including TWA, were assigned to the most lucrative long-haul routes, where their attractiveness to passengers and operating economies could be most fully exploited. As additional jets would be received, they would be added to the best of the remaining routes, which were less advantageous than the original assignments, and according to Simat, the history of jet deliveries showed a pattern of assignment to routes of decreasing advantage. Simat asserted that the Coverdale study failed to take this pattern into consideration, and that as a result, the Coverdale report contained certain "fundamental errors" as follows (italics mine):

(1) The assumption that added jet aircraft and displaced piston aircraft would be operated at the same average *load factors* as the average of all aircraft of the same or similar types for the year is unrealistic. Added jet operations, Simat estimated, in fact would produce addi-

tional traffic at levels well below the average for existing jets, and displaced piston aircraft would be drawn from the most effective of the piston aircraft services, rather than services of average effectiveness.

(2) The assumption that added jet aircraft of a particular type would be used in *stage lengths* exactly as the average of all aircraft of the same or similar types for the year is not realistic because the added aircraft are not used as productively or as economically as available aircraft of the same or similar types. Additional aircraft would be operated at stage lengths shorter than average. By the same token displaced piston services were not average piston aircraft services but were long-haul services affording better-than-average use of piston aircraft with respect to productivity and operating economies.

(3) The assumption that passenger traffic added by added jet services or deleted by displaced piston services would have *revenue yields per passenger mile* equal to the average experienced yield per passenger mile for the year in which added, is unrealistic. Simat estimated that the yields from this added jet passenger traffic would be below average revenue yields per passenger mile and yields of traffic from displaced piston services would not necessarily be at the average revenue yield for the Domestic Division.

We will defer until later discussion of a Supplemental Simat Report, and now discuss the three factors which, in the original Simat Report, differentiate it from the Coverdale Report as to the Domestic Division.

The original Simat Report states his opinion that the assumed additional jet operations would not have produced additional net revenues for the plaintiff in the 1959-63 period. In support of this conclusion, Simat makes the following points:

1. The economic climate for increased airline capacity was not favorable during the years in question. In June 1960 the economy started a downward drift which continued through February, 1961. This was followed by a gradual recovery through the third quarter of 1962 and finally through the balance of 1962 and in 1963 by a period of accelerated growth.

2. While volume of domestic air travel has shown a long term trend of generally more rapid rate of growth than the economy as a whole, it mirrors the forces of decline and growth in the economy.

3. Actual load factors for the industry declined precipitously in 1959 through 1962, leveling out only in 1963. TWA's load factor in all its scheduled services declined from 71% in 1959 to 53% in 1963.

4. The U. S. air trunkline industry suffered a decline in earnings shown by the CAB Handbook of Airline Statistics, 1965 edition, as follows:

	Operating Profit	Adjusted Net Income
1959	$124 million	$71 million
1960	$ 80 "	$16 "
1961	$ 13 "	($36) "
1962	$158 "	$40 "
1963	$259 "	$77 "

5. From the same source, it was shown that from the beginning of 1959 to the end of 1961 approximately one billion dollars were added to the investment of U.S. domestic and international trunk line carriers in additional flight equipment, ground property and equipment and net working capital. For each dollar added there was a loss of 9 cents in operating profit.

6. The rate of return before investment tax credit—a measure employed by the CAB to gauge the appropriateness of airline earnings for regulatory purposes—reached a low of 4% for U.S. certificated route air carriers from 1959 through 1963. This was the lowest average rate of return for the industry for any five consecutive post-war years. It compares with an average rate of return of 7% for the preceding 1955-58 period and a rate of return of 11% for the 1964-68 period.

Simat next presented a mathematical study based upon computer calculations to support his conclusions. He expressed his opinion that *marginal load factor,* i.e., the ratio of the net passengers added by an additional flight to the seat capacity added by the flight, rather than annual average load factor for the type of plane for the year involved, should be the factor used in considering whether the addition of an assumed flight would be profitable in calculating damage estimates. He states that the marginal load factor for added flights is generally less than the actual load factor of existing flights because added flights compete to some extent with existing flights of the same carrier and divert traffic from other existing flights.

Simat then made an adjustment in his marginal load factor percentages, before applying it to his damage estimates, to compensate for traffic produced solely by "forces in the economy." The adjustment was intended to result in isolating the additional traffic that he estimated would have been due solely to the introduction of additional jets. This adjustment was in proportion to the increase in Disposable Personal Income, which is an index used by the Office of Business Economics of the U.S. Department of Commerce and which, in Simat's opinion, would have reflected the ability of people to engage in air travel for personal reasons.

The adjusted marginal load factors, by years, were applied by Simat to the agreed upon added plane miles for estimating added and deleted passenger miles. The average marginal load factors for the combined experience of all types of jets were used by Simat to obtain the marginal load factor for jet operations since, he stated, his studies showed a high degree of interrelation among the various categories of jets. The same method was used for non-jets to obtain the average marginal load factor for non-jets.

Simat found, as a result, that the Coverdale estimates of increase in passenger traffic from the addition of domestic jet services were "overstated" by 1.65 billion passenger miles, equal to 41.9% of the total estimate of added jet traffic. He also found that Coverdale "understated" the estimates of deleted piston aircraft traffic by 1.1115 billion passenger miles, equal to 63.3% of the total estimate. We reserve until later our opinion of the validity of the use of average load factor (Coverdale) or adjusted marginal load factor (Simat) in computation of damages.

The procedure followed by Simat to obtain domestic passenger revenue yields was to apply to his estimates of added jet and deleted piston passenger miles in each year, not the historical average yield for all passengers (as did Coverdale) but the particular yield which was found by him to be applicable in that year to trips of the average length that would have been taken by passengers who would have been added and deleted. This required three steps: (1) estimation of average stage lengths for the assumed added and deleted traffic; (2) estimation of average passenger trip lengths for the assumed added and deleted traffic; and (3) estimation of the average yield which would have been realized by TWA for different passenger trip lengths.

Simat reviewed TWA's domestic jet schedules and derived mathematical relationships between existing stage lengths of jet flights and the stage lengths of jet flights actually added in the years in question. Based upon these relationships, he estimated the stage lengths of the flights that would have been added with the assumed additional jet aircraft.

His relationships for estimating the stage lengths of added scheduled jet services for each type of jet aircraft are expressed in the formula (DX 271A, p. IV-3):

$$\textit{Average Stage Length of Added Jet Services (Miles)} = C1 \times \textit{Average Stage Length of Existing Jet Services (Miles)} + C2$$

Where C1 is an amount less than 1.0 applied to determine that part of the stage length of added jet services that varies in proportion to the actual length of existing jet services and

C2 is an additional number of miles that does not vary with the stage length of existing jet services.

For the B-331 aircraft, the specific relationship was:

$$\textit{Average Stage of Added Flights (Miles)} = 0.271 \times \textit{Average Stage of Existing Flights (Miles)} + 631.544$$

Adjustment was made for non-scheduled flights by assuming they would have had the same lengths as scheduled flights and would be flown in the same relative proportions as the miles actually flown in all service in the same years.

The above formula for the B-331s was determined by a method commonly recognized by statistical experts for determining relationships between two variables, and known as regression analysis or as the method of least squares (Tr. 7805-6). As an example, by plotting on graph paper aircraft hours operated (independent variable) and

amount of operating expenses (dependent variable) for several airlines, one can connect the dots on the graph with a straight line which represents an average relationship between the points. There are various standards for placing the straight lines, but the method of least squares fits the line to the various observations (dots) so as to reduce the squares of the deviations (differences) to a minimum. It produces a line showing the average of the various lines that might be fitted to the observations. If one squares the deviations and divides by the number of observations, one gets the standard error of estimate; and, given a normal distribution of errors, 68% of the observations should fall within one standard of error and 95% of the observations should fall within two standard errors. Relationships based on fewer observations tend to be more untrustworthy, and results showing a large proportion of observations outside the standard error of estimate likewise tend to be untrustworthy unless validated by independent means.

No claim was made by Simat that regression analysis was anything more than a statistical method useful in testing the validity of assumptions made by non-mathematical observations and raw data and conclusions based thereupon. Nevertheless Simat was of the opinion that the statistics produced by regression analysis under the assumptions made in his report confirmed his expert opinion as to the financial results that would have been obtained under the relevant equipment assumptions.

The average stage length estimated by Simat for the added B-331 domestic flights are set forth below, and are compared with the stage lengths used by Coverdale, which were based on the average stage lengths which TWA actually experienced with B-331 jets for that year (DX 271B, Ex. A-D):

	Coverdale	Simat
1959	1869 miles	1047 miles
1960	1869 "	1047 "
1961	1389 "	1009 "
1962	920 "	881 "
1963	799 "	848 "

The number of flights that would be performed with the added aircraft miles was obtained by dividing the added plane miles by Simat's estimated average stage length of the added services:

	Net Added B-331 Flights
1960	1600
1961	3122
1962	1613
1963	855

In obtaining his trip length data for added and deleted traffic, Simat noted that TWA's average passenger trip length historically trended steadily upward during 1959-1963—from 892.6 miles per passenger to 942.3 miles per passenger. TWA would have added 499,000 passengers and 725 million passenger miles during this period, giving an average trip length per added passenger of 1,453 miles. This is 1.6 times the 914 mile average stage length of TWA's domestic traffic in this period. Simat then derived a relationship between the stage lengths of added and deleted flights and the trip lengths of passengers added and deleted as a consequence of the flight changes. Separate ratios were established for jet and piston services, using various assumptions that Simat considered reasonable on the basis of his experience. Using these ratios, he estimates the average trip length of added jet passengers by increasing the estimated stage lengths of the added flight

by 144% and of deleted piston passengers by applying 168% to the stage lengths of the deleted piston flights.

He stated that the reason why revenue passenger yield realized by domestic air carriers varies with distance traveled is because the fares contain a fixed component in the form of a charge per ticket, which is intended to cover such costs as ticketing and handling of the passenger and baggage at airports (not dependent on length of trip) and a variable component in the form of a charge per mile. As the length of trip increases, there results a "fare taper." Adding to the effect of taper are such factors as that passengers on longer than average trips get a disproportionate part of fare discounts. By use of regression analysis Simat obtained a relationship between yields and trip distances on an industry basis for the years 1959-63. These figures were adjusted to TWA yields by comparing the actual passenger yield for TWA at an average trip length in each year with the yield estimated for the same trip length using the industry relationship.

The estimated revenue yields were applied to the estimated adjusted marginal load factors, computed as above described, and transportation revenues were obtained.

We now show the results of the methodology in the original Simat Report under subdivision (a):

The seat miles for the added B-331 planes are the same as under Coverdale assumptions. The adjusted marginal load factors and added passenger miles are (DX 271B, p. IV-25):

	Added Seat Miles (Millions)	Marginal Load Factor	Added Revenue Passenger Miles
1960	241.6	32.4%	78.3 million
1961	418.1	22.7	94.9 "
1962	180.9	49.2	89.0 "
1963	97.7	49.5	48.4 "

The average stage lengths, passenger trip length, and added passengers are (*id.*, p. IV-27):

	Average Added Stage Length (Miles)	Average Added Trip Length (Miles)	Added Passengers
1960	1,138	1,633	47,449
1961	1,009	1,447.9	65,543
1962	881	1,264.2	70,400
1963	848	1,216.9	39,773

Applying the yields for passenger revenues, computed as set forth above, the following estimated added revenues are obtained (*id.*, p. IV-29):

	Passenger Revenue Yield Per Mile	Total Added Revenues
1960	5.342¢	$4.39 million
1961	5.685¢	$5.67 million
1962	5.979¢	$5.59 million
1963	5.768¢	$2.93 million

As to displaced piston aircraft service, Simat noted that Coverdale had based its estimate on the experienced ratio of total such miles deleted to total jet miles added in each year, and had assumed that all the additional plane miles deleted in domestic service were flown with L-1649As or L-1049Gs. Simat disagreed with this latter assumption, and stated that by eliminating the piston aircraft with the largest number of seats, Coverdale had overstated the number of piston seat miles to be eliminated. Simat accordingly computed the additional piston miles deleted according to the type of piston plane proportional to the plane miles of each type actually deleted in the year in question. The results, applying marginal load factors, gave the estimated deleted passenger miles as follows (*id.*, p. IV-31):

		Deleted Available Seat Miles (Millions)	Marginal Load Factor	Deleted Passenger Miles (Millions)
M-404—	1960	22.	63.2	13.90
	1961	38.	57.3	21.77
L-049/749				
	1960	52.88	63.8	33.74
	1961	63.39	58.	36.75
	1962	50.78	72.6	36.87
	1963	5.51	69.4	3.82
L-1049	1960	33.51	64.4	21.58
L-1049G	1960	61.16	63.1	38.59
	1961	43.66	57.1	53.15
	1962	1.60	72.7	1.16
	1963	2.39	69.4	1.66
L-1049H	1960	.97	66.	.64
L-1649A	1960	10.09	63.5	6.41
	1961	80.24	63.4	50.87
	1963	9.10	84.8	7.72

The average stage lengths and average trip length of deleted passenger traffic having next been obtained, the numbers of deleted passengers were computed. The revenue yields were computed for each type of deleted piston and the resulting deleted revenues, were as follows (*id.*, p. IV-35):

		Deleted Revenues (Millions)
M-404	1960	$1.02
	1961	$1.67
L-049/749	1960	$2.08
	1961	$2.42
	1962	$2.64
	1963	$ .26
L-1049	1960	$1.30
L-1049G	1960	$2.23
	1961	$3.39

		Deleted Revenue (Millions)
L-1049G (cont.)		
	1962	$ .07
	1963	$ .11
L-1049H	1960	$ .03
L-1649A	1960	$ .37
	1961	$3.21
	1963	$ .47

The methods used in the original Simat Report for estimating changes in operations from the earlier delivery of certain B-131 and B-331 aircraft follow the procedures described above in respect of the changes from failure to receive certain B-331s, and the detailed figures appear in DX271A, Chapter V.

The original Simat estimate for subdivision (a) is that the total revenues would have been strikingly less than the Coverdale estimate if the Boeing jets had been introduced and operated under the posited equipment assumptions.

Discussion of costs relating to this subdivision (a) and my decision as between the methodologies of the plaintiff and defendants are deferred until later.

Twenty Convair 880's—Plaintiff's Position

Subdivision (b) of the plaintiff's claim for loss of profits in the Domestic Division is based upon the delayed delivery of twenty of the thirty CV-880 aircraft originally ordered by Toolco from Convair. On this subject paragraph 19 of the complaint states:

> "During the period 1956 to 1960, the defendants required Convair to make certain changes in the design of Model 880 aircraft on order by Toolco, but the defendants prevented TWA from arranging with Convair for certain design modifications which were de-

sired by TWA and which would not have interfered with the scheduled dates of delivery. During the year 1960 the defendants also prevented and restricted TWA from making acceptance and test flights from time to time of various specific Convair model 880 aircraft then on order with Convair by Toolco."

Paragraph 18 of the complaint provides, in part, with respect to the Convair 880's:

"Despite repeated requests by TWA Toolco refused throughout the period 1956 to 1960 to assign to TWA the rights to acquire such aircraft."

The background facts are that Toolco, in April 1956, contracted with Convair for thirty medium range CV-880 jets, a newly developed model. At or about the same time Delta contracted with Convair for ten of the CV-880 jets. These contracts provided for a subsequent allocation of delivery dates for the 40 planes between Toolco and Delta, which was to be worked out between the parties at a later date. The selection of CV-880 jets by Toolco for medium range operations was on Rummel's recommendation. He favored concentrating on pure jets in preference to buying turbo-prop aircraft for medium range operations. The number ordered by Toolco—i.e.—thirty aircraft, was also based upon Rummel's recommendation.

The plaintiff does not contend that a medium range jet could or should have been ordered at an earlier date. After a succession of modifications in the original Toolco and Delta contracts, Convair agreed in the final contract to the first delivery to be made in November 1959 and the fortieth in September 1960, with the allocation of specific dates still to be made by mutual agreement.

In the fall of 1958 when the production of the CV-880's had reached a point where it became essential to allocate particular aircraft between Toolco and Delta, so that the configurations would meet the respective requirements of the two airlines, Toolco refused to agree to any proposed allocation of delivery dates and Convair finally made a specific allocation on its own initiative (Rummel, TWA Ex. 2, p. 15; Tr. 1094-1095, 1108, 1552-1553). Delta executed a contract amendment incorporating the delivery schedule provided for it (TWA Ex. R10). Toolco never executed such an agreement, but the evidence shows that Toolco could have contracted for the contract delivery dates assigned to it by Convair. The plaintiff has accordingly assumed delivery dates so assigned by Convair (original contract delivery dates) in measuring the delays in delivery of twenty of the CV-880's.

Rummel testified (Tr. 307, 321, 444, 1538) that defendant Hughes assumed personal control of all matters connected with Convair deliveries; that no one else in TWA was permitted to become involved on matters of delivery; that in the fall of 1959 defendant Hughes instructed him that he was not to proceed with any acceptance procedures or even to continue acceptance flights without receiving personal clearance from defendant Hughes (Tr. 2949-50, 2987). The evidence as a whole bears out this Rummel testimony.

Rummel also testified that in December 1959 Toolco sent armed guards to the Convair plant who actually took control over the first four CV-880's coming off the production line and scheduled for delivery to TWA or Toolco; that these planes were subsequently bailed to Toolco and remained in that condition for many months, unavailable for final inspection test flight or acceptance procedures (Tr.

2788-90, 2810-17, 2839-40). The effect of this incident is discussed later.

Rummel also testified that removal of other CV-880's from the production line came as a direct result of the actions of defendant Hughes (Tr. 2836-37). Rummel also testified that when Convair subsequently tendered approximately seven or eight completed aircraft, they were refused because "we had not been cleared by Hughes to do so" (Tr. 2763-66).

Rummel also testified that Convair claimed damages from Toolco for delay in delivery and storage costs on nineteen of the twenty planes which eventually went to TWA and that in 1963 (when TWA purchased six additional CV-880s from Convair after repossession from Northeast Airlines) that Toolco agreed to credit Convair with a substantial sum in recognition of these claims (Tr. 2757-65; DX 145; TWA Ex. 21).

Delta during this period was accepting deliveries of aircraft under the contract with an average delay of 1.4 months per plane subsequent to the various contract delivery dates. Rummel testified that if TWA had been the purchaser, independent of defendants Hughes and Toolco, it was his opinion that Convair would have delivered the aircraft to TWA on a schedule at least closely approximating that of Delta (Tr. 1129-1139).

TWA's claim for damages under this facet of the case is based on the original Toolco-Convair contract delivery dates, as stated above. Its theory of damages is that by reason of the actions of Toolco, it is entitled to rely upon the schedule of deliveries which Convair was willing (prior to these events) to contract to meet.

Following is a table showing the original contract delivery dates, the actual receipt dates and the months difference (TWA Ex. 4(c)(1), p. 52):

Actual Receipt Date	Contract Delivery Date	Months Difference
5/18/60	11/59	6
1/ 1/61	1/60	12
1/ 5/61	2/60	11
1/ 6/61	3/60	10
1/ 8/61	3/60	10
1/12/61	4/60	9
1/21/61	4/60	9
2/ 2/61	5/60	9
2/15/61	5/60	9
3/15/61	6/60	9
3/18/61	6/60	9
3/20/61	7/60	8
4/26/61	7/60	9
5/ 6/61	7/60	10
5/25/61	7/60	10
6/ 9/61	8/60	10
7/ 9/61	8/60	11
8/10/61	8/60	12
9/ 2/61	9/60	12
10/13/61	9/60	13

The Coverdale Report computed the increase in annual average CV-880s which would have been available for commercial service if the original contract delivery dates had been met under this portion of the case, as follows (*id.*, p. 53):

1960—10.3 planes
1961— 5.2 planes

assuming the aircraft would have been received on the 15th of whatever month was specified in the contract for each aircraft.

Using TWA historical data for 1961 operation of CV-880s, Coverdale calculated the additional plane miles would have been 5.9 million for 1961; and again using 1961 data (since TWA was not operating CV-880s in 1960), it calculated the additional plane miles for 1960 as 11.6 million.

Using TWA's average of 88.3 seats offered for sale per CV-880 in 1961, it then calculated the additional seat miles as (*id.*, p. 54):

1960—1,024 million additional seat miles
1961— 521 million additional seat miles

Using TWA's 1961 average CV-880 passenger load factor, the resulting number of additional jet passenger miles for 1961 is 341 million miles. Since TWA did not have CV-880s to operate in commercial service in 1960, Coverdale took average load factor for 1960 for TWA's Boeing 331s and 131s used in the Domestic Division and thus computed additional jet passenger miles for 1960 for the CV-880s as 702 million miles. (*Id.*, p. 55.)

To obtain the corresponding reduction in piston plane passenger miles a complicated formula was used: An examination was made of the historical service patterns for the thirty specific pairs of cities in which TWA historically employed its twenty CV-880s when they were put into service in 1961 and for the six additional pairs of cities served by the six additional CV-880s when they were put into service in 1963. The historical decrease in piston service on those particular segments was totaled and was related to the amount of jet service introduced on such segments. It was found that the average decrease in piston plane miles was 52% of the increase in jet plane miles between the same cities. It was assumed that this percentage would be applicable to any earlier service and to any further increase in CV-880 service in similar operations; and

that in any given year the kinds of operations in which TWA would have used additional jets of a given type would have been essentially similar to the operations in which aircraft of the same type were used by TWA historically in the same year. Applying the 52% reduction factor to the additional CV-880 jet plane miles the additional reduction of piston plane miles becomes (*id.*, p. 62):

1961—3.1 million
1960—6.0 million

More than half of the reduction shown above was in flights of L-1049G aircraft, and the Coverdale Report used the average number of seats offered for sale in L-1049Gs for each of the two years in question, and the average load factor for such piston plane for each year, and thereby arrived at the following figures for reduced piston passenger miles (*ibid.*):

1960—286 passenger miles
1961—134 passenger miles

The above changes in jet and piston passenger miles and TWA's actual yields (computed as set forth above, at pp. 84-86) gives estimated net increase of passenger revenues as follows (*id.*, p. 63):

1960—$23.5 million
1961— 12.2 million

Adding the 5% estimate for non-passenger revenues these figures become (*ibid.*):

1960—$24.8 million
1961— 12.8 million

for the net estimated additional revenues under subdivision (b).

Twenty Convair 880's—Defendants' Position

The defendants take the position that there is no positive and distinct allegation in the complaint that the delays in delivery of the CV-880s were caused by the defendants; and that the plaintiff has failed during the damage hearings to introduce evidence to link the delays sufficiently with actions of the defendants. The defendants claim that the proof indicates that the delays were due primarily, if not exclusively, to Convair—i.e.—the manufacturer. The defendants cite at pages 142-150 of their brief the references to various contemporaneous documents which were introduced as exhibits in which TWA's representatives described actions or failures to act, on the part of Convair, which might have contributed to delays.

There is an allegation in the complaint that "during the period 1956 to 1960, the defendants required Convair to make certain changes in the design of Model 880 aircraft on order by Toolco. . . ." (Paragraph 19). However, this paragraph in the complaint does not allege that these changes in design resulted in any delays in the delivery of any aircraft, and no evidence of any such delay was introduced. The only specific action of the defendants prior to May 1960 (when the first 880s were delivered to plaintiff) cited by the plaintiff as being active interference by Toolco and defendant Hughes with the deliveries of the planes was the setting aside of three of the 880s from the production line in December 1959 and the stationing by Toolco of armed custodians to guard the planes. But it is clear from a contemporaneous document (Deft. Ex. 127) that Rummel did not consider this action by Toolco in itself to have delayed Convair's production schedule, although it was probable by this time that Convair was not going to be able to deliver on the original schedule.

In an inter-office memorandum written by Rummel to Mr. Charles Thomas, then President of TWA, under date of February 8, 1960, he stated:

> "Setting aside the three, now two, aircraft has not adversely affected the Convair production line. In fact this may have helped Convair materially by (1) beneficial reassignment of personnel, (2) permitting more timely completion of engineering, and (3) permitting more orderly, i.e., less out of station construction. Of course, delivery of the two aircraft now set aside is affected. They have been rescheduled for substantially later delivery * * *. Certification has not been adversely affected by setting aircraft aside."

I conclude that the defendants are not chargeable with responsibility for delays in delivery by reason of the December 1959 incident.

On March 2, 1960, the purchase agreement between Convair and Toolco covering all thirty of the CV-880s was changed by amendment No. 4 which established a new schedule for delivery of the planes as follows:

May	1960—4	planes
June	4	"
July	5	"
August	5	"
September	4	"
October	5	"
November	3	"

In my opinion the plaintiff's position that it was entitled to take the original contract delivery dates in measuring the amount of damages is not valid. Rather it should be bound by the revised delivery dates established in Amendment No. 4.

The evidence clearly shows, however, that commencing about May 1960 when Convair was able to offer deliveries, the defendants, as alleged in the complaint, prevented deliveries from being made and caused substantial delays in deliveries.

I have heretofore set forth the references to the testimony of Rummel showing that Hughes assumed personal control of all matters connected with Convair deliveries and that no one else at TWA was permitted to become involved on matters of delivery or acceptance procedures or even to continue acceptance flights. Rummel also testified that after TWA was rendered unable by Hughes to carry out final inspection procedures, numbers of additional aircraft were removed by Convair from the production line in a semi-complete state (Tr. 2807-8). This occurred progressively as TWA could not proceed with acceptance procedures (Tr. 2808). In "the summer" of 1960 Convair tendered seven or eight completed aircraft and Rummel testified that, "We didn't proceed with the flight testing because we hadn't been cleared by Hughes to do so." (Tr. 2766). Also, it is uncontroverted in the evidence that Convair claimed damages from Toolco for delay in delivery and storage costs on nineteen of the twenty planes which eventually went to TWA (Tr. 2757-58, 2764-65); and in 1963 Toolco settled Convair's damage claims for disruption of its business and delays in deliveries by crediting Convair with $3,750,000.

We turn now to the defendants' computations set forth in the Simat Original Report. Using his methodology described above for Boeing planes in domestic service, Simat reached the following results in respect of the assumed earlier delivery of 20 CV-880s:

Simat assumed the Coverdale estimates of 10.3 added planes for 1960 and 5.3 added planes for 1961; and the estimate of 11.7 million added jet plane miles for 1960 and 6.0 million jet added plane miles for 1961. By analysis of TWA domestic schedules for CV-880s over the period 1961-1963, Simat established by regression analysis the estimated stage lengths of added CV-880 jet service to be 752 miles, although the historical average stage length of existing CV-880 flights was 819 miles. The number of added flights becomes 15,558 for 1960 and 7,978 for 1961.

To the net assumed added seat miles, Simat then applied the "estimated adjusted marginal load factors" (32.3% for 1960 and 22.5% for 1961) and obtained added revenue passenger miles of 333.7 million miles for 1960 and 119.2 million miles for 1961. Since the average stage length of added service was estimated at 752 miles for both years, the number of added passengers becomes 309,239 for 1960 and 110,462 for 1961. TWA's actual average passenger revenue yield per mile was then adjusted proportionately in the same proportion as the actual average trip length bears to the adjusted trip length, and the total added revenues were (DX. 271A, p. VI-16):

1960—$19.5
1961—$ 7.3

As for piston aircraft operations, by regression analysis the estimated stage lengths of each type of displaced piston plane was calculated, and the number of deleted piston flights and miles was also estimated for each type of piston plane. The total deleted revenues from piston operations,

similarly computed for each type of piston, and then combined, were (*id.*, p. 20):

1960—$41.3
1961—$20.0

Simat, it will thus be seen, estimated very substantial losses in revenues for both years from the assumed additional operations of the twenty 880s.

Discussion of estimated changes in expenses under subdivision (b) is deferred until later. However, the figures for loss of revenue, apart from costs, are significant. In view of the clear preference by airline passengers for jets over pistons, it is almost impossible to accept the conclusion that replacements of piston flights by jet flights would have caused net revenues to decline from $41.1 million to $19.5 million in 1960 (more than 50%) and from $20.0 million to $7.3 million (more than 65%) in 1961. These figures should be contrasted with the views of the Civil Aeronautics Board as expressed in Order No. E-16195 (December 29, 1960, TWA Ex. 315.4, also reported at 32 C.A.B. 1363). That Order approved the loan agreement which substituted control by independent voting trustees for control by Hughes. Noting that the loan would enable TWA to take delivery of the 20 Convair 880's, the C.A.B. stated:

> It appears that the failure to receive this equipment as planned may have played a substantial part in TWA's recent inability to maintain its traffic position relative to its principal competitors. Thus, we note, for example, that the carrier's preliminary traffic reports for the month of November 1960 show that TWA's share of the Big Four domestic passenger market has declined from 23 to 20.2 percent. By way of contrast, United, which was behind TWA, has

> caught and passed it, increasing its share from 21.3 percent to 29 percent. It appears to be significant that TWA's major competitors have already taken delivery of much larger jet fleets than TWA is operating and have firm orders for delivery of more. [Footnotes omitted.]

Thus, the C.A.B., an impartial body which is certainly experienced in matters such as these, was of the opinion that the delay in delivery of the Convair 880's had probably resulted in a heavy loss of traffic to TWA, rather than a preservation of traffic as Simat asserts. Simat's conclusion that replacing piston flights with jet flights would result in a heavy loss of traffic can only be viewed with disbelief and reflects on the credibility of his entire approach.

Ten Convair 880's—Plaintiff's Position

Subdivision (c) of the plaintiff's claim for loss of profits in the Domestic Division is based upon the failure to receive ten of the thirty CV-880s originally ordered by Toolco from Convair.

In addition to the more general allegations of the complaint (see Par. 52) the following statements appeared therein:

> "In or about April 1956 the defendants arranged for Toolco to place orders for at least 30 Model 880 jet powered aircraft to be manufactured by Convair (par. 17)."

> "In November 1960 while the proposal for merger was pending, the defendants arranged for the lease by Convair to Northeast of six of the Convair model 880 aircraft which Toolco had ordered from Convair.

Among the aircraft so leased to Northeast were three aircraft which Toolco previously by an agreement with TWA of May 9, 1960 had assigned to TWA (par. 22)."

There is no disagreement over the fact that the remaining four 880s out of the ten involved in the claim under subdivision (c) were retained by Toolco for some time and later leased by it to Northeast (TWA Ex. 2, p. 10), and were never released by Toolco to the plaintiff.

Earlier we described the main major provisions of the contemporaneous contracts between Toolco and Convair, and Delta and Convair, for a total of forty CV-880s (pp. 101-03). Rummel testified that as a result of this and other reductions in the jets available to the plaintiff, caused by actions of Toolco, TWA was unable "to provide the schedule coverage that was advisable because of lack of equipment for a number of years" (Tr. 1085-86).

Rummel was informed on March 5, 1959 by Toolco representatives that TWA was not to receive ten of the Convair 880s which had been previously ordered (TWA Ex. 2, p. 9; R. Tr. 147). It appears that Toolco had had negotiations with Capital Airlines about selling six to ten of those CV-880s in January 1959. Rummel protested about the cutback in the Convair fleet (Tr. 762-65) as did other TWA officials (Tr. 1165-74, 1193-94). The opposition to the reduction was communicated to the executives of Toolco and to Hughes personally, but Hughes dismissed TWA's objections "summarily" (Tr. 1178-81).

The original contract delivery dates for the ten planes which the plaintiff takes as being the dates when it would have received the ten planes but for the aforementioned actions of Toolco, are as follows (TWA Ex. 2, p. 18; TWA Ex. 4(c)(1), p. 65):

December	1959
February	1960
April	1960
May	1960
June	1960
June	1960
July	1960
August	1960
August	1960
September	1960

and in each case it is assumed by Coverdale for damage computation purposes that the aircraft would have been received on the 15th day of the applicable month.

The additional annual average number of CV-880s available for commercial service was computed on this basis as (TWA Ex. 4(c)(1), p. 66):

1960	5.1
1961	9.9
1962	10.
1963	7.9

(The reduced figure for 1963 results from the fact that, as noted above, TWA actually purchased six of the ten planes in question from Northeast Airlines in the last quarter of 1963, and it was assumed that these six CV-880s would have been among the thirty aircraft in the original Toolco order for such planes).

The Coverdale calculation of additional passenger miles TWA would have recorded each year is similar to the calculations described above (pp. 104-06) for the twenty CV-880s involved in the delayed deliveries. It results as follows (*id.*, p. 67):

1960—351 million additional jet passenger miles
1961—648 " " " " "
1962—599 " " " " "
1963—506 " " " " "

It was assumed that service by TWA for the additional ten CV-880s would have been similar to that which it actually operated with a fleet of twenty CV-880s in 1960 and with a fleet of twenty-six commencing in 1963.

The Coverdale Report then took thirty-six pairs of cities where most of the CV-880 service was concentrated and found that the reduction of piston aircraft service for such pairs of cities was 51% of the jet aircraft service added. Using this ratio, the report then calculated reduction of piston aircraft service as follows (*id.*, p. 70):

1960 — 123 million miles
1961 — 235 " "
1962 — 247 " "
1963 — 195 " "

At TWA's average annual yields, computed on the basis above described, the following are the Coverdale calculations for net increase of passenger revenues (*ibid.*):

1960 — $12.9 million
1961 — $24.3 "
1962 — $21.5 "
1963 — $18.2 "

Using 5% additional revenue for non-passenger revenues the total additional revenue figures become:

1960 — $13.5 million
1961 — $25.5 "
1962 — $22.6 "
1963 — $19.1 "

In considering whether to allow the full amount of the plaintiff's claim under this subdivision (c) relating to the failure to receive ten CV-880s, the question arises as to whether the plaintiff is justified in using the original contract delivery dates or whether (as in the case of the calculation of damages in respect of the delays in delivery of the twenty CV-880s considered under subdivision (b)), the plaintiff should be required to use the amended delivery dates set forth in Amendment No. 4 of the contract between Toolco and Convair.

For the reasons stated above, it is my opinion that it is reasonable to use the contract delivery dates in Amendment No. 4 in computing its damages under this subdivision (c).

Ten Convair 880's—Defendant's Position

The original Simat estimates in respect of the failure to deliver the ten additional CV-880s are now considered.

Simat assumed the estimates of added planes and added plane miles as computed in the Coverdale Report. By regression analysis the stage lengths for the assumed added service were obtained, as were the stage lengths of the assumed deleted piston service, by types of planes. To the added seat miles assumed, Simat then applied the "estimated adjusted marginal load factors" (32.3 for 1960, 22.5 for 1961, 48.7 for 1962 and 49.4 for 1963) and obtained added revenue passenger miles of (DX 271A, p. VII-15):

1960	—	165.4	million miles
1961	—	224.5	" "
1962	—	519.1	" "
1963	—	435.2	" "

The assumed added passengers were (*ibid.*):

1960 — 163,487
1961 — 211,693
1962 — 494,193
1963 — 422,976

The average passenger revenue yield per mile (adjusted as described above) then produced total added revenues of (*id.*, p. VII-17):

1960 — $ 9.7 million
1961 — $13.7 "
1962 — $33. "
1963 — $26.6 "

The total deleted revenues from piston operations, similarly computed for each type of plane, and then combined, were (*id.*, p. VII-21):

1960 — $21.0
1961 — $37.8
1962 — $22.3
1963 — $10.2

Discussion of changes in costs under subdivision (c) is deferred until later.

I now take up the Simat Supplemental Report.

During the Simat cross-examination on the original Simat Report, plaintiff's attack was directed primarily to the validity of the concept of a marginal load factor—both before and after adjustment for economic growth. The use of this factor, more than any other, accounted for the wide variation in the estimate of the experts covering domestic operations.

The defendants countered with the statement that with the data then available to them they were confined to

pointing out the "fundamental errors" of the Coverdale Report—that they needed additional data from TWA records if they were expected to produce the best judgment of their expert (Simat) as to changes that would have occurred in operating profits.

The testimony of the defendants' experts was that any realistic estimation of the change in net operating profit requires the construction of an articulated TWA operating plan in which specific consideration is given to how the added jet capacity would be integrated with existing operations, to what types of service would be added, to what existing services would be eliminated in their entirety, and of what shifts in aircraft usage would occur as added jet aircraft displaced other aircraft from their existing usage to displace, in turn, other aircraft in a chain reaction. Since the scheduling and integration of new aircraft capacity is one of the most complex functions performed in the operation of an airline, Simat stated, it cannot be dealt with in generalities but an extensive bank of background information is needed to make appropriately informed judgments concerning the most probable and suitable use of additional aircraft on a route system as heterogeneous as that of TWA, and the resulting effect on operating profit.

The defendants accordingly made a demand for massive additional production of TWA's operating records to enable their experts to construct an operating plan for TWA for the years in question and thus test the validity of their underlying damage theories. This demand was vigorously contested by the plaintiff as unnecessary and too late. It was my opinion that because of the incredibly large spread between the estimates of the experts as to operating results to be expected from the assumed added jet fleet, the Special

Master and any court reviewing the matter were entitled to the best judgment of all the experts, based on every available TWA record, as to the factors involved in their judgment. The defendants' admission that the original Simat Report did not reflect the best judgment of their expert because of the limited source material available, also influenced me. Accordingly, the defendants' belated request was granted as to the production of all available records sought by it affecting the Domestic Division operations of TWA.

I decided that corresponding figures for the International Division operations need not be produced because of lesser complexity of the factors involved in the operations of that Division. For example, the computations of transatlantic load factors were basically undisputed, and the stage lengths of the flights of course did not vary to any considerable degree in the International operations.

This demand for production entailed a substantial delay in the completion of the damage hearings but resulted in a Supplemental Simat Report reflecting, in conjunction with its original report, its final revised estimate of changes in plaintiff's domestic operating revenues. The Supplemental Report did not change estimates of costs, so the Simat cost estimates for the Domestic Division are found in the original Simat Report.

The mass of material furnished by the plaintiff as a basis for the Simat Supplemental Report consisted mainly of TWA's routing charts and on-board reports and on-line passenger revenue yield information for the five-year period 1959-1963. Traffic and financial data for all scheduled flight services were made available by individual flight segments. For each segment of each flight, the information was converted into a form considered suitable by Simat

for computor processing. This information included flight itinerary, departure and arrival time, number of flights per month, type of equipment, classes of service and numbers of seats in each class, and distances between points served.

Basically the differences in method from the Original Report may be summarized as follows:

1. Rather than estimating the average stage length of added and deleted operations by the use of Domestic Division average relationships between stage lengths of existing added and deleted services, the report estimated directly the changes in flight operations by segments and derived the stage lengths from individual flight segment data.

2. Rather than estimating passenger miles on the basis of average divisional marginal load factors, the Report estimated them on the basis of individual segments.

3. Rather than estimating passenger trip lengths on the basis of divisional averages, the Report estimated them likewise on data from the individual flights.

Following is a more detailed description of the methodology used in the Simat Supplemental Report:

The routing charts show the flight patterns over a twenty-four hour period for each aircraft. The on-board reports provide monthly summaries of data by flight number, segment and type of equipment for all revenue flights. They show number of departures and number of revenue passengers. From the origin and destination points, data were obtained for computing aircraft miles and block hours. Block hours are defined as the elapsed time between departure from the gate position before take-off to arrival

at the gate position after landing. From these figures, seat miles were obtained for each aircraft in each segment for each month. Simat then computed the average monthly stage length (aircraft miles divided by departures) and the average monthly load factor (revenue passenger miles divided by seat miles).

The annual average stage lengths resulting were (DX 271A, p. II-12):

Pistons	1959	1960	1961	1962	1963
M-404	161	155	141	—	—

Simat next determined his estimate of the monthly operating profit or loss, based on distances actually flown and number of passengers actually carried. He did this first computing revenues and costs under the methodology used in his Original Report and second by computing them under the Coverdale methodology. He summarized his results in the following language:

> "While the profit or loss determined under the Simat procedures is, in our opinion, substantially more accurate, the difference is not significant to the present analysis. For both methods demonstrate, with equal certainty, although in different degree, that individual aircraft in each of TWA's jet fleets varied strikingly in their earning capacity, depending upon their scheduling, and they also demonstrate that, as jets were added, the additional jets were placed on routes where they began to contribute not profits, but losses."

The Supplemental Report does not make separate estimates according to categories of assumptions, as did the Simat Original Report and the Coverdale Report.

In deploying the assumed additional jet fleet, Simat built a constructive schedule just as TWA historically scheduled such equipment when it in fact received the additional equipment (with certain adjustments not material for understanding the methodology). It selected as

a basis for the schedule of the constructive fleet in each month ("constructive fleet month") the schedule pattern adopted by TWA in the "guide" month, i.e., a subsequent month when the actual jet fleet was closest in number to the constructive fleet. The average jet stage length was computed for each guide month and applied to the total jet miles in the constructive fleet month, to obtain total constructive jet departures. Piston fleet miles and departures were similarly constructed. To determine the traffic carried by the "constructive" fleet, Simat did not use the on-board data furnished by TWA but chose instead an intricate method of computing passengers from data from a competition study of the CAB made in 1966, which tabulates from samples the number of passengers who purchased tickets for travel on TWA, or other airlines, between each combination of cities served by TWA and other airlines. By regression analysis Simat then related the change in the volume of passenger miles between each two successive years, for each flight segment, with the corresponding changes in the volume of seat miles scheduled with jet and piston aircraft. Further regression analysis was used to convert the relationship between changes in non-stop on-line passenger traffic service (traffic carried between a point of origin and a point of final destination) as reported in the CAB Competition Survey, and changes in aircraft services to a relationship between changes in on-board traffic and changes in aircraft services.

Passenger yields were then applied (varying with the estimated length of passenger trip to show "taper" as described in the original Report). The ratio of length of passenger trip to stage length was also computed as in the original Report, with some refinements statistically.

Operating revenues resulted from this application of

yield figures to the passenger miles. The results showed an even greater net loss of revenue for the Domestic Division than shown in the original Report. Total revenues were estimated at $79.79 million and total costs at $191.74 million, or a net loss estimated for operating with the assumed additional Domestic fleet of $111.95 million. Some "alternative" computations are also set forth in the Supplemental Report to "validate" the findings of the Report, but are not otherwise relied upon (DX 371) and accordingly are not discussed in this Opinion.

Conclusions

I have described above the claims of the plaintiff for Domestic Division losses resulting from inadequacy of its jet fleet. I have also examined the methodology used in the reports of the plaintiff's expert witness (Wemple of Coverdale) and the defendants' expert witness (Simat) and their estimates of the financial results to TWA if the hypothesized jet fleet had been received and operated in the years 1959-63. Since the conflicting results as to the amount of damages are based largely upon three assumed factors, the reasonableness of those factors will now be discussed as a preliminary to award of damages under this part of the case (Section IB-Domestic).

The greatest portion of differing results stems from the use by Coverdale of the historical annual average load factor (percentage of available seats which are occupied) for each type of plane to compute the number of net additional passenger miles that would have been flown if the additional planes had been available; and from the use by Simat of the marginal load factor (ratio of the net traffic added by an added flight to the seat capacity added by the

flight) in his computation of the number of net additional passenger miles. (In his Supplemental Report Simat did not denominate this factor as marginal load factor, but for purposes of this discussion the term is applicable to both of his Reports.) In my opinion the historical average annual load factor of the same or similar type of plane involved in the computation is the proper measure to be used. Since it is computed separately for each year it adequately takes into account the steadily decreasing load factors experienced by TWA and by the industry during most of the period covered by the damage claims.

The defendants quite properly state that use of the annual average load factor would not be valid if applied to unlimited assumed additions to traffic. However, the Coverdale report was based upon a limited assumed increase in traffic—limited by the amount of increased traffic assumed by the equipment assumptions of the posited hypothetical TWA jet fleet.

The percentages of seat miles of all types of aircraft assumed to be added by TWA domestically in 1959-63 measured against the total of TWA, American and United; and the percentage of seat miles so added by TWA measured against TWA's historical jet domestic seat miles is shown in the following table (TWA Ex. 444):

TOTAL AVAILABLE SEAT-MILES OPERATED
DOMESTIC SCHEDULED SERVICE ONLY
TWA, UAL AND AAL
ALL AIRCRAFT TYPES, 1959-1963

Year	TWA, UAL and AAL Historical Seat-Miles (A)	TWA Estimated Additional Seat-Miles (B)	Percent Additions by TWA
	(Millions)		
1959	21,738	105	0.5%
1960	24,827	910	3.7
1961	29,020	1,018	3.5
1962	34,613	774	2.2
1963	37,969	638	1.7

Year	TWA Only Historical Seat-Miles (A)	TWA Estimated Additional Seat-Miles (B)	Additions Percent
	(Millions)		
1959	6,492	105	1.6%
1960	6,962	910	13.1
1961	7,487	1,018	13.6
1962	8,623	774	9.0
1963	10,042	638	6.4

(A) Source: CAB Handbook of Airline Statistics (1965 Edition).

(B) Source: C&C Report (May 2, 1966) Volume I, Chapters II-V; Exhibits TWA 42, 42A, 43A and DX 262.

As applied to this posited increase in traffic, I am of the opinion that use of the annual average load factor in the Coverdale Report is reasonable.

A comparison of industry average load factors (scheduled operations of the trunk line air carriers) for the years in question with the TWA average load factors used by

Coverdale also tends to confirm the reasonableness of the Coverdale computations. The industry figures are as follows (DX 271B):

	Jets	Non Jets
1959	79.9	59.7
1960	69.6	55.3
1961	59.5	53.
1962	53.6	52.6
1963	54.	53.3

The use of the marginal load factor by Simat to measure increase or decrease in number of passenger miles is, in my judgment, inappropriate. I note that Simat throughout his testimony refers to the marginal load factor as being appropriate to determine whether an assumed added flight would be profitable. That may well be so for an individual flight under normal industry conditions which do not involve a transition period in which there is introduced into the market a highly preferred new type of equipment. But it seems to me to erroneously exclude from consideration the probability that passengers would be diverted from competitors, who would not have had, under the assumptions here applicable, as great a quantity of jets as they had historically, to TWA which, under said assumptions, would have had more of the jet equipment so highly preferred by the traveling public. Indeed Simat stated (Simat Tr. 9123) "A truly accurate measure of marginal load factor should consider not only the competitive factors but also the other factors I mentioned of increased public acceptance, changes in quality and quantity of air services, and independent of the change in capacity alone." As applied in the Simat Report, these factors have not been sufficiently recognized. I am strengthened in my opinion by the follow-

ing statement of defendants in their brief (p. 220) that even though Simat's methodology led to the mathematical conclusion that TWA would have lost $95.91 million, if it had operated the assumed additional jet equipment as hereinbefore described: "It was not, of course Simat's opinion that the management of reconstructed TWA would have permitted such staggering losses to accumulate. Management could have drastically cut schedules * * * but while such measures might have avoided the dire consequences of operating * * * [the jet] added plane miles they would not have sufficed to put the added fleet in the black." A mathematical result which varies so widely from the estimate of what would in fact have occurred, must be regarded with great caution.

In terms of passengers carried, the Simat calculations (with marginal load factor being the greatest factor) also result in an unrealistic assumed loss to TWA over the five year period of over 3 million passengers, as follows (TWA Ex. 328):

	Jet Added	Piston Deleted
1959	79,768	138,635
1960	546,707	1,729,434
1961	387,698	1,915,988
1962	564,593	967,280
1963	462,749	350,869
Total	2,041,515	5,102,206

A factor which leads to such unrealistic mathematical results as does the marginal load factor as used herein, should be rejected.

Examples of the unreliability of the results reached by use of the marginal load factor are cited in the Plaintiff's brief (pp. 191-4) as follows:

"In 1959, for example, a period when TWA's actual jet load factor of 83.1% was such as to demonstrate that jet capacity of all airlines was far less than sufficient to fly the passengers who wished to fly in jets, the defendants employ a 'marginal load factor' in computing what would have occurred with more jets of 56.5%. In 1960, the actual figure is 68.6% but defendants use 37.1%. In the year 1961 the actual figure was 55.6%, while the marginal figure used is 31.7%.*

"The fallacies of this approach would be more apparent if quarter-to-quarter figures were employed. For example, in the fourth quarter of 1960, TWA was able to offer 829,780 jet available seat miles. In the first quarter of 1961, it was able to offer 873,704 jet available seat miles—the increase resulting primarily from the deliveries of the first few Convair 880 jet aircraft. Revenue passenger miles for the two periods were respectively 490,699 and 482,514. [TWA Ex. C & C 4 (24)] A simple computation following the principles that Simat espouses indicates a marginal load factor of zero—according to Simat the sole cause of TWA's falling load factors has to be its improvement in equipment, limited as that improvement was.

• • • • •

"From 1959 to 1960 TWA decreased the piston service which it offered by 1,171 million seat miles; the piston passenger traffic which it carried was decreased by 1,054 million revenue passenger miles. The simple-minded computation to which the defendants' cause and effect assumptions lead them is that TWA's piston miles were operated at a marginal load factor of 90%;** that is, that for every 100 piston seat miles subtracted

* After the adjustment against economic growth, discussed below, the figures are 53.7% for 1959, 31.5% for 1960 and 21.0% for 1961. The defendants' figures were changed several times, and DX 330 is believed to reflect the final estimates.

** The adjustment against economic growth is applied in reverse to make this figure, for computational purposes, an historic 94.5%.

or added by TWA in 1959, 90 revenue passenger miles were subtracted or added as a direct result [DX271B, p. C-23, as modified by DX330]. This being, according to defendants, the sole explanation of the historical trends, they conclude that further decreases of piston mileage offered would have had similar effects, so that any time TWA was led to cancel a piston flight in 1959 it would have cost itself the passengers which would have filled 90% of that piston's seats, while added jets would (according to defendants' jet analysis), have filled only 56.5% of their seats. Any such piston cancellation, whether or not involving a jet replacement, would obviously be a scheduling decision costing TWA a great deal of money.

"Indeed, if there were operative in actual fact something properly describable as a 90% marginal load factor for pistons in 1959, TWA and all other airlines should as a matter of sound business management have made every effort to increase piston mileage so as to take advantage of this extremely favorable market situation. The proper management decision would have been to reverse the developing situation and replace all of the limited existing jet mileage with piston mileage."

The reason for Simat's extraordinarily high estimates of the load factors on displaced piston flights seems to be a fundamentally unsound approach. Simat's marginal load factors for the deleted piston services were calculated by matching decreases in piston passenger traffic with decreases in piston flights. However, it is apparent that some of the decreases in piston passenger traffic were the result of passenger preference for jets, which caused fewer persons to use those piston flights which continued to be operated. Simat paired the deleted piston flights with the total decline in piston passenger traffic from all sources.

To take a hypothetical example, it may be assumed that an airline operated four flights from Point A to Point B with 50 seat piston aircraft, averaging 40 passengers per flight. If it is further assumed that jet competition would cause a loss of five passengers per flight, then each flight would be carrying only 35 passengers. If the airline then withdrew one of these flights, the load factor of the deleted flight should properly be 70% (35 passengers as against 50 seats). However, there has been a total loss of 55 passengers, if the first loss of five passengers per plane is added to the loss attributable to the deleted flight. Using Simat's method of matching deleted flights with the total decline in passenger traffic, the deletion of one 50 seat flight would be deemed to have resulted in the loss of all 55 passengers, rather than the loss of 35 passengers. It is this basic error of methodology which apparently has resulted in estimates of marginal load factors for deleted piston flights which exceed 100% (i.e. exceed the maximum capacity of the deleted aircraft). It is, moreover, apparent that passenger traffic was declining on all major piston flights which were feeling the effect of competition from jets, both on flights which were subsequently deleted and also on those flights which were continued in operation. Matching this total passenger decline with the deleted flights alone has resulted in a completely invalid marginal load factor for deleted piston services, and the result has been to vastly overstate the amount of revenues that TWA would have lost by deleting piston flights.

The defendants counter by giving examples of "absurd results" reached by the Coverdale method, as set forth below, but it is my opinion that the questions they raise in that connection can be rationally answered. At page 245 of the defendants' brief, they point out that Coverdale

would add nearly two billion revenue passenger miles to TWA's domestic traffic from 1959 through 1962, a period in which that traffic declined by 154 million passenger miles; that in 1961 Coverdale bestows on TWA 644 million additional passenger miles heedless of the fact that in that year the entire domestic trunk industry could add only 300 million; and that American Airlines suffered a decline of 500,000 passengers and 339 million passenger miles in 1961 in spite of having added fifteen jets. Where, the defendants ask, were the additional TWA passengers to come from? It appears to me they would probably have come from passengers that were attracted from competitors who would not have had as attractive equipment in type or quantity, vis-a-vis TWA, as they did historically during the years of jet shortage; and that new passengers would also have been attracted by the new and preferred assumed TWA jet equipment. The new jets did not cause the historical decreases in traffic admittedly experienced by the industry and by TWA, as the methodology used by Simat seems to dictate.

It should be emphasized that plaintiff has not sought to recoup from defendants its entire operating losses incurred historically during some of the years in question. For example, as pointed out at page 32 of plaintiff's reply brief, in 1961, a year in which Pan-Am and American operated at a profit, TWA's operating losses were $12 million and its net loss $15 million before special adjustments (TWA Ex. 94). Its damage evidence claimed that operating results were adversely affected by $10.6 million by its failure to receive the jets diverted to others and delays in receipt of the jets it did receive. It is that adverse effect upon its operating results alone, for which plaintiff seeks recovery

in its claims based on inadequacy of its jet fleets. Plaintiff has not sought to blame defendants here for the results of a general economic turndown. Rather, since jets were admittedly more attractive to the traveling public than pistons, it is the reflection of customer dissatisfaction with inadequate equipment attributable to defendants' conduct that is here the key element.

The adjustment made by the original Simat Report in the marginal load factor was intended to eliminate such part of the assumed added traffic as was attributable to economic changes. It is true that the economic changes for this period had already occurred and had been fully absorbed by the flight schedules which had historically been operated during those years. Thus, deletion of economic growth factors might be valid in determining the extent to which assumed additional flights might have produced additional passengers for the domestic airline industry as a whole. However, what is at issue here is not how many passengers would have been added to the entire airline industry, but how many passengers would have been added to TWA. While some might have been totally new passengers, others would represent a diversion of existing passengers from other airlines to TWA. In short, the addition of more jet flights might have resulted in a considerable redistribution of airline passengers with great increases for TWA, even though relatively few new passengers are produced for the airline industry as a whole. Therefore, the economic growth factor, while it may be applicable in other contexts, is not properly applicable here.

A second instance of different factors used by the experts was historical "average annual stage length" used

by Coverdale in estimating stage lengths of assumed added flights, as opposed to "marginal stage lengths" used for this purpose by Simat. The factor of annual average stage length of TWA, as used by Coverdale separately for jets and pistons, in my opinion, adequately takes into consideration the various changes in stage lengths accompanying the introduction of jets. The mathematical basis for confirming Simat's estimates of marginal stage lengths of added flights developed, on cross examination, to be unreliable (Tr. 7918-34; TWA Ex. 320; Tr. 7955). No reasonable alternative to use of the annual average stage length by type of plane, as used in the Coverdale Report, was presented to me and I accept the validity of its use as a proper factor to be employed in the calculations of damages. (See TWA Ex. 396). The acceptance of the use of the annual average stage length, as a proper factor, eliminates the need for any discussion at this point of the validity of the factor of average trip length of passengers as computed by Simat.

Also in my opinion the Coverdale Report is reasonable in using actual annual average yield per passenger in computing the dollar yield estimates for assumed added passengers. In my opinion the Simat estimates, using the so-called "fare taper" are less reliable because they fail to take into consideration adequately the jet fare surcharges in existence during much of the period involved, and the varying fare structures in operation for various periods and various classes of travel.

In adopting the Coverdale figures based on TWA's average performance rather than the Simat figures based on declining marginal productivity, I have been influenced by the overall picture of TWA's performance in relation to the performance of all of the other domestic trunk carriers

during the period 1959-1963. In 1959, TWA had the highest operating profit for its domestic operations of any U. S. trunk line. It also operated over many of the most densely traveled long haul routes in the country. Given the strength of its route structure and its 1959 operations, it is reasonable to assume that with adequate equipment TWA would have fared approximately as well in the ensuing years as the trunkline industry as a whole. If a condition of overcapacity had set in, it would be reasonable to assume that TWA would not have fared significantly worse than the other trunks, since it is not asserted that historical TWA was operating too many aircraft during this period. The statistics, however, show that TWA fared far worse during this period than the other trunks. It is clear that during 1960, 1961 and 1962, when plaintiff claims it was short of jets, TWA fell significantly behind the other carriers, and that beginning in 1962 and in 1963 and 1964, when TWA was catching up in terms of jet equipment, it also significantly improved its performance in relation to the other trunk carriers.

These statistics, which are set forth below, are taken from the CAB's 1965 Handbook of Airline Statistics. In Part III, Table 4, figures are given for the entire domestic operations of the domestic trunk carriers for revenue passenger miles, passenger originations and passenger emplanements. Individual figures for TWA are given in Part III Table 18. If the TWA figures are subtracted from the totals for all trunk lines, the TWA figures can then be compared with the totals for all trunk lines other than TWA. In all cases, figures are given as shown in the Handbook, with the final 000's omitted. The comparisons are shown in Chart 1. To compare TWA's post 1959 performance with that of the other carriers, the figures in Chart

1 can be expressed year by year in terms of the percentage increase or decrease in relation to 1959. This comparison is set forth in Chart 2. The divergence between TWA's performance after 1959 in comparison with that of the other trunk lines can be seen even more clearly when the percentage figures in Chart 2 are shown in the graphs which follow that chart.

Chart 1

REVENUE PASSENGER MILES

	1959	1960	1961	1962	1963	1964

PASSENGER ENPLANEMENTS

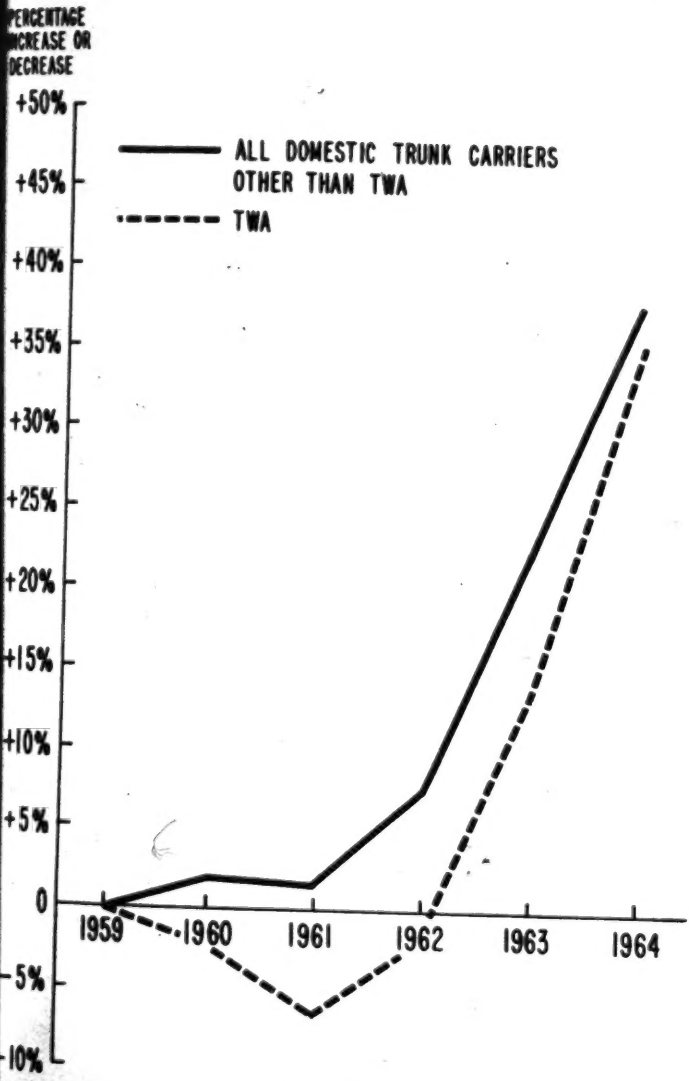
PERCENTAGE INCREASE OR DECREASE COMPARED TO 1959



From this it can be seen that TWA's performance in 1960 and 1961 was significantly worse, when compared to its 1959 performance, than that of the other trunk carriers. In 1962, it turned the corner of recovery, and by 1964 had nearly reached the same level of performance, vis-a-vis 1959, as the other trunks. This strongly suggests that TWA's shortage of jets in these years had a significantly adverse effect on its competitive position. Had TWA's performance been maintained at the same level as the other trunks, its passenger traffic would have been far greater than the levels which it actually experienced. In view of TWA's excellent route structure and its strong performance in 1959, the inference is strong that its failure to maintain its position in 1960 and the subsequent years was due to its shortage of jet equipment, which affected its ability to compete for the available passenger traffic. These statistics make it almost impossible to accept the Simat thesis that TWA would have suffered further drastic declines in passenger traffic if it had replaced piston flights with jets. Rather, the inference is that TWA would have obtained far higher levels of passenger traffic. Therefore, the Coverdale use of TWA's historical average figures to project the additional traffic from the jets would appear to be a conservative estimate.

As to the Domestic Division claims, the plaintiff's proof is sufficiently certain and direct to meet the standards in default situations (*Bigelow* v. *RKO Radio Pictures Inc.*, 327 U. S. 251 (1946)). The defendants, while raising doubts as to certain aspects of the claims which could undoubtedly have been cleared up if Hughes had been willing to testify, have failed to disprove these claims by any method open to them in the light of their default. Accordingly, I find as follows:

Subdivision (a). The plaintiff's estimates of revenues are reasonable and are adopted by me.

Subdivision (b). The plaintiff's use of original contract delivery dates in the Convair contract is not reasonable. Its estimates of revenues if computed instead on the basis of using the delivery dates provided for in Amendment No. 4 to said contract are reasonable and as so changed (as hereinafter set forth) are adopted by me. After appropriate adjustment of assumed changes in expenses, the net dollar reduction from plaintiff's claim is hereafter shown.

Subdivision (c). The plaintiff's estimates of revenues, modified similarly to use the delivery dates provided for in said Amendment No. 4, are reasonable and as so changed (as hereinafter set forth) are adopted by me. The appropriate related adjustment in expenses is hereafter shown.

As to costs of operation of the assumed added plane miles under subdivisions (a), (b) and (c), I find that if the methods of computation thereof, used by Simat, were applied to the increased traffic and revenue estimates by Coverdale, and which I have adopted as reasonable, they would produce at least as low expense estimates as those of Coverdale, and accordingly I adopt the Coverdale estimates of expenses applicable to subdivision (a), (TWA Ex. 449; Tr. 10,679-82) and the estimates of expenses under subdivisions (b) and (c) modified as above stated; provided, however, that a change in the applicable amount of net interest costs (hereafter discussed), is to be given effect.

After the record in the case was closed I requested counsel for the plaintiff to recompute the damage claim in respect of failure to receive and delay in delivery of the Convair 880s on the basis of using the delivery dates set forth in Amendment No. 4 to the Convair-Toolco con-

tract instead of the original contract delivery dates. The recomputation, with copy to counsel for defendants, has now been submitted to me. Since I have now decided (*supra*, p. 141) that the Amendment No. 4 dates are properly used for computation of damages, I set forth below the amount as computed by the plaintiff to be deducted from the plaintiff's claim in respect of the Convair 880s; and I have arranged to have the recomputation (Letter of Dudley B. Tenney to the Special Master dated August 30, 1968, with enclosures) filed with the Exhibits:

SUMMARY OF EFFECT OF APPLICATION OF REVISED ASSUMPTION THAT DELIVERY DATES FOR THIRTY CV880 AIRCRAFT WERE THOSE SET FORTH IN AMENDMENT NO. 4 IN LIEU OF THOSE SET FORTH IN ORIGINAL TOOLCO-CONVAIR CONTRACT

FOR THE PERIOD SEPTEMBER 30, 1955—DECEMBER 31, 1963

(Amounts in millions)

Increase in income and special items before provisions for income taxes (Price Waterhouse & Co. report, Vol. I p. 5, as revised by $.2 million in TWA Exs. 42 and 43 and DX262)	$71.9
Adjustments—Add (deduct) (Note 1):— Decrease in gain from operations before provisions for depreciation, obsolescence and amortization, per Coverdale & Colpitts	($3.6)
Reduction in provisions for depreciation of airframes, engines and rotable parts due to later timing of the fleet, $1.9 million in 1960 and ($.1) million in 1962 (Note 2)	1.8

Decrease in proceeds relating to earlier sale of 103 piston aircraft:		
Per R. Dixon Speas Associates	(.8)	
Less—Reduction in "bad debts" (Note 3)	.2	
Decrease in reserve for overhaul of jet aircraft, eliminated at December 31, 1963, resulting from reduced maintenance expense (Note 4)	(.7)	
Total adjustments		(3.1)
Increase in income and special items before provisions for income taxes, as adjusted to reflect delivery of thirty CV880 aircraft on dates set forth in Amendment No. 4 of Toolco-Convair contract		$68.8

Since, however, I have elsewhere rejected the plaintiff's claim in respect of the earlier sale of piston aircraft, I eliminate from the foregoing recomputation the items

Decrease in proceeds, etc.	$(.8) million
Less reduction in "bad debts"	.2 "

Accordingly the recomputation, as so changed, results in a reduction of the plaintiff's claim in respect of the Convair 880s of $2.5 million.

(C) *B-331B's*

An additional point is raised by the defendants in connection with the plaintiff's claim under this Section I. It asserts that the cost of operation of the five fan-jet B-331Bs

which were leased by the plaintiff from Boeing was less than the cost of operations of the additional B-331s it would have had in the assumed additional fleet underlying the plaintiff's damage claim. The defendants claim that the savings in operating the B-331Bs in the post-1963 period until the end of the leases in 1971 and 1972 should accordingly be deducted from any damages awarded under this Section I. They estimate such lease period for the five planes at 40.33 aircraft years. On the basis of a historically determined production rate of 4,000 block hours per aircraft, and applying a "conservative" cost advantage of $100 per block hour, the savings would aggregate $16.1 million (DX 271A, pp. VIII—10-12; Tr. 8818-19). The defendants state that it is the rule in both tort and contract cases that a plaintiff may recover only for the net effect of defendants' acts after deducting the value of any benefit caused by such acts.

The plaintiff points out that insofar as savings from the operation of the B-331Bs (as against the assumed additional B-331s) for the 1959-1963 period is concerned these estimated savings were deducted fully in the Coverdale computations. And the plaintiff makes no claim for damages based upon operations of its jet fleet in the post-1963 period.

The plaintiff further points out that the defendants had nothing to do with the decision to lease the B-331Bs; it was the Voting Trustees, after the defendants' control of the operations of TWA had ceased, who ordered them; and accordingly the rule of law cited by the defendants has no application to the facts in this case.

The plaintiff finally points out that if one were to attempt to calculate the relative benefit of operating the B-331Bs and the assumed jet fleet in the post-1963 period, it would

be necessary to take into consideration many additional factors ignored in the defendants' calculation. Four such items are listed in the plaintiff's reply brief at p. 130, as follows:

"(i) During the period within which the six owned B-331s would have been fully depreciated, the rental expense for the five leased B-331Bs would have exceeded total depreciation upon the six B-331s by some $9.5 million [TWA Ex. 353; Simat Tr. 8805-06].

"(ii) If TWA wished to continue operating the five B-331Bs at the end of the lease period, when reconstructed TWA would have owned six fully depreciated B-331s, historical TWA would either have to exercise its option to buy the planes at a substantial figure or have to enter into a new lease [Tr. 8813-15].

"(iii) Six B-331s would have earned more revenue than five B-331Bs, but Simat made no allowance at all for such additional revenue although he thought it 'appropriate to consider the earnings power of the additional B-331, that is, the sixth aircraft' [Simat Tr. 8806, 8810].*

"(iv) No account was taken of the resale value of the six owned B-331Bs [Simat Tr. 8814-16] despite the defendants' statement that airplanes 'cannot be thrown away' [Def. Br., p. 275].*

---

* "Defendants also take no account of either the ultimate resale value or the post-1963 earning power of the four additional CV-880s which reconstructed TWA would have had in its jet fleet if it had received all 30 CV-880s."

I am of the opinion that the defendants have failed to state any claim for a benefit due to their actions; that their computation of the value of the alleged benefit is fatally deficient; and accordingly no deduction should be made from damages awarded to the plaintiff by reason of the

alleged savings in operations of the B-331Bs in the post-1963 period.

(D) *Mitigation Claim*

Defendants also claim that the plaintiff should have mitigated its damages by "picking up the four unassigned 880s in 1961"; by accepting the opportunity, which it allegedly rejected, to acquire seven 880Ms available for delivery from Convair from June through December 1961 in Capital Airlines' configuration (or from October 1961 through April 1962 in plaintiff's configuration), and thirteen fan-jet 990s available from Convair for delivery from December 1961 through April 1962 in American Airlines' configuration. The citations in support of the mitigation claim (DX 56; DX 62 pp. V-4, V-9-10; DX 72; DX 74; Tr. 2332-33, 2351-52, 2364-67; DX 78, p. 4; Tr. 2405-08) are generally too indefinite or too incomplete to form a basis for a specific mitigation claim. Evidence from the defendants to complete the picture as to the underlying facts was not available to the plaintiff due to the defendants' default. Indeed, defendants do not even compute the dollar value of their mitigation claim.

The plaintiff correctly points out that Toolco owned the four unassigned 880s and had the rights to the seven 880Ms and the thirteen fan-jet 990s (Rummel Tr. 1534-37) so that Toolco's agreement would have been required to consummate any of the transactions. The independent Trustees of TWA were engaged in a series of bitter controversies, including threats of litigation, with Toolco in 1961-1962 (complaint, paragraphs 35, 37, 38, 39, 40-46), so that no transactions of the kind which the defendants envisage in their mitigation claim would have been feasible as a business matter, especially since the policy of the Voting Trus-

tees favored buying Boeing planes rather than additional Convairs. The defendants' mitigation claim is accordingly rejected.

(E) Adjustment to Reconstructed Interest Cost

The interest cost of the funds that would have been applied to the timely acquisition of a sufficient number of aircraft must next be determined.

TWA introduced the testimony of John C. Biegler, a partner of Price Waterhouse, who used the Drexel Harriman Ripley financial plan (TWA Ex. 5, Part II) and a reconstructed flight equipment fund take down schedule (TWA Ex. 7(b) 2, VI, B, Schedule B-3) to compute the total interest cost that would have been incurred by Reconstructed TWA during the period October 1, 1955-December 31, 1963 (TWA Ex. 7(b) 2, VI, B, Schedule B-1). This figure was compared with the actual interest cost incurred by Historical TWA (TWA Ex. 7(b) 2, VI, C, Schedule C). After appropriate adjustments Price Waterhouse found that there would be an increase in gross interest cost for Reconstructed TWA over Historical TWA in the amount of $9.9 million. In addition to this increased cost, Reconstructed TWA would also have incurred added expense to the extent of $1.0 million, a premium for its early payment of the $35 million 3¾ percent Equipment Mortgage Sinking Fund Bonds in July, 1955 (TWA Ex. 7(b) 2, VI, A, Schedule A). These costs appear in the plaintiff's "Condensed Summary of Effect of Application of Assumptions" as deductions from the alleged overall reconstructed gain in operating profits (TWA Ex. 50).

The defendants have not attempted to fix the appropriate interest cost. Since I have not accepted the Drexel Harriman Ripley financial plan (see pages 257-264) on which the Price Waterhouse computation relied, I have independently calculated the appropriate cost of interest. The testimony of Biegler indicated that a separate calculation of reconstructed interest expense would be feasible, granting certain additional assumptions. (Tr. 6361). I believe the record is sufficiently complete to allow these assumptions to be taken. However, in my opinion it is not necessary or feasible for me to construct a complex financial plan on the order of that presented by Drexel Harriman Ripley. Also, I do not find it necessary or feasible to extend my determinations by making detailed calculations reflecting complex and minor accounting adjustments.

In reconstructing the interest expense associated with the additional and earlier purchase of jet flight equipment I have assumed that funds were available at the time of the delivery of each aircraft. Except with respect to an item representing accrued interest on deposits for the purchase of twenty CV 880's, which is a matter of historical record and which is discussed hereafter at page 155, I have not made provision for funds for advance deposits and progress payments on aircraft purchases. For me to do so on a reconstructed basis would involve elaborate calculations and several speculative assumptions not required in recognizing the historical item of accrued interest on deposits for the twenty CV 880 aircraft. For similar reasons I have not considered any commitment fees and short-term investment returns that might be experienced with certain types of financing. The proceeds from the sale of piston aircraft were determined to have no material impact on the calculation of interest. In my opinion, these procedures and assumptions are fair and reasonable, and they avoid the

substantial amount of speculation or guesswork that would be involved with a more complex calculation.

In arriving at an appropriate deduction for cost of capital, I find that two components must be determined: (1) the amount of funds needed and the timing of the takedowns; and (2) the rate at which the funds are obtained.

(1) ***The amount of funds needed and the timing of the takedowns.***

(a) *six additional B-331 aircraft*—The six B-331 aircraft that were diverted became historically available to Pan American on the following delivery dates.*

Aircraft No.	*Date Received*
N701	November 5, 1959
N702	December 15, 1959
N703	December 30, 1959
N704	March 23, 1960
N705	April 29, 1960
N706	June 8, 1960

To avoid undue complexity I assume that one-third of the funds required for the purchase of these aircraft and related spare parts and equipment would be needed by TWA as of October 1, 1959, one-third as of January 1, 1960 and the balance as of April 1, 1960. As stated in the Price Waterhouse Report, the full purchase price of these aircraft and related spare parts and equipment would amount to a capital expenditure of $43.1 million (TWA Ex. 7(b) 2, VI, p. 35). I accept this figure.** Accordingly, I assume

* Source: Coverdale Report, TWA Ex. 4-c(1), p. 10. The impact of delivery to TWA at dates earlier than the above dates which Coverdale in its report described as "assumed receipt dates" is considered hereafter at pp. 150-155.

** Defendants' expert, Simat, relied on the Price Waterhouse Report for basic data in computing the cost of capital to effect purchase of the leased aircraft (Simat Report, DX 277A, IX-B-3).

that $14.4 million would be required as of the beginning of the fourth quarter of 1959, $14.4 million as of the beginning of 1960 and $14.3 million as of the beginning of the second quarter of 1960.

(b) *ten additional CV880 aircraft*—It was my determination above at page 141 that TWA would have acquired ten additional CV880 aircraft during 1960 and that delivery would have occurred from May through November of that year. As stated by Price Waterhouse, the full purchase price for these aircraft and related spare parts and equipment would have amounted to $48.1 million (TWA Ex. 7(b) 2, VI, p. 43). I accept this determination. Accordingly, I assume that one-third of this total amount, $16.1 million, would be needed as of April 1, 1960, one-third of $16.0 million as of July 1, 1960, and the balance of $16.0 million at October 1, 1960.

(c) *earlier delivery of jet aircraft*—I determined above at pages 52, 87 and 141 of this Report that TWA would have acquired its jet fleet prior to the historical delivery dates. With respect to the Boeing fleet, eleven B-131 aircraft and seventeen B-331 aircraft would have been acquired an average of 1.63 months earlier, and nineteen CV880 aircraft an average of 7.74 months earlier as shown in the calculations below.

Average Delay in Purchase of Fifteen B-131 and Eighteen B-331 Aircraft

$$= \frac{7.74}{12} = .6450 \text{ year}$$

[1] See determination page 141 this report.

For the purpose of calculating the effect on cost of capital with respect to the delayed Boeing aircraft I find that a determination that the aircraft would have been delivered earlier requires a matching determination that funds would be needed earlier to effect purchase. As above, in determining the capital amount needed I rely on those figures provided in the Price Waterhouse Report.

As stated by Price Waterhouse the initial cost of fifteen B-131 aircraft would have been $71.6 million and the cost of related spare engines $5.9 million or a total of $77.5 million (TWA Ex. 7(b) 2, VI, pp. 30 and 32). The schedule of reconstructed deliveries above indicates that only eleven of the B-131 aircraft were delayed. On a prorated basis the cost of these eleven aircraft would amount to $56.8 million.* Price Waterhouse also indicated that the total reconstructed cost for eighteen B-331 aircraft and related spare parts and equipment would have been $129.3 million (TWA Ex. 7(b) 2, VI, p. 35). Seventeen of the eighteen B-331 aircraft were delayed and the prorated cost of these aircraft is $122.1 million.** On a fleet basis, the total cost of delayed Boeing aircraft and related spare parts and equipment thus amounts to $178.9 million. Accordingly, I determine that TWA would have to have had this amount available an average of 1.63 months earlier in order to take delivery at the reconstructed earlier dates.

---

* 15 aircraft = $77.5 million = $5.16 million per aircraft
× 11 delayed aircraft
15 = $56.76 million for 11 aircraft

** 18 aircraft = $129.3 million = $7.18 million per aircraft
× 17 delayed aircraft
18 = $122.06 million for 17 aircraft

Similarly, on a reconstructed basis the funds necessary to effect the purchase of the delayed CV880 aircraft would have had to be available to pay for the aircraft on the earlier reconstructed delivery dates. I have determined, as set forth above that these aircraft would have been delivered an average of 7.74 months earlier than the historical delivery dates, and accordingly, actual funds would have had to be available more than seven months earlier.

As stated by Price Waterhouse, the initial cost of the nineteen CV 880 aircraft that would have been acquired earlier would be the historical capital outlay of $83.0 million, plus a reconstructed amount of $.5 million for the earlier purchase of spare parts (TWA Ex. 7(b) 2, VI, pp. 43 and 46). This total figure of $83.5 million includes a $4.1 million historical payment for interest on an advance deposit. Since I have determined that the funds to pay for the earlier purchase of these aircraft would have been available 7.74 months earlier it is reasonable to assume that the accrued interest on the advance deposit would be reduced. Therefore I determine that instead of the $4.1 million interest payment, TWA would have paid $3.5 million, a difference of $.6 million.* Such an adjustment reduces the total sum needed to purchase the nineteen delayed CV 880 aircraft from $83.5 million to $82.9 million.

(2) ***The rate at which the funds are obtained.***

In Section II pp. 183-84 I have determined that the *Hanover Shoe* case is controlling on the question of the

* 1. Interest Payment of $4.1 million at 5.5% (TWA Ex. 7(b)2, VI, p. 44) indicates time period of 51 months.

2. Adjusted period:
51 − 7.74 = 43.26 months

3. Adjusted interest payment on advance deposit:
$4.1 million × 43.26 = $3.5 million

proper cost of capital to employ in measuring damages in antitrust cases. According to *Hanover*, the proper rate to employ is the company's external borrowing rate.

In examining the record I find that there is enough evidence of borrowing rates for the period in question to fix an approximate constructive rate for TWA which is both fair and reasonable under the facts and circumstances developed at the hearing. The record discloses that TWA historically negotiated major debt financings on several occasions during the general period in question, 1955-1963. The significant independent borrowings involved the following debt.*

1957	Chattel Mortgage Notes, 5¼% due December 1, 1960	$ 20.7 million
1957	Bank Loan, 5¼%	$ 12.0 million
1960	Equipment Mortgage Notes, 6½%, due December 31, 1972	$114.8 million
1960	Equipment Mortgage Serial Notes, 6%	$ 85.4 million
1961	Equipment Mortgage Notes, Series B, 6% due December 31, 1977	$ 57.0 million
1961	Equipment Mortgage Serial Notes, Series B, 5½%	$ 21.9 million
1961	Subordinated Income Debentures, 6½% due June 1, 1978	$111.9 million
1963	Convertible Subordinated Debentures, 5¾% due October 1, 1983	$ 38.5 million

Interest rates for these actual borrowings range from 5¼-6½ percent. Reference to long-term borrowings by

* Source: Price Waterhouse Report, TWA Ex. 7(b)2, VI, Schedule C4

other airlines at or about this time (1957-1960) indicates that rates on debt financings generally ranged from 5-6½ percent.* Those straight financings (no convertible feature) of more than $25 million with indicated borrowing rates are listed below:

1958	*Delta* —Debentures due Oct. 1, 1974, 6%	$25.0 million
	Northwest —Credit 4¼-4⅝% due 1965	$32.5 million
	Northwest —Notes due October 1, 1978, 6%	$40.0 million
1959	*American* —Promissory Notes due Nov. 1, 1996, 5%	$30.0 million
1960	*Pan American* —Promissory Notes 1st installment due 1967, 6%	$50.0 million
	Capital —Secured Notes Series A due September 30, 1965, 5½%	$25.5 million
	American —Notes, 5¾%	$60.0 million

I also take note that one aspect of the Drexel Harriman Ripley financial reconstruction was a $90-100 million debt financing scheduled for May 1959 (TWA Ex. 5, Part II, p. 70). Drexel Harriman Ripley made the following appraisal as to the interest rate on this proposal:

*Source: Loeb, Rhoades Report DX270, Part II, Exhibit A.

"We believe that institutional investors, in the second quarter of 1959, would have charged TWA an interest rate of 6% on the used portion of the Series B Flight Equipment Notes, and a commitment fee of ½% per annum on the unused portion." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 70)

The Rate Applicable to the Reconstructed Purchase of the Boeing Fleet—On a reconstructed basis TWA would have purchased its entire Boeing fleet between November 30, 1958 and July 1, 1960.

The record discloses no large-scale financing by TWA at or about the time when arrangements for funds certainly would have been made to effect purchase during the above period, i.e., 1958-1959. Therefore I have looked to those points in the record that suggest a rate that might have been obtained at this time by an independent management seeking funds to purchase a substantial jet fleet. Considering the evidence on airline borrowings recited above on pages 155 through 157, I believe that it is fair and reasonable to fix TWA's borrowing rate for funds needed to purchase the Boeing aircraft on the reconstructed delivery dates at 6%.

The Rate Applicable to the Reconstructed Purchase of the Convair Fleet—However, I find a different interest rate should be used in respect of the thirty CV 880 aircraft. I have previously determined that the reconstructed and timely delivery of a fleet of thirty CV 880 aircraft would have occurred between May 15, 1960 and November 15, 1960. These deliveries would have occurred subsequent, in point of time, to the deliveries of the Boeing fleet. Of the total reconstructed Boeing fleet of thirty-three aircraft only two were delivered after delivery of the first Convair aircraft.

Unlike the case with the acquisition of the Boeing fleet, where there is no evidence in the record of financings directly related, in point of time, to the acquisition of the fleet, TWA did undertake large scale financing approximately seven months subsequent to the first delivery, on a reconstructed basis, of the Convair fleet. From the financial statements submitted in evidence it is reasonable to conclude that the historical purchase of twenty CV 880 aircraft was largely financed by the historical borrowings arranged in December, 1960, referred to above on page 156. Aside from the training aircraft which was delivered in May 1960 the first deliveries of the CV 880 fleet historically commenced immediately after the December 1960 financings.

Under the December, 1960 financing agreements provision was made to sell Equipment Mortgage Notes (of which $114.5 million were sold) at 6½%, and Equipment Mortgage Serial Notes (of which $85.4 million were sold) at 6%. The weighted average interest rate for these external borrowings is 6.3%.* There is no significant evidence that TWA could have borrowed at a lower or higher rate at or about the time of the reconstructed delivery dates. Accordingly, I determine that 6.3% should be the rate applicable in computing the additional interest cost that would be connected with the additional and earlier need of funds for the reconstructed acquisition of the CV 880 aircraft.

---

*Weighted Average interest rate (x)

$114.5 million	× 6.5%	=	7.443
$ 85.4 million	× 6.0%	=	5.124
199.9 x		=	12.567

x = .063

Reconstruction of Interest Cost

The basic components determined above, i.e., the amount needed, the timing of the take downs, and the rate, allow a computation of an interest cost that is an appropriate deduction from the overall increase in operating profits resulting from the reconstruction of TWA to include the additional and earlier use of jet aircraft. In computing interest charges, an adjustment should be made, however, to the gross capital investment required to give effect to the cash throw-off in the form of depreciation and amortization from the added capital investment. I note that such an adjustment was an integral part of the calculation introduced by Simat with respect to the constructive purchase of the leased aircraft (DX 271A, IX-B), and that plaintiff's counsel in their brief adopted this calculation (Plaintiff's Brief, p. 227). The depreciation and amortization figures associated with the reconstructed additional and earlier use of jet flight equipment have been calculated by Price Waterhouse. They were not materially challenged by the defendants and I accept them as stated. I have used them below in column 2 of Calculations A and B and also in Calculations C and D. Finally, it is assumed that the reconstructed borrowings necessary to finance the purchase of the additional jet equipment will not be paid off prior to December 31, 1963.

Proceeding on the foregoing assumptions and evidence, I have determined that Reconstructed TWA would have incurred additional interest cost over the period 1959-1963 in the amount of $8.3 million for adding six B331 aircraft, and $8.7 million for adding ten CV 880 aircraft, or a total of $17.0 million. The details of these determinations appear in Calculations A and B below.

Adding Six B-331 Aircraft
($ millions)

	(1) Adjusted Capital Investment Beginning of Period	(2) Less Depreciation and Amortization for the Period[2]	(3) Adjusted Capital Investment End of Period	(4) Average Investment for the Period (1) + (3) ÷ 2	(5) Interest at 6 per cent	(6) Interest Cost for the Period (4) × (5)

1963	35.0	4.4	30.6	32.8	"	2.066
				Total increase in interest cost for period 1960-1963		$8.663

* Proration of annual depreciation of $12.0 million.

[1] See (1)(b) above on page 150.

[3] Source: TWA Ex. 7(d) as amended by letter of Price Waterhouse to Cahill, Gordon of August 30, 1963, Note 2.

[3] One-quarter of annual rate of 7.2 per cent.

Since historically TWA had the benefits of the earnings generated by the twenty-eight delayed Boeing aircraft and the nineteen delayed CV 880 aircraft after their historical acquisition, in determining damages for delay in receipt of these aircraft, I am concerned only with the loss of profits in the period between constructive deliveries and actual deliveries. I have determined, as stated above, that the average delay in acquisition of the Boeing aircraft was 1.63 months and that the average delay of the CV 880 aircraft was 7.74 months. I find that these are fair and reasonable periods to use in determining the additional interest cost to TWA which would be incurred in financing the earlier acquisitions. Accordingly, I determine that the additional interest cost related to the earlier ownership of the delayed Boeing aircraft would be $1.4 million, as shown in Calculation C below. The additional interest cost related to the earlier purchase of the delayed CV 880 aircraft amounts to $3.2 million as shown in Calculation D below.

CALCULATION C

Interest Cost 1958-1960

Earlier Purchase of Twenty-Eight Boeing Aircraft ($ millions)

Cost of 11 B-131 Aircraft delayed[1]	56.8	
Cost of 17 B-331 Aircraft delayed[1]	122.1	
a. Total cost of earlier Boeing Aircraft		178.
Less increase in depreciation as a result of the earlier purchase[2]		3.
b. Net value of earlier investment		175.
c. Average earlier investment (a + b ÷ 2)		177.
× annual interest rate[3]		
Increased interest cost for one year		10.6
× average delay		.13
		$1.43

[3] See page 159 above.

The total increase in interest cost caused by the additional and earlier purchase of jet flight equipment aggregates $21.6 million as shown in Calculation E below.

CALCULATION E

Summary of Adjustments to Interest Cost
1958-1963

	($ millio
I. *Additional Purchase*	
Six B-331 Aircraft	$ 8.
Ten CV-880 Aircraft	8.
	$16.
II. *Earlier Purchase*	
Eleven B-131 Aircraft and Seventeen B-331 Aircraft	$ 1.
Nineteen CV-880 Aircraft	3.
	4.
Total	$21.

COPY BOUND TO CLOSE IN CENTER

As shown by the above table the proper amount to be deducted from the damages under Section I in respect of interest cost is $21.6 million. This represents an increase of $10.7 million over the deduction made by Price Waterhouse (TWA Ex. 50).

(F) Damages under Section I

For the reasons above stated, the amount of the damages under Section I is as follows:

A. International Division		$22,400,000.
B. Domestic Division	$29,300,000.	
Less adjustment as to Convair 880s:	($ 2,500,000.)	$26,800,000.
Total Net Revenues		$49,200,000.
Less adjustment relating to interest rate:		($21,600,000.)
Damages under Section I		$27,600,000.

An accounting adjustment related to the above damages is made in the final award in Section VIII.

II.

Losses due to being required to lease jets.

The following allegations in the complaint underlie the claim considered in this Section II:

"9. Beginning in or about the year 1939 and continuing up to and including the date of the filing of this complaint, the defendants, Atlas and other persons acting for each of them have been and are now engaged in:

• • •

"(f) Sales and leases of jet-powered aircraft on the condition, agreement and understanding that the purchaser or lessee shall not buy or lease the goods of a competitor or competitors of the vendor or lessor, in violation of Section 3 of the Clayton Act; and

• • •

"10. Each act of the defendants and Atlas hereinafter alleged was done in furtherance of the offenses charged in the preceding paragraph and was a part thereof and was done with the primary purpose of restraining and monopolizing the trade and commerce described above. It was the intent of the defendants and Atlas, *inter alia*:

• • •

"(h) That the defendants and Atlas would obtain substantial profits for themselves, at the expense of TWA and other air carriers, as the result of restrictions upon competition in the trade and commerce hereinbefore alleged.

• • •

"20. During the period 1959 to 1960, defendants arranged for the lease to TWA by Toolco of certain jet-powered aircraft on a day-to-day basis. Such aircraft were the first and only jet-powered aircraft made available to TWA by the defendants during the years 1955 to 1960 and the number of aircraft so leased by Toolco to TWA was inadequate for the needs of TWA. Such leases were given on a continuing condition, agreement and understanding that TWA would not purchase or lease aircraft from any other potential supplier thereof. The effect of such continuing condition, agreement and understanding was to foreclose, to all potential suppliers of jet-powered aircraft to TWA other than defendants, the opportunity for selling or leasing jet-powered aircraft to TWA."

The specific allegations set forth in Paragraph 20 above concern a fleet of fifteen B-121 jet aircraft and four B-331 jet aircraft that were historically leased by TWA from Toolco according to a schedule of delivery dates commencing in January, 1959 and ending in December, 1959. These nineteen leased aircraft are among the fleet of sixty-three jets considered in Section I. Except for two B-131 aircraft which were purchased in May, 1960, they were historically purchased by TWA on December 30, 1960.

The plaintiff and its experts contend that the defendants forced TWA to lease these jet aircraft from Toolco instead of permitting it to own them, with the result that TWA had to pay far more to have the use of these aircraft than it would have paid if it had originally bought the aircraft itself. TWA further contends that

"Toolco, on the other hand, not only profited through the receipt of rental payments but also, by taking depreciation on an accelerated basis, created a tax gain for which it claimed capital gains treatment upon ultimate sale." (Plaintiff's Brief, p. 220.)

Proof of Damages

TWA through its financial expert, Morehouse of Drexel Harriman Ripley, included among the "Fundamental Principles of Airline Finance" that an airline should own its flight equipment rather than lease it from other parties. Two minor exceptions to this general principle, the "seasonal interchange" type of lease and the "through run interchange" type of lease were stated. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 4)

The cross-examination of Morehouse developed the following points:

¶ The equipment represented by the two exceptions, i.e., the "seasonal interchange" and the "through run interchange" type of lease, is a comparatively small part of the total fleet of any airline. (Tr. 3991-3992).

¶ In the opinion of Drexel Harriman Ripley an airline is not soundly financed if its major income producing facilities, as contrasted with what might be described as servicing equipment such as hangars and airport facilities, are not owned. (Tr. 3995).

¶ The principal distinction between the popularity of railroad car leasing and the unpopularity of airplane leasing is the much more rapid development of the state of the art in the aircraft field, but it might be appropriate for an airline to lease rather than buy if it thought that the particular aircraft which it needed presently might be outdated quite shortly. (Tr. 3996).

¶ There has been interest in the use of equipment trust financing for airlines. Equipment trust financing is not particularly germane to the leasing problem, but it is somewhat "in the same ball park." (Tr. 4000).

¶ There are under certain conditions tax advantages such as the investment credit which make it a good business decision to enter into leasing arrangements. The investment credit was not a factor, however, during 1955-1960. (Tr. 3997, 4020-1).

¶ After the investment credit became effective United Air Lines leased a sizeable number of airplanes through a third party group of commercial banks to whom the credit was more valuable than if United had owned or leased directly. (Tr. 4029).

¶ Among the factors to consider in a comparison of the cost of ownership with the cost of leasing would be an estimate of the cost of the capital involved in the purchase of an airplane, and the depreciation on the airplane, when owned, compared with the gross rentals involved in the lease alternative. (Tr. 4013-4014).

¶ Drexel Harriman Ripley believe that it is in the best interests of an airline to retain the greatest degree of control of its income-producing property. Ownership gives that greatest degree of control. A very long lease with reasonably flexible provisions probably involves the giving up of less of the control factor than the opposite extreme, a day-to-day lease which has no assurance of any reinstatement of the lease. (Tr. 4020, 4019).

Operating Profit Lost—TWA has claimed that had it owned the aircraft leased from Toolco in 1959 and 1960 from the date Toolco received them, it would not have incurred actual rental expense aggregating $7.8 million in 1959 and $16.4 million in 1960. These rental charges were historically incurred by TWA and were taken from Form 41 reports filed with the Civil Aeronautics Board (CAB) (TWA Ex. 4(c)(1), p. 9). Assuming ownership, TWA's

accounting expert, Biegler of Price Waterhouse, estimated that depreciation on these nineteen aircraft during the actual lease period would be $4.4 million in 1959 and $8.5 million in 1960. (TWA Ex. 7(d)). By subtracting these depreciation estimates from actual rentals Wemple of Coverdale computed a "Total Improvement in Gain From Operations" amounting to $3.4 million in 1959 and $7.9 million in 1960. In addition, Price Waterhouse estimated a further improvement in gain from operations in the amount of $1.4 million, representing a reduction in depreciation and amortization expense for TWA on a reconstructed basis during 1961-1963 if the aircraft were owned rather than leased ($1.0 million in 1961, $0.1 million in 1962 and $0.3 million in 1963 (TWA Ex. 7(d)). The total improvement in operating profits over the period 1959-1963 before provision for the cost of funds necessary to achieve earlier ownership would then aggregate $12.7 million. (Plaintiff's Brief, pp. 221-222).

The cross-examination of Wemple of Coverdale presented the following points:

¶ The leases from Toolco to TWA were approved by the CAB. (Tr. 5040).

¶ Coverdale did not inquire into the question whether TWA should have owned rather than leased aircraft in 1959 and 1960. (Tr. 5047).

¶ No inquiry was made as to whether TWA was in the financial condition to buy the airplanes in 1959 and 1960. (Tr. 5048).

¶ In measuring the difference between owning and leasing insofar as it affects operating expenses cost of capital would not be considered but it would normally be considered in a feasibility analysis of the entire project. (Tr. 5053).

The Cost of Capital—The cost of funds that would be necessary to pay for the ownership of the aircraft which historically were leased is reflected in the Price Waterhouse Report (TWA Ex. 7(b) 2, VI, B) in the form of interest cost. Plaintiff's Brief states the following position:

"This cost of the borrowed money which reconstructed TWA needed to buy the Boeing jets instead of leasing them appears in the reconstructed financial statements prepared by Price Waterhouse & Co., as part of a total provision for all of TWA's financial needs, including, for example, CV-880s as well as Boeings. It is possible, if desired, to allocate a portion of TWA's cost of borrowed money to the acquisition of these jets so as to derive a separate net damage figure for the effects of the wrongful acts alleged in paragraph 20 of the complaint. As indicated in TWA Ex. 314, as of December 31, 1960, reconstructed TWA's weighted average interest rate on outstanding debt was 4.75%, and that is plainly the cost of money properly applicable to buying the leased jets. Applying this interest rate to Simat's average net book value figures for the leased jets for 1959 and 1960 [DX 271A, pp. IX-B-3-4], TWA's 1959 cost of money to buy the leased jets would have been $2.4 million in 1959 ($51.3 million x 4.75%) and $3.4 million in 1960 ($72.1 million x 4.75%). Reconstructed TWA's cost of capital to own the leased jets during 1959 and 1960 would thus have been $5.8 million,* not the $12.6 million calculated by Simat, and on this basis, TWA's net losses from not being allowed to buy the leased jets, stated separately, would aggregate $6.9 million (before trebling)." (Plaintiff's Brief, pp. 226-227)

*"It must be emphasized that this interest expense is already reflected in the Price Waterhouse & Co. Report as part of the interest which would have been paid by reconstructed TWA. It is not an additional deduction from TWA's claim of $104.5 million, before trebling."

TWA's basic contention is that the only cost of capital which can be considered in antitrust cases is interest on borrowed money. They cite *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 377 F. 2d 776 (3rd Cir. 1967), *rev'd on other grounds*, 88 S. Ct. 2224 (1968), as authority for this position.

Defendants' Answer

The Defendants' Brief asserts that TWA has not presented any evidence in support of its leasing claim other than the computation of Coverdale. Defendants further state that the plaintiff:

> "... relies solely on paragraph 20 of the complaint, the allegations of which purport to set forth a violation of section 3 of the Clayton Act. (Pl. Memo., p. 220) Apart from the legal and factual defects of the section 3 charge, nothing in paragraph 20 provides a foundation for the claim that plaintiff was injured by being required to lease aircraft rather than own them. (See pp. 17-18, 103-04 *supra*) There is no claim and no evidence that the rentals were excessive.* Indeed, all of the leases received CAB approval. (CAB Orders E-13542, E-13873, E-14169, E-14504, E-14877)." (Defendants' Brief, pp. 292-293)

---

* "The rentals were no higher in relation to the value of the aircraft than those paid by plaintiff's post-1960 management to Boeing for the four 720Bs, also a short-term lease which included installed engines. The rental rate for the 720Bs of $80,000 a month per plane is equivalent to a daily rate of $2,630, compared with the daily rates of $2,500 for the B-131s and $2,940 for the B-331s. (TWA C & C-4(2) for qtrs. ended March 31, 1960 and December 31, 1961) In each case the daily rate amounts to 0.05% of the value placed by plaintiff on the leased aircraft ($5.1 million each for the 720Bs, $4.6 million each for the B-131s and $5.8 million each for the B-331s)." (*Ibid.*)

In an effort to support the propriety of the lease arrangements, the defendants introduced the report of Simat.

Simat testified that the leasing of flight equipment is a common practice among U. S. airlines and that during the period 1955-1963 eleven different trunklines and Pan American leased flight equipment for their scheduled operations at rentals in excess of $100,000 per year in at least one year, and in some cases in each year, of the period. Simat stressed that the leasing of equipment can, in many instances, reduce the overall costs of the airlines, including the cost of capital, by substituting the credit of the lessor for the credit of the lessee. (Simat Report, DX 271A, Vol. 1, IX and Exhibit IX-A).

Woodfin of Loeb, Rhoades, defendants' financial expert, disputed Drexel Harriman Ripley's contention that an airline should own rather than lease its equipment.

> "The relevance to his report of Mr. Morehouse's second principle, that an airline should own rather than lease its equipment, escapes us. We know of no such general principle. A decision as between ownership and leasing must depend upon the facts of each particular situation and requires not only a comparison of the relative costs, including the cost of capital, but also a determination of a company's needs and objectives. We do not attempt to set forth here the reasons why an airline might choose to lease rather than own equipment, but note that leasing of aircraft took place during the 1955-1960 period and remains a fairly common practice in the airline industry today." (Loeb, Rhoades Report, DX 270, Part II, p. 13).

Loeb, Rhoades' representative, Woodfin, was cross-examined on the firm's opinion of this matter and the following points were developed:

¶ Generally, the airlines own their airplanes. Tax considerations dominate the decision to lease. Today, there are a great number of airlines that don't own their airplanes because of tax benefits derived from leasing. (Tr. 7100)

¶ There would not be much concern if a lessor who owned 75 per cent of an airline was leasing planes to the airline on a day-to-day basis because the lessor would be principally interested in keeping the planes in use producing income. (Tr. 7104A-7106)

¶ It would not be of material concern that every jet aircraft that TWA had in 1959 was leased, and that they were all subject to mortgages taken out by Toolco. (Tr. 7106)

¶ Woodfin would not dispute the following view of his partner, Kenrick Gillespie, which was expressed in an advisory letter dated June 8, 1959. (TWA Ex. 258, p. 2):

> "The cost of the overall jet program will run well in excess of $300 million, and permanent financing has not yet been crystallized. The commitment for purchase of the jets was made by the parent, Hughes Tool, and to date the planes are being leased to TWA on a month-to-month basis. This is an interim and unsatisfactory arrangement. We believe that a solution to this problem is imminent and will involve ownership of the aircraft by TWA and permanent financing of a satisfactory nature." (Tr. 7111-7112)

Cost of Capital Defense—The defendants persistently challenged TWA's proof of damages on the leasing claim on the basis that an improper provision was made for the cost of funds necessary to purchase the aircraft. In their

brief defendants argue that TWA's imputation of a debt expense of owning these aircraft as reflected in the overall cost of the financial program designed by Drexel Harriman Ripley is not a sufficient showing of cost.

Instead of using merely debt expense as a cost of capital for the leased aircraft the defendants assert that an overall cost of capital including the cost of equity as well as debt expense should be employed.* Evidence on this point was presented by defendants' witness, Simat, who adopted the cost of capital applicable to TWA which had been established at 10.25% by the CAB for rate-making purposes (Simat Report, DX 271A, IX-6).

Simat computed the average additional investment in the nineteen leased aircraft after depreciation and multiplied this figure by 10.25%. His findings were as follows:

> "• • • if they had been owned during 1959 instead of leased [the average additional investment], would have been $51.3 million greater than historical TWA. With a cost of capital at 10.25%, this would have cost $5.2 million for 1959. Similarly, the average additional investment in the B-131 and B-331 aircraft after depreciation, if they had been owned during 1960 instead of leased, would have been $72.1 million greater than historical TWA. Applying the 10.25% cost of capital, this would have cost $7.4 million for 1960 (Simat Report, DX 271A, IX-7).

Simat concluded that if TWA had owned the fifteen B-131s and the four B-331s instead of leasing them in 1959 and 1960, the costs of ownership (depreciation, amor-

*The concept of "cost of capital" as used by defendants was defined by the District Court in the *Hanover Shoe* case as:

"the rate of return expected by investors on capital funds they place at • • • [a concern's] disposal." (245 F. Supp. at 289-290)

tization and capital) would have exceeded the costs of leasing (rentals paid) by $1.3 million. (Simat Report, DX 271A, IX-8).

The defendants also contend that *Hanover Shoe, Inc. v. United Shoe Machinery Corp.* should not be interpreted to exclude the cost of equity capital from the computation of antitrust damages in all cases. Defendants' Brief cites several alleged grounds of distinction that exist in this case. Defendants argue that while the Circuit Court characterized the concept of cost of capital as a novel one which had not yet reached the point of general acceptance among economists, and the measurement of which was vague and not susceptible of general agreement, that there are no such questions about the concept in the regulated airline industry.

> "[cost of capital] has long been a topic for concern and investigation by the CAB, which must ensure that subsidies and passenger fare levels are adequate to cover all the capital costs of an airline, both debt and equity (DX 271A, pp. IX-5-6) . . . Nor is the measurement vague. After extensive hearings in the General Passenger Fare Investigation, Dkt. 8008 32 C.A.B. 291 (1960), the CAB found the cost of capital for the 'Big Four' domestic trunks, which includes TWA, to be 10.25%. (Id. at IX-6). The figure is susceptible of general agreement. Plaintiff's financial expert, Morehouse, testified that he would accept the cost of capital established by the CAB in determining the costs of ownership" (Tr. 4015-17) (Defendants' Brief, p. 277).

Defendants' counsel raise a further alleged distinction.

> "The most important distinction from *Hanover* is the finding in that case by the District Court that Han-

over at all times had sufficient capital to purchase the machinery in question and that, if additional capital had been needed, it would not have raised equity capital but borrowed the necessary funds at an interest rate of 2.5%. 245 F. Supp. 258, 289-92, 299. This finding, affirmed by the Circuit Court, was the sole ground upon which the Supreme Court decided this issue in favor of Hanover. (36 U.S.L. Week at 4649) It did not decide or intimate that the overall cost of capital should under no circumstances be deductible in antitrust cases. The circumstances here are the opposite of those in Hanover. Plaintiff charges that it did not have enough equity, and Morehouse's reconstructed financing provides for the issuance of common stock and convertible debentures. A composite cost of equity and debt is therefore apt for TWA." (Defendants' Brief, p. 278).

The cross-examination of Simat yielded the following pertinent points:

¶ The 10.25 per cent figure is a figure which the CAB concluded was a reasonable figure for the cost of capital of a major airline such as TWA. It includes not only the cost of debt securities but also the cost of equity securities which are no less a cost to the company than the cost of debt. (Tr. 8820).

¶ The Price Waterhouse Report does not cover the full cost of capital, i.e., it covers only that portion of the cost of capital which is represented by the cost of debt financing. (Tr. 8825).

¶ If a business achieves a return in the course of its operations sufficient to meet its cost of capital that portion of the return which relates to the return on equity would appear in the income statement as net earnings or profits. (Tr. 8827).

¶ The cost of equity is actually an estimate of the return on investment which investors must be able to expect from a company's future operations but it is no more an estimate than depreciation expense, and the expired costs of any other assets of the company which are only partially consumed during the period. (Tr. 8832).

Determination of Damages

The allegations of the complaint set forth above (pages 168 and 169) are taken to be "well pleaded." As a result of their default, defendants are found to have admitted each of the allegations included in the paragraphs of the complaint dealing with aircraft leases during the period 1959 through 1960.

The defendants have argued that the principal paragraph in the complaint relative to the leasing claim (par. 20) does not specify any injury as a result of Toolco leasing aircraft to TWA rather than TWA owning these same aircraft. Indeed, the defendants stress that there is no claim that the rents were excessive and that all of the leases received CAB approval. (Defendants' Brief p. 292-293) A reading of paragraph 20 without the other related allegations of the complaint would support this contention. It appears that the singular thrust of the paragraph goes toward the claim that the 1959-1960 leases did not provide a sufficient number of aircraft for TWA's needs and that the provisions of the lease agreements prohibited TWA from buying *or leasing* other jet aircraft from another potential supplier. This aspect of TWA's overall claim is the subject of Section I above, and has been decided in favor of TWA. I am not, however, persuaded that the inquiry under this Section II into the question of damages as a result of these leases should be arrested on the basis of the silence within paragraph 20. I find that

other general allegations in the complaint specify enough grounds of injury to base my findings in this portion of the claim on an evaluation of all the evidence presented rather than on an omission in a specific allegation. For instance, it would appear that the above quoted paragraph 10 subsection (h) would be sufficient to cover damages resulting from leasing rather than owning the aircraft.

TWA's financial expert, Morehouse of Drexel Harriman Ripley, believed that it was a "fundamental principle" for airlines to own rather than lease their flight equipment. The ability to control primary income producing property was cited as of paramount importance. The defendants' expert, Woodfin of Loeb, Rhoades, disputed the Drexel Harriman Ripley proposition as a general principle and cited that leasing of aircraft was a fairly common practice in the airline industry from 1955 onward. (Loeb, Rhoades Report DX 270, Part II, p. 13). However, in cross-examination on the question of the Toolco-TWA leases, Woodfin stated that he would not dispute the view of his partner, Gillespie, that the 1959-1960 leases were an interim and unsatisfactory arrangement. (Tr. 7111-7112)

The defendants' expert, Simat, gave additional testimony that the leasing of aircraft was common among airlines from 1955-1963; however, no evidence was presented that other airlines leased all their jets during 1959-1960 or that flight equipment rentals of any one airline approximated the $24.2 million spent by TWA during those years for jets.

There was indication that United Air Lines took some advantage of the investment credit by leasing aircraft through commercial banks but this tax advantage was unavailable in 1959 and 1960. (Tr. 3997, 4020-1). There was no evidence presented that aircraft manufacturers had sufficient financial resources and were willing to lease, or as to the existence of a third party financier who was

ready, willing and able to act as lessor to TWA during the period. I have also noticed that as of December 31, 1960 that of 2,036 aircraft operated by certificated route air carriers in system operations, 1,919 were owned and 117 were leased (Civil Aeronautics Board, Handbook of Airline Statistics, 1961 edition, PI-1).

In view of the paucity of evidence showing that the lease arrangements were superior to ownership, or that TWA was unwilling or incapable of purchasing jets during 1959-1960, I am persuaded, that absent Toolco's control, that TWA would have purchased the 15 B-131 and 4 B-331 aircraft directly from Boeing.

Given this determination, the question of damages from leasing rather than owning centers on the calculation of damages presented in evidence by TWA's expert, Wemple of Coverdale.

As indicated above the calculation was based on two factors: (1) the historical rental payments on the jet aircraft from TWA to Toolco; and (2) a computation of the appropriate depreciation and amortization applicable to the leased jets. Defendants have not disputed the accuracy of the rental payments used in the calculation and no material challenge was made to the determination of depreciation and amortization constructed by Price Waterhouse and testified to by their representative, Biegler (Tr. 6327-6343). I therefore accept the figure of $12.7 million as the extra costs incurred by TWA by reason of its being forced to lease rather than own the nineteen jet aircraft, but this amount is before the necessary deduction of the cost of funds required for their purchase.

The defendants have urged that the computation of the difference between leasing and owning flight equipment must include an additional deduction of the cost of ownership or "cost of capital." The foundation of this "cost of

capital defense" rests on including as part of the cost of capital an appropriate cost attributable to the cost of equity. Using as their overall cost of capital the rate of 10.25% which had been established by the CAB for rate-making purposes the defendants claim that it would be more expensive to own than lease.

TWA and its counsel have not objected to Simat's formula for computing financial differences between leasing and owning. In fact TWA's counsel adopts Simat's figures for "average additional investment" in computing their own leasing claim separately from their general operating claim. (Plaintiff's Brief, p. 227). However, TWA has vigorously disputed Simat's use of a cost of capital which includes a cost of equity rather than its own estimate of cost of capital which is solely limited to its reconstructed borrowing rate, i.e., 4.75%. TWA's counsel also argues that the recent case of *Hanover Shoe Inc.* v. *United Shoe Machinery Corp.*, 377 F. 2d 776 (3rd Cir. 1967) *rev'd on other grounds* 88 S. Ct. 2224 (1968) is dispositive on the question of excluding a cost of equity in the computation of damages in antitrust cases. Despite defendants, attempt to distinguish *Hanover* from the facts of this case I find the following language to be a clear statement favoring TWA's position:

> "United contends that Hanover's so-called cost of capital should have been treated as an element of the cost of acquiring the machinery. The court below disallowed this item, which was defined as 'the rate of return expected by investors on capital funds they place at * * * [a concern's] disposal,' after hearing the conflicting testimony of expert economists called by each party. It found that 'cost of capital' is an economic concept which allows a company to decide if a certain investment is sound by computing the rate of return which will be required on that investment to jus-

tify expending funds on it rather than in an alternative investment, and that it is measured in terms of percentage of earnings per share of common stock to price per share, and of percentage of net profits after taxes to stockholders' equity. It also found that the measurement of cost of capital was vague and not susceptible of general agreement in its application and that in any event it was not a proper element in the calculation of damages but was only a guide to investment.

"The novel concept which United sought to have approved has not yet reached the point of general acceptance even among economists. We agree with the court below that cost of capital is not sufficiently related to actual costs to be included in an antitrust damage calculation." (377 F. 2d at 791-92)

The U. S. Supreme Court has expressed agreement with this finding. 88 S. Ct. 2224, 2237 (1968).

Accordingly, I do not accept the defendants' figure for the cost of capital as computed by Simat since it is an inappropriate measure of the cost of ownership. I am persuaded that the correct external cost of capital is the appropriate borrowing rate for TWA during the period in question. However, since I have not accepted TWA's reconstructed financial plan which is considered in Section III hereof, the rate which TWA asserts (4.75 per cent) must also be rejected. In Section I pages 147 to 167 of this report I have discussed the problem of adjusting the overall interest cost that must be deducted from the total "loss" in operating profits that I have awarded as a fair measure of damages. There it was determined that an appropriate rate to apply to the purchase of Boeing aircraft would be 6 per cent. Adopting the figures of average additional investment for the nineteen jet aircraft during 1959 and 1960 upon which both parties agree, I have determined

that on a separate basis TWA's damages would amount to $5.3 million as set forth below:

Determination of Separate Net Damage Resulting From Leasing Rather Than Owning Jet Aircraft

Year	(1) Average Additional Investment in Jets (Net Book Value)	(2) Assumed Interest Rate on Borrowed Funds	(3) Cost of Capital to Own Jets (1) x (2)
1959	$51.3 million[1]	6%	$3.1 million
1960	$72.1 million[1]	6%	4.3 million
Total			7.4 million

	($ millions)	
Total Rentals Jet Aircraft 1959-1960	24.2	
Add		
Historical Increase in Depreciation and Amortization Costs in 1961-1963 Over Reconstructed Costs[2]	1.4	
		25.6
Less		
Depreciation and Amortization 1959-1960	(12.9)	
Cost of Capital—(3) above	(7.4)	
		(20.3)
Total Net Loss by Reason of Leasing Rather Than Owning		$5.3

III.

Losses connected with financing the jets.

The following allegations of the complaint underlie the claims considered in this Section III.

"7. The trade and commerce involved in this action concerns:

* * * * *

"(f) The financing in interstate commerce of the United States of the acquisition by sale, lease or other means of aircraft for use by TWA in air transportation in interstate and foreign commerce of the United States."

Paragraph 9 of the complaint alleges that defendants and others engaged in a combination and conspiracy to restrain interstate and foreign commerce in violation of Sections 1 and 2 of the Sherman Act and Sections 3 and 7 of the Clayton Act.

Paragraph 10 of the complaint alleges, in part, as follows:

"10. Each act of the defendants and Atlas hereinafter alleged was done in furtherance of the offenses charged in the preceding paragraph and was a part thereof and was done with the primary purpose of restraining and monopolizing the trade and commerce described above. It was the intent of the defendants and Atlas, inter alia:

* * * * *

"(g) That defendants would supply TWA with the aircraft essential to its business only on the condition that TWA would accept such financing arrangements relating to the aircraft as the defendants dictated, and in turn that defendants would allow

TWA to procure financing essential for the acquisition of the aircraft it needed only on the condition that TWA would accept such aircraft as the defendants dictated; and"

* * * * *

The allegations with respect to equity financing are set forth in paragraph 23 of the complaint. The allegations with respect to debt financing are set forth in paragraphs 24 through 28, inclusive, and paragraph 52(c) and (d) of the complaint and are more fully discussed hereafter.

The Proof of Damages

In proof of damages, TWA offered as direct expert testimony the report of Drexel Harriman Ripley, a firm of investment bankers with experience during the 1955-1960 period under consideration, in the financing of airlines and manufacturers of aircraft and jet equipment. Drexel Harriman Ripley "reconstructed" on the basis of certain assumptions given them by TWA's counsel, the TWA financial structure so as to provide what, in their opinion, would be adequate financing for a 63-plane jet fleet and in doing so made the central assumption that beginning in 1955, TWA's management was free to do what was best for TWA. Drexel Harriman Ripley assumed "neither that there was nor that there wasn't" a majority stockholder of TWA such as Toolco. (Tr. 3933)

In their report, Drexel Harriman Ripley stated:

"This report is written in response to the request of Cahill, Gordon, Reindel & Ohl that we give our opinion as to whether Trans World Airlines, Inc., if it had been under an independent and competent management not influenced by any consideration other than the prudent conduct of its operating and financial affairs, during the 1955-1960 period, could have fi-

nanced its projected capital requirements for those years, including specifically the purchase of 15 Boeing 707-131s, 18 Boeing 707-331s, 30 Convair 880s, and all the piston aircraft which were purchased by it and delivered during the foregoing period; and, if so, that we describe the methods by which, in our opinion, such capital requirements should have been financed.

"We have been advised, and assume for purposes of this report, that if Trans World Airlines had been adequately financed the 33 Boeing aircraft could and would have been ordered by an independent and competent management in the fall of 1955 for delivery in 1959 and 1960, and that the 30 Convair aircraft could and would have been ordered by such management in 1956 for delivery in 1960." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 1)

• • • • •

"We are assuming for the purposes of this report that we were engaged by Trans World Airlines as its investment bankers throughout the 1955-1960 period, and that we were thus in intimate and frequent contact with the management and had access to all current information and data having a bearing on finance." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 3)

• • • • •

"We have designed the foregoing financing program* on the basis of projected and reconstructed capital expenditures prepared by Price Waterhouse & Co.; on the basis of reconstructed financial statements prepared by Price Waterhouse & Co.; and on the basis of forecasts of funds generated prepared by Coverdale & Colpitts. And we have used various statements of figures furnished to us by Trans World Airlines pertaining to historical balance sheets, income

* Described below on page 190 of this report.

accounts, and certain other historical financial data." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 2)

Drexel Harriman Ripley also considered such other historical data as general financial information about the economy, the airline industry and the stock market.

The Drexel Harriman Ripley Report asserted that there are certain fundamental principles which should govern prudent management of a major airline in arranging its corporate financing, as follows:

"We have consistently maintained that the fundamental principles which should be followed in airline finance, throughout the 1955-1960 period under review, are as follows:

The airline should get, or endeavor to get, its equity or junior capital prior to or simultaneously with getting its senior borrowed capital.

The airline should own its own equipment rather than lease it from other parties.

* * * * *

Contractual commitments for capital expenditures should be prepared for reasonably in advance of the time they are to become due. By this we mean that the airline should plan and arrange its financing program so as to have sufficient liquid capital and/or credit standing to afford reasonable expectation of obtaining the funds required to meet its forward commitments." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 4-5)

In determining TWA's financial requirements and whether it had sufficient equity capital and credit standing to fulfill these financial requirements, Drexel Harriman Ripley accepted the assumptions given it by TWA's counsel, as described above, and proceeded to reconstruct the

financial condition and results of operations of TWA for the 1955-1960 period. In effecting the reconstruction, Drexel Harriman Ripley made adjustments in the historical figures principally to reflect the acquisition and financing of jet aircraft and their operation subsequent to 1958. Timely delivery of jet aircraft was assumed. Drexel Harriman Ripley relied upon a reconstruction of income (loss) and a projected capital expenditure program for 1955-1960 which had been prepared by Price Waterhouse and also gave consideration to projections of cash flow made by Coverdale. (See IV. "Premises and Assumptions," Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 5.)

Based on the foregoing considerations, Drexel Harriman Ripley summarized their opinion as follows:

> "In our opinion Trans World Airlines could have financed, and if we had been advising it during the 1955-1960 period we would have advised it to finance, the acquisition of the foregoing aircraft and its other capital expenditures by means of the following program, which will be more fully described hereinafter, in addition to the estimated internally generated funds." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 1)

The financing program recommended was composed of four separate elements, summarized in Plaintiff's Brief as follows:

> "(i) An underwritten common stock issue in May 1955 offered preemptively on a share-for-share basis at $17.50 per share to provide net proceeds of $55.5 million.
>
> "(ii) A private placement long-term loan commitment with institutional investors in October 1955 for

$150 million minimum—$170 million maximum at 4% interest.

"(iii) An underwritten non-preemptive offering in May 1959 of $60 million of 5% subordinated debentures, convertible into common stock.

"(iv) A private placement long-term loan commitment with institutional investors in May 1959 for $90 million minimum—$110 million maximum at 6% interest." (Plaintiff's Brief, pp. 60-61)

TWA claims that by reason of Toolco's preventing TWA management from adopting and following the above financing program, that TWA has been damaged to the extent of $97.8 million, of which $36.9 million ($12.3 million before trebling) is attributable to Toolco's interference with TWA's equity financing, and $60.9 million ($20.3 million before trebling) is attributable to defendants' refusal to permit TWA to arrange debt financing as TWA claims was done by other airlines when the prevailing cost of money was lower.

Plaintiff's Brief states in respect of its claim of $12.3 million in damages (before trebling) attributable to Toolco's interference with the equity financing:

"TWA is claiming $12.3 million in damages (before trebling) for the wrongful acts of defendants set forth in paragraph 23.

"This damage is measured by the difference between:

"(i) the net proceeds from a 1-for-1 common stock offering which TWA was forced to make in 1957, when the market price for TWA stock was at one of its lowest points historically and TWA's financial condition was very shaky, so as to enable Toolco to increase its equity interest in TWA, and

"(ii) the net proceeds of a 1-for-1 common stock financing which Drexel Harriman Ripley would have recommended be made by TWA in the spring of 1955 (assuming they were advising TWA in 1955), when the market for stock was far more favorable for a successful equity financing, when TWA's prospects even in the opinion of Toolco's expert witness were rosy, when TWA should have been preparing for the needs of the jet age, and when TWA had already for many years (as set forth in the complaint) been starved of equity." (Plaintiff's Brief, p. 69)

Plaintiff's Brief states in respect of a claim of $20.3 million in damages (before trebling), attributable to defendants' refusal to permit TWA to arrange debt financing:

"TWA is making a separate claim of $20.3 million (before trebling) for the wrongful acts of defendants set forth in the foregoing paragraphs.

"This separate claim is based upon the difference between:

"(i) The present value (*i.e.*, the present equivalent of the future burden) of future payments for debt service on TWA's long-term debt historically outstanding on December 31, 1963, and

"(ii) The present value (i.e., the present equivalent of the future burden) of future payments for debt service on long-term debt for reconstructed TWA as of December 31, 1963 with a debt structure of the kind and in the amounts recommended by Drexel Harriman Ripley." (Plaintiff's Brief, p. 120)

In answer to TWA's claim for damages, defendants introduced as direct testimony the Report of Loeb, Rhoades (DX 270) in which its conclusions are stated, as follows:

"The equity financing plan suggested by DHR in the Morehouse testimony as of the Spring of 1955 would have been a plan so contrary to the best interests of TWA and its stockholders that it would not have been accepted or implemented by prudent and competent officers and directors of that company.

"We would not have recommended to TWA or to its stockholders that TWA engage in Mr. Morehouse's proposed equity financing in the Spring of 1955. It could not have been accomplished without Toolco actively participating by subscribing to its proportionate share of the proposed equity offering, and it would not have been in the best interests of TWA's stockholders for Toolco to have done so at that time.

"Our opinion that TWA would have rejected Mr. Morehouse's 1955 equity financing plan is the same on the assumptions that TWA could not or would not have looked to Toolco for assistance in such a financing, or that TWA was widely held with no controlling stockholder.

"Lastly, TWA without the assistance of Toolco, could not have financed the so-called 'reconstructed' capital requirements of $544.8 million during the period October 1955 through December 1960, on any reasonable basis." (Loeb, Rhoades Report, DX 270, Part II, p. 3)

I have concluded that the investment banking firms of Drexel Harriman Ripley, and Loeb, Rhoades and the witnesses who participated in the preparation of their direct testimony and who submitted to cross-examination with respect thereto are well qualified as experts competent to give testimony as to TWA's financial affairs in the 1955-1960 period. The direct testimony of each discloses a thoroughness of preparation and a familiarity with the subject. The cross-examination of the witnesses was extensive

and searching and most helpful in considering the issue of damages.

The Equity Financing

This Report will consider first the evidence with respect to damages introduced in connection with equity financing. Paragraph 23 of the complaint alleges as follows:

> "23. Subsequent to the acquisition of stock by Toolco in TWA, defendants for reasons of self-interest continuously refused to allow equity financing by TWA except on condition that, as a result of any such financing, Toolco would be enabled to increase its equity position in TWA and instead caused TWA to obtain funds chiefly by means of debt financing. TWA was thus rendered unable to seek the financing it needed for the acquisition of aircraft except upon the approval of defendants. The purpose of the defendants in rendering TWA dependent upon them for such assistance in financing as defendants might choose to provide, and the effects thereof, were, among other things,
>
> "(a) to create and maintain control in the defendants of the business of financing the purchase of aircraft for use by TWA, and
>
> "(b) to strengthen defendants' control over the acquisition of aircraft by TWA."

The Drexel Harriman Ripley Report and Morehouse Testimony Relating to Equity Financing

Drexel Harriman Ripley states that TWA should have known early in 1955 that the jet age was imminent and that provisions must be made for funding substantial capi-

tal expenditures (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 6 and 10).

The circumstances of the airline industry in early 1955, as seen by Drexel Harriman Ripley, is stated in their report as follows:

> "Prior to 1955, the major airlines had experienced five years of good earnings with the trend generally upward. In early 1955 it was generally recognized that the jet age was coming and that large amounts of additional capital from outside sources would be required to acquire jet aircraft and other facilities. However, there were wide differences of opinion as to the type of jet aircraft which would be preponderant. One school of thought favored the 'straight jet'; another favored the gas turbine driven propeller type, generally referred to as the 'prop-jet' or 'turbo-prop'. None of the airlines, so far as we know, could at that time estimate with any degree of certainty just how much additional capital would be required. But it was generally recognized that the amounts would be very large." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 6)

The Drexel Harriman Ripley Report cites the annual reports of commercial aircraft manufacturers as evidence of the awareness of the airline industry in early 1955 that the advent of the jet age was imminent, but, only the Annual Report of the Boeing Company for the calendar year 1954 (DX 187), which was issued on March 7, 1955, can be helpful in understanding the airline industry's thinking in early 1955. Referring to the Boeing 1954 Annual Report, the Drexel Harriman Ripley Report states:

> "*Boeing*: In its 1954 annual report, published in the early part of 1955, Boeing refers to its B-47 (a jet bomber) as being 'well established' in the military

service, and states that considerable active interest had developed among airline operators in a commercial application of its jet prototype tanker-transport." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 7)

Drexel Harriman Ripley also cited the Annual Reports for 1953 and 1954 of National Aviation Corporation, a closed-end investment trust which concentrates its investments in the airline and aircraft manufacturing industries, as follows:

"*National Aviation 1953 Report*: This report states categorically that it was all but a certainty that the (then) piston-engined newcomers (presumably the DC-7 and the Lockheed Super Constellation) were the last of their kind for mass travel by air, the reason being that the few companies concerned with commercial transport were all working on jets.

"*National Aviation 1954 Report*: This report refers to the British invasion of the U. S. domestic airline market with the Vickers Viscount turbo-prop. And it states that the new 'shape of things to come in 1955-58 is in ferment • • • • .'" (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 8)

Capital Expenditure Requirements in the Jet Age

The Drexel Harriman Ripley Report asserts that in early 1955 TWA could have formed an opinion as to its capital expenditure requirements in the jet age. It stated:

"We doubt that in early 1955 the TWA management could make an accurate estimate of its forward capital expenditure program. But it seems reasonable to presume that the management would have at that

time estimated the six-year total at over $300 million, and probably nearer to $400 million." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 10).

Shortage of Equity Capital

Drexel Harriman Ripley compiled certain statistics which it employed as "yardsticks" for measuring the TWA equity capital in comparison with that of its major competitors (Pan American Airways, American Airlines and United Air Lines). These statistics consisted of (i) Total Operating Revenue; (ii) Net Operating Income; (iii) Net Income Including Capital Gains; (iv) Revenue Airplane Miles Flown; and (v) Available Seat Miles. In addition, Net Operating Income per Revenue Airplane Mile and per Million Available Seat Miles for five years, 1950-1954, and for one year, 1954, were set forth in comparative form (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 11).

Drexel Harriman Ripley applied these "yardsticks" and determined that TWA had a shortage of equity capital. Plaintiff's Brief summarized and stated this matter as follows:

"* * * On the basis of 1954 revenue miles flown and available seat miles, respectively, TWA was 33% to 28% larger than Pan American, 10% to 7% smaller than American, and 9% to 5% smaller than United; using these figures as yardsticks, TWA was short of proprietary capital by from $69 million to $74 million in comparison with Pan American, by from $27 million to $30 million in comparison with American, and by $17 million to $21 million in comparison with United. Using available ton miles as a yardstick, TWA was 12.7% larger than Pan American, 15.6% smaller than American and 13.6% smaller than United, indicating a proprietary capital shortage of $53 mil-

lion when compared to Pan American, $21 million when compared to American and $13 million when compared to United. [Drexel Harriman Ripley Report, Part II, pp. 9-10]" (Plaintiff's Brief, pp. 82-83)

The Drexel Harriman Ripley Report then proceeds to conclude with respect to additional equity required, as follows:

> "In the light of the foregoing, and recognizing that TWA was the only company conducting both U. S. transcontinental and transatlantic operations, we believe that TWA would have been well advised in early 1955 to obtain not less than $50 million of additional proprietary capital. TWA's book net worth at December 31, 1954 was only $67.2 million, a very low amount in relation to the capital expenditure program which it faced in the (then) next few years.
>
> "It is our opinion that we would have advised TWA in early 1955 to raise not less than $50 million of additional equity capital. And that it be raised by an underwritten preemptive offering of common stock." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 10)

Drexel Harriman Ripley supports its opinion that TWA should and could have raised at least $50 million additional equity capital in 1955 by citing, in addition to TWA's operating results in the 1950-1954 period which compared favorably with its principal competitors, the announcement in March 1955 that TWA's earnings per share in 1954 were double earnings per share for the preceding year 1953, the fact that the general stock market was strong and advancing and that the market for TWA common stock from January 1, 1954 to June 30, 1955 showed a greater percentage advance than the Standard & Poor's Index of Air

Transport Stocks or the Dow Jones Industrial Index, and performed better than its three major competitors.

Drexel Harriman Ripley then concluded:

> "Thus, the market for TWA stock in the first six months of 1955 showed no sign that investors were worried about the TWA losses reported for the first quarter. The seasonal character of TWA's operations and those of other airlines was generally recognized." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 17)
>
> • • • • •
>
> "From the foregoing it will be noted that the market for TWA stock was strong in terms of price and trading volume in early 1955, and that market prices were much above book values." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 17)

The TWA loss for the first quarter referred to above was a loss of $3,898,000, announced on May 5, 1955 (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 13).

The Drexel Harriman Ripley Report compares the price earnings ratios of TWA with its three major competitors during the period 1950-1955 and notes that TWA was selling at about the same price earnings ratio as United Air Lines, although United Air Lines had a better long-term historical earnings record than TWA and was paying cash dividends whereas TWA was not. During the same period Pan American and American Airlines sold at higher price-earnings ratios. Drexel Harriman Ripley also indicated that in early 1955 the major financial advisory services regarded TWA as an appropriate "hold." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 19-20).

The recommendation of the Drexel Harriman Ripley Report with respect to an equity issue by TWA is set forth as follows:

"We would have advised and urged TWA, in the spring of 1955, to put out a major equity issue in the first half of that year. The stock market was strong and its trend was upward. The first half of 1955 was the time for TWA to correct its obviously short proprietary capital position and prepare for the jet age.* We would have recommended that the equity financing be effected in April or May. The regular 1954 year end audit would comply with the SEC rule for listed companies. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 21)

* In February 1955 General Motors issued and sold $328 million of common stock. Goodyear Tire & Rubber sold $45 million in July.

Cross Examination of Morehouse

There is set forth below certain supplemental information developed in the defendants' extensive cross-examination of Edward J. Morehouse of Drexel Harriman Ripley and certain exhibits admitted in evidence. The information set forth is selected to illuminate the Drexel Harriman Ripley Report. However, I did not confine my consideration solely to the information listed below.

¶ Any change in the timing of the financing (including the equity financing) would affect the amount of damages computed under the Drexel Harriman Ripley approach (Tr. 3892).

¶ If, hypothetically, common stock were offered in October 1955 when the market price of TWA stock was $22 as compared to $31 in May 1955, there could have been an effect on the amount raised and, therefore, an effect on damages (Tr. 3884-3885).

¶ The Boeing Annual Report dated March 7, 1955 (DX 187) contains the following sentence which had been omitted from the Drexel Harriman Ripley Report:

"Our entry into the commercial field is as yet undetermined. We desire such a commercial development, if it can be accomplished on a sound financial basis and without interfering with our military commitments." (Tr. 4109)

¶ The Boeing 707 prototype was flown in July 1954 (Tr. 4120).

¶ On November 19, 1954, William H. Allen, President of Boeing, quoted a price of $4.25 million for the commercial version of the jet tanker (DX 95). On December 21, 1955, Noah Dietrich, then Vice President of Toolco and a director of TWA, wrote to Fred Ayers, Senior Vice President of Toolco and also a director of TWA:

"For several years it has been assumed in the air transport industry that jet aircraft would play a prominent role when their design reached the stage of development as to be commercially feasible. Early this year [1955] TWA engineers and representatives of the Tool Company concluded that the time was ripe to commence negotiations for the design and manufacture of jet airplanes which would suit the peculiar requirements of TWA. Because of the tremendous cost of newly designed jet aircraft it was a foregone conclusion that the Tool Company would have to lend substantial financial assistance to TWA. The exact form and extent of such support being left open, pending final determination as to the requirements and the existing financial capabilities of TWA itself." [DX 46]

¶ The article by Selig Altschul, entitled "Financing Patterns to Change for Jet Transport Acquisitions" appearing in the November 7, 1955 issue of AMERICAN AVIATION (DX 31, p. 27) "is probably a reasonably good

description of the picture as it then existed * * *" (Tr. 3985), but Morehouse disagreed with the following statement as being "too general":

> "'It is important to note that the bulk of financial requirements for the airlines for ordering jets will not come until four years or so from now. This gives them time to work out financing programs.'" (Tr. 3987-3988)

¶ A memorandum from J. P. Ripley of Drexel Harriman Ripley to Berry and Morehouse of the same firm, dated September 23, 1955 (DX 182), summarizing a conference with Curtis Barkes, Financial Vice President of United Air Lines, states:

> "'Barkes said that just off the top of his head he is thinking along the following lines. He is wondering if we could work out a transaction with Metropolitan by the terms of whch [sic] UAL would borrow from the Metropolitan $30,000,000 within the next two or three months and make a commitment to borrow the balance (presumably about $90,000,000) on the condition that UAL sell $30,000,000 of preferred stock. Then UAL could sit down and consider the risks involved in selling the preferred stock right now or waiting until later to sell it. He appreciates the risks involved, but he thinks the market might be better next summer.'" (Tr. 3965)

There is no indication that Ripley asserted the foregoing violated a fundamental principle of Drexel Harriman Ripley or that he was offended by the suggestion of Barkes, contained in DX 182 (Tr. 3967-3968).

¶ The timetable for the hypothetical sale of equity in the spring of 1955, assuming a June 1, 1955 closing and

the retention of Drexel Harriman Ripley by TWA in January 1955 would be (i) two or three weeks to conduct the survey to conclude that TWA required equity financing and to formulate a plan (Tr. 4104); (ii) receipt of approval of recommendations and commencement of work approximately in the middle of March 1955 at the latest (Tr. 4099); and (iii) the filing of a registration statement with the SEC on April 19, 1955, the preparation of which would have commenced as late as a month prior thereto (Tr. 4097), but might take longer so that it might have commenced somewhere between February 19 and the middle of March 1955 (Tr. 4098).

¶ Morehouse expressed doubt that in January 1955 Drexel Harriman Ripley would have known that the Government would on August 1, 1955 give the required consent to Boeing to use Government facilities to manufacture commercial jet aircraft (Tr. 4127).

¶ Drexel Harriman Ripley were instructed to assume that orders for jet aircraft would have been placed in the fall of 1955 and Morehouse stated that:

> "... it is not unreasonable to assume that only a few months earlier than that time they would have had enough information about probable costs and probable needs to have estimated that their capital expenditure program would have been in the order of the numbers we have set down here" (Tr. 4169).

¶ In the spring of 1955, the airline would probably have had enough information to know that its needs were going to be in the order of $300 million to $400 million (Tr. 4171).

¶ Sometime in the second half of 1955, United Air Lines (for whom Drexel Harriman Ripley was then acting as

investment bankers) first came to some conclusion with respect to what its anticipated expenditures might be for jet aircraft (Tr. 4172).

¶ In concluding that TWA was short of equity, Drexel Harriman Ripley compared TWA revenue per seat miles and available ton miles with its competitors, but did not consider that TWA, during 1954 at the time the comparisons were made, had taken the lead in promoting coach travel (Tr. 4157-4158), and that the statistics for one of the competitors, American Airlines, reflected a 24-day pilot strike in 1954 (Tr. 4157). Thus the TWA revenue per seat mile, "a yardstick" used by Drexel Harriman Ripley in developing the shortage in TWA equity, appears higher in relation to its competitors and according to the Drexel Harriman Ripley approach, resulted in a greater shortage of equity (Tr. 4157-4166).

¶ Airline stocks during May and June 1955 "were volatile and investments in them were speculative in nature." (Tr. 4196).

¶ During the period from January 1, 1946 to May 12, 1955 the equity financing of all airlines aggregated $47,272,425 (Tr. 4256), the largest of which was an offer by Braniff of $5,700,000 (Tr. 4257), and TWA accounted for the other three large equity financings, one in 1949 and two in 1952 (Tr. 4256). On July 3, 1945, there was an equity issue of $42,398,000 by Pan American Airways coupled with stock purchase warrants to purchase an additional $36,800,000 (Tr. 4258) (very few of the stock purchase warrants were exercised because of the sharp drop in the Pan American Airways' stock (Loeb, Rhoades Report, DX 270, Part II, p. 8).

¶ The Drexel Harriman Ripley Report recommended a 1-for-1 rights offering of TWA stock in May 1955, yet Ripley in a letter dated August 25, 1955 (DX 193) in speaking of a prospective rights offer of common stock of United Air Lines admitted that a 1-for-3 rights offering would be very high and that "even one to five is pretty high" (Tr. 4262).

¶ Application of the "yardsticks" to TWA produced a TWA equity shortage ranging from $13 million to $74 million, the upper end of the range being produced by comparison with Pan American Airways, the only one of the comparable competitors flying the transatlantic run. The absolute dollar comparison of capital indicates that the amount of equity shortage would have been fixed in the upper range. (Tr. 4166)

¶ TWA's need for additional equity was "so bad" that in the opinion of Drexel Harriman Ripley TWA should have rushed to the market and raised the equity in May of 1955 rather than at some later date in the summer. (Tr. 4167)

¶ It is not clear from Drexel Harriman Ripley's records that they actually recommended equity financing to United Air Lines in the fall of 1955. The next equity financing of United Air Lines subsequent to the fall of 1955 was in 1960. (Tr. 4307)

The Loeb, Rhodes Report and Woodfin Testimony Relating to Equity Financing

The Loeb, Rhoades Report (DX 270) constitutes the direct testimony of Gene M. Woodfin, a general partner of Loeb, Rhoades, an investment banking firm of New York City.

As noted above in this Report, the Loeb, Rhoades Report disagreed with the Drexel Harriman Ripley recommendations in every material respect. Loeb, Rhoades stated that it would not have recommended the 1955 equity financing, and were of the opinion that no prudent competent officers or directors would accept the Drexel Harriman Ripley recommendations. The Loeb, Rhoades Report further stated that they were of the opinion that TWA could not have financed the "reconstructed" capital requirements of $544.8 million without the assistance of Toolco (Loeb, Rhoades Report, DX 270, Part II, p. 3). The Loeb, Rhoades Report, in asserting its opinion, made the following statements:

> "Mr. Morehouse's written testimony and exhibits, despite the labor devoted to their presentation, are no more than an exercise in a hypothetical financing conducted without regard to certain important historical facts and yet with the benefit of hindsight on such things as the peaks of the stock market for airline stocks. This is no criticism of Mr. Morehouse or of DHR, who, pursuant to counsel's instructions, prepared an academic answer to an academic question. We have examined that exercise in the light of important historical facts, which cannot be ignored. Only thus can its validity be tested." (Loeb, Rhoades Report, DX 270, Part II, p. 4)

Loeb, Rhoades stated that the airline industry in early 1955 was uncertain about the imminence and implications of the introduction of the jet aircraft into commercial aviation:

> "Unquestionably the greatest uncertainty facing the airlines in early 1955 was the anticipated coming of the jet age to commercial aviation. There were no

commercial jet aircraft actually available at that time and no one knew the answers to the many questions airline executives were pondering: When would commercial jet aircraft become available for ordering? Who would build them? Would they be turbo-prop or turbo-jet, or both? How large would they be? How much would they cost? When would they be delivered? To what extent and when would they replace piston operations? Would they win a high degree of public acceptance? How many would the airlines purchase? Could airport facilities be improved in time?

"As Mr. Morehouse pointed out at page 6 of his report, none of the airlines, in early 1955, could have estimated with any degree of certainty how much capital would be required for the purchase of jet aircraft. At the same time it would have been obvious to anyone knowledgeable in the airline and aircraft industries that only down payments and perhaps progress payments would be required in the early years, with the heavy money requirements coming three, four or five years after orders were placed. (Loeb, Rhoades Report, DX 270, Part II, pp. 6-7)

The prospect of a substantial increase in domestic commercial airline competition, involving the granting of new routes and the reduction and elimination of the CAB subsidy contributed to the uncertainty. In early 1955, the ability of the airline industry to obtain equity financing was extremely limited as is apparent from the history of airline financing during the post-war years (Loeb, Rhoades Report, DX 270, Part II, pp. 8-9 and Exhibit A).

As an indication of the climate for airline equity financing, there is cited a $40.8 million, 3½% cumulative convertible preferred stock issue by American Airlines on June 11, 1946, which was followed shortly after issuance by a sharp drop in price of the preferred stock market

value which continued below par value for about eight years. The market price of the common stock did not reach the conversion price based on redemption until December 1954. Also cited was the $43.4 million sale of capital stock of Pan American on July 3, 1945 through an underwritten offering of capital stock with stock purchase warrants attached, exercisable at $18 a share. Because of the market decline in 1946 very few of the warrants were exercised (Loeb, Rhoades Report, DX 270, Part II, p. 8 and footnotes). Common stock offerings of domestic trunk airlines during the period from January 1946 to June 1957 were rare and in very small dollar amounts. Of the four major offerings, two were by TWA, one in 1952 for $10.7 million and the other in 1957 for $43.4 million, and each of the four larger offerings were underwritten in whole or in part by a principal shareholder (Loeb, Rhoades Report, DX 270, Part II, p. 9).

"This dearth of equity financing was not by design. The airlines were forced to rely on debt financing during the post-war piston era because airline equities had no investment status and most airlines were simply unable to obtain equity financing. For example, W. C. Barkes, Vice President of Finance and Property for United Airlines, explained United's 1955 debt financing program in testimony before the CAB in 1957 in the General Passenger Fare Investigation as follows (United Ex. U-2, Docket No. 8008, pp. 12-13; attached hereto as Exhibit D):

" 'The 1955 financing program for United was handled entirely by arranging for issuance of debt. This was not a matter of choice, for the ability of United, as well as the industry, to sell equity has been limited. That further increase in equity is necessary and desirable is apparent, but it is equally

apparent that it cannot be accomplished satisfactorily until the present period of depressed earnings is brought to an end.'

"In 1955 airline shares were speculative securities and they were not held in quantity by institutional investors." (Loeb, Rhoades Report, DX 270, Part II, pp. 10-11)

As of June 30, 1955, none of the airlines had obtained any financing for jet aircraft and prior thereto had financed their equipment purchases chiefly out of earnings, cash accumulations from fast depreciation and tax amortization certificates and short-term bank credits. Long-term debt was obtained infrequently. The Pan American 25-year $60 million loan from a group of insurance companies in May 1955 was for the purpose of financing the acquisition of piston aircraft. (Loeb, Rhoades Report, DX 270, Part II, pp. 11-12)

The fundamental principles of Drexel Harriman Ripley, summarized on page 189 of this report, were challenged by Loeb, Rhoades, which stated:

"We believe that it is unrealistic to postulate a set of principles to which diverse companies in a growth industry with varying needs and abilities should conform."

• • • • •

"With respect to Mr. Morehouse's first principle, getting equity prior to or simultaneously with senior debt, it is our experience that most companies raise funds through the sale of common equity or convertible securities only when the need therefor is clearly demonstrable. It is common practice for a lending institution to make a commitment to lend senior debt conditioned upon equity or subordinated debt financ-

ing being done prior to or contemporaneous with the later takedown of the senior funds. A well organized financing plan raises equity only when required, not in unknowing anticipation of possible future needs some years away. As we shall show below, the fact of the matter is that historically no major airline followed Mr. Morehouse's first principle. The facts indicate that during the 1955-1960 period none of the airlines sold equity or securities convertible into equity until the latest date possible and then in amounts as minimal as possible. This is reasonable and what one would expect, rather than the converse suggested by Mr. Morehouse's first principle.

"Mr. Morehouse's third principle, that contractual commitments for capital expenditures should be prepared for reasonably in advance of the time they are to become due, is difficult to quarrel with as a general proposition. The statement of the principle, however, totally fails to answer the important questions of timing and amount. No guidelines are given as to how much money should be raised, by what method or what is meant by 'reasonably in advance.'

"In short, we do not believe that a realistic financing program can be devised or reconstructed upon any such a set of principles of airline finance. Instead, a careful analysis of the factual situation existing in the securities markets, the airline industry at large, and the individual company is required." (Loeb, Rhoades Report, DX 270, Part II, pp. 12-14)

Loeb, Rhoades stated that TWA had no need for equity in early 1955 and that it was doubtful that any TWA management would have been persuaded that TWA, in 1955, was short of equity in comparison with the other airlines. Loeb, Rhoades knows of no airline that bases its equity or debt financing upon its relationship to other airlines using

"yardsticks" such as formulated by Morehouse. (Loeb, Rhoades Report, DX 270, Part II, p. 15)

According to Loeb, Rhoades, the results obtained using the "yardsticks" show a variance in the indicated equity shortage from $13 million to $74 million.

"A widely accepted measurement of the strength of a company's capital structure is its debt-equity ratio. On that basis, TWA with its ratio of 78.4% equity to 21.6% debt (p. 10 Morehouse Report) was in a better financial position than American, United and Eastern and equally as well off as Pan American.

"• • • While it likely was recognized by all of the airlines and by their financial advisers in the forepart of 1955 that, at some time in the future, both additional equity and debt financing would be required by each of them to meet the oncoming jet age, no one could be sure of 'when' or of 'how much.'" (Loeb, Rhoades Report, DX 270, Part II, p. 16)

It was Loeb, Rhoades' opinion that the equity issue proposed by Drexel Harriman Ripley was excessive in amount and that it is unrealistic to state that it could have been sold in the spring of 1955.

"It is clear that the $58.4 million common stock offering proposed by Mr. Morehouse for the Spring of 1955 would have been of astounding size, exceeding by more than $11 million the sum total of all domestic trunk common stock offerings during the 1946-1955 period.

"• • • To suggest, as Mr. Morehouse does, that TWA or any other domestic trunk airline, could have sold in the Spring of 1955 what was a theretofore unheard of dollar amount of stock is in our opinion utterly unrealistic, unless a financially sound majority stockholder for some reason insisted upon it and

agreed in advance to assure its success." (Loeb, Rhoades Report, DX 270, Part II, pp. 17 and 18)

Loeb, Rhoades thought that the proposed equity financing in May 1955 was premature:

"To have accomplished an offering of $58.4 million of common stock in the Spring of 1955 Mr. Morehouse would have to have made his recommendations to TWA and had them accepted early in 1955.

"It is common knowledge that in early 1955 there were not yet any jet aircraft available for order by TWA or any other airline and that the magnitude of the orders and investment required by the airlines was unknown. We agree with Mr. Morehouse (p. 6) that, while it was generally recognized that the amounts would be very large, none of the airlines could estimate with any degree of certainty just how much additional capital would be required. Certainly no airline management could have foreseen in early 1955, when or in what amounts, funds would be required for the purchase of jet aircraft." (Loeb, Rhoades Report, DX 270, Part II, pp. 18-19)

The first carrier to order jets was Pan American which placed an order in October 1955 for 25 Douglas DC-8s and 20 Boeing 707s, at a cost of $269 million. The $60 million loan arranged May 10, 1955 by Pan American was to finance the acquisition of piston aircraft and to increase working capital. A $30 million loan on December 19, 1956 was to finance the purchase of 9 DC-7s and make advance payments on 23 707s and 21 DC-8s. Pan American had no equity financing until July 29, 1959. American Airlines ordered 30 707s in November 1955 and in the same month placed privately $75 million of 4% notes. The following year on September 1, 1956, American placed privately an

additional $60 million at 4¼% the proceeds of which were added to general funds and were available for the purchase of jet aircraft. American raised no equity until June 15, 1959. United ordered 30 DC-8s at a cost of $175 million in late October 1955 and also ordered 45 piston aircraft. On December 22, 1955, United arranged with three insurance companies to borrow, prior to March 1, 1959, up to $120 million and at the same time arranged a $30 million standby revolving credit with a group of bankers. Two years later, in December 1957, United arranged for another $130 million bank credit. It was not until November 1960 that it sold equity in the form of convertible debentures (Loeb, Rhoades Report, DX 270, Part II, pp. 19 and 20).

Loeb, Rhoades in their Report concluded that:

> "The actions of these airlines clearly indicate that competent management did not raise equity in the mid-1950's as a part of long-range financing for the purchase of jet aircraft." (Loeb, Rhoades Report, DX 270, Part II, p. 20)

Finally Loeb, Rhoades stated that TWA had no use for equity funds in the spring of 1955 since $35 million of the proceeds of the equity issue was to be used to pay off a 15-year 3¾% equipment mortgage which had been arranged with Equitable in December 1954. (Loeb, Rhoades Report, DX 270, Part II, p. 21)

In the opinion of Loeb, Rhoades, the 1-for-1 preemptive offering recommended by Drexel Harriman Ripley is a drastic measure without historical precedent, unless a major stockholder willingly participates. On such an offering, the market price for TWA would drop lower than $17.50 as stated by Drexel Harriman Ripley and even at

$17.50, TWA stockholders would suffer a self-inflicted loss in the aggregate indicated market value of $44,990,000, and a stockholder who did not purchase additional stock would find his holdings diluted in market value by $13.50 per share (Loeb, Rhoades Report, DX 270, Part II, pp. 22-23).

No competent management would approve the dilution of the equity position of its stockholders and reduce stock leverage unless the need is clearly apparent and the circumstances pressing:

> "In our opinion a prudent and competent management would have considered both dilution and leverage in weighing Mr. Morehouse's proposal to raise equity in the Spring of 1955, and would have decided to postpone any equity financing until the need for the money could be more clearly demonstrated. In our view these considerations would have led to the same result whether the shares of the company were widely held by the public or largely held by a majority stockholder.
>
> "The fact that TWA actually did a one-for-one rights offering in 1957 does not change our view. This was not a public offering underwritten by investment bankers. There was a definitive and immediate need for the funds* and the issue was underwritten by Toolco which had agreed to provide TWA with a minimum of $34 million of proceeds, exceeding Toolco's pro rata portion by approximately $2 million. Actually, Toolco subscribed to $35 million or 80.69% of the issue. (DHR Exhibit: Trans World 7)." (Loeb, Rhoades Report, DX 270, Part II, pp. 24-25)

---

* See Purposes of Issue Section, DHR Exhibit: Trans World 7.

The Report then took up alternative assumptions as to Toolco:

"(i) If we assume that TWA had accepted Mr. Morehouse's recommendation with respect to the $58.4 million equity offering in the Spring of 1955 and that Toolco had agreed to take up its pro rata share of the offering in order to maintain its percentage of ownership, such a financing probably could have been done. It is our opinion, however, that such an expensive, premature and unnecessary financing would have been a bad business decision. We would not have recommended such a financing to TWA management or to the stockholders of TWA in the Spring of 1955. If such a recommendation had been made, it is our opinion that it would not have been accepted by TWA management, by its majority stockholder or by its other stockholders.

"(ii) If Toolco could not have been looked to for participation in the suggested equity offering, it is our opinion that it could not have been accomplished. We would not have participated in such an underwriting and it is our opinion that a syndicate could not have been formed to have underwritten such an offering. We have already discussed the difficulties of accomplishing such a large financing under any circumstances, and we believe the impact on the financial community of a declination by Toolco to subscribe to its share of the offering would have doomed the proposal at the outset. In short, had Toolco declined to participate, Mr. Morehouse's suggested 1955 equity financing in our opinion, could not have been accomplished.

"(iii) It is difficult to comment upon the purely hypothetical question presented by the assumption that there was no Toolco and that TWA was a widely-held company with no controlling stockholder. Such was not the case. Moreover, in view of the assistance TWA received as the result of Toolco's financial backing in the post-war years, it is difficult to assume that TWA, absent Toolco, could have been in as good a financial

condition as it was in historically, in the Spring of 1955. Even indulging in the assumption that it was, it is our opinion that no prudent and competent management with due regard for the interests of its stockholders would have accepted the suggested equity financing plan, and if it had, we do not believe that such an offering could have been underwritten." (Loeb, Rhoades Report, DX 270, Part II, pp. 25-27)

Loeb, Rhoades concluded that Drexel Harriman Ripley's proposal was not "doable" and in relation to the amount of common stock sold by the domestic trunk airlines during the entire 1946-1956 period it was "stupendous."

"• • • if the offering had not been held precisely in the Spring of 1955, the subsequent history of TWA's earnings would have made any later offering even more difficult to consummate. Earnings for the third quarter of 1955 were $4.2 million compared to $7.1 million for that quarter in 1954 and the fourth quarter earnings dropped to $100,000 from $1.3 million the preceding year. (Exhibit F). The years 1956, 1957 and 1958 were all loss years for TWA. (DHR Exhibit: Financials—5). Commencing in June 1955 the stocks of the airline group declined counter to the general market. (DHR Exhibits: General 5 and 7). TWA shares declined from a high of 31⅝ in June to a low of 22¾ in October 1955, and, of course, went much lower thereafter. (DHR Exhibit: Trans World 9). Even accepting Mr. Morehouse's fortuitous selection of late May or early June 1955 for the proposed equity financing, we do not believe it could have been done without the assistance of Toolco. The selection of a somewhat later date would have made the success of any such a proposed financing even more improbable." (Loeb, Rhoades Report, DX 270, Part II, pp. 27-28)

Cross-examination of Woodfin

There is set forth below certain supplementary information developed in the plaintiff's cross-examination during 5½ days of Woodfin, a general partner of Loeb, Rhoades and certain exhibits admitted in evidence. The information set forth below is selected to illuminate the Loeb, Rhoades Report. However, I did not confine my consideration solely to the information listed below.

¶ Woodfin had experience in negotiating the financing of pipelines (Tr. 6762) but prior to 1959, claimed no expertise in airline financing (Tr. 6763).

¶ Woodfin was associated with Loeb, Rhoades when two Seaboard World Airlines' financings were done in 1960 and 1966. Seaboard was exclusively a cargo carrier with a record of operating losses and the financings were effected in part to adjust creditors' claims (Tr. 6767-6771).

¶ Loeb, Rhoades also acted as investment bankers for Northeast Airlines in 1956 and had connections with Capital Airlines (Tr. 6772-6773).

¶ It was not "in the cards" for any independent competent management (forgetting Toolco) to have jumped in and have had a rights offering when they did not need the money in May 1955. (Tr. 6808)

¶ Historically it took a lot of help from Toolco to finance a program substantially less than the $550 million capital program recommended by Drexel Harriman Ripley. Woodfin does not see how TWA could have financed such a substantial program without the help of Toolco. (Tr. 6813)

¶ The fact that in May 1957 TWA sold 3,337,036 shares of common stock for $43,381,486 means that with Toolco cooperation TWA could have sold the common stock in May 1955. (Tr. 6822-6823)

¶ It is significant that at the time of the May 1957 equity issue TWA had a real present need for the funds and sold stock despite the downtrend in earnings commencing in June 1955, which was not arrested until the year 1959. (Tr. 6828)

¶ Loeb, Rhoades would not have advised any financing in 1957 if Toolco was content to make the down payments on equipment acquisitions. As pressure to pay installments mounted, a better case was made for financing. Neither Drexel Harriman Ripley nor Loeb, Rhoades would have done the equity financing in 1957. (Tr. 6840)

¶ The 1957 financing was not intended to cover the jets but to pay for the Lockheed 1649 A and 1049 G aircraft and spare parts. (Tr. 7217-7218)

¶ While American Airlines in May 1955 had a ratio of 78% equity to total capitalization and was in a strong balance sheet position to borrow for the jet program, this in the opinion of Woodfin does not mean that an airline should be so operated. With a high equity ratio earnings available for stockholders are going to be reduced. The CAB encourages a 50% debt ratio which provides leverage beneficial to stockholders. (Tr. 6871-6875)

¶ The growth of the domestic passenger airlines particularly in 1953, 1954 and 1955 was not reflected by enthusiasm on the part of stockholders. Airline stocks were speculative without a broad investment appeal (Tr. 6863) but as of October 27, 1954 Loeb, Rhoades stated in an

investment "informatory" (TWA Ex. 207): "The strength in airlines reflects a widening interest in this group which we have been recommending for some time, believing that finally some of the basic problems are being overcome." (Tr. 6887A)

¶A Loeb, Rhoades informatory on American Airlines commented that its 80% ratio of equity to total capital puts it in the strongest position of any airline to meet the financial demands of the jet program (Tr. 6875).

¶In 1954-early 1955 the outlook for commercial jets continued uncertain. Boeing had not received permission from the U. S. Air Force to use the tanker-jet tooling and the Renton, Washington plant to build a commercial version of the tanker-jet, there remained questions about the functioning of jet aircraft in hot weather, noise, and whether the airline industry would decide upon turboprops such as the Electra (Tr. 6889-6892).

¶Several issues of aviation trade journals in the late summer and early fall of 1954 carried accounts of Boeing's prospects for the manufacture of a commercial jet, its ability to satisfy U. S. Air Force obligations and also meet commercial requirements and the estimate that the capital requirements of the commercial airline industry would range between $1.5 billion to $3 billion over the next 10 years. (Tr. 6900-6907).

¶On November 19, 1954 Allen, President of Boeing, wrote Damon, President of TWA, with a carbon copy to Hughes (DX 95A), stating that the time had arrived to negotiate with the airlines for a commercial ship but pointing out that before actual construction can begin, Boeing must obtain from the Air Force permission to use the tool-

ing designed and constructed for the Air Force contract and also permission to use a portion of the Government-owned plant at Renton, Washington. To assist in negotiating with the Government, Boeing suggested a "production type contract", which would become binding upon both parties on receipt of notice given by Boeing if the final price is within the maximum price and the delivery schedule is as favorable and the aircraft specifications are substantially the same as set forth in the production notice contract. The indicated sales price was in the neighborhood of $4,250,000 per aircraft assuming a quantity of 50 (Tr. 6908-6912).

¶ American Aviation Daily of December 3, 1954 (TWA Ex. 216) observed that the prototype aircraft for the Boeing 707 jet had 40 hours flight time with the original set of jet engines which was a remarkable record for prototype aircraft according to Boeing (Tr. 6914-6915).

¶ Woodfin was aware in December 1954 that Pan American was negotiating for Boeing commercial jets (Tr. 6937, TWA Ex. 219).

¶ Loeb, Rhoades was aware that there was active interest in commercial jets in the fall of 1954 and considered this in preparing their direct testimony. But at that time no one could ascertain who would order what and when, and what the delivery timetable would be. Loeb, Rhoades' opinion would not be affected by knowledge that Pan American Airways was seriously negotiating, for that was a fact. (Tr. 6920-6923)

¶ Woodfin was aware in January 1955 that United was negotiating for DC-8 jets for delivery starting in 1960 and

possibly 1959 and United actually ordered jet aircraft in the fall of 1955 (Tr. 6943-6944).

¶ In January 1955 Boeing was interested in commencing active negotiations with TWA on specifications for its jet aircraft (Tr. 6947, DX 10).

¶ The payment of $10,000,000 for an option to purchase 15 jet aircraft to be delivered four years later at a total cost of $75,000,000 would not, in Woodfin's opinion, require raising money to finance the option in January 1955. (Tr. 6950-6951).

¶ When asked was it not obvious in early 1955 to everyone in the airline business that millions and millions of dollars would be required for financing jet aircraft? Woodfin replied:

> "A. As to exactly when the sums of money would have to be produced and how much outside money would have to be produced was all a function of how the airlines operated, what cash flow off they had from depreciation and earnings, what cash they had available, from tax acceleration certificates, and the rest of it, how much outside money was going to be needed and how many airplanes were actually going to be ordered. I don't think anybody knew. There was a lot of speculation, of course." (Tr. 6957)

¶ Woodfin did not consider the equity financings by other airlines in the years covered by the complaint prior to 1955. TWA Ex. 224 sets forth a record of equity financings, including convertible preferred stock, for the period from 1939-1945, inclusive (Tr. 6980-6983).

¶ The price of an airline's common stock is a highly material consideration to an airline company and its investment bankers contemplating an issue. (Tr. 7046).

¶ In determining whether a common stock issue is doable an underwriter would look at the common equity financing of other companies in the same period. It would do no good to examine issues of convertible preferred, convertible debentures or any other different securities (Tr. 7073-7074).

¶ In December 1955 United Air Lines completed the "largest single financing program in the history of the airline industry * * * as part of its long range preparation for jet airliner operations." This aggregated $150 million. (TWA Ex. 180, p. 6, Tr. 7084).

¶ In May 1955 TWA did not know what aircraft was to be ordered. When the equipment program had been determined they would have discussed their money needs with Equitable who held their equipment mortgages. However, contrary to United which had its best year in 1956, TWA earnings started downhill in the second half of 1955 and operations continued to show a loss in 1956, 1957 and 1958. This barred TWA from approaching Equitable (Tr. 7114-7116).

¶ Loeb, Rhoades would not determine TWA's financial requirements by employing the "yardsticks" used by Drexel Harriman Ripley. These yardsticks are used to measure efficiency of airline operations and the efficient use of capital and the statistics are more meaningful for flight engineers and operating people (Tr. 7122-7123).

¶ In May 1955 there had not been a sizeable common equity offering by airline companies for several years and Loeb, Rhoades had serious doubts that the stock market would absorb a $50,000,000 issue. (Tr. 7130).

¶ Woodfin agrees "as a generalization" that stock should be sold first before selling debt, a general principle set

forth by John F. Childs, Vice President, Irving Trust Company, in an article entitled "Long Term Financing" appearing in the Corporate Treasurer's and Controller's Encyclopedia, Volume 2, page 435 (Tr. 7133), but none of the airlines sold equity before selling debt and the most natural and normal practice is to couple the sale of debt with equity (Tr. 7136).

¶ On May 3, 1955 Loeb, Rhoades stated in a Research Department informatory (TWA Ex. 201) that American Airlines with a ratio of 78% of equity to total capitalization was in need of no financing until the jet program and then probably would be in the strongest position of any of the airlines to finance the program (Tr. 7189).

¶ Woodfin is in fundamental disagreement with the Drexel Harriman Ripley proposal that capital be doubled and stock be sold below book in May 1955 when TWA had no precise information with respect to its aircraft requirements (Tr. 7249).

¶ Woodfin objects to paying off in June 1955 an equipment mortgage loan obtained from Equitable Insurance Company in December 1954 believing it would put TWA in a very strange position in the fall of 1955 when it returned to the insurance companies to get a loan commitment (Tr. 7250-7251).

¶ In 1957 when historically TWA sold common stock to its stockholders the jet age was much closer and there was a very definite use for the money. 75% of the 25% minority stockholders subscribed for the stock (Tr. 7261-7262).

¶ TWA was the only one of the big four airlines which did not pay a dividend. If funds were sought from stockholders in May, 1955 before the details of the jet acqui-

sition program were known and when there was no immediate need for the funds it would be taxing the stockholders (Tr. 7285).

¶ Offering additional stock substantially below the market involves the risk of depressing the after-market to the detriment of all stockholders (Tr. 7307-7308).

¶ In January or February of 1955, none of the airlines were able to determine the amount of money required and when it would be needed (Tr. 7197).

¶ Late in 1955 United completed a $150 million financing program designed to cover its commitments for the 30 DC-8 jetcraft ordered late in 1955 together with related ground equipment and facilities. This financing was privately arranged because United did not have a sufficiently high potential rating to go to a public offering and was entirely a debt issue because in the words of United Air Lines: "This was not a matter of choice, for the ability of United, as well as the industry, to sell equity has been limited. That further increase in equity is necessary and desirable is apparent, but it is equally apparent that it cannot be accomplished satisfactorily until the present period of depressed earnings is brought to an end." (Loeb, Rhoades Report DX 270, Exhibit D, pp. 12-13, Exhibit U-2 in CAB Docket No. 8008).

The Debt Financing

TWA's claim for damages in respect of the defendants' interference with TWA's debt financing is founded upon paragraphs 24 through 28 inclusive and paragraph 52(c) and (d) of the complaint which are set forth below.

Paragraphs 24 through 28 of the complaint provide:

"24. From 1955 until December, 1960, the defendants used their power over the financing of aircraft thus obtained to compel TWA to acquire aircraft of the type and in the manner dictated by the defendants and used their power over TWA's acquisition of aircraft, obtained as hereinbefore alleged, to compel TWA to obtain financing for the acquisition of such aircraft of the type and in the manner dictated by the defendants.

"25. At least as early as 1955, the needs of United States air carriers for the extensive financing required for acquisition of jet-powered aircraft were recognized throughout the air carrier industry and by others, including the defendants.

"26. In 1955 and continuously thereafter until December, 1960, the defendants, pursuant to and in furtherance of their plan to control TWA in a manner advantageous to themselves, directed TWA to make no efforts itself to obtain financing necessary for the acquisition of jet-powered aircraft required for the needs of TWA.

"27. Commencing in the year 1955 and continuing thereafter, various other air carriers, including competitors of TWA, made appropriate arrangements for the financing of jet-powered aircraft. In 1955 and 1956 various United States air carriers were able to obtain funds at a cost (or interest rate per annum) in 1955 of 4%, and in 1956 at costs ranging from 4¼% to 4¾%.

"28. In 1955 and thereafter for a period of several years, the defendants discussed with others various proposals for the financing of jet-powered aircraft, but the defendants did not make arrangements for such financing nor allow TWA to make such arrangements until December 1960, at which time the prevailing cost of funds (or interest rates) for debt financing was approximately 6-6½%."

Paragraph 52 of the complaint provides, *inter alia*:

"52. TWA has further been injured in the following manner:

• • • • •

"(c) TWA was foreclosed from obtaining financing on more advantageous terms than those available to it in December 1960 and thereby suffered a loss by virtue of the greater cost of borrowing it ultimately experienced.

"(d) TWA's ability to obtain financing for its needs was substantially impaired."

It is helpful to note particularly that the foregoing allegations, all of which are admitted by defendants' default, assert that (i) defendants dictated the type and manner of acquiring aircraft and manner of financing the acquisition (par. 24); (ii) United States air carriers recognized in early 1955 the need for extensive financing in order to acquire jet aircraft (par. 25); (iii) defendants directed TWA to make no efforts itself to obtain financing for the acquisition of jet aircraft (par. 26); (iv) various other air carriers, including TWA competitors, made arrangements for financing commencing in 1955, and in that year and in 1956, obtained commitments at interest rates ranging from 4% in 1955 to 4¼-4¾% in 1956 (par. 27); (v) defendants discussed various proposals for financing TWA jet requirements in 1955 and for several years thereafter made no arrangements for financing nor was TWA allowed to arrange financing until December 1960, when interest rates were approximately 6-6½% (par. 28); and (vi) TWA was foreclosed from obtaining advantageous interest rates and thereby suffered a loss (par. 52(c)).

The debt financing recommended by Drexel Harriman Ripley in their Report was summarized at pages 190-91 of this Report and is repeated herewith:

> "(ii) A private placement long-term loan commitment with institutional investors in October 1955 for $150 million minimum—$170 million maximum at 4% interest.
>
> "(iii) An underwritten non-preemptive offering in May 1959 of $60 million of 5% subordinated debentures, convertible into common stock.
>
> "(iv) A private placement long-term loan commitment with institutional investors in May 1959 for $90 million minimum—$110 million maximum at 6% interest." (Plaintiff's Brief, pp. 60-61)

On the basis of the allegations of the paragraphs of the complaint set forth above, TWA purported to establish damages before trebling in the amount of $20.3 million, which was determined as follows:

> "This separate claim is based upon the difference between:
>
> "(i) The present value (*i.e.*, the present equivalent of the future burden) of future payments for debt service on TWA's long-term debt historically outstanding on December 31, 1963, and
>
> "(ii) The present value (*i.e.*, the present equivalent of the future burden) of future payments for debt service on long-term debt for reconstructed TWA as of December 31, 1963 with a debt structure of the kind and in the amounts recommended by Drexel Harriman Ripley." (Plaintiff's Brief, p. 120)

The date of December 31, 1963 was selected for the purpose of calculating damages because according to TWA's

counsel that date permitted the simplest and most logical assumptions. As of December 31, 1963, the debt structures of Historical TWA and of Reconstructed TWA were comparable because (i) the jet fleet had been delivered and financing arranged, (ii) both Historical and Reconstructed TWA had outstanding long-term non-convertible and convertible debentures and the total amount of debt outstanding was comparable, and (iii) the shares outstanding of Historical and Reconstructed TWA as of December 31, 1963 were practically identical. If calculations had been made at a later date, additional assumptions would have been required to make adjustments for conversions of convertible debentures which occurred in respect of Historical TWA. (Plaintiff's Reply Brief, pp. 73-74)

October 1955 Debt Financing

Drexel Harriman Ripley Report and Morehouse Testimony

In forming their opinion with respect to debt financing in October 1955 and their recommendation that TWA should have and could have arranged mortgage loan commitments from institutional investors which would have provided over the next three years a minimum of $150 million and a maximum of $170 million, Drexel Harriman Ripley took the following approach:

(i) A pro forma balance sheet as of September 30, 1955 was prepared for Reconstructed TWA in which effect was given to the May 1955 sale of common stock providing net proceeds to TWA of $55.5 million. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 23-25 and Exhibit thereto "Financials—7")

(ii) A capital expenditure program for Reconstructed TWA was projected by Price Waterhouse as of September 30, 1955, which indicated that Reconstructed TWA would require capital expenditures from the fourth quarter of 1955 through December 1960, aggregating $375.3 million (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 26-27 and Exhibit thereto "Financials—8")

(iii) A source of funds forecast from October 1955 to December 1960 for Reconstructed TWA as of September 1955 was prepared by Coverdale (Drexel Harriman Ripley Report, TWA Ex. 5, Part III, Volume 2 "Financials—9")

(iv) The balance sheets of Historical TWA and Reconstructed TWA as of September 30, 1955 were then compared with those of their three principal competitors, the balance sheets of American Airlines and United Air Lines as of September 30, 1955, and the balance sheet of Pan American Airways as of December 31, 1955.

In this comparison Historical TWA had a book net worth less than its three principal competitors by the following amounts: Pan American Airways $40 million, American Airlines $42 million, and United Air Lines $29 million; whereas Reconstructed TWA would have shown a greater book net worth than its competitors by the following amounts: Pan American Airways $15 million, American Airlines $13 million, and United Air Lines $26 million. Reconstructed TWA would have had no funded debt, showing 100% equity in its capital structure compared to 67.9% for Pan American Airways, 79.2% for American Airlines and 73.3% for United Air Lines; whereas Historical TWA would have had a ratio of 67.4% of equity to total capitalization. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 25)

Drexel Harriman Ripley stated in their report that they would not have recommended short-term financing because funds required by TWA were very large and the returns on their investment in form of earnings were several years off. They would, therefore, have recommended that between July 1 and September 30, 1955, that TWA take corporate proceedings to authorize a flight equipment mortgage and in the fourth quarter of 1955 to arrange with institutional investors for a commitment to purchase flight equipment mortgage notes in the principal amount ranging between a minimum of $150 million and a maximum of $170 million, with an interest rate of 4% and a commitment fee of ½% on the unused portion. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 31) A summary of the principal provisions of the equipment mortgage and the October 1955 loan agreement are set forth in the Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 29-30, 32, 33.

Lastly, Drexel Harriman Ripley in their Report set forth a five year projection as it would have appeared in September 1955, showing as of December 31 for each of the years 1956-1960, inclusive, the outstanding equipment mortgage notes, their percentage of net tangible assets and the "Leeway" for the issuance of additional funded debt within the 60% voluntary action limit of funded debt to consolidated net tangible assets required by the mortgage. Drexel Harriman Ripley concluded that Reconstructed TWA could expect to be able to take down by 1959 the maximum of $170 million available from the equipment mortgage financing while remaining comfortably within the 60% limitation.

Cross-examination of Morehouse

There is set forth below certain supplemental information developed in the defendants' extensive cross-examination of Morehouse of Drexel Harriman Ripley and certain exhibits admitted in evidence. As was the case earlier in this Report, the information set forth below is selected to illuminate the Drexel Harriman Ripley Report. However, I did not confine my consideration solely to the information listed below.

¶ In formulating the $170 million debt financing in October 1955, Drexel Harriman Ripley made no assumption as to whether interest rates were going up or going down and took no advantage of hindsight in knowing that interest rates substantially increased over the five year period from the fall of 1955 to the end of 1960. (Tr. 3888-3889)

¶ The proposed debt financing of October 1955 assumed and was dependent upon the successful consummation of the May 1955 equity financing. Since in ordering aircraft equipment the lead time is in many cases so long, an airline need not necessarily arrange financing prior to entering into a contractual commitment for the equipment if it is satisfied that its credit standing and liquid capital give it a reasonable expectation that total financing is available. (Tr. 4038)

¶ It would not be proper for an airline to rely upon the credit standing of a parent holding 75% of its stock. (Tr. 4039)

¶ In planning the TWA May 1955 financing, Drexel Harriman Ripley would not have necessarily discussed with Equitable Life "rolling over" $35 million of the equipment mortgage placed in December 1954 and would have men-

tioned possible additional financing in the fall of 1955 in general terms rather than specific terms. (Tr. 4250)

¶ In formulating its recommendations for October 1955 Drexel Harriman Ripley would have believed in the summer of 1955 that TWA in the fall of 1955 would have been negotiating with Boeing for 33 jet transports, of which 15 would be Boeing 707-131s and 18 Boeing 707-331s. (Tr. 4299-4300)

¶ Drexel Harriman Ripley assumed that TWA entered into the long-term financing arrangements on October 1, 1955 and that there would have been some negotiations with Boeing prior thereto. (Tr. 4300)

¶ Drexel Harriman Ripley's recommendations for October 1955 were not based on 20/20 hindsight even though the Capital Expenditure Projections prepared by Price Waterhouse admittedly used 20/20 hindsight. (Tr. 4335)

¶ While the general operating characteristics of jet aircraft were not known in September 1955, Drexel Harriman Ripley were of the opinion that a potential lender could have been satisfied with reasonable forecasts based on the known general operating characteristics. (Tr. 4338)

¶ Coverdale projected TWA revenue income to be greater than the actual results of operations of Historical TWA which showed a loss. On the basis of historical results TWA would not have been able to take down the amounts of money projected by Drexel Harriman Ripley under the 1955 mortgage equipment loan because of the provision of the mortgage limiting funded debt to 60%. (The limitation of debt to 60% of consolidated net tangible assets.) (Tr. 4351)

The Loeb, Rhoades Report and Woodfin Testimony Relating to the October 1955 Debt Financing

The Loeb, Rhoades Report disagreed with the Drexel Harriman Ripley opinion that TWA could and should have made arrangements in October 1955 to borrow between $150 million and $170 million from institutional lenders. Loeb, Rhoades stressed that the Drexel Harriman Ripley Report and testimony of Morehouse recommending the October 1955 debt financing assumed and was dependent upon the successful consummation of the equity financing in May 1955 producing net proceeds of $55.5 million. (Loeb, Rhoades Report, DX 270, Part II, p. 28)

Loeb, Rhoades proceeds to state that in its opinion even if the October 1955 financing was not dependent upon the May 1955 equity financing, it could not have been successfully arranged. The Loeb, Rhoades Report states their opinion as follows:

> "In assessing the likelihood of success for Mr. Morehouse's projected $150-170 million flight equipment mortgage loan of October 1, 1955, we think it relevant to consider the following:
>
> (i) By October 1, 1955 no jets had been ordered by any airlines;
>
> (ii) By October 1, 1955 none of the airlines had arranged any financing (debt or equity) for the purchase of jet aircraft; (Exhibit A)*

* The debt financings referred to by Morehouse on page 32 of his Report (see also Financials—13) were arranged on the following dates: Pan American May 10, 1955; Northwest June 30, 1955; Eastern October 31, 1955; American, November 1, 1955 and United December 21, 1955. However, the earlier Pan American and Northwest financings were for the purpose of acquiring the latest series of pistons ordered. (Exhibit A).

(iii) The maximum $170 million mortgage commitment which Mr. Morehouse assumes TWA could have obtained substantially exceeds the long-term commitments obtained by any other airline in 1955.** The large commitments obtained by United, Eastern and American later in the Fall of 1955 were the largest in the history of the airline industry. Indeed, a $150-170 million loan to TWA on October 1, 1955, would have been almost three times as large as any long-term commitment that had been made to that date to any airline for any purpose, and would have exceeded the commitments to the other airlines by a minimum of $30-50 million. (Exhibit A).

(iv) Detailed projections with respect to the Boeing 707-331s and the Convair 880s could not have been prepared as of October 1, 1955. Lending institutions, such as life insurance companies did not make commitments of the size envisaged by Mr. Morehouse without making a comprehensive analysis of the planned use of the funds. Jet aircraft were an unknown and untested commodity in the Fall of 1955. Any insurance company asked to lend large sums of money for such a purchase during this period would have demanded detailed information as to the type and size of the fleet, cost, terms of payment, delivery dates, earning power, depreciation, planned usage, configuration and the like.

We are advised by counsel that we may assume, based upon the record in the case to date, that the intercontinental Boeing, the 707-320 series, was not ordered by any airline until December, 1955 and that detailed information on that aircraft such as described

---

** American obtained $75 million; Eastern obtained $90 million; and United obtained $120 million of long-term debt. Financing done by other airlines during this period was for much smaller amounts. (Exhibit A).

above was not available to the airlines until some time after October 1, 1955. We do not believe that funds could have been borrowed for the acquisition of this aircraft until detailed projections containing information relating to cost, terms, delivery, earning power and the like could have been made available to prospective lenders. We note that such detailed projections, although hypothetical, were in fact included as a part of Mr. Morehouse's Report (Financials—8, 9 and 10) but that his projections were based upon information apparently not yet available to the industry. We also note that detailed projections which United in fact used in order to obtain its loan commitment in December 1955. (Defendants' Exhibit 197 in evidence.)

Moreover, Mr. Morehouse assumed that TWA's proposed borrowing on October 1, 1955 would have included a $25 million projected down payment for medium/long-range airplanes not yet selected. As to the last item, it is our opinion that a commitment of this size could not have been obtained as of October 1, 1955 to buy an unspecified number of unselected airplanes which had not yet been developed or identified.

(v) Although not disclosed by Mr. Morehouse's exhibits, TWA's earnings, as compared to 1954, began to fall in the second quarter of 1955 and dropped sharply in the third and fourth quarters. (Exhibit F)." (Loeb, Rhoades Report, DX 270, Part II, pp. 29-31)

In conclusion the Loeb, Rhoades Report stated an opinion with respect to the October 1955 debt financing as follows:

"In view of the above, and even assuming, contrary to our view, that the proposed 1955 equity financing had been accomplished, it is our opinion that TWA would not have and could not have obtained a commitment for $150-170 million on October 1, 1955." (Loeb, Rhoades Report, DX 270, Part II, pp. 31-32)

It is noted that Loeb, Rhoades emphasizes that prior to October 1, 1955 none of the airlines had arranged any financings (Debt or Equity) for the purchase of jet aircraft and that the $60 million financing of Pan American and the $29.5 million financing of Northwest arranged on May 10, 1955 and June 30, 1955, respectively, were in each case to finance the acquisition of piston planes, not jets, and in the case of Pan American also for working capital. The first financing specifically concerned with the acquisition of jets was the Eastern Air Lines financing arranged on October 31, 1955 amounting to $90 million of which $40 million was earmarked for future jet orders. The first financing earmarked solely for acquisition of jets was the American Airlines financing of $75 million effected November 1, 1955 and the United Air Lines financing of $150 million effected December 21, 1955, of which $30 million was arranged with thirty-eight banks and $120 million with insurance companies.

Cross-examination of Woodfin

There is set forth below certain supplemental information developed in TWA's extensive cross-examination of Woodfin and certain exhibits admitted in evidence. As was the case earlier in this Report, the information set forth below is selected to illuminate the Loeb, Rhoades Report. However, I did not confine my consideration solely to the information listed below.

¶ The United Air Lines Annual Report for the calendar year 1955 stated in referring to a financing program arranged in December 1955:

> "The largest single financing program in the history of the airline industry was completed by United in December as part of its long-range preparation for

jetliner operations. Included were arrangements for a maximum of $150,000,000 in new capital, to be available over the next five years. Of that amount, $120,000,000 may be realized from the sale of new debentures and up to $30,000,000 may be borrowed under a new bank credit agreement. No equity financing is involved.

"Series D, 4 per cent sinking fund debentures will be sold as funds required from February 1, 1956 through March 1, 1959, to the Metropolitan Life Insurance Company, The Prudential Insurance Company of America and The Mutual Life Insurance Company of New York. . . .

"The new credit agreement is with a group of 38 banks headed by The First National City Bank of New York. Replacing an earlier agreement dated March 1, 1955, it makes loans available through December 31, 1960, with repayment over a five-year term thereafter." (TWA Ex. 180, p. 6, Tr. 7084)

¶ Most of the airline financing from 1946 to the 1955 period was with banks, mostly five year money. (Pan American in October 1946 had a $40 million credit agreement with the National City Bank.) Only Pan American, United and TWA had placed any long-term money with institutions. (Tr. 7182-7183)

¶ Prior to October 31, 1955, when Eastern Air Lines arranged a $90 million financing with Equitable Life Assurance Company, of which $40 million was to finance jet acquisitions, there had been only the following long-term financings arranged with insurance companies: (i) a $60 million financing of Pan American Airways arranged on May 10, 1955 with a group of several insurance companies, (ii) the $40 million financing arranged by TWA with Equitable Life Assurance Company to replace a 1953 bank

credit and to purchase 20 Lockheed 1049-Gs, and (iii) three financings of United Air Lines arranged with Metropolitan Life and MONY, a $12 million financing in 1947, a $10 million financing in March 1952, and a $20 million financing in July 1954, the last two of which were stated to be for general purposes. (DX 270—Exhibit A—pp. 2, 4, 5 and 6, Tr. 7250-7251)

¶ On October 25, 1955, the Board of United approved the purchase of 30 Douglas DC-8's at a total cost of $175,000,000; on October 14, 1955, Pan American Airways ordered 25 Boeing jets and 20 Douglas jets; and in November, 1955 American Airlines ordered 30 jets (Tr. 7382-7383).

¶ An agreement in principle is reached between the lender and the borrower some time before the execution of the formal written documents evidencing the loan commitment. (Tr. 7388)

¶ In October 1955, after giving effect to the $55.5 million May 1955 equity financing and the $170 million October 1955 debt financing, TWA on a pro-forma basis had a more favorable ratio of debt to total capitalization (57%) than did United Air Lines which had a ratio of 61%. But it is doubtful that TWA could have raised more long-term money than United Air Lines. Long-term lenders would be interested in earnings as well as amount of equity and TWA was not doing well in the latter part of 1955. (Tr. 7409-7410)

¶ In Woodfin's opinion it would have been a mistake to terminate in May 1955 the $40 million financing arranged by TWA with Equitable Life in December 1954. Institutional lenders do not like to have recently completed financings terminated even if Equitable Life had been will-

ing to "roll over" the $40 million financing. Woodfin doubts that Equitable together with other insurance companies would have been willing to participate in an additional $150-170 million financing in October 1955 as recommended by Drexel Harriman Ripley. Such a financing involved a larger commitment than a group of large insurance companies gave subsequently to TWA's three principal competitors. Woodfin would hold this opinion whether or not TWA had effected the $55.5 million equity financing in May 1955. Only a relatively few number of large life insurance companies were participating in airline financing in 1955. (Tr. 7250-7255)

The May 1959 Debt Financings

Drexel Harriman Ripley recommended that Reconstructed TWA in May 1959 make (i) an underwritten non-preemptive offering of $60 million 5% Convertible Subordinated Debentures and (ii) a private placement with institutional investors of a long-term loan commitment ranging from $90 million to $110 million and bearing interest at 6%.

In formulating their recommendation, Drexel Harriman Ripley first considered the reconstructed situation of TWA in September 1956, again for the period from 1957 through mid-1958 and lastly in 1959.

As of September 30, 1956

It was assumed that TWA had placed orders in September 1956 for 30 Convair 880 jet aircraft for delivery in 1960 at a total price of $157,900,000 and that a down payment of $26,300,000 was made at the time the orders were placed with substantially no further payments required until the third quarter of 1959, the funds for the down

payment being obtained from a takedown on July 1, 1956 of $50 million of the Series A Mortgage Notes arranged for by Reconstructed TWA in October 1955.

The report proceeded to examine the financial posture of TWA as of September 1956 in the light of its then projected capital expenditure program and considered what, if any, financing arrangements might have been indicated in September 1956.

Drexel Harriman Ripley considered TWA's reconstructed operating results during the first nine months of 1956, which showed a loss of $500,000 and internal cash generation of $17.5 million and noted that by September 1956 Reconstructed TWA was running well behind the Coverdale forecast of funds generated prepared as of September 1955. They also considered (i) a reconstructed balance sheet as of September 30, 1956, which gave effect to the receipt of $55.5 million net proceeds of sale of common stock in May 1955 and the takedown of $100 million under the October 1955 debt financing, (ii) TWA's capital expenditure program projected by Price Waterhouse as of September 30, 1956, and (iii) the projection of TWA money requirements as of September 30, 1956, which indicated a peak requirement by the 1960 third quarter of $233.5 million, which was $163.5 million in excess of the $70 million remaining available out of the $170 million 1955 mortgage commitment.

Drexel Harriman Ripley concluded as follows:

> "In summary, then, TWA's financial posture at September 30, 1956 was about as follows: It had experienced sizable operating losses during the nine-month period then ended, and C&C was forecasting further losses in 1957. TWA had a projected peak requirement for $163.5 million in new outside funds (over and above what had been provided for in the 1955 mortgage financing) and it appeared that some form of junior

security would have to be included in the financing of this requirement. But the new money did not appear to be needed before the first quarter of 1959, almost 2½ years hence.

We conclude that under the circumstances prevailing in September 1956 we would have recommended to TWA that it not attempt, at that time, to formalize further financing arrangements even though all indications were that it would have to do so later. We believe that TWA would have held conversations with its major institutional lenders to advise them of the enlargement of its projected money requirements, indicating (a) that it would be approaching them at a later date to discuss further borrowing arrangements, and (b) that it recognized the indicated need for junior financing prior to or in conjunction therewith.

It would not have been practical, in September 1956, to attempt to pinpoint a target date for a financing two years or so away. We believe that it would have been logical to plan in terms of a financing sometime in the latter part of 1958 or early in 1959. However, since the junior financing would doubtless involve the sale of common stock, either directly or through the use of a convertible security or warrants, we believe that TWA and we, as their investment bankers, would have been keeping a weather eye on the market for airline securities with a view toward a possible earlier financing should stock market conditions permit." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 38)

1957 Through Mid-1958

Drexel Harriman Ripley then proceeded to consider the reconstructed TWA situation in 1957 through mid-1958. They assumed that the $70 million remaining balance of the $170 million financing arranged in October 1955 had been taken down, $50 million on April 1, 1957 and $20 million on January 1, 1958, and that Reconstructed TWA had the same aircraft leases as Historical TWA. They noted

that reconstructed generation of funds from internal sources for the twelve months ended September 30, 1957 exceeded by $13.9 million the forecast made by Coverdale in September 1956, but that in the last quarter of 1957 internal cash flow on a reconstructed basis was $4.8 million lower than the forecast for that quarter and that cash flow continued to lag behind the forecast for the next two quarters so that the accumulated lag in cash flow for the period from September 30, 1956 to June 30, 1958 was $3.5 million. On instructions from TWA's counsel, Drexel Harriman Ripley assumed that in the fourth quarter of 1957 TWA made a commitment to acquire four L1649A piston aircraft and four L1049H piston aircraft, although the expenditures for these eight piston aircraft were not included in the Price Waterhouse Projection of Capital Expenditures made as of September 1955 and September 1956. The net cash expenditures by TWA for these eight aircraft totalled $17.3 million and were to be made in the last quarter of 1957 and the first three quarters of 1958, and Drexel Harriman Ripley assumed that these acquisitions would be financed by the takedown on January 1, 1958 of the last $20 million available under the October 1955 financing. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 39-40)

On the basis of the foregoing considerations, Drexel Harriman Ripley in their report made the following comments with respect to the situation in mid-1958:

> "As a result of the foregoing factors, TWA would have been aware, by mid-1958, that funds required from outside sources to meet projected capital expenditures would be larger than indicated by the September 1956 projection. Timing of the money requirement had not changed, however. It appeared that the airline should be able to meet its scheduled progress

payments on the jets, and its other capital requirements, without obtaining new funds from outside sources until the spring or summer of 1959.

TWA, however, was on 'thin ice' with respect to the funded debt restrictions of the Flight Equipment Mortgage. Exhibit: Financials—27 indicates that throughout the first half of 1958 TWA's reconstructed funded debt as a percentage of net tangible assets would have hovered right around the 60% figure set forth in the voluntary action covenant of the funded debt limitation. It did not appear that there was any immediate danger of reaching the 65% default level." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 41)

Operating under these considerations Drexel Harriman Ripley stated that TWA probably would have given thought to doing some junior financing in 1958 in order to provide some additional "cushion" beneath its outstanding funded debt and thereby avoid the possibility of default under the 65% provision of the outstanding Flight Equipment Mortgage. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 43)

After comparing the market prices of TWA stock with Standard & Poor's Index of Air Transport Stocks as well as the AIMV (Aggregate Indicated Market Value) and the book value of TWA shares and noting the decline of TWA common from a mid-1955 high of 31⅝ to 12¾ in March 1958, when the historical book value per share was $15.09, and after also considering published comments on airline stocks of Moody's Stock Survey, Drexel Harriman Ripley commented as follows:

"So, throughout the first half of 1958 TWA's shares, and the shares of its principal competitors, were selling at prices only slightly recovered from their then recent lows. But the market generally seemed to be expecting an improved performance from airline shares

during the forthcoming months. Since TWA's period of outside money need still appeared to be at least twelve months away, we believe that we would have recommended that TWA adhere to its plans for a financing in 1959 rather than attempt to accelerate part of the program. It appeared to be a good business risk that market conditions for an equity offering by TWA (which would clearly be the cornerstone of the financing) would be better by mid-1959 than they were in mid-1958.

Thus, commencing in the summer of 1958, we believe that TWA, in consultation with its lawyers, accountants, investment bankers, institutional lenders, etc., would have been engaged in the task of designing and preparing for a major financing, in the spring or summer of 1959, involving the sale of both senior and junior securities." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 43)

Early 1959

In preparing for the major financing in the spring or summer of 1959, Drexel Harriman Ripley considered various earnings and other data relating to TWA and its principal competitors including a tabulation of TWA operations, both historically and reconstructed, year by year, 1954-1958, compared with its three main competitors. Drexel Harriman Ripley observed that the operating results of all four airlines during the five year period showed the effects of the high cost of preparation for the introduction of jet equipment, but noted that TWA, with losses from operations in three out of the five years, turned in by far the poorest performance of the four airlines. The report then turned to consideration of a more detailed income account for Reconstructed TWA for the five years 1954-1958, inclusive, and set forth brief summaries of TWA news releases commenting on revenues and operat-

ing results put out on April 1, 1959 and April 23, 1959. Consideration was also given to a summary of items appearing in the current section of Moody's Transportation Manual from January 1, 1959 to June 30, 1959, relating to the CAB monthly earnings reports of TWA and its competitors and also the earnings reports of TWA and its competitors for the year ended December 31, 1958 and interim reports, which in each case were compared with the similar period a year earlier. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 47-52)

Having considered operating figures of TWA and its three principal competitors as summarized above, the report then turned to a consideration of the general stock market situation and the market quotations for the common stocks of TWA and its three principal competitors. It noted that the stock market in general was strong and advancing through 1958 and the first half of 1959, referring to the Dow Jones Industrial Average during that period, which indicated a percent advance over the 18 month period ranging from a high of 43% to a low of 41% and for the six month period ended June 30, 1959 ranging from a high of 8% to a low of 6%. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 53)

In commenting upon the market quotations for the common stock of TWA's competitors, the Report noted that over the 18 months ended June 1959, the stocks of TWA's main competitors advanced in greater amounts percentagewise than the Dow Jones Industrials. With respect to the market for the TWA common stock, the Report commented:

> "TWA, although operating at a loss in the first quarter of 1959, was sharply reducing its loss in that quarter as compared with the corresponding quarter of 1958. TWA stock advanced strongly in price during the first half of 1959, in fact, more than double that of the Standard & Poor's Index of Air Transport

Stocks. And it was selling well over its book value." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 54)

A comparative tabulation showing volume, price per share and approximate dollar volume of trading in TWA common stock for the entire year 1958 and the first six months of 1959 was then set forth, and also a tabulation giving a comparison of the market prices of TWA stock with its historical book value at year-end over the five year period preceding 1959 and at the middle of 1959.

The Report commented upon the price-earnings ratios of TWA and its three principal competitors as follows:

"Translating the foregoing figures into price/earnings ratios (P/E), and using the Standard & Poor's figures of earnings per share, brings the following results:

	Price/Earnings Ratios-Times			
	TWA	PAA	AAL	UAL
Five-Year Average 1954-1958	30.8	19.6	15.8	10.9
Three-Year Average 1956-1958	—	20.7	15.9	10.7

Note: Prices taken at average market price—April, May, June 1959. Using the AAL figures including the 'special credit' for 1954, the ratio for the five-year average 1954-1958 becomes 15.1 time (instead of 15.8 times).

It will be noted that TWA shows no figure for the P/E ratio for the three-year period 1956-1958, the reason being that TWA operated at a loss in each of the three years. Its three main competitors operated profitably in each of the five years 1954-1958. Nevertheless, as stated hereinbefore, TWA stock was strong in the market in early 1959, doubtless because of anticipated future operating profits." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 56)

The Report then noted that Standard & Poor's was advising investors to hold TWA, buy Pan American and American Airlines, and hold United Air Lines. It then noted that Moody's Stock Survey published a relatively bullish article on the subject of airline stocks in the spring of 1959 and that both Moody's and Standard & Poor's were emphasizing the importance of the coming jet airplanes.

Again the report reconstructed the TWA situation in March 1959 resorting to a reconstructed balance sheet, a capital expenditure program as projected by Price Waterhouse as of March 1959, and a projection of money requirements as of March 1959, noting that the latter projection indicated a peak money requirement by the 1960 third quarter of $160.7 million.

Lastly the Report, in coming to its recommendations as to the 1959 debt financing, noted that (i) as of March 31, 1959, reconstructed funded debt as a percentage of net tangible assets was 59.1%, (ii) as of that date not more than $100 million could have been raised by the issuance of additional equipment mortgage notes, assuming a total financing of $160 million, and (iii) all of the new money would not be required by TWA until the third quarter of 1960, by which time TWA's net tangible asset position should improve through retention of forecast earnings. The Report stated its recommendation as follows:

> "Under the above circumstances, we believe that we would have recommended junior financing in the amount of $60 million. Subject to the sale of $60 million of junior securities, we believe that TWA could have obtained commitments from institutional investors for the private purchase of Series B Flight Equipment Mortgage Notes to provide, over the next two years, a minimum of $90 million and a maximum of $110 million." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 61)

The Report then turned to specific consideration of the essential terms for the junior financing and the senior debt financing.

Junior Debt of $60 Million

Drexel Harriman Ripley ruled out issuing common stock because of the poor earnings record of TWA and also excluded the issuance of a straight or convertible preferred because the dividends would not be deductible for tax purposes by TWA. The Report concluded that convertible subordinated debentures should be publicly offered in May 1959 and that the offering should be underwritten rather than making a preemptive offering to stockholders.

It was Drexel Harriman Ripley's opinion that the conversion rate should be "right on" or very close to the market at the time of offering. As the announcement of a proposed offering of convertible subordinated debentures of the magnitude contemplated frequently has a depressing effect on the market, Drexel Harriman Ripley in arriving at the conversion price of $18.50 per share discounted by 15% the mid-May 1959 market price of $21.75 per share (first concluding, based on a consideration of the historical and reconstructed earnings of TWA that a reconstructed market value would have been approximately the same as the historical value). (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 66)

An interest rate of 5% was recommended, which was the same rate being paid on similar issues by American Airlines and Eastern Air Lines and slightly above a 4⅞% rate being paid by Pan American Airways and a 4¾% rate being paid by KLM.

An outline of the specific terms of the proposed subordinated debentures is set forth on pages 68 and 69 of the Drexel Harriman Ripley Report.

Senior Debt Financing

Drexel Harriman Ripley were of the opinion that TWA could and should have obtained in May 1959 from institutional investors commitments to purchase from $90 million to $110 million Flight Equipment Mortgage Notes subject to the prior sale of $60 million convertible subordinated debentures, the funds to be taken down over a period ending December 31, 1960.

The recommended interest rate was 6%, which was admittedly higher than the interest rate on current unsecured borrowings of its principal competitors, Pan American Airways, American Airlines and United Air Lines. Only Delta and Northwest Airlines were paying a 6% rate on their senior debt. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 70)

It is important to note, and the Drexel Harriman Ripley Report acknowledges, that Reconstructed TWA, giving effect to the May 1959 financings, would have had a higher debt ratio and lower earnings and cash flow coverages than the other six trunk airlines, except that TWA's cash flow would have exceeded that of Pan American Airways and Delta. However, as a counter-consideration, Drexel Harriman Ripley in their Report cited as favorable factors for TWA (i) a "strong forecast of earning power" arising from ownership by December 1960 of a jet fleet which would have equalled or surpassed the fleets of each of its three main competitors, (ii) a strong mortgage security for its senior debt as compared with the other airlines whose debts were unsecured, and (iii) a higher interest rate except for Delta and Northwest. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 70-71)

The terms of the loan agreement pursuant to which the mortgage equipment notes would be issued are set forth on page 71 of the Drexel Harriman Ripley Report.

Lastly, the Report compared the balance sheets of Historical and Reconstructed TWA with those of Pan American Airways, American Airlines and United Air Lines, and also compared the historical and reconstructed capital structure of TWA as of December 31, 1960, which indicated that Reconstructed TWA would have had a total funded debt of $320,180,000, of which $260,180,000 was senior, compared to the historical total funded debt of $223,242,000, of which $123,242,000 was senior. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 74)

The Loeb, Rhoades Report Relating to the May 1959 Debt Financing

Loeb, Rhoades in their Report stated that notwithstanding their conviction that neither the May 1955 equity nor the October 1955 debt financing recommended by Drexel Harriman Ripley could have been accomplished, they would assume that for the purpose of commenting on the proposed 1959 financing, the 1955 financings as recommended by Drexel Harriman Ripley had been accomplished. Their Report noted that the proposed convertible debentures financing of $60 million substantially exceeded any equity financing done by Pan American, American, Eastern or United during the 1955-1960 period, mentioning that Eastern sold $25 million of convertible subordinated notes on October 21, 1958, American sold $40 million of convertible subordinated debentures on June 18, 1959, Pan American sold $46.97 million of convertible subordinated debentures on July 29, 1959 and United sold $25 million of convertible subordinated debentures on November 30, 1960. In view of these circumstances and the fact that the reconstructed earnings of TWA during the years 1956, 1957 and 1958 were disappointing, Loeb, Rhoades questioned that the

offering would have been doable. Further, Loeb, Rhoades found it difficult to believe that it would have been possible to have had two equity financings—one in 1955 and one in 1959—and catch the market each time at or near its high over a thirteen-year period. (Loeb, Rhoades Report, DX 270, Part II, p. 33).

Turning to the proposed private placement of $90 million to $110 million of 6% mortgage notes in May 1959, Loeb, Rhoades expressed doubt that an institutional investor would have been willing to enter into the commitment again in light of the poor earnings and cash flow coverages as well as the high senior debt ratio of 60.7% indicated for the first quarter of 1960 on page 70 of the Drexel Harriman Ripley Report. In commenting on the schedule, Loeb, Rhoades stated:

"(c) The May 1959 $90-110 Million Loan Commitment

With respect to the private placement of $90-110 million of 6% mortgage notes in May 1959, we doubt that an institutional investor would have been willing to enter into the commitment in light of the poor earnings and cash flow coverages and the high senior debt ratio of 60.7% shown for reconstructed TWA in Mr. Morehouse's schedule at page 70. According to the schedule, on a pro forma basis reconstructed TWA had earned an average over five years (1954-1958) of only half of the interest that would have been payable had the total reconstructed senior debt of $280 million been outstanding. The 12 months ended March 31, 1959 were not much better than the five year average, as only 70% of the interest had been earned. None of these figures would seem to justify an institutional lender making an additional $90-110 million senior debt investment in reconstructed TWA.

Based upon our dealings with insurance companies in arranging financing for our clients, we know that all

insurance companies, including the major lenders, are regulated in their investments by state laws, which prevent the lenders from acquiring obligations which are predominantly speculative in character.

We note that Mr. Morehouse speculated as to the quality of both his proposed October 1955 mortgage obligations and his $60 million May 1959 convertible subordinated debentures. In Mr. Morehouse's opinion the institutional investors would have viewed the October 1955 obligations as 'not quite up to Baa quality' (page 31). As to the May, 1959 convertible subordinated debenture issue, he states that it 'might have been rated no higher than B'.* (page 68). However, he gives no clue as to a possible rating for the $90-110 million May 1959 mortgage notes. It is our opinion that the May 1959 mortgage notes would have been considered at best of B quality, and thus might well have presented to institutional lenders a question as to whether such an investment would have complied with applicable state laws. (Loeb, Rhoades Report, DX 270, Part II, pp. 33-35)

* Although DHR Exhibit: General 1 defines Baa and Ba ratings, no definition of a B rating is given. Moody's defines a B rating as follows: 'Bonds which are rated B generally lack characteristics of the desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.'"

The Loeb, Rhoades Report then turns to a consideration of the reconstructed capital requirements of TWA from October 1, 1955 through December 31, 1960 appearing in the Drexel Harriman Ripley Report as Exhibit: Financials—31, which showed a total requirement of $544.8 million to cover the cost of the 63 jet planes originally ordered by Toolco for TWA, as well as the cost of the piston acquisitions TWA historically incurred. Apart from funds generated from operations assumed on a reconstructed basis, TWA would have been faced with raising in excess of

$300 million of new money to carry out the hypothetically reconstructed capital requirement program in the period from October 1, 1955 through December 31, 1960. Loeb, Rhoades concludes that in view of the diminishing reconstructed earnings in 1955 and the losses incurred in 1956, 1957 and 1958, TWA could not independently have raised $300 million on reasonable terms.

After listing on page 36 of their Report the financial aid given TWA historically by Toolco in the 1955-1960 period which assisted TWA historically in acquiring 47 jet planes and various piston planes, Loeb, Rhoades states as its opinion that TWA could not have independently financed the capital requirements of the hypothetical program which were even greater than that met historically by TWA with Toolco's assistance. In conclusion, Loeb, Rhoades reverts to the May 1955 equity financing of $58.4 million recommended by Drexel Harriman Ripley as the cornerstone of its program and repeats its opinion that the equity financing could not have been completed without Toolco's participation and that without Toolco, no prudent and competent management without the benefit of hindsight would have adopted such a program.

Cross-examination of Witnesses on 1959 Debt Financing

The cross-examination of the expert witnesses as to that portion of their respective reports relating to the 1959 debt financing was not as extensive as the cross-examination devoted to the May 1955 equity financing and the October 1955 debt financing, possibly because their direct testimony as embodied in their respective reports was especially detailed and explicit. No supplemental information developed on cross-examination addressed to the May 1959 debt financings needs to be noted herein.

Determination of Damages Related to Financing

I find that those paragraphs of the complaint that form the basis of TWA's claim for damages related to financing, specifically paragraphs 7(f), 10(g), paragraphs 23 through 28 inclusive and paragraph 52(c) and (d) are "well pleaded" and in considering and determining the damages claimed by TWA, I accept these allegations as proved.

It may be helpful once again to restate below in summary form the essence of these allegations as follows:

1. For the purpose of creating and maintaining control of the business of financing the purchase of aircraft for use by TWA and strengthening control over the acquisition of aircraft by TWA, the defendants rendered TWA dependent upon them for such assistance in financing as defendants might choose to provide, refusing to allow equity financing by TWA except on condition that as a result Toolco would increase its equity position in TWA and causing TWA instead to obtain funds chiefly by means of debt financing, thus rendering TWA unable to seek financing needed for the acquisition of aircraft except upon the approval of defendants. The actions complained of commenced subsequent to the acquisition by Toolco of a stock interest in TWA and the action continued throughout the period covered by the complaint. (Par. 23).*

2. From 1955 until December 1960 defendants dictated the type and manner of acquiring aircraft and the manner of financing the acquisition of aircraft. (Par. 24).

3. At least as early as 1955 United States air carriers recognized the needs for the extensive financing required for the acquisition of jet powered aircraft. (Par. 25).

---

* Toolco first acquired stock of TWA in 1939 (6 CAB 153, 154) and continued its actions until December 31, 1960.

4. In 1955 and continuously thereafter until December 1960 defendants directed TWA to make no efforts itself to obtain financing necessary for the acquisition of jets required for TWA needs. (Par. 26).

5. Commencing in 1955 and continuing thereafter various other air carriers, including TWA competitors, made appropriate arrangements for the financing of jet aircraft, and in 1955 and in 1956 obtained commitments for funds at interest rates ranging from 4% in 1955 to 4¼%-4¾% in 1956. (Par. 27).

6. In 1955, and for several years thereafter defendants discussed various proposals for financing TWA jet aircraft, but made no arrangements for such financing, nor was TWA allowed to make any such arrangements until December 1960, when interest rates for long-term debt were approximately 6-6½% (Par. 28); and

7. TWA was foreclosed from obtaining financing on more advantageous terms than those available to it in December 1960 and thereby suffered a loss because of the greater cost of borrowing and TWA's ability to obtain financing for its needs was substantially impaired. (Par. 52(c) and (d)).

The well pleaded allegations restated above, which are accepted as facts, lead to the determination that with one important exception noted below, the existence of Toolco, its ownership of stock and the role played by it historically in making or guaranteeing loans to TWA or in buying TWA equity all must be ignored in considering and determining damages to TWA attributable to the foregoing allegations of the complaint. To give weight to the existence of Toolco, its TWA stock ownership and the role played by it in TWA financial affairs would be in deroga-

tion of the allegations and not permissible as I interpret the doctrine of *Thomas* v. *Wooster* (114 U. S. 104) discussed on pages 21 through 24 of this Report. Notwithstanding this exclusion, I must consider the actual Balance Sheet as of December 31, 1954 and the actual operating results for the year 1954 and the first two calendar quarters of 1955, as did TWA and its experts Drexel Harriman Ripley, and as must have an independent Board.

Proof of Damages. TWA in submitting its proof of damages has endeavored to establish through the expert testimony of Drexel Harriman Ripley what it would have recommended to TWA in the early part of 1955, in October 1955 and in May 1959. Further through the expert testimony of Drexel Harriman Ripley and through cross-examination of Woodfin, a general partner of Loeb, Rhoades, the expert retained by the defendants, TWA has endeavored to establish that if the Board of TWA in early 1955 and continuously thereafter had been composed of directors acting prudently, independently and free from any control or dominance by Toolco or any other major stockholder, it would have approved and could have carried out the recommendations of Drexel Harriman Ripley.

TWA and its expert, Drexel Harriman Ripley, state quite clearly and repeatedly that the debt financings recommended in October 1955 and May 1959 assumed and were conditioned upon the sale in May 1955 of common stock bringing net proceeds to TWA of $55.5 million (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 23-25; Tr. 3981, 4313-4314). The recommendations with respect to the May 1959 sale of $60 million convertible debentures and the placing of $90-$110 million equipment mortgage notes assumed and were additionally conditioned upon the successful placing in October 1955 of a $150-$170 mil-

lion equipment mortgage (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 58).

It is, therefore, understandable why TWA, its expert and counsel devoted a substantial amount of attention to the prudence and doability of the May 1955 equity financing and why the defendants, their expert and counsel similarly addressed an equivalent amount of attention to proving that the May equity financing was imprudent, premature and not doable.

No alternative theory of damage was presented by TWA or the defendants and I must, therefore, address myself to TWA's contention that an independent and prudent Board of TWA could and should have sold in May 1955, $58.5 million of common stock of TWA which would bring net proceeds to TWA of $55.5 million.

In the receiving and hearing of evidence on damages I have been guided by the principle of *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U. S. 251 (1946). The Supreme Court in *Bigelow* stated that "the most elementary conceptions of justice and public policy require that the wrongdoers shall bear the risk of the uncertainty which his own wrong has created." (327 U. S. 251, 265). However, the Court defined the responsibilities of the trier of fact in the following language at page 264:

> "In such a case, even where the defendant by his own wrong has prevented a more precise computation, the jury may not render a verdict based on speculation or guesswork. But the jury may make a just and reasonable estimate of the damage based on relevant data, and render its verdict accordingly."

I recognize that with respect to participation in the financing of commercial airline companies and aircraft manufacturing companies, Drexel Harriman Ripley, and

its senior officers who participated in the preparation of their Report are eminently qualified. As a product of careful and sophisticated statistical research and presentation their Report is commendable. However, after careful deliberation, I have determined that TWA has not established that a prudent and competent management of TWA acting independently and free of any control or interference on the part of Toolco would and should have calculated in the spring of 1955 the amount of the financial requirements of TWA for the jet aircraft age. It is also my determination that an independent and prudent TWA management would not have accepted the recommendation of Drexel Harriman Ripley that TWA sell in May 1955 $55.5 million (net proceeds) in common stock of TWA.

For me to find to the contrary would in my opinion endow Drexel Harriman Ripley and an independent prudent Board of TWA in 1955 with a prescience, wisdom and perfection of timing that exceeds the natural capacity of the most experienced men acting without the benefit of hindsight. I am aware that in the spring of 1955 the equity capital of historical TWA reflected the influences of the major stockholder, Toolco, over several years prior thereto, but I am not persuaded that it has been convincingly established that TWA was "obviously short of proprietary capital" in the early part of 1955 (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 21).

TWA and Drexel Harriman Ripley compared the net worth in absolute dollars of TWA with the net worth of its principal competitors and showed that at best TWA was short by $25.7 million (United Air Lines) and at worst short by $39.1 million (Pan American) (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 9). In addition, TWA and Drexel Harriman Ripley resorted to

a comparison of certain "yardsticks" applied to TWA and to its principal competitors. Several "yardsticks" were employed: (i) Total Operating Revenue; (ii) Net Operating Income; (iii) Net Income Including Capital Gains; (iv) Revenue Airplane Miles Flown; (v) Available Seat Miles; and (vi) Net Operating Income Per Revenue Airplane Miles and Per Million Available Seat Miles for 5 years 1950-1954 and for one year 1954. Defendants' expert, Loeb, Rhoades, stated that these "yardsticks" are tools normally used for measuring operating performance. On that basis TWA, which as the record discloses had revenue and earnings up to December 31, 1954 that compared favorably with those of its principal competitors, might be said to have made the most efficient use of its equity capital (Tr. 7122-7123). It is deemed significant that a comparison of debt-equity ratios as of December 31, 1954, indicated that TWA with a ratio of 78.4% equity to 21.6% debt was in a better financial position than American and United and about equal to Pan American. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 9).

Loeb, Rhoades was of the opinion that TWA having placed with Equitable Life a $40 million Equipment Mortgage Loan in December 1954, was adequately financed. I accept this opinion of Loeb, Rhoades. In January and February 1955 the performance characteristics of commercial jet aircraft and the dates on which they were to be delivered were still far from being settled. It was acknowledged that the delivery dates for jet aircraft were three or more years away. While there was discussion in the trade press and periodicals that commercial airlines were almost certain to be using commercial jets in the future, it was still an open question whether they were to be pure jets or turbo-prop jets (Loeb, Rhoades Report, DX 270, Part II, pp. 6-7). While the Annual Report in 1953

of the National Aviation Corporation, a closed-end investment trust, concentrating on airline and aircraft manufacturing industries regarded the DC7 and the Super Constellation as the last of their kind for mass air travel. Its Report for 1954 referring to the advent of the Vickers Viscount turbo-prop stated that the new "shape of things to come in 1955-58 is in ferment * * *" (See page 196 this Report). In the early months of 1955 Boeing could not say when it would commence the manufacture of commercial jets. Its Annual Report for the calendar year 1954 which bears the date March 7, 1955, was far from definite. The manufacturing facilities, tools and equipment used by Boeing for the manufacture of the U. S. Air Force jet tankers were owned by the U. S. In early 1955 Boeing was seeking, but had not obtained, the consent of the U. S. Air Force to use these facilities for the manufacture of commercial jets (this consent was not obtained until August 1955) (Tr. 6889).

During the spring and summer of 1955 the specifications and performance characteristics of the commercial jet continued to be the subject of speculation and discussion. The functioning of jet aircraft in hot weather, noise at airports and the choice between pure jets and turbo-props, such as the Electra and Vickers Viscount was still unresolved (Tr. 6889-6893). It was not until October, November and December of 1955 that delivery schedules were arranged and firm contracts were signed. It was in those months that the airlines made arrangements to finance the acquisition of jets. The first financing arranged was by Eastern Air Lines on October 31, 1955 for $90 million, of which $40 million was earmarked for the purchase of jets. This was followed by the American Airlines financing of $75 million

arranged on November 1, 1955 and the United Air Lines financing of $150 million arranged on December 21, 1955, these being solely to finance the acquisition of jets.

I find it unlikely for an independent Board of TWA to have acted upon the Drexel Harriman Ripley recommendation with respect to initiating a plan to secure $300-400 million over six years in the first quarter of 1955 when there was no proven need for equity capital and when specific information with respect to the performance characteristics and delivery dates of jet aircraft was still unavailable and uncertain. That is to say, I am not persuaded that this information was available in sufficiently definite form to permit the formulation of the financial program of the magnitude which Drexel Harriman Ripley states it would have recommended, and I conclude that an independent prudent Board of TWA would not have accepted and acted upon the Drexel Harriman Ripley recommendations and that the sale in May 1955 of common stock of TWA for $58.5 million netting TWA $55.5 million would not have occurred.

But even if an independent prudent Board of Directors of TWA would have concluded in the early months of 1955 that a program should be formulated and acted upon to provide funds with which to finance the long-term acquisition of jet aircraft, I am persuaded by and accept the expert testimony of Loeb, Rhoades to the effect that such a Board would not have implemented the plan advocated in the Drexel Harriman Ripley Report. Loeb, Rhoades in their direct testimony and their cross-examination established the following points: (i) TWA was not clearly in immediate need of equity capital as asserted by Drexel Harriman Ripley; (ii) the $58.5 million common stock offering exceeded by more than $11 million the sum total

of all domestic trunk common stock offerings during the 1946-1955 period; (iii) the terms of the one-for-one offering involved an extreme dilution of stockholders' interest; and (iv) the $58.5 million offering exceeded by $23 million the sum total of common stock offerings of all other airlines between May 1955 and 1960 (Loeb, Rhoades Report, DX 270, Part II, Exhibit A). It is also significant to note that United Air Lines which was being advised during the period in question by Drexel Harriman Ripley sold no equity to finance jets until 1960, when it issued convertible debentures in the amount of $25 million.

The recommended October 1, 1955 mortgage debt financing amounting to $150-170 million was stated by TWA's expert, to be largely dependent on the successful completion of the May 1955 common stock offering. Testimony of both plaintiff and defendants indicated that an improved balance sheet based on a reconstruction of TWA as of September 30, 1955 incorporating the added equity would be a crucial step in securing the large amount of debt conceived by Drexel Harriman Ripley for the fall of 1955.

TWA's expert was faced with a difficult task in offering to prove that large scale financing would have been obtained in 1955 in an amount and on the terms estimated. Relative to the previous year, TWA's quarterly earnings were dropping rapidly after the first quarter of 1955. (Loeb, Rhoades Report, DX 270, Part II, Exhibit F.) It appears that in order to secure the amount indicated at favorable terms that TWA would have had to complete jet financing commitments before lending institutions became cognizant that TWA's earnings deterioration was more serious than a mere seasonal variation. Against this history TWA and Drexel Harriman Ripley endeavored to show that an independent TWA Board would have had

the singular foresight to plan both the common stock offering of $55.5 million and the October 1, 1955 debt financing of $150-$170 million well ahead of its competitors. As indicated above, the advent of commercial jet aircraft was the subject of discussion in the trade press in November and December of 1954 and January of 1955 and was commented upon in the Boeing Annual Report of 1954 which was dated March 7, 1955, and the cost of a commercial jet aircraft was generally accepted to be in the neighborhood of $4,250,000. Nevertheless, I am satisfied from the record that there remained to be determined as of August-September 1955 (the time which the debt financing would have had to be negotiated) much vital information regarding specific aircraft orders, performance and delivery schedules before realistic bargaining for such large scale funds could take place. Indeed, a $150-$170 million loan to TWA on October 1, 1955, would have been almost three times as large as any long-term commitment that had been made to that date to any airline for any purpose. (See page 234 this Report). I conclude that TWA has not proved that either of the 1955 financings could have been reasonably negotiated at the time, in the amount and according to the terms suggested, by an independent and prudent management.

Since the May 1959 equity financing of $60 million and debt financing of $90-110 million assumed and were dependent upon the 1955 common stock and mortgage debt financings and since I have determined that the latter on their face as proposed by TWA's expert could not have taken place under the historical circumstances established in the record, I thus find a failure of proof with regard to these subsequent financings. Although the complaint alleges damages attributable to defendants' interference with the proper and timely financing of TWA, I do not feel that I, as Special Master, can independently, with the

record available, make an ultimate determination of any specific amount of damages with respect to financing. Therefore I determine on the whole that no damages be awarded to TWA in respect of the allegations of the complaint set forth above.

In view of my determinations above it is not necessary for me to consider the calculation of the debt burden as of December 31, 1963. However, I do think it might be proper for me to observe that an independent prudent management might have subsequent to December 31, 1963 found opportunities to refinance all or part of the funded debt at more favorable terms and thus nullify the significance of a present value comparison as far as damages are concerned.

IV.

Loss Due to Delay in Disposal of Displaced Piston Aircraft

Plaintiff alleges in paragraph 52 of its complaint that it "was foreclosed from the opportunity for early sales of its obsolescent piston-engine aircraft, causing loss to TWA". It claims that the earlier delivery of the jet aircraft would have allowed it to retire many of its piston aircraft earlier and at least as early as its competitors did (TWA Ex. 2, pp. 22-23) and that a decline in the market prices obtainable for these aircraft during that period caused TWA damages of $6,880,600, before trebling (TWA Ex. 6B, pp. 9, 24-26). TWA has lowered this claim to $5,700,000 before trebling by taking into consideration possible losses due to uncollectible items receivable (Plaintiff's Brief 231).

TWA does not contend that the acquisition of any particular jet airplane would have caused the retirement of any particular piston plane or planes (Tr. 1649), and it states that as the jet aircraft were delivered over a period of time, they displaced piston aircraft from certain routes which in turn displaced other piston aircraft from other routes, and so on, in a chain reaction which made piston aircraft available for sale which were not necessarily the particular planes which had been serving the routes to which the jet aircraft were assigned (Tr. 1649-50, 1799-1800). Nor does TWA contend that there is a specific relation in terms of seating capacity between the jet aircraft and the piston planes retired in connection with their acquisition (Tr. 1683, 1799). Its claim rests on the broader assertion that until it received jet aircraft it was re-

quired to keep sufficient piston aircraft to carry on its business (Tr. 1596, 1600, 1798). The proof it offers as to the loss it sustained is put forward as a reasonable estimate of the number of sales of piston aircraft which were delayed, the extent of the delays, and the cost to TWA of the delays (Plaintiff's Brief 230).

It will be recalled from the discussion under Section I of this Report that the hypothetical jet fleet of reconstructed TWA used in computing lost operating profits consisted of 63 jet aircraft. As a basis for computing damages under this Section IV, Rummel constructed Annex F to TWA Exhibit 2 (hereinafter "Annex F") in which he first listed the delivery dates of the first 63 jets historically received by TWA and the delivery dates of the first 63 jets assumed to have been received by reconstructed TWA. Rummel next determined how many days earlier reconstructed TWA would have received each of its first 63 jets than it historically received each of its first 63 jets ("jet gain days"). Rummel also listed chronologically the sales dates for 103 piston aircraft which TWA historically sold between December 31, 1958, and July 20, 1962 (the latter date being the date on which TWA sold the last piston aircraft it sold before receiving its 63rd jet) (Tr. 1593, 1630). Rummel then determined reconstructed piston sale dates by moving forward the sale date of each of the 103 pistons a number of days ("piston gain days") equal to the jet gain days of the reconstructed jet with which it was linked (Tr. 1607, 1690). The pistons were linked to the jet by the following method:

Rummel linked the first jet received to those (four) of the 103 piston aircraft which TWA sold prior to the receipt of that jet airplane (Tr. 1647). He then took the period the delivery of the jet was delayed, jet gain days,

which is 60 days, and advanced the date these four piston aircraft were actually sold by 60 days to arrive at a "reconstructed piston retirement" date. The actual retirement date listed for each piston aircraft is the date the airplane was historically sold and the reconstructed retirement date is the date on which TWA claims for damages purposes the plane would have been sold if the delivery of the "linked" jet aircraft had not been delayed (Tr. 1631-32, 1653, 1689-90, 1724). The second jet received by TWA was delivered on March 17, 1959.* In Annex F, TWA has linked to the second jet the piston aircraft actually sold prior to the delivery date of that jet airplane and subsequent to the delivery date of the jet airplane previously received (Tr. 1700-01). As the second jet is claimed to have been delivered 76 days late, TWA asserts in Annex F that the piston aircraft linked to it would have been retired 76 days earlier.

This system is used throughout Annex F to attribute to each of the 103 piston aircraft a reconstructed retirement date. The number of days by which the reconstructed dates are advanced vary from 11 to 707. As each piston aircraft is linked to the first jet airplane which was delivered after the piston plane was sold, jet airplanes which were delivered after the delivery of other jet airplanes by an interval in which no piston aircraft sales took place are not linked to any piston aircraft and therefore play no part in TWA's computation of days by which piston retirement dates are reconstructed. For example, no piston aircraft were actually sold between March 25, 1959, when the airplane listed on Annex F as Piston No. 7 was sold, and June 26, 1959, when the airplane listed

*The date March 17, 1958, appearing in Annex F is a typographical error; the plane was delivered on March 17, 1959 (Tr. 1696).

on Annex F as Piston No. 8 was sold. Between these two dates, nine jet aircraft were delivered at various times from March 30, 1959, to June 13, 1959, but eight of these nine jet airplanes are not linked to any piston aircraft. Although TWA does not contend that any particular piston airplane would in fact have been sold on its reconstructed retirement date, it offers Annex F as "a reasonable construction of events that could have been expected" to occur (Plaintiff's Brief 234, Tr. 1632).

Plaintiff based its estimates as to the price which it would have obtained for the displaced piston aircraft upon a study made by R. Dixon Speas Associates, aviation consultants with extensive experience in evaluating aircraft. The study was presented through the prepared testimony of Mr. R. Dixon Speas (TWA Ex. 6B). The report reflected a study made by Speas Associates of the market for used piston aircraft offered for sale by the various United States trunk line air carriers for the years in question and concluded with the opinion that if the 103 piston aircraft had been sold earlier at the reconstructed retirement dates, TWA would have received 6.9 million dollars greater proceeds than it did historically for those aircraft.

To determine the price which TWA would have obtained on the reconstructed retirement date for each of the piston aircraft, Speas has constructed by statistical analysis sales price trends, by types of aircraft, of all the aircraft sold by United States trunk line air carriers from January 1, 1958, to June 30, 1964. These sales price trends are depicted in the figures set forth at pages 33-43 of TWA Exhibit 6B, where in every class of aircraft the trend line so constructed by TWA declines throughout the period. To determine the damages claimed for each piston air-

craft, Speas, at pages 24-26 of TWA Exhibit 6B, applies the rate of market price decline for aircraft of that type to the period of delay equal to "piston gain days" arrived at in formulating reconstructed retirement dates in Annex F.

For purposes of reference it is noted that the prices actually received by TWA for the piston aircraft it sold in the period from January 1, 1958, to June 30, 1964, including the 103 aircraft it links to the delivery of jet aircraft, are set forth at pages 80-85 of TWA Exhibit 6B, and the prices received by other United States trunk line air carriers in the sales of piston aircraft in the same period are set forth at pages 122-154 of the same exhibit.

Defendants attack the validity of TWA's proof. They contend that the reconstructed retirement dates for piston aircraft are meaningless without proof that the earlier delivery of particular jet airplanes would have advanced the sale of particular piston airplanes, and advanced them an equal number of days (DX 324, p. 5). Defendants also attack TWA's price trend lines. Although they do not dispute the validity of the mathematical basis for the trend lines given all the assumptions used by Speas, they contend that the lines are constructed with reference to inappropriate data (Defendants' Brief 281). They point out that the condition of the aircraft and the nature of the sales transactions were not considered and that the trend lines are based in part on data for periods not relevant to the aircraft in question (DX 324, pp. 5-6). Defendants also point out that TWA's computations give no consideration to benefits which TWA could offset against losses in sales prices, such as depreciation and the use of the aircraft while allowing the usable flight time after overhaul of air frames, engines, and propellers to expire

(DX 324, p. 6), and that the average cost of a full overhaul on the two-engine planes, which are the M-202 and M-404 aircraft, exceeds $100,000 and the cost of overhaul of larger piston aircraft is greater (DX 324, pp. 32-34). Defendants also contend that there was not a steady market for each of the types of piston aircraft retirement by TWA (Defendants' Brief 284-86). They further contend that any comparison of the sales by TWA to the sales by other airlines should entail an examination of the percentage of each airline's piston aircraft sold during the initial period of jet aircraft acquisition. (DX 324, p. 7).

In supporting their contention that the sales transactions were not sufficiently homogeneous to warrant their use in the construction of price trend lines, defendants maintain that sales which were actually trade-ins on jet acquisitions or sales to buyers which entailed a high risk of default were made at prices far higher than could be obtained from arm's length, financially responsible buyers (DX 324, pp. 14-17). Defendants also contend the sales of any aircraft for less than $100,000 were not sales for use as airplanes but as scrap (DX 324, p. 17), implying that either these aircraft were not usable for flying or there were no buyers. In addition, defendants contend that TWA did not require the 103 piston aircraft during the period in question, and to illustrate this they set forth tables comparing the normal utilization of certain aircraft types with TWA's utilization during that time (DX 324, pp. 21-26).

TWA attempts to meet defendants' contention that the reconstructed retirement dates cannot be taken as dates when the aircraft would have been sold by arguing that it cannot be said that the absence of sales at any time within the period means there were no buyers, for sales took place throughout the period and to say that an absence of sales indicates an absence of buyers is "improb-

ably deterministic" (Plaintiff's Brief 235). As TWA asserts, its claim is based on the proposition that market prices declined steadily and continuously during a six-year period beginning in mid-1958 (Plaintiff's Reply Brief 119). TWA attempts to meet defendants' contentions that the trend lines are based on sales which are too disparate to be compared by arguing that the factors which distinguish particular sales average out in the formulation of the trend lines (Plaintiff's Brief 239-44). In particular, TWA contends that any differences in sales prices accounted for by differences in flying time since overhaul are random and that airlines provide "progressive maintenance" and do not allow aircraft to be flown without maintenance until they require a complete overhaul (Plaintiff's Brief 239). TWA also contends that each piston aircraft it sold was, on an average basis, approximately 50 per cent "run out of time" (Plaintiff's Brief 244).

Proof of any actual relation between the acquisition of jet aircraft and the retirement of the piston aircraft, other than the chronology set forth in Annex F, was not introduced. It was apparently available to TWA, for Rummel testified that TWA had charts showing probable piston aircraft retirements as a function of the acquisition of jet aircraft (Tr. 1801) and made several references in his testimony to a specific piston retirement plan.* He also

* "Forward planning regarding fleet composition" (Tr. 556), "the removal of a fleet or fleets would be on a plan known basis" (Tr. 562), the disposition "did reflect planning" (Tr. 1611), "the development of plans" (Tr. 1619), "the specific plan for retirement" (Tr. 1638), "the plan" (Tr. 1641), "the plan to retire pistons" (Tr. 1653), "in the overall piston retirement plan we spoke of release of airplanes in terms of what they would do" (Tr. 1722), a "disposal plan" (Tr. 1745), and an "overall plan" (Tr. 1755). TWA personnel were assigned the formulation of a plan to retire piston aircraft (Tr. 1616, 1638-39). There was a broad plan in writing contained in the Jet Plans and Programs Manual which did not link the retirement of particular piston planes to specific jet deliveries (Tr. 1624), and certain exhibits introduced by defendants are taken from this source (Tr. 1666, 1670).

testified that he chose the dates of actual sales "rather than a plan" as the basis of TWA's proof on this issue (Tr. 1641).

I accept as "well-pleaded" the allegation of paragraph 52 of the complaint that plaintiff was foreclosed from the opportunity for early sales of piston aircraft, but I determine for the reasons set forth below that TWA is not entitled to the damages it claims in its proof with respect to losses due to delay in having piston aircraft available for sale. Defendants have proved conclusively that TWA's decisions to retire or retain many of the 103 aircraft were based on considerations having no connection with the acquisition of jet aircraft or defendants' acts and that the losses claimed in the proof offered by TWA with respect to the remainder of these aircraft cannot be said to be the result of defendants' acts. Instances of these failures in proof are set forth in the detailed review which follows. Moreover, the statistical analysis used by the plaintiff is deficient for the reasons advanced by the defendants and summarized above. The detailed application of the analysis of each type of piston plane sold by TWA, as set forth below, indicates clearly the unreasonableness of the results obtained under the methodology used, and plaintiff's claim under this Section IV is rejected in its entirety.

M-202A Aircraft

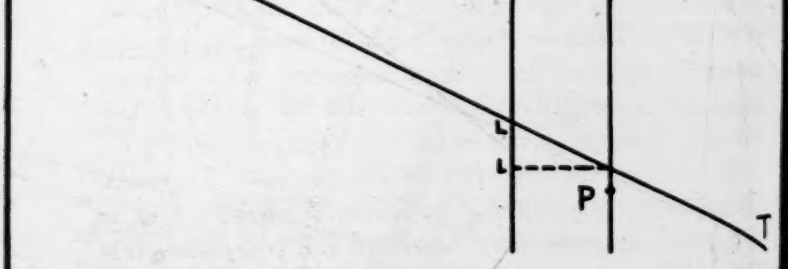
TWA claims damages of $75,800, before trebling, for delay in having eleven M-202A aircraft available for sale (TWA Ex. 6B, p. 9). These are short-range, two-engine airplanes. According to TWA's proof, the earliest date at which any of these aircraft would have been sold had there been no delay in the receipt of jet aircraft is No-

vember 1, 1958, which is the "reconstructed retirement date" set forth in Annex F for Piston Aircraft No. 1. The proof shows, however, that TWA historically made these aircraft available for sale in December 1957 and that on February 15, 1958, TWA announced that they were retired from service (Tr. 1656, 1661, DX 35). As these aircraft were put up for sale and retired from service prior to their reconstructed retirement dates, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. My reasoning in support of this conclusion follows:

TWA's claim is for losses due to a delay in having certain aircraft available for sale. It has computed its damages for that delay in a series of steps, the first of which, as described above, are (1) the computation of piston gain days, (2) the formulation by statistical analysis of trend lines which show the market price for each type of aircraft declining throughout the period at a steady rate, and (3) the determination of the decline in market price during the period between the reconstructed retirement date and the actual retirement date by translating the piston gain days for each aircraft into quarters of delay and multiplying the quarterly rate of market decline for the particular type of aircraft by the number of quarters of delay. The next step is to put forward the resulting amount not only as the decline in market price between the reconstructed retirement date and the actual retirement date but also as the amount of damages claimed for delay in having the aircraft available for sale. The claim that the delay in acquiring jet aircraft caused a loss in this amount is apparently based on the contention that TWA's failure to sell the aircraft between the recon-

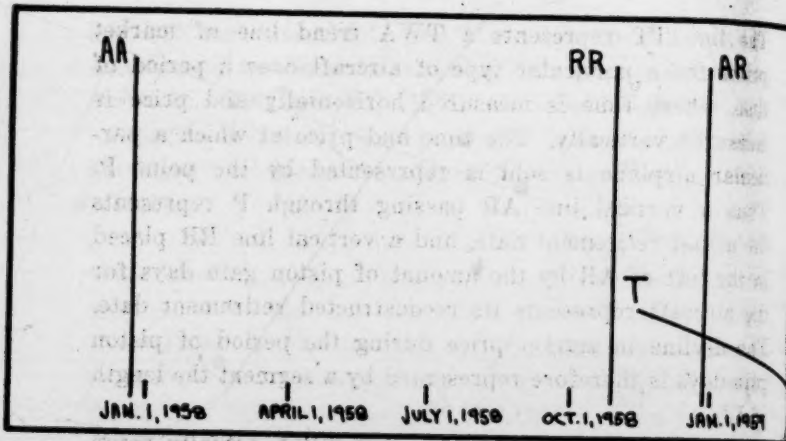
structed retirement date and the actual retirement date was caused by delay in receiving jet aircraft. An alternative possible basis would be the contention that this amount equals the decline in market price during earlier, but equal, periods of the delay in having aircraft available for sale.

At first Rummel testified that the theory of TWA's proof was that the piston aircraft were not available for sale prior to the date of actual retirement (Tr. 1612, 1613-14) and he also testified that the piston aircraft were needed at the reconstructed retirement dates because of the lack of having jet aircraft (Tr. 1633). This testimony indicates that it is TWA's contention that because of the jet delivery delays the aircraft could not be given up prior to their actual retirement dates and therefore that the fall in market price between the reconstructed retirement date and the actual retirement date is TWA's actual loss. TWA's proof in this respect may be set forth in graph form as follows:



The line TT represents a TWA trend line of market prices for a particular type of aircraft over a period of time, where time is measured horizontally and price is measured vertically. The time and price at which a particular airplane is sold is represented by the point P. Thus a vertical line AR passing through P represents the actual retirement date, and a vertical line RR placed to the left of AR by the amount of piston gain days for the aircraft represents its reconstructed retirement date. The decline in market price during the period of piston gain days is therefore represented by a segment the length of LL.

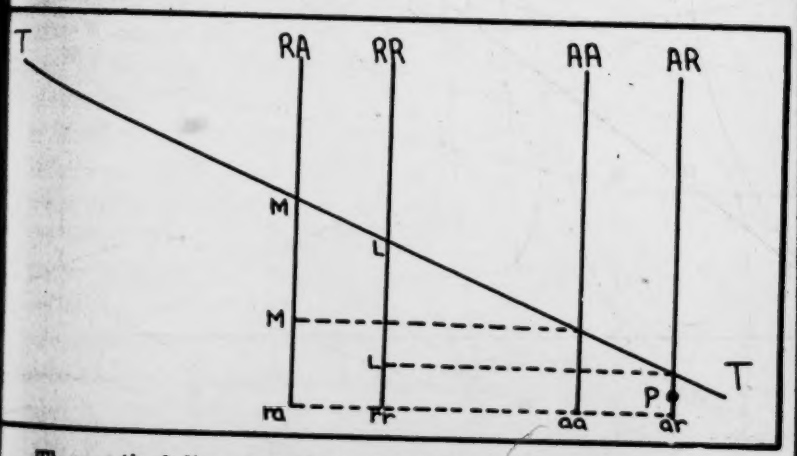
It was established, however, that TWA actually made many piston aircraft available for sale not only in advance of their actual retirement dates but in advance of their reconstructed retirement dates. In some instances piston aircraft were actually made available for sale approximately two years prior to the earliest reconstructed retirement date for any aircraft of that type (DC-4 aircraft; DX 324, p. 67; Annex F). In the case of M-202A aircraft, the planes were available for sale at least as early as December 1957 while the earliest reconstructed retirement date set forth in Annex F for any aircraft of this type is November 1, 1958, and the earliest actual retirement date for these aircraft is December 31, 1958. A graph showing these dates with respect to the first M-202A airplane sold would appear as follows, with the line AA representing a date as of which the proof has established the aircraft was actually available for sale:



Rummel also testified that piston aircraft were available for sale earlier than the dates listed in Annex F and that the reconstructed retirement date is not the date an airplane would have been available for sale but the date it is assumed it would have been sold (Tr. 1631-32, 1633, 1692, 1751, 1754, 1756). He testified that in Annex F TWA assumed that if the jet aircraft had not been delayed, the piston aircraft would have been available for sale in advance of the reconstructed retirement dates "exactly to the same degree" that the dates they were actually made available for sale preceded the actual retirement dates (Tr. 1751) and that the time it would have taken to make the reconstructed sale may be assumed to be the same as the time it took to make the actual sale (Tr. 1753). This testimony indicates that TWA seeks as damages the difference in market prices on the reconstructed retirement date and the actual retirement date on the theory that, although aircraft were available for sale prior to the reconstructed retirement dates, it takes a certain amount of time to sell any particular airplane even when a market exists. Possibly TWA contends alternatively that that amount is equal to the decline

in market value during the period it actually complains of, that is, the period of delay in having the aircraft available for sale, which decline would be equal to the decline in market price in the later period between the reconstructed retirement date and the actual retirement date because (1) the lead times between having aircraft available for sale and selling them would be the same in both cases and (2) the trend line shows a market price decline at a steady rate.

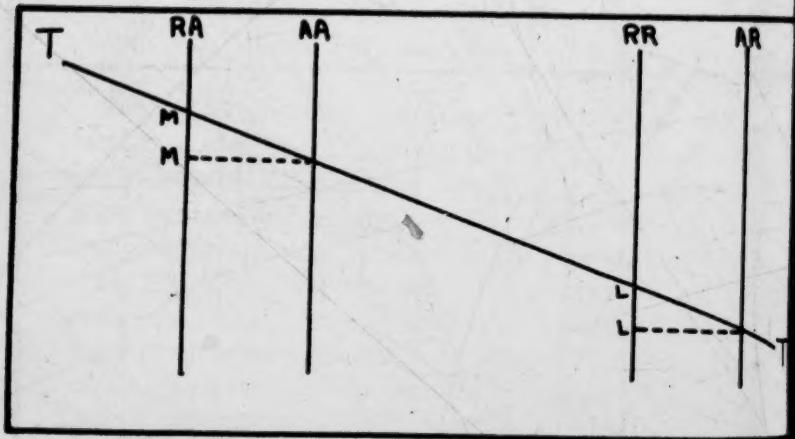
Rummel's introduction of the factor of equivalent lead times may be set forth in graph form as follows:



The vertical line AA plotted to the left of AR represents the date the aircraft was actually available for sale, and on TWA's assumption that the time it took to effect the sale would have been the same at any earlier time, a vertical line RA representing the reconstructed availability date would lie as far to the left of RR as AA is from AR. The segments shown on the graph as ra-rr and aa-ar are equal, and therefore adding the segment rr-aa to each of them results in the segment ra-aa being equal to rr-ar.

The segment MM therefore equals the segment LL, which expresses the conclusion that the decline in market price in the period of delay in having aircraft available for sale equals the decline in market price between the reconstructed retirement date and the actual retirement date.

Where the proof shows that an aircraft was actually available for sale prior to its reconstructed retirement date, a graph would show the lines AA and RA to the left of line RR:



In this situation the particular proof of loss attributable to defendants' acts put forward by TWA cannot be sustained. No matter which of the theories described above underlies TWA's claim, the damages claimed are based upon the assertion that the aircraft would have been sold on certain dates, the earliest of which, in the case of M-202A aircraft, is November 1, 1958, while defendants have shown that the aircraft were available for sale prior to that time, at least as early as December 1957 for M-202A

planes. If there was a market throughout the period, as TWA asserts (Plaintiff's Brief 235, Tr. 3688, Plaintiff's Reply Brief 119, 122) and must assert to support its contention that planes could have been sold throughout the period earlier than they were, the delay in selling these planes after they were no longer needed cannot be said to be caused by defendants' acts. The proof does not show that there is any particular number of months or years required to effect the sale of an airplane once it is placed on the market. On the contrary, the evidence shows that planes of the same type, even when made available for sale at the same time, were sold at widely varying times after becoming available for sale. The contention of TWA that it may be assumed that the period between availability and sale would be the same whenever a plane is made available for sale, thereby requiring an earlier, reconstructed availability date to enable a sale to take place on the reconstructed retirement date, is conclusively disproved. As defendants were not responsible for TWA's failure to sell these aircraft from December 1957 on, I am unable to find that the loss it claims in its proof to have sustained upon the sale of the M-202A aircraft, which sales occurred over the period December 31, 1958, to October 1, 1959 (Annex F), is due in any part to a delay prior to December 1957 in having the aircraft available for sale or that the damages claimed may be a measure of a loss attributable to the period of delay in availability. Moreover, the proof conclusively shows that these aircraft were made available for sale prior to "mid-1958" which TWA asserts was the commencement of a six-year price decline (Plaintiff's Reply Brief 119). In addition, in view of TWA's assertion that there was a market for the sale of the aircraft, I conclude that TWA has failed in its proof

based on the assertion that, as a reasonable reconstruction of events that would have occurred, an airplane would have been sold on a certain day if the acquisition of jet aircraft had not been delayed, where defendants have shown that the aircraft was actually made available for sale by TWA prior to that time.*

In considering TWA's proof above, I have treated as valid its basic assumption that there was a market throughout the period, the existence of which would have enabled airplanes to be sold on their reconstructed retirement dates at market prices which declined at a steady rate. Rummel testified, however, that the market was glutted by the time TWA's planes were available for sale (Tr. 1636),** and if that is the fact TWA's methodology is further invalidated.

Moreover, TWA's proof shows that from 1959 to 1963 there was an elimination of 15,000 short-segment departures resulting from a TWA decision "to eliminate the short stage length departures operated with piston aircraft, because they were not profitable and had nothing whatsoever to do with the advent of the long-range aircraft, which is the

---

* Rummel conceded that a document showing M-202A aircraft to be available for sale in February 1958 indicated that he could not say that the first four of these aircraft sold were timed to the first jet as is shown in Annex F (Tr. 1668). Rummel also testified that he could not say the M-202A listed in Annex F as Piston No. 21 and linked to Jet No. 16 was needed by TWA until the delivery of that jet in view of proof that TWA leased the piston plane on January 14, 1959 (Tr. 1679) and again on June 13, 1959 (Tr. 1681-82). The reconstructed retirement date for that plane in Annex F is June 17, 1959. Similarly, the M-202A airplane listed in Annex F as Piston No. 22 was leased twice prior to its reconstructed retirement date of June 17, 1959, the second leasing taking place on June 6, 1959 (Tr. 1685-86). Piston No. 13 was leased on June 27, 1959, and has a reconstructed retirement date of June 29, 1959 (Tr. 1690-91).

** Defendants showed that TWA did not lag behind its competitors in 1958-1959 in selling piston aircraft (Tr. 3692-93) and takes the position that the market decline took place at that time (Defendants' Brief 285).

subject of our analysis and estimates." (Tr. 10642-43 and TWA Ex. 443). That the M-202A aircraft were all operating on average stage lengths of less than 300 miles and were the subject of this managerial decision (Defendants' Brief 290) is undisputed. The elimination on this scale of the short stage length departures operated with piston aircraft having no connection with the introduction of the jet aircraft into service makes it impossible to conclude that the short-range M-202A aircraft were retained because the delivery of long-range aircraft was delayed. The claim for damages with respect to these aircraft is disallowed in its entirety. It is noted that the first four aircraft of this type which were sold form the starting point of the trend line set forth at page 33 of TWA Ex. 6B. There is no evidence to support the conclusion that higher prices were obtainable for aircraft of this type between November 1, 1958, and the date on which they were sold, December 31, 1958, and the trend lines of market prices constructed by TWA do not purport to show that higher prices were available prior to the initial sales which constitute the starting points of the trends (Tr. 3610-11, 3612). For that reason also, TWA's proof does not support the damages it claims with respect to these aircraft.

L-1049, L-1049G and L-1049H Aircraft

TWA claims damages of $808,100, before trebling, for delay in having eleven aircraft of the types L-1049, L-1049G, and L-1049H available for sale (TWA Ex. 6B, p. 9). Speas testified that he considered the L-1049, L-1049G, and L-1049H aircraft to be enough alike to use the same market decline in computing damages for aircraft of all these types (Tr. 3644). The trend line constructed for the market price of these aircraft is apparently based

solely on data of L-1049 sales, and the data for L-1049G and L-1049H aircraft were not used in determining the trend line (TWA Ex. 6B, pp. 24, 26, 38, 85, Tr. 3643), although the quarterly market declination rate constructed with reference to L-1049 aircraft is used as the basis for computing the claimed loss attributable to L-1049G and L-1049H aircraft (TWA Ex. 6B, pp. 24-26). TWA contends that using the sales data for the L-1049H aircraft would result in a trend line which would not be reliable because it would have a low coefficient of correlation (Tr. 3789). All nine of TWA's L-1049 aircraft were listed for sale on February 6, 1959 (Ex. G annexed to DX 324), while according to TWA's proof the earliest date on which any of the planes would have been sold if the jet aircraft had not been delayed was July 18, 1959, which is set forth in Annex F as the reconstructed retirement date for Piston No. 16, the damaged L-1049G for which TWA claims no damages on the ground that it was damaged prior to its reconstructed retirement date. (TWA Ex. 6B, p. 24; Tr. 1707, 1737). The next earliest reconstructed retirement date was September 24, 1959, which is set forth in Annex F as the reconstructed retirement date for the L-1049 airplane listed as Piston No. 26. Only five of the nine L-1049 aircraft were sold by June 30, 1964 (TWA Ex. 6B, pp. 80-85).

As these aircraft were listed for sale prior to the earliest reconstructed retirement date for aircraft of any of these types and are enough alike for TWA to value them on the same trend line, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. Moreover, if only the data of

L-1049 sales will serve as the basis of a trend line having a reliable coefficient of correlation, TWA's claim that losses with respect to the other types may be measured by the trend line, with which their own data is incompatible, is not accepted. The claim with respect to these aircraft is therefore disallowed in its entirety. It is noted that the aircraft which is plotted on page 38 of TWA Ex. 6B as sold in the second quarter of 1963 is the same plane that is also plotted as having been sold in the fourth quarter of 1960, having been repossessed in the interim (Tr. 3643). It was therefore available for sale at least as early as the time of its first sale. It is also noted that if the sale of this aircraft, which occurred after the period of the sale of the 103 aircraft, had not been considered, TWA's claim would concededly be reduced by $120,250 (Tr. 3779).

DC-4 Aircraft

TWA claims damages totalling $91,800, before trebling, with respect to delay in having available for sale six DC-4 aircraft (TWA Ex. 6B, p. 9). On July 27, 1957, TWA authorized the sale of all these aircraft (DX 324, p. 67, Tr. 1729-30, 1739) and offered aircraft of this type for sale through an aircraft broker on January 2, 1959 (DX 324, p. 67 and Ex. G annexed thereto where this type is referred to as C-54). The earliest of the dates to which TWA's proof shows the sale of any of these planes would have been advanced if the delivery of jet aircraft had not been delayed is June 8, 1959, which is the reconstructed retirement date set forth in Annex F for Piston Aircraft No. 8. As these aircraft were for sale prior to any period of delay in their sale claimed to be caused by the delay in receipt of jet airplanes, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay

in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. Moreover, minutes of TWA's Board of Directors show that TWA made these planes available for sale because they were being operated at a loss, not because they were no longer needed by reason of the acquisition of jet aircraft (Tr. 1729-30, DX 37). The date they were made available for sale was prior to "mid-1958" which is the time TWA asserts the six-year price decline commenced (Plaintiff's Reply Brief 119). In addition, these aircraft were all configured for cargo or engine carrying service rather than passenger service (DX 324, p. 67, Tr. 1716). The claim for damages with respect to these aircraft is disallowed in its entirety.

It is noted that in a sale of a group of four of these planes by TWA in 1959 the price paid by the buyer and plotted by TWA at page 35 of its Exhibit 6B, purchased not only four aircraft but also 29 extra engines (Tr. 3657). One of the other of these four-engine aircraft which is plotted on the same chart was apparently sold with only one of its engines (Tr. 3658-59). TWA's proof indicates that the factor of extra engines would reduce the quarterly market price decline from $12,400 to $12,000 (Tr. 3784). It is also noted that if sales in the first three quarters of 1958 and the fourth quarter of 1962 had been eliminated in determining the rate of market price decline for this type of aircraft, TWA's claim would concededly be $37,740 less (Tr. 3772).

L-1649A Aircraft

TWA claims damages of $1,461,900, before trebling, with respect to delay in having available for sale four L-1649A aircraft (TWA Ex. 6B, p. 9). These are long-range air-

craft which were directly replaced in function by the jet aircraft. In view of Rummel's testimony that TWA would have liked to sell these aircraft earlier because they were uneconomical but delayed their retirement because they were substantially undepreciated (Tr. 1800), any loss resulting from a decline in the market price obtainable for these aircraft cannot be attributed to the acts of defendants.[1] The claim for damages with respect to the delay in the availability of L-1649A aircraft for sale is therefore disallowed in its entirety.

The damages claimed with respect to the first two aircraft sold of these four would have to be disallowed in any event, for they were the first aircraft of that class to be sold by any airline in the period from January 1, 1958, to June 30, 1964, and each brought the highest price obtained to the date of its sale. There is no evidence to support the conclusion that a higher price was obtainable for aircraft of this type between January 1, 1958, and the dates on which they were sold in the fall of 1960, and the trend lines of market prices constructed by TWA do not purport to show that higher prices were available prior to the initial sales which constitute the starting point of the trend (TWA Ex. 6B, p. 39, Tr. 3610-11, 3612). Similarly, the damages claimed for the last two aircraft sold of this type would have to be reduced, for their reconstructed retirement dates are dates prior to the initial sales, and plaintiff's computations in effect extend the price trend lines to times prior to the commencement of the trend. All the sales of aircraft of this type were sold by TWA, and the

[1] There is other TWA proof that aircraft of this type were ordered with full knowledge of the coming of jet aircraft because of their "cash generating power" and that even with the advent of jet planes there would be a need for aircraft of this type for several years (Tr. 3795).

first four of these sales were to a buyer outside the country and without a credit rating, factors which TWA admits would affect the sales prices (Tr. 3621). These planes were later repossessed by TWA (Tr. 3628).

L-749A Aircraft

TWA claims damages of $346,000, before trebling, for delay in having three L-749A aircraft available for sale (TWA Ex. 6B, p. 9). The proof shows that TWA sold two L-749 and three L-749A aircraft during this period (TWA Ex. 6B, pp. 81-85) and that it offered "several Lockheed model 749 and 749A Constellation airplanes for sale" as early as July 25, 1958 (Exhibit F Annexed to DX 324). As TWA's L-749A aircraft were listed for sale prior to the earliest reconstructed retirement date for aircraft of this type, which is set forth in Annex F as July 13, 1959, (Piston No. 23) for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. TWA's claim for damages with respect to L-749A aircraft is therefore disallowed in its entirety.

Even apart from the proof that TWA made these aircraft available for sale in July, 1958, its claim for damages could not be granted in the amount requested. The first L-749A airplane sold by any airline in the period between January 1, 1958, and June 30, 1964, was the plane listed in Annex F as Piston Aircraft No. 23 (TWA Ex. 6B, p. 37). This airplane was sold at a substantially higher price than any other aircraft of its type. There is no evidence to show that a higher price would have been obtainable had the plane been sold at an earlier date, and, as shown above with

respect to M-202A and L-1649A aircraft, the trend line constructed by plaintiff does not purport to show higher prices prior to the initial sale. TWA's claim for damages with respect to this airplane would therefore be disallowed in any event.

The second aircraft of this type sold by TWA is the plane listed in Annex F as Piston Aircraft No. 58. This plane was actually sold on November 24, 1961, and according to Annex F, it would have been retired by March 12, 1960, except for the defendants' delay in furnishing jet aircraft. The proof shows, however, that at least as early as August 17, 1960, TWA considered that this aircraft was not needed, for at that time it leased it to another company (Tr. 1771), and therefore the fact that TWA did not sell this plane in the period from August 17, 1960, to November 1961 cannot be attributed to its claimed need to retain aircraft because of delay in receiving jet aircraft. The period from March 12 to August 17, 1960, is one of 1.7 quarters rather than the 6.8 quarters which was used to compute the damages attributed to this plane at page 25 of TWA Exhibit 6B, where the aircraft is listed as No. 44 under its registration number N-6017C. Using TWA's method of computing damages, the maximum decline in market price which could have been related to delay in receiving the jet aircraft referred to in Annex F as Jet No. 52 is $37,230, which is the rate of quarterly market decline for this aircraft type computed by TWA of $21,900 (TWA Ex. 6B, p. 25) for a period of 1.7 quarters.

Not all of this loss could be attributable to the acts of defendants, however. As has been determined above, defendants are not responsible for part of the delay in the delivery of the 30 Convair 880 jet aircraft. In Annex F, the last 48 of the 103 piston aircraft, Piston Nos. 56-103,

are related to timely deliveries of Convair 880 jet aircraft with respect to which defendants are not responsible for 60 days of the delivery delay, and this particular piston airplane, Piston No. 58, is linked to the nineteenth Convair 880. Therefore, even if damages could be awarded with respect to any aircraft of this type, defendants could not have been responsible for damages for delay with respect to this airplane for a period greater than one quarter.

The third aircraft of this type with respect to which TWA claims damages is the plane listed in Annex F as Piston Aircraft No. 103. This plane has registration number N-6012C and appears also as No. 103 at page 26 of TWA Exhibit 6B. The plane was actually sold on July 20, 1962, and TWA has assigned it a reconstructed retirement date of August 12, 1960. At approximately that time an aircraft of the same type was sold for $164,000 (TWA Ex. 6B, p. 78). The aircraft actually sold in the third quarter of 1960 is the only airplane of this type sold by an airline other than TWA in the period January 1, 1958, to December 31, 1964, and there were only five sold by TWA. The actual sale of an airplane of this type at the time of the reconstructed sale date raises the question whether the better evidence of the price TWA would have obtained for this plane is the price actually obtained by its competitor at that time or the higher price claimed by TWA, which is the price actually received for the airplane later plus the amount the market price declined from the reconstructed retirement date to the actual sale date as shown by the trend line TWA has set forth at page 37 of its Exhibit 6B.

TWA attributes the fact that particular sales prices fall above or below its trend lines to random differences in the condition of the aircraft of any particular type (Plain-

tiff's Brief 239-40, 242). The only two aircraft of this type for which the engine and airframe condition are in evidence are the TWA aircraft bearing registration numbers N-6012C and N-6017C (TWA Ex. 421, p. 3). These planes brought approximately the same price although N-6017C was sold on November 24, 1961, and N-6012C was sold on July 20, 1962. The trend line set forth at page 37 of TWA Ex. 6B represents a decline in market price of approximately $58,400 in that time, and as there are so few aircraft on which this trend line is based, if the condition of the plane which was sold later was equivalent to or better than that of the plane which was sold earlier, there would be reason to refer to the actual sales price at the reconstructed retirement date, rather than to apply the trend-line market price decline to the price later received. According to TWA, reference to actual sales at the reconstructed sale dates would be a valid method of determining loss (Tr. 3685). TWA's Exhibit 241 shows, however, that the later-sold airplane had more hours of flying time before an airframe overhaul was required and before an overhaul was required of any of its four engines. This difference in the condition of the two airplanes is consistent with TWA's explanation of deviation of particular prices from the trend lines and supports the validity of the trend line constructed for this type of aircraft. In the absence of similar information with respect to the aircraft actually sold in the quarter of the reconstructed retirement date, TWA's reliance on the trend line is accepted for this purpose with respect to aircraft of this type.

Even if damages could be awarded with respect to aircraft of this type, the damages of $170,830 claimed by TWA with respect to this airplane would have to be diminished in view of the determination made above that

defendants were not responsible for part of the delay in the delivery of the 30 Convair 880 aircraft. Annex F shows that the last 48 of the 103 aircraft are related to deliveries of jet aircraft of this type and that this particular piston airplane, which is the last of the 103 piston aircraft to be sold, is linked to the twenty-seventh Convair 880 airplane. Any period of the delay in retiring piston aircraft No. 103 attributable to the acts of defendants would therefore have been diminished by 60 days with the result that damages with respect to this aircraft would necessarily have been diminished by at least $14,600 to $156,220.

M-404 Aircraft

TWA claims damages of $1,009,300, before trebling, for the delay in having 37 M-404 aircraft available for sale (TWA Ex. 6B, p. 9). These are short-range, two-engine aircraft, and, as shown above with respect to M-202A aircraft, TWA's proof shows that from 1959 to 1963 there was an elimination of 15,000 short-segment departures resulting from a TWA decision "to eliminate the short stage length departures operated with piston aircraft, because they were not profitable. It had nothing whatsoever to do with the advent of the long-range jet aircraft, which is the subject of our analysis and estimates." (Tr. 10,642-43 and TWA Ex. 396, 443). For this reason, as in the case of the M-202A aircraft, TWA's claim with respect to M-404 aircraft is disallowed in its entirety. Although it is therefore unnecessary to examine in detail the computation of damages with respect to M-404 aircraft, it should be noted that TWA had aircraft of this type available for sale from a time not shown by the proof until March 11,

1959 (Ex. E annexed to DX 324) and that 18 aircraft of this type were gradually sold by March 20, 1961,[1] when TWA declared the remaining 19 aircraft surplus (Tr. 1747-48, DX 39). In addition, no damages could be granted with respect to the first three aircraft of this type sold by TWA, listed in Annex F as Piston Nos. 5, 6 and 7, as, for the reasons set forth above with respect to M-202A and L-1649A aircraft, these aircraft form the starting point of TWA's trend line (TWA Ex. 6B, p. 34), and there is no reason to believe that the market price was higher at an earlier time than the prices obtained for these aircraft. Moreover, as the last 19 of these aircraft were actually available for sale from March 20, 1961, prior to both the reconstructed and actual retirement dates, the delay in effecting sales of these aircraft after that date, which amounted to more than nine months in the case of the planes listed in Annex F as Piston Nos. 59-75, cannot be attributed to defendants' acts. These limitations alone would reduce the damages claimed by TWA for these aircraft by $361,641, as damages for the aircraft listed in Annex F as Piston Nos. 5-7 would be disallowed in their entirety, and the quarters of delay would be limited to 3.3 for Piston No. 48, 3.2 for Piston No. 49, and 3.67 for Piston Nos. 59-75.

L-049 Aircraft

TWA claims damages of $3,087,000, before trebling, for delay in having 31 L-049 aircraft available for sale (TWA

[1] Sales of these aircraft occurred in February, March, August, and November 1959, January, February, March, June, and September 1960, and February 1961. Two of these aircraft, numbers N-40432 and N-40441, were leased to another company in November 1959 (Tr. 1749), more than six months prior to their actual retirement date in June 1960 (Annex F, p. 3).

Ex. 6B, p. 9). These are intermediate-range, four-engine airplanes. TWA's L-049 fleet, or at least "several" airplanes of it, was for sale as early as July 15, 1958 (DX 349), but none was sold before the sale of one on August 26, 1959 (TWA Ex. 6B, p. 81), and a second one was not sold until April 30, 1961 (TWA Ex. 6B, p. 83). The aircraft of this type are listed in Annex F as Piston Nos. 20, 43-47 and 76-100, where the earliest reconstructed retirement date for any of them is May 12, 1959, and the next earliest is May 5, 1960. As TWA considered these aircraft available for sale as early as July, 1958, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. The claim for damages with respect to having aircraft of this type available for sale is therefore disallowed.

Although TWA's offering of its aircraft of this type for sale in 1958 shows that defendants are not responsible for the delays claimed in TWA's proof with respect to L-049 aircraft, there are other reasons which would require the disallowance of TWA's claim with respect to all of these aircraft. It is undisputed that the 30 of the 31 aircraft TWA still had in 1961 were operating at stage lengths of less than 300 miles (Defendants' Brief 290, Annex F, TWA Ex. 396) and the proof shows that elimination on a large scale of such piston flights was the result of a decision having nothing to do with the acquisition of jet aircraft (Tr. 10642-43, Defendants' Brief 290). There are separate reasons why the claim with respect to a different 30 of these aircraft must be disallowed, and these 30 aircraft are the first five and the last 25 which were sold.

TWA made particular efforts to sell four aircraft of this type in March, 1959 (Ex. E Annexed to DX 324), but four aircraft of this type were not disposed of until May, 1961 (Annex F, TWA Ex. 6B, pp. 80-83). The fifth aircraft of this type to be sold, listed as Piston No. 46 and assigned a reconstructed retirement date of May 14, 1960, in Annex F, was removed from service on November 24, 1959 (Tr. 1761). As these five aircraft were available for sale prior to their reconstructed retirement dates, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained.

The sixth aircraft of this type which was sold by TWA is listed in Annex F as Piston No. 47 where it is linked to a Convair 880 airplane with respect to which it has been determined defendants are not responsible for 60 days of the delay in acquisition.*

The proof shows that TWA would not be entitled to any damages for the remaining 25 aircraft in any event. When they were sold, the flying time after overhaul of the airframes and engines was substantially used up (TWA Ex. 421). TWA had been granted a time extension to operate the engines for 2,000 hours between overhauls (DX 354, p. 2) and for all practical purposes had used up even the additional times granted prior to selling the aircraft. Three of the aircraft were "incomplete, uncertified and non-flyable" and parts had been removed which would not be replaced (DX 354, p. 2). Three other aircraft were

*The number of quarters set forth at page 26 of TWA Ex. 6B for this aircraft, which is listed there as No. 66, is apparently incorrect, for the entire period of delay claimed of 13 months and 10 days equals 4.4 quarters rather than 4.6.

in "minimum ferry condition" and were not in "airworthy condition" (DX 354, p. 2). The remaining 19 aircraft complied with federal airworthiness directives only up to December 31, 1961 (DX 354, p. 2). Sales of "non-operating" aircraft of this type by another airline were omitted by TWA in computing the market price decline (Tr. 3773-74).

As noted above, these airplanes were made available for sale on June 21, 1961. Piston No. 47, which was sold on June 23, 1961, had over seven-eighths of its flying time after overhaul remaining for its airframes and approximately three-fourths of its flying time after overhaul remaining for its engines (Aircraft N90830 in TWA Ex. 421). In view of the proof that a complete overhaul of a four-engine aircraft costs more than $100,000 and in view of TWA's argument that its trend lines are valid despite differences in overhaul times because airlines provide progressive maintenance and do not allow aircraft to be flown until they require a complete overhaul (Plaintiff's Brief 239) and the significance which TWA attaches to the time since overhaul in determining the value of aircraft (Tr. 1723, 3633), TWA's claim with respect to these 25 aircraft would be disallowed.

Even if all 25 airplanes had been airworthy, the difference in value between these airplanes in a completely used up condition and Piston No. 47 which was sold shortly after these planes were made available for sale is at least three-fourths of the cost of overhaul or at least $75,000 per airplane. TWA received an average of approximately $16,000 for each of these 25 aircraft, and the price received for Piston No. 47 (TWA Ex. 6B, p. 83) was not more than $75,000 higher.

It should be noted that even if damages could be awarded with respect to these 25 aircraft, defendants would not be responsible for 60 days of the delay in making them available for sale because these 25 aircraft are Piston Nos. 76-100 in Annex F, the retirement of which is linked to the Convair 880 aircraft. This limitation alone would result in a diminution of TWA's damages by $810,000 before trebling.

V.

Losses due to disruption of business.

Plaintiff makes a separate claim for damages for disruption of its business at the time of transition to jets. It bases this claim primarily upon the following allegations of the complaint:

> "53. As additional results of the offenses hereinabove alleged, TWA further has been immediately and irreparably injured in that: * * * (f) the period of disruption caused by the transition from non-jet to jet operations has been extended * * * (g) the co-ordination of the change from non-jet to jet operations has been disrupted over an extended period of time; * * * (h) the management and business of TWA has been disrupted over an extended period of time."

Plaintiff presented its detailed evidence to support this claim through the prepared testimony of Raymond F. Rowe, Staff Vice President—Transportation Training (TWA Ex. 8) and Virgil L. Walstrom, Director—Maintenance and Overhaul Planning (TWA Ex. 9). The damages are stated by these witnesses to be the direct result of defendants' activities which delayed the deliveries to the plaintiff of Convair 880s. The amount of the claim under this Section V is as follows:

(1) $350,246 in monthly guaranteed salaries which TWA paid to 24 captains and 14 flight engineers who had to be held off schedules because the Convair 880 aircraft, for which they had been trained, had not arrived; and since there were no other aircraft available on which they were qualified to operate, TWA paid the above sum to these employees while they remained idle and "substantially unproductive" to the Airline. (TWA Ex. 8, p. 3).

(2) $177,260 as the cost of refresher training for 62 captains, 40 first officers and 45 flight engineers. (TWA Ex. 8, p. 4).

(3) $42,972.65 as the cost of subsequent retraining of the ground crew. (TWA Ex. 9, pp. 3-5).

These three claims total $570,478.65, and they appear not to overlap in any way the claims reflected in the computations of Price, Waterhouse (TWA Ex. 7) or Coverdale (TWA Ex. 4).

Rowe testified that TWA's training plans at first were based on the original contract dates for delivery of the CV-880s, i.e., that deliveries were to commence in November 1959, with scheduled service to commence in March 1960. Delays in delivery ensued, however, and full scale training of flight crews did not commence until February 1960. As noted elsewhere in this opinion it was clear to the plaintiff at or about this time that deliveries would not begin until May 1960. It appears to me that the plaintiff was justified in commencing the flight training courses in February 1960, as Rowe testified, in preparation for deliveries in May.

The first CV-880 was in fact delivered in May 1960 and used for training purposes. Rowe stated (TWA Ex. 8) that "by summer of 1960, adequate flight-crews had been trained." Elsewhere in this opinion, I have concluded that commencing in May 1960 the further delays in deliveries of 880s were caused by defendants. Rowe testified, without contradiction that in the summer of 1960 flight crew training was drastically reduced because the 880s had not been delivered; co-pilots were returned to service on piston equipment; but captains and flight engineers could not be returned for such service without additional retraining;

that TWA was obligated to pay their salaries even though no 880s were available. (TWA Ex. 8, pp. 2 & 3).

Deliveries of the 880s were resumed in January 1961, by which time the flight crews required refresher training in order to be qualified under TWA standards and FAA regulations (id. p. 4). Walstrom testified that similar refresher training in December 1960 was required for ground crews. (TWA Ex. 9).

I am of the opinion that the plaintiff took reasonable steps to mitigate its losses caused by the delays in deliveries that were due to the defendants' actions.

There is set forth below certain supplementary information developed in the cross-examination of Rowe:

¶ Annex A to TWA Ex. 8 does not list all captains and flight engineers who had completed Convair training prior to the commencement of 880 revenue service in January 1961, but only those who were held off regular service flights so that they would be available to fly Convair 880s when delivered (Tr. 6594).

¶ A TWA pilot normally would fly about 750 to 800 hours a year (Tr. 6597).

¶ While a pilot is in training, the pilot does not perform regular service flight on other types of aircraft (Tr. 6599-6600). In order to qualify for scheduled flight operation, FAA regulations require that a pilot complete a proficiency check every six months on the type of equipment he is going to perform on, and also complete at least three take-offs and landings to a full stop within the last 90 days (Tr. 6601).

¶ TWA regulations for safety reasons prohibit a pilot from flying piston equipment after he has completed tran-

sition on jet equipment without transition back to the piston equipment (Tr. 6602).

¶ Training for a captain or first officer consists of three weeks of ground school, 12 to 18 hours of simulator training, 8 to 20 hours transition training on the aircraft, and then 20 hours of line time (regular commercial service with passengers) under supervision. Training for a flight engineer is the same except that he requires four weeks of ground school (Tr. 6602-6603).

¶ Because of TWA safety regulations, when a captain or flight engineer begins training on a new type of aircraft, he devotes his full time to that training and does not fly other craft even though he is otherwise qualified to fly them (Tr. 6607).

¶ The above-stated TWA regulation does not apply to first officers [co-pilots] (Tr. 6609, [6613]).

¶ TWA regulations are approved by the FAA and consequently must be complied with like any other FAA regulation (Tr. 6610-6611).

¶ In order to return to piston equipment, a captain is required to complete one hour of transition on piston aircraft and at least one ILS approach and three take-offs and landings. Then in order to return to jet aircraft again, he is required to complete two hours of transition training and three take-offs and landings with jet equipment (Tr. 6611-6612).

¶ The guaranteed salary of captains, co-pilots and flight engineers was computed on the basis of an 85 hour month even though the union contract only guaranteed salary for a 60-hour month (Tr. 6615-6616).

¶ Mr. Rowe felt that the real reason for not returning the captains and flight engineers to piston aircraft was the belief that the Convair 880s were expected momentarily and crews would be needed to serve on them. (Tr. 6626).

There is set forth below certain supplementary information developed in the cross-examination of Walstrom:

¶ About 80 hours of classroom training was necessary to qualify a ground crew mechanic for service on a Convair 880 aircraft (Tr. 6550-6551).

¶ The minimum of 80 hours training was a TWA requirement and not specifically required by the FAA (Tr. 6555-6556).

¶ The ground crew were trained mainly where they were domiciled although there was a "minor amount of travel involved" (Tr. 6556-6557).

¶ Refresher training of the ground crew would be necessary whenever the "considerable time" of three months or more had elapsed since initial training and actual contact with the airplane (Tr. 6570).

¶ TWA did not hire any additional instructors to conduct the refresher training on Convair 880s (Tr. 6573).

¶ All the refresher training listed in Annex A consisted of classroom training (Tr. 6573).

¶ Refresher training took place in lieu of regular productive work (Tr. 6574).

¶ While taking refresher training, the ground crew was not on overtime pay (Tr. 6574).

¶ Walstrom was "sure" that maintenance suffered during the period that refresher courses were given, and that "it resulted in some degree of overtime over what we would

normally have had." Walstrom guessed that "it is just axiomatic that it has to be handled in some way, the work that has to be done. And one way it can come out is overtime." (Tr. 6574-6575).

The supplementary information thus developed in cross-examination of Rowe and Walstrom supports the plaintiff's entire claim under this Section V, and accordingly said claim is allowed for the full amount of $570,478.65.

VI.

Alternative over-all claim for damages based upon comparative profitability study.

Up to this point we have considered the plaintiff's claims for damages suffered by it as a result of specified allegations of the complaint. The plaintiff also claims under this Section VI damages "for the totality of its injuries set forth in the complaint." It claims certain additional injuries not covered by the preceding portions of this opinion as follows:

1) Injuries to TWA piston fleet, being included in the term "aircraft" in the following portion of paragraph 10 of the complaint:

> "It was the intent of plaintiff and Atlas, inter alia * * *
>
> (d) that defendants would have TWA as a captive market and would supply the requirement of TWA for aircraft, including jet-powered aircraft, upon terms advantageous to themselves;
>
> (e) that the requirements of TWA for aircraft, including jet-powered aircraft, would be enlarged for the benefit of defendants and Atlas by various means."

Other paragraphs of the complaint cited under this heading are as follows:

> "TWA has been denied the right freely to acquire aircraft necessary to its operations and has received such aircraft as were made available to it in an untimely manner (par. 50)."
>
> "TWA has been further and immediately injured in its business * * * in that defendants have allowed TWA to procure financing essential for the acquisition of

aircraft only upon the condition that TWA would accept such aircraft as the defendants dictated, • • •" (par. 51)

2) Injuries relating to the disruption of the management and business of TWA. Under this heading plaintiff cites paragraph 53(h) of the complaint reading as follows:

"As additional results of the offenses hereinabove alleged TWA further has been immediately and irreparably injured in that • • •

(h) The management and business of TWA has been disrupted over an extended period of time."

3) Injuries relating to the disruption of the transition from non-jet to jet operations (over and above the disruption claims previously discussed above under Section V of this opinion). Under this heading the plaintiff cites paragraphs 53(f) and (g) of the complaint which were quoted above in discussion of the disruption claimed under Section V.

4) Injuries to TWA's good will (and consequent ability to attract passengers in competition with other airlines) due to the many years of victimizing of TWA by the defendants. Under this heading plaintiff cites paragraph 52(e) of the complaint which reads:

"TWA had been further injured in the following manner • • •

(e) TWA's good will in its business in serving passengers throughout the world was diminished."

This Section VI claim is presented by plaintiff as an over-all alternative claim, i.e., it includes damages incident to all of the claims discussed above in Sections I-V and

damages for the above listed four categories of additional injuries not covered by Sections I-V.

The testimony in support of this alternative over-all claim for damages was presented in the form of a very brief comparative profit study prepared by Coverdale & Colpitts. It attempted to measure the extent to which the operating profits (not net profits) earned by the plaintiff during the years 1959-1963, inclusive, fell short of such profits that plaintiff would have attained had its profits for those years been on the same level vis-a-vis certain other air carriers, as the profits earned by it during the years 1964 and 1965. The comparison used for TWA's International Division was with the Atlantic Division of Pan-Am. The comparison for TWA's Domestic Division was based upon a comparison with American Airlines, Inc. These airlines were the ones most nearly comparable in the opinion of Coverdale & Colpitts with TWA. The basis upon which the study was made was that during the years 1959-1963 the plaintiff's business was handicapped by unlawful restraints or monopolization of the defendants, whereas during the so-called base years of 1964 and 1965 the effects of the defendants' alleged illegal actions had been substantially dissipated and accordingly the profit figures for those two years represented operations when the plaintiff's business was not handicapped by unlawful restraints or monopolization. The comparative profitability study is plaintiff's Exhibit 4(b) and was prepared under the direction of Wemple and submitted as a portion of his sworn direct testimony. No study of comparative operations policies or physical facilities or service policies was made by Coverdale.

The Coverdale Report found that TWA's 1959-1963 route structure was not materially different from what it was in

1964 and 1965. It also concluded that the route structures of the Atlantic Division of Pan-Am and of American were not materially different in 1959-1963 from what they were in 1964 and 1965.

The operating profits during the base years 1964 and 1965 of TWA's Domestic and International Divisions and of the air carriers for purposes of comparison were as follows:

	1964	1965	Average
	(Millions)		
TWA International	$34.6	$47.6	$41.1
TWA Domestic	50.9	49.8	50.3
PAA-Atlantic	26.1	33.7	29.9
American (Domestic)	61.2	70.9	66.1

The ratios of TWA's operating profits to those of the air carriers selected for comparison in 1964 and 1965 were as follows:

	1964-1965 Average Operating Profit (Millions)	Ratio, TWA to Other
TWA International	$41.1	
PAA-Atlantic	29.9	1.37
TWA Domestic	$50.3	
American (Domestic)	66.1	.76

The operating profits (losses) in each of the years 1959 through 1963 of TWA and the selected air carriers were as follows:

	1959	1960	1961	1962	1963	Total
	(Millions)					
-Atlantic	$17.5	$16.6	$ 4.5	$12.5	$33.3	$ 84.4
rican						
omestic)	24.5	24.7	19.1	19.3	43.9	131.5
International	(—7.8)	17.1	(—13.5)	15.3	23.3	34.4
Domestic	26.3	(—0.9)	(—24.2)	(—7.4)	17.5	11.3

Application of the TWA profit ratios determined for the base years 1964 and 1965 to the total 1959-1963 profits of the selected air carriers, establishes that TWA's profits would have been as set out below if TWA had attained a profit level comparable to that reached by TWA in 1964 and 1965:

1959-1963 Profits		1964-1965 Profit Ratio, TWA to Other	Calculated 1959-1963 TWA Profits
	(Millions)		(Millions)
PAA-Atlantic	$ 84.4	1.37	$115.6
American (Domestic)	131.5	.76	99.9

The difference between the profits calculated by this method and TWA's actual profits are as follows:

Comparison Airline	Calculated 1959-1963 TWA Profits (Millions)	Actual TWA Profits		Difference (Millions)
PAA-Atlantic	$115.6	TWA International	$34.4	$ 81.2
American (Domestic)	99.9	TWA Domestic	11.3	88.6
				$169.8

The operating profits earned by TWA's International Division in the period 1959 through 1963 were about $81 million less than they would have been if that Division's profit, as compared with PAA-Atl., had been as high as in the years 1964 and 1965. The operating profits earned by TWA's Domestic Division in the period 1959 through 1963 were about $89 million less than they would have been if that Division's profit, as compared with American, had been as high as in the years 1964 and 1965.

In my opinion the Coverdale comparative profit study does not provide an acceptable measure of damages in this proceeding, and I disallow the over-all claim based upon it. The allegations in the complaint relating to it are very much less definite and certain than the specific allegations with which the claims under Sections I-V of the opinion have dealt and to a considerable extent are overlapping therewith. Under Sections I-V of this opinion, the plaintiff claims a total of approximately $104 million and accordingly the claim for additional damages under this alternative claim amounts to an additional $65 million of general damages based solely upon the comparative profit study.

The objections of the defendants to the basis of the study, and the validity of the comparisons made therein for the purpose for which it is sought to be used are, in the main, valid.

The fact that many of the routes of the airlines used for comparative purposes parallel those of TWA (see maps attached to the study) is in itself not a sufficient basis for indicating that comparable earnings should follow therefrom. Some additional factors required to make the comparison valid in such a complex business, all of which are missing from the study, are comparative equipment and physical facilities and a myriad of management accounting and service factors. The variance in historical load factors in earlier years between TWA and the other airlines is one reflection of the importance of these missing factors. See *Wolfe* v. *Nat'l Lead Co.*, 225 F. 2d 427 (9th Cir.) 1955.

Furthermore, it seems inherently invalid to raise T.W.A.'s 1959-1963 results by using the 1959-1963 levels of operating profit of American and Pan-Am. Both of these carriers actively compete with TWA on its major routes. If TWA were to have significantly increased its revenues by introducing additional jet service in 1959-1963, it is

obvious that much of the increased revenue would have represented a diversion from its major competitors, including American and Pan-Am. Since the improvement in TWA would have lowered the operating profit of its two major competitors, it would not seem proper to estimate the operating profit of reconstructed TWA on the basis of the unreduced levels of operating profit of American and Pan-Am.

It also seems to me that the two alternative methods used by Coverdale in computing damages contain significant inconsistencies (TWA Ex. 4(b) and 4(c)). In my opinion the methodology used by Coverdale in plaintiff's Exhibit 4(c) is more precise and realistic than that shown in its comparative profitability study (TWA Ex. 4(b)). At one point the following colloquy occurred during the cross-examination of Wemple (Coverdale):

> "Q. Have you any opinion, Mr. Wemple, as to which between 4B and 4C represents the proper approach or the better approach to the determination of net operating profits? A. I have no opinion on that matter.
>
> Q. In 4(c) you come out with * * * $64 million and here you come out with $170 million, and still you have no opinion. A. Correct." (Tr. 6139-40) (See also Tr. 6134 and Simat Def. X 271A. p. XI-1).

The plaintiff did not call any other witness to support the Comparative Profit Study.

In my opinion the evidence to support the study is conjectural. The damages awarded in respect of Section I-V of this opinion adequately reflect the totality of the plaintiff's damages. When applied to the underlying facts the Comparative Profit Study produces results which are unrealistic (Def. Brief, p. 305).

VII.

Interest on damage claim.

The plaintiff in its brief takes the position that any award should carry interest, as an exercise of the discretionary authority of the trier of the facts to include in the award a sum constituting prejudgment (or moratory) interest, which would itself be subject to trebling (Plaintiff's Brief, p. 284). It alleges that the defendants, "through skillful exercise of their rights of appeal and through vigorous and lengthy contests of TWA's damage case," have succeeded in postponing for over five years a determination of the sum that should be awarded to TWA. Furthermore, TWA asserts that failure to record the operating profits which should have been recorded in each year, 1959 through 1963, and other elements of damage, have deprived plaintiff not only of the absolute amounts, but also of the normal increment on these sums.

The defendants in their brief state that the matter of award of interest should not be covered in the Special Master's opinion on damages but should be reserved for the trial judge who passes upon the Special Master's report.

I have interpreted the order of reference to the Special Master as requiring me to express my opinion on this subject.

The first line of cases to be considered establishes the Federal rule that interest may be allowed upon unliquidated claims.

In *Miller* v. *Robertson*, 266 U. S. 243, 258 (1924), the court allowed interest upon unliquidated claims:

> "Generally interest is not allowed upon unliquidated damages. *Mowry* v. *Whitney*, 14 Wall. 620, 653, 20 L. Ed. 860 (1871). But when necessary in order to arrive at fair compensation, the court in the exercise of a fair discretion may include interest or its equivalent as an element of damages."

In *Miller* the claim was capable of reduction to a specific monetary amount with a minimum degree of difficulty. There the buyer refused to accept ore and the seller sued for the difference between the contract price and the lesser price obtained when the seller resold ore after the buyer's refusal. The Supreme Court said the lower court properly allowed interest since the claim was a "debt" but suggested that such an award was within its discretion.

In *Concordia Insurance Co.* v. *School District No. 98*, 282 U. S. 545 (1931), the following statement appears:

> "In the absence of an authoritative state decision to the contrary, there was nothing in either [statute] which required the trial court in rendering its judgment to depart from the rule in respect of the allowance of interest which this court has recognized, namely, that, even in the case of unliquidated damages, 'when necessary in order to arrive at fair compensation, the court in the exercise of its sound discretion may include interest or its equivalent as an element of damages.' (citing *Miller, supra*)" 282 U. S. at 544-545.

In *National Airlines, Inc.* v. *Stiles*, 268 F. 2d 400 (5th Cir. 1959) the court concluded that interest was clearly in order. The case appears to be an expansion of the doctrine insofar as it allows interest in a situation where the damage is pecuniary but not subject to close valuation. An action had been brought under the Death on the High Seas Act by the widow of a passenger who was killed when the

defendant's airplane crashed. In awarding interest, the court pointed out that a party suffering a financial loss from the death of a "breadwinner", just as from the destruction of a ship, could be adequately compensated for the loss only "if the award is made at the time of the loss or if interest for the time between loss and payment is allowed." 268 F. 2d at 405. In so holding, the court stated:

> "It is quite clear that with as many uncertain factors as there are for consideration by the court in arriving at the fair value of plaintiff's pecuniary loss the length of time to the date of judgment may sometimes be taken into consideration by the court in determining the amount of its award." 268 F. 2d at 405.

After reviewing the congressional intent, the court affirmed the lower court's award stating:

> "... Congress clearly did intend to provide full compensation for the loss; and . . . the courts cannot carry out this clear mandate without taking into account the inadequacy of delayed compensation." 268 F. 2d at 406.

The court pointed out that admiralty stands on a different footing from the common law regarding damages, "for the general rule in common law had traditionally been that prejudgment interest could not be allowed on an unliquidated tort claim."

Shortly after the *National Airlines* decision, a Federal case was decided which laid to rest the question of power of the Federal courts to award prejudgment interest on unliquidated claims under Federal statutes. This case, which involved the High Seas Act, was *Moore-McCormack Lines, Inc.* v. *Richardson,* 295 F. 2d 583 (2d Cir. 1961), *cert. denied,* 368 U. S. 989 (1962). In the *Moore-McCormack* decision, the court stated:

"Interest was never refused on unliquidated claims from any doubt that some financial loss is actually suffered from delay in receiving money. Theoretically, refusal was based on the concept that interest was payable only on a 'debt' and that no debt could be due until the liability had been fixed. (citation omitted) McCormack traces the distinction to a survival of the medieval distaste for interest as 'usurious.' (citation omitted) A further explanation sometimes advanced is that a debtor should not be burdened with prejudgment interest upon an obligation so nebulous that he must necessarily look to the courts to fix its scope. Similar considerations would, however, seem to support the disallowance of prejudgment interest where liability is in doubt as to a 'liquidated' claim. But since the courts have not seen fit to deny prejudgment interest in the latter case, we see no reason why they should not grant it in the former." 295 F. 2d at 594.

It thus appears that the Federal courts have discretionary authority to allow interest on unliquidated claims, as well as liquidated claims, in proper cases where the statute is silent as to award of interest.

Next to be considered is a series of Federal cases standing for the proposition that when a penalty is authorised by the statute, it may be improper to award interest in addition. These cases first arose under the Fair Labor Standards Act but their rule of law regarding interest was made applicable to the private antitrust field by Judge Wyzanski in *Cape Cod Food Products, Inc.* v. *National Cranberry Association*, 119 F. Supp. 900 (D. Mass. 1954).

Cape Cod was an action by a food products company against individuals and corporations for damages claimed to have been sustained by the plaintiff by reason of an alleged conspiracy on the part of the defendants to violate

the antitrust laws. Judge Wyzanski charged the jury as follows:

> "Finally, I instruct you . . . that you are not to allow any interest of any kind. The problem of interest is one which has not yet been authoritatively settled by the Supreme Court of the United States. The ruling that I make is in accordance with the ruling of Judge Caffey in the Southern District of New York, and contrary to an earlier ruling of my own. But I am now bearing in mind a decision in the Supreme Court of the United States in connection with the Fair Labor Standards Act, 29 U. S. C. A. §201 *et seq.*, and double damages, and I have concluded that in a statute where treble damages are available, interest is not appropriately allowed. So you will please not take into account the problems of interest of any kind." 119 F. Supp. at 911.

Judge Wyzanski cites in support of his conclusion *Brooklyn Savings Bank* v. *O'Neil*, 324 U. S. 697 (1945).

Brooklyn Bank was an action for back wages and liquidated damages under Section 16(b) of the Fair Labor Standards Act. That aspect of *Brooklyn Bank* relevant to the situation presently under consideration centers around the court's consideration of whether an employee recovering minimum wages and liquidated damages under Section 16(b) is also entitled to interest on the sums so recovered. Mr. Justice Reed, speaking for the Court, first stated that the question of the right to interest on sums recoverable under a federal statute is a question of federal, not local, law. He then went on to disallow the interest requested and, in so doing, made the following statements at pp. 715-16:

> "Interest is not recoverable in judgments obtained under §16(b). As was indicated in our decision in *Overnight*

Motor Co. v. *Missel,* 316 U. S. 572 (1942), §16(b) authorizes the recovery of liquidated damages as compensation for delay in payment of sums due under the Act. Since Congress has seen fit to fix the sums recoverable for delay, it is inconsistent with Congressional intent to grant recovery of interest on such sum in view of the fact that interest is customarily allowed as compensation for delay in payment. To allow an employee to recover the basic statutory wage and liquidated damages, with interest, would have the effect of giving an employee double compensation for damages arising from delay in the payment of the basic minimum wages. See *Royal Indemnity Co.* v. *United States,* 313 U. S. 289, 296. Allowance of interest on minimum wages and liquidated damages recoverable under §16 (b) tends to produce the undesirable result of allowing interest on interest. See *Cherokee Nation* v. *United States,* 270 U. S. 476, 490. Congress by enumerating the sums recoverable in an action under Section 16(b) meant to preclude recovery of interest on minimum wages and liquidated damages."

Shortly after the *Brooklyn Bank* decision, the Supreme Court applied the rule in that case to penalties incurred under the Agricultural Adjustment Act of 1938. In *Rodgers* v. *United States,* 332 U. S. 371 (1947), the District Court rendered judgment in favor of the Government for penalties incurred under the Act for marketing cotton in excess of farm quotas plus interest from the date the penalties became due to the date of judgment. The Circuit Court of Appeals affirmed this decision and the Supreme Court granted *certiorari.* In an opinion by Mr. Justice Black, the Supreme Court reversed the lower court's decision and denied the propriety of awarding interest.

In *Rodgers,* the petitioner produced and sold more cotton than allotted him under Part IV of the Agricultural

Adjustment Act of 1938 as amended. Stat. 31, 55-60; 55 Stat. 203; 7 U. S. C. A. §§ 1281 *et seq.* The United States instituted suit to recover money "penalties" to which non-cooperating farmers are "subject" for quota violations. Mr. Justice Black, after stating that federal law controls since the penalties are imposed under an act of Congress, said:

> "Since penalties under the Agricultural Adjustment Act are imposed under an Act of Congress, they bear interest only if and to the extent such interest is required by Federal law (citations omitted). There is no language in the Agricultural Adjustment Act or in any other act of Congress which specifically allows or forbids interest on penalties such as these prior to judgment. But the failure to mention interest in statutes which create obligations has not been interpreted by this Court as manifesting an unequivocal congressional purpose that the obligation shall not bear interest. (citation omitted) For in the absence of an unequivocal prohibition of interest on such obligations, this Court has fashioned rules which granted or denied interest on particular statutory obligations by an appraisal of the congressional purpose in imposing them and in the light of general principles deemed relevant by the Court. (citation omitted)" 332 U. S. at 373.

The opinion next contains the following statements cited in the Plaintiff's brief in support of the proposition that interest should be awarded in a private antitrust action:

> "As our prior cases show, a persuasive consideration in determining whether such obligations shall bear interest is the relative equities between the beneficiaries of the obligation and those upon whom it has been imposed. And this court has generally weighed these relative equities in accordance with the historic judi-

cial principle that one for whose financial advantage an obligation was assumed or imposed, and who has suffered actual money damages by another's breach of that obligation, should be fairly compensated for the loss thereby sustained." 332 U. S. at 373.

However, the actual holding of *Rodgers* undercuts the relevance of this statement to the present situation. *Rodgers*, as mentioned above, appears to be the application by the Supreme Court of the rule it established in *Brooklyn Bank*. In disallowing prejudgment interest, the Court made the following observations:

"... [W]e think that the question of interest on the penalties provided in the Agricultural Adjustment Act on non-cooperators should be governed by the rule previously applied by this Court to criminal fines. Although Congress neither wholly prohibited nor made it a crime for a farmer to market cotton in excess of his quota, still it imposed sanctions upon non-cooperators analogous to those of the criminal law. The purpose of Congress in requiring payment of penalties into the Federal Treasury for marketing above the allotted amount was not to raise revenue for the Government's financial advantage but to deter farmers from planting and marketing more than their quotas. In fact, the whole philosophy of the Agricultural Adjustment Act is based on the theory that the public will be benefited, not damaged, if farmers produce and market within these quotas, thereby avoiding the payment of penalties." 332 U. S. 374-375.

The penalties imposed by the Fair Labor Standards Act and the Agricultural Adjustment Act are analogous for the question here under consideration to those imposed by the trebling of damages in a private antitrust action. The situation in which TWA finds itself is not unlike the situ-

tion of the government in the *Rodgers* case insofar as the penalties are concerned and *Rodgers* leaves no doubt but that interest cannot run on that part of the treble damages which is the "penalty" or "deterrent factor." But, as *Rodgers* was speaking only to penalties in and of themselves, the case does not necessarily mean that interest could not run on the primary damage claim. That interest can run on this primary amount is, in fact, the contention of TWA.

In *Brooklyn Bank, supra,* the court merely stated, without severing withheld wages from liquidated damages, that "[t]o allow an employee to recover the basic statutory wage and liquidated damages, with interest, would have the effect of giving an employee double compensation for damages arising from delay in the payment of the basic minimum wages." 324 U. S. at 715. It would seem, then, that *Rodgers* did in no way qualify the *Brooklyn Bank* holding. *Rodgers* was discussing only penalties so the Court talked in terms of penalties. *Brooklyn Bank* was discussing actual damages plus liquidated damages, and the Court spoke in terms of disallowing interest on both with the suggestion that the liquidated damages had the same effect as interest insofar as the claimant was concerned. Therefore, the *Rodgers* decision seems in no way to support TWA's contention that interest should be allowed on the primary amount in the situation presently being considered.

This interpretation of *Brooklyn Bank* is borne out in *Asselta* v. *149 Madison Ave. Corp.,* 95 F. Supp. 856 (S. D. N. Y. 1951). There the problem and its solution depended upon an interpretation of the effect of § 11 of the Portal-to-Portal Act of 1947, 294 U. S. C. A. § 260, on § 16(b) of the Fair Labor Standards Act, 29 U. S. C. A. § 216(b).

Under the Portal-to-Portal Act, the awarding of liquidated damages as provided in the Fair Labor Standards Act was no longer mandatory, but, by § 11, was placed within the sound discretion of the court. Judge Kaufman, in distinguishing the *Brooklyn Bank* decision, made the following observations:

> "Clearly, interest on an award in which no liquidated damages were granted, such as in the present case, would not be barred by the holding in Brooklyn Savings Bank v. O'Neil. An analysis of the opinion in the O'Neil case indicates that the Court regarded the provision for liquidated damages as a substitute for interest, which, the Court said, 'is customarily allowed as compensation for delay in payment.'" 95 F. Supp. at 858.

The stage was then set for Judge Wyzanski's adoption of the Federal Rule concerning interest on penalties to private antitrust litigation where treble damages are available.

Although interest is traditionally considered compensation for delay in the payment of money rightfully due the claimant, it appears that where penalties are involved, as in the trebling of the principal amount in a private antitrust action, such penalty is conceptually in lieu of interest. TWA, in the situation presently under consideration, is not entitled to moratory interest.

VIII

Recapitulation and Final Award

The schedule below compiles the separate determinations (prior to adjustments as set forth below) made in the foregoing sections of this Report.

SUMMARY OF SEPARATE DETERMINATIONS

			($ millions)	
Section I	*Losses in operating profits due to inadequacy of jet fleet*			
	(1) International Division		22.4	
	(2) Domestic Division	29.3		
	less: adjustment with respect to earlier delivery of Convair aircraft	2.5		
			26.8	
			49.2	
	less: cost of capital to effect earlier and additional purchase of jets (increase in gross interest cost)		21.6	
				$27,600,000

SECTION II	*Losses due to being required to lease jets*		
		12.7	
	less: cost of capital to effect purchase of jets	7.4	
			5,300,000
SECTION III	*Losses connected with financing the jets*		
	(1) Damages with respect to equity financing	-0-	
	(2) Damage with respect to debt financing	-0-	
			-0-
SECTION IV	*Loss due to delay in disposal of displaced piston aircraft*		-0-
SECTION V	*Loss due to disruption of business*		570,478.65
	TOTAL		$33,470,478.65

The determination of the amount of damages in the previous sections of this Report has generally followed the separate statement of the several aspects of the over-all claim as set forth by TWA. However, these various interrelated aspects of the over-all claim were consolidated by Price Waterhouse and adjusted in connection with TWA's historical financial statements. The result of the Price Waterhouse analysis, which was put forward by plaintiff as its final claim, developed the total sum of $104.5 million before trebling (TWA Exs. 7 and 50).

The defendants have not raised any serious question as to the Price Waterhouse analysis. Although I have not accepted some of the underlying calculations by other experts which were incorporated into the Price Waterhouse report, I do accept the basic principles of combination and adjustment. The Price Waterhouse results have been modified to incorporate the specific determinations in the foregoing sections of this Report.

In Section III of this Report I have set forth my determination that there should be no damage award with respect to financing. This determination reduces the Price Waterhouse total sum by $32.6 million, leaving $71.9 million. In Sections I and IV I have made specific determinations which accept in part and reject in part the underlying data upon which this figure of $71.9 million is based. These adjustments include a reduction with respect to the Domestic Division operating claim, of $2.5 million; an increase in gross interest cost of $29.0 million; and making no provision for any increase in proceeds with respect to the sale of piston aircraft and other property retirements.

These adjustments appear in tabular form below in the "Consolidated Statement of Award". Adopting the adjusted Price Waterhouse formulation together with the separate award for losses due to disruption of business

stated in Section V, I determine that the over-all award for damages should be $45,870,478.65 (before trebling).

CONSOLIDATED STATEMENT OF AWARD

	($ millions)	
A. *Increase in gain from operations with respect to earlier delivery, additional purchase, and owning rather than leasing jet aircraft*	76.8*	
less: adjustment with respect to earlier delivery of Convair aircraft	2.5	
	74.3	
less: increase in proceeds relating to earlier sale of piston aircraft	–0–	
less: increase in gross interest cost	29.0	
		$45,300,000
B. *Losses connected with financing the jets*		
(1) Damages with respect to equity financing	–0–	
(2) Damages with respect to debt financing	–0–	
		–0–
C. *Loss due to disruption of business*		570,478
		$45,870,478

* Source: TWA Ex. 50 as amended by TWA Exs. 42 and 43 and DX 262.

On April 9, 1968, TWA moved on the record to amend its complaint to ask damages in such amount as the Special Master should find to have been established by the evidence. TWA gave written notice on May 2, 1966, of intent to make such motion at the close of the hearing, and there is no suggestion of surprise. I have determined that no amendment of the complaint is required in order to award the plaintiffs the damages hereby awarded because the previous motion of the plaintiffs to amend their complaint to increase the amount of damages sought to be recovered, as granted by Judge Metzner, was sufficiently broad to authorize the award hereby made.

Pursuant to 15 U. S. C. § 15, the damages of $45,870,478.65 determined above are trebled to $137,611,435.95.

The plaintiffs' request for award of counsel fees and costs is referred to the District Court for decision.

The foregoing Report shall constitute my findings of fact and conclusions of law.

/s/ HERBERT BROWNELL
Special Master

Dated: September 21, 1968

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

[Doc. 511]

[CAPTION] 61 Civ. 2324

PLEASE TAKE NOTICE that defendants Hughes Tool Company ("Toolco") and Raymond M. Holliday object to the Report of Herbert Brownell, Special Master, filed herein on September 21, 1968, in the following particulars:

I. DETERMINATIONS RELATING TO DEFENDANTS' ALLEGED ANTITRUST VIOLATIONS

A. CLEARLY ERRONEOUS FINDINGS OF FACT

The Special Master clearly erred, on the undisputed facts of record or of which he had judicial knowledge, in failing to make the following findings which are relevant and material to a determination whether defendants violated the antitrust laws as alleged in the complaint:

1. Toolco's acquisitions of control of plaintiff through purchases of its stock commencing in 1939 were all approved by the Civil Aeronautics Board ("CAB") after public hearings pursuant to section 408 of the Federal Aviation Act, 49 U.S.C. § 1384.

Transcontinental & Western Air, Inc., Control by Hughes Tool Co., 6 C.A.B. 153 (1944)

Transcontinental & Western Air, Inc., Further Control by Hughes Tool Co., 9 C.A.B. 381 (1948)

Report of Edward T. Stodola, Hearing Examiner, Dkt. 2796, dated January 30, 1948, reported at 12 C.A.B. 193 (1950)

Trans World Airlines, Inc., Further Control by Hughes Tool Co., 12 C.A.B. 192 (1950)

tion ("Convair") for the specific and exclusive use of plaintiff and in lieu of plaintiff's placing such orders directly with the manufacturers.

Complaint, par. 17

Sworn statement of Rummel (TWA 2)

Concession of counsel contained in TWA memorandum to the Special Master, pp. 4, 22

Testimony of Rummel (Tr. 308, 635-36, 1101-06, 1155-57)

Report of R. S. Damon, dated December 6, 1955 (DX 44)

Letter from A.V. Leslie to Noah Dietrich, dated December 19, 1955 (DX 45)

Letter from Noah Dietrich to Fred Ayers, dated December 21, 1955 (DX 46)

(iii) Toolco's contracts with Boeing and with Convair all provided that Toolco's rights thereunder were not assignable without the consent of the manufacturer except to plaintiff, Toolco and plaintiff being regarded as a single purchasing entity.

Letter from J. B. Connelly to Toolco, dated January 6, 1956 (DX 47)

Sworn statement of Rummel (TWA 2, Ex. R-3)

Contract between Boeing and Toolco, dated March 2, 1956 (DX 66, Article 21)

Contract between Boeing and Toolco, dated March 19, 1956 (DX 67, Article 21)

Contract between Convair and Toolco, dated September 10, 1956 (DX 68, Article 16)

Testimony of Rummel (Tr. 1104, 2593)

Testimony of plaintiff's witness Connelly (Tr. 3131-32, 3135, 3233-35)

(iv) The Boeing and Convair contracts were administered by Rummel in the best interests of plaintiff and as though plaintiff rather than Toolco had placed the orders, all of the jet aircraft being configured as closely as possible to plaintiff's unique requirements and specifications.

Testimony of Rummel (Tr. 308, 314, 432-36, 438-40, 443-44, 604-05, 1538)

(v) Plaintiff received 47 of the 63 jet aircraft ordered for it by Toolco from Boeing and Convair, it having been determined in 1959 by Toolco, with the concurrence of the president and other senior officers of plaintiff, that six B-331 jet aircraft and ten CV-880 jet aircraft were surplus to plaintiff's needs.

Sworn statement of Rummel, as amended (TWA 2, pp. 9, 17; Tr. 147-48)

Testimony of Rummel (Tr. 757-63, 2122-23)

Testimony of Wemple (Tr. 5016)

Letter from Coverdale & Colpitts to A. V. Leslie dated March 13, 1959 (DX 218)

Deposition of Cocke (DX 364 for id., pp. 1008-09)

(vi) Toolco disposed of the sixteen surplus jet aircraft as follows:

Its contract rights to the six B-331 jet aircraft were assigned in July, 1959 to Pan American Airways ("Pan Am") with the consent of Boeing and with the consent of plaintiff's president, Thomas, ratified by its Board of Directors.

TWA Board Minutes, dated June 26, 1959 (DX 54)

Supplemental Agreement #5, dated September 3, 1959, to March 19, 1956 contract between Boeing and Toolco (DX 67 and Article 21)

Six of the ten CV-880 aircraft were leased by Convair to Northeast Airlines ("Northeast") in 1960 and 1961 after Convair had reduced Toolco's commitment from 30 to 24 CV-880s in return for Toolco's agreement to purchase six CV-990 jet aircraft.

Sworn statement of Rummel (TWA 2, pp. 9-10)
Testimony of Rummel (Tr. 2915-16)
Toolco-Northeast Control Case, 36 C.A.B. 280, 295 (1962)
Purchase Agreement between General Dynamics and Toolco, dated November 10, 1960 (TWA 12)
Letter from J. V. Naish to Toolco, dated May 6, 1960 (DX 146)

The remaining four CV-880s, after having been repeatedly offered to plaintiff in early 1961, remained parked on the ground until 1962 and 1963, when they were leased to Northeast, in which Toolco had in the meantime acquired substantial control with CAB approval.

Sworn statement of Rummel (TWA 2, p. 10)
Telegram from W. Bew to Rummel, dated February 27, 1961 (DX 72)
Letter from A. V. Leslie to Toolco, dated March 20, 1961 (DX 73)
Testimony of Rummel (Tr. 2364-68, 2370-72)

(vii) In 1961 Toolco ordered from Convair seven additional CV-990 jet aircraft, making a total order of thirteen, which Toolco was prohibited from assigning to anyone except plaintiff without the consent of Convair and none of which was ever completed following plaintiff's rejection of them in early 1961.

Testimony of Rummel (Tr. 2256-57, 2369-70, 2391-92)
Purchase Agreement between General Dynamics and Toolco, dated November 10, 1960 (TWA 12)
Amendment No. 1, dated February 22, 1961, to November 10, 1960 Agreement between General Dynamics and Toolco (TWA 14)
Projection by TWA's planning and research department, dated March 1, 1961 (DX 62)
Letter from J. V. Naish to Toolco, dated May 6, 1960 (DX 146)
Letter from W. P. Gullander to Toolco, dated July 7, 1960 (DX 147)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

Letter from E. D. Johnson to Toolco, dated July 14, 1960 (DX 148)
Letter from R. M. Holliday to General Dynamics, dated July 14, 1960 (DX 149)
Letter from R. M. Holliday to General Dynamics, dated August 6, 1960 (DX 150)
Letter from R. M. Holliday to General Dynamics, dated September 6, 1960 (DX 152)

5. During the period of the complaint plaintiff acquired and operated various models of piston and jet aircraft manufactured by Boeing, Convair, Douglas, Lockheed and Martin.

Sworn statement of Rummel (TWA 2, pp. 8-9)
Deposition of Rummel (pp. 1267-74)
TWA Motions in Docket 1182, filed March 29, 1951 and April 18, 1958 (DX 321 for id.)
C.A.B. Orders No. E-5324 (April 25, 1951) and No. E-13334 (December 30, 1958) and (DX 321 for id.)
1945, 1949, 1951 and 1953 TWA Annual Reports (TWA 78; TWA 82; TWA 84; TWA 86)
TWA Prospectus, dated February 18, 1949 (TWA 293, p. 21)
Toolco-TWA-Lockheed-Mellon Subordination Agreement, dated June 6, 1947 (DX 272)
Toolco-TWA-Lockheed-Lending Institution Agreement, dated Aug. 4, 1949 (DX 276)
TWA Fifth Supplemental Indenture, dated Aug. 1, 1949 (DX 277)
Toolco-TWA-Equitable Agreement, dated Jan. 16, 1951 (DX 283)

6. During the period of the complaint Rummel and Hughes explored almost every conceivable source of supply of piston, turboprop and jet aircraft in order to obtain the best possible aircraft for plaintiff and, acting in pursuit of

that objective and in the best interest of plaintiff, held discussions or negotiations with Douglas, Martin, Lockheed, Consolidated Vultee (Convair), Boeing, AVRO of Canada and England, Vickers, Handley-Page, Bristol, de Havilland and Sud Aviation.

Testimony of Rummel (Tr. 456-57, 637, 1256-57, 1310-12, 1390-93, 1399)

7. In the period 1953-55, concurrently with exploratory discussions and negotiations with various other potential suppliers of jet aircraft to plaintiff, Rummel and Hughes, with the assistance of plaintiff's technical personnel and general counsel and acting in the best interests of plaintiff carried on exploratory and contract negotiations with Convair for the development and production by it of a jet aircraft, known as the Model 18, which would be uniquely suited to plaintiff's domestic and international requirements; and such negotiations continued until September 1955, when Convair decided not to build the Model 18.

Testimony of Rummel (Tr. 1417-18, 1890-95)
Deposition of Rummel (pp. 886-89, 892)
Running Record of Negotiations with Convair (DX 11)

8. In early 1956 Toolco considered the possibility of developing, subject to approval by the CAB, with which the requisite application was duly filed by plaintiff, a long-range jet aircraft suitable for use by plaintiff on both its domestic and international routes, but the project was abandoned in a few months before it reached the blueprint stage.

Testimony of Rummel (Tr. 3010-16A)
C.A.B. Orders No. E-10360 (June 8, 1956) and No. E-12604 (June 4, 1958) (DX 321 for id.; DX 323 for id.)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

9. At no time during the period of the complaint did defendants engage in financing the acquisition of aircraft by plaintiff or other air carriers in competition with insurance companies, commercial banks or other lending institutions.

a. Toolco was not a lending institution and did not supply financing of air carriers generally.

b. From time to time Toolco rendered financial assistance to plaintiff, its lawfully acquired subsidiary, frequently as a condition of plaintiff's obtaining loans from the Equitable Life Assurance Society ("Equitable") and other lending institutions, in the form of subordinated loans, guarantees, underwritings of working capital and security issues, and upon conditional sales agreements without recourse and in other forms and upon terms and conditions which are not normally available from lending institutions but are characteristic of financial aid from a parent company to a subsidiary.

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

11. There is no evidence that Atlas Corporation ("Atlas") engaged at any time during the period of the complaint in the manufacture or development of commercial transport aircraft or in the supplying of such aircraft to U.S. air carriers.

12. In 1960 Atlas, pursuant to an agreement with Toolco, caused Northeast, which it then controlled through stock ownership, to submit to plaintiff, subject to approval of the CAB and of the majority of the stockholders of plaintiff other than Toolco, a proposal of merger, which was reported by a study committee appointed by plaintiffs president, Mr. Thomas, as being fair in its terms and possessing significant cost and income advantages for plaintiff but which lapsed on March 31, 1961 without having been acted upon.

36 C.A.B. 280, 294-95
Report of the Huntington Committee (DX 57)
Deposition of Cocke (Dx 364 for id., pp. 1120, 1181-83, 1191, 1332, 1493)

13. The interim leases under which Toolco leased certain B-131 and B-331 jet aircraft to plaintiff in 1959 and 1960 pending the consummation of permanent financing for their purchase by plaintiff were all approved by the CAB upon applications signed by officers and directors of plaintiff, and neither the applications nor the leases disclose any condition, agreement or understanding that plaintiff "would not purchase or lease aircraft from any other potential supplier thereof."

Motions, Leases, and CAB Orders contained in DX 323 for id.

The Special Master clearly erred in making the following findings for which there is no evidentiary basis in the record which are clearly against the weight of the evidence:

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

14. It was clearly erroneous to find that the negotiations conducted by plaintiff and Toolco with Convair in 1953-1955 for the development and production by Convair of the Model 18 jet aircraft constituted "'engaging in' the development and manufacture of aircraft" by Toolco. (Report, p. 28)

See Part I(A), Objection #7 and citations in support thereof.

15. It was clearly erroneous to find that the short-lived idea in 1955 of having Toolco develop a jet aircraft for plaintiff's use constituted "'engaging in' the development and manufacture of aircraft" by Toolco. (Report, p. 28)

See Part I(A), Objection #8 and citations in support thereof.

16. It was clearly erroneous to find that the activities of Toolco referred to in paragraphs 14 and 15 of the complaint "occurred at the same period of time when TWA alleges that it should have been arranging for purchases from other suppliers such as Boeing Aircraft Corporation (Boeing)." (Report, pp. 28-29)

Complaint, pars. 14, 15, 16, 17

17. There is no evidence to suggest that "the development and manufacture of the Convair 880 aircraft . . . had elements of a joint venture between Toolco and Convair." (Report, p. 29)

Testimony of Rummel (Tr. 2006-2100, 2110-16)
Sworn statement of Rummel (TWA 2, Ex. R-3)
Contract between Convair and Toolco, dated September 10, 1956 (DX 68)
Letter agreement #1 between Convair and Toolco, dated September 20, 1956 (DX 68)
Toolco-Convair telegrams, dated September 18-20, 1956 (DX 68 [following letter agreement #2

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

18. It was clearly erroneous to find that Toolco's purchase of Pratt & Whitney jet engines in 1956 had any other purpose than to serve the best interests of plaintiff by securing the satisfaction of its foreseeable engine requirements at a cost savings or that Toolco resold the engines at a profit. (Report, p. 30)

Testimony of Rummel (Tr. 305-08, 449-65, 2052)
Deposition of Rummel (pp. 961-68)
Letter from R. Holliday to Pratt & Whitney, dated February 14, 1956 (DX 4)
Telegram from R. Holliday to Pratt & Whitney, dated February 15, 1956 (DX 6)
Letter from United Aircraft to Toolco, dated September 7, 1956 (DX 8)
TWX from Boeing to Toolco, dated December 11, 1956 (DX 48)
Supplemental Agreement #3, dated January 10, 1957, to March 2, 1956 contract between Boeing and Toolco (DX 66)

19. It was clearly erroneous to find that Toolco was able to trade in the delivery positions of the jet aircraft it had ordered from manufacturers. (Report, p. 31)

Testimony of Rummel (Tr. 1104, 2915-16)
Testimony of Connelly (Tr. 3131-32, 3135, 3231-35)
Letter from J. B. Connelly to Toolco, dated January 6, 1956 (DX 47)
Contract between Boeing and Toolco, dated March 2, 1956 (DX 66, Article 21)
Contract between Boeing and Toolco, dated March 19, 1956 (DX 67, Article 21)
Contract between Convair and Toolco, dated September 10, 1956 (DX 68, Article 16)
Contract between Convair and Toolco, dated November 10, 1960 (TWA 12, Article 16)
Letter from J. V. Naish to Toolco, dated May 5, 1960 (DX 146)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

20. It was clearly erroneous to find that the allegation in paragraph 18 of the complaint that "Toolco refused throughout the period 1956 to 1960 to assign to TWA the rights to acquire" the jets which Toolco had ordered from Convair and Boeing had not been disproved. (Report, p. 32)

Sworn statement of Rummel (TWA 2, Ex. R-5)
TWA Motions in Docket 1182 filed January 29, 1959; March 13, 1959; June 26, 1959; September 22, 1959; November 6, 1959; March 30, 1960; April 14, 1960; May 6, 1960; July 1, 1960; and December 22, 1960 (DX 322 for id.)
C.A.B. Orders No. E-13542 (February 26, 1959); No. E-13873 (May 15, 1959); No. E-14169 (July 1, 1959); No. E-14504 (September 30, 1959); No. E-14877 (January 29, 1960); No. E-15430 (June 26, 1960); No. E-15561 (July 21, 1960); and No. E-16195 (December 29, 1960) (DX 322 for id.)
Toolco-TWA Leases dated March 17, March 30, April 18, April 29, May 13, May 24, May 28, June 13, July 1, July 10, and August 1, 1959 (DX 322 for id., item No. 10d)

21. It was clearly erroneous (although irrelevant to a determination as to whether defendants violated the anti-trust laws) to find that plaintiff's management was "Hughes-dominated." (Report, p. 33)

Testimony of Rummel (Tr. 279-81, 412-14, 515-17, 550-51, 1381-84, 1835-40, 2096-2116, 2319-21)
Deposition of Rummel (pp. 394-98, 1201-02)
Rummel Call Sheets (TWA 22)
TWA Annual Reports, 1947-1967 (TWA 80-99; DX 374)

Report of R. S. Damon, dated December 6, 1955 (DX 44)
TWA Staff Engineering Report, dated April 19, 1956 (DX 65)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

22. It was clearly erroneous to find that the factory representatives at the Boeing and Convair factories were Toolco employees reporting to Rummel as special representative of Toolco. (Report, p. 46)
Testimony of Rummel (Tr. 317-23, 326, 384)

B. Erroneous Conclusions of Law

1. The Special Master erred in holding that defendants during the period of the complaint violated the following anti-trust laws:

(a) Section 1 of the Sherman Act;
(b) Section 2 of the Sherman Act;
(c) Section 3 of the Clayton Act;
(d) Section 7 of the Clayton Act.

(N.B.—While there is no express holding to this effect, such a holding is implicit in the Special Master's acceptance without exception or qualification of all of the allegations of the complaint (Report, pp. 25-34). The same comment applies to our objections to other conclusions of law for which no specific reference is cited.)

2. The Special Master erred in holding that the agreement between Toolco and Atlas to submit a proposal for the merger of plaintiff and Northeast to the Board of Directors and minority stockholders of plaintiff was in violation of Section 1 or Section 2 of the Sherman Act.

3. The Special Master erred in holding that Atlas was engaged in a contract, combination or conspiracy with defendants to unreasonably restrain or monopolize interstate trade or commerce in violation of Section 1 or Section 2 of the Sherman Act.

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

4. The Special Master erred in holding that defendants were engaged in a contract, combination or conspiracy within the meaning of Section 1 or Section 2 of the Sherman Act.

5. The Special Master erred in holding that defendants during the period of the complaint unreasonably restrained or monopolized interstate trade or commerce in the furnishing of commercial transport aircraft to U.S. air carriers or to plaintiff in violation of Section 1 or Section 2 of the Sherman Act.

6. The Special Master erred in holding that defendants during the period of the complaint unreasonably restrained or monopolized interstate trade or commerce in the furnishing of financing to U.S. air carriers or to plaintiff for the acquisition of commercial transport aircraft in violation of Section 1 or Section 2 of the Sherman Act.

7. The Special Master erred in holding that defendants leased jet aircraft to plaintiff in violation of Section 3 of the Clayton Act.

8. The Special Master erred in holding that Toolco's acquisition of control of plaintiff violated Section 7 of the Clayton Act.

9. The Special Master erred in holding that he was bound by allegations of the complaint despite an exceedingly strong showing by facts of record or within his judicial knowledge that such allegations were untrue. (Report, pp. 29, 33)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

10. The Special Master erred in holding that he was bound to accept all the allegations of the complaint, including those which are not factual or definite but conclusory and indefinite. (Report, p. 21)

11. The Special Master erred in refusing to take judicial notice of the contents of opinions of the CAB relating to the acquisition and exercise of Toolco's control of plaintiff and of applications and documents submitted by plaintiff to the CAB for approval in accordance with the terms of the Control Orders. (Report, pp. 26-28, 38-41)

12. The Special Master erred in refusing to admit into evidence or otherwise to consider relevant portions of the deposition testimony of plaintiff by Mr. E. O. Cocke, a senior vice president and director of the plaintiff at the time of the deposition. (Report, pp. 41-43)

II. Determinations Relating to Plaintiff's Claims That it Received an Inadequate and Late Jet Fleet.

A. Clearly Erroneous Findings of Fact.

The Special Master clearly erred, on the undisputed facts of record, in failing to make the following findings which are relevant and material to a determination as to whether plaintiff's failure to receive 15 Boeing B-131 and 18 Boeing B-331 jet aircraft on certain dates set forth in the opinion of Rummel (Annex D to TWA Ex. 2) and to receive 30 Convair 880 jet aircraft on the delivery dates set forth in the Toolco-Convair contract or in Amendment No. 4 thereto were proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint:

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

1. Toolco and TWA originally started talking about jets with Boeing and many other potential jet manufacturers in 1947 or 1948 and in 1953 or 1954 Boeing agreed to give TWA a right of initial refusal of its first jet delivery positions.

Sworn statement of Rummel (TWA 2, pp. 4-5)
Testimony of Rummel (Tr. 1310-12, 1319, 1390-93)

2. In early 1955 and continuously thereafter until sometime in late 1955 Toolco and TWA engaged with Convair in discussions and negotiations which were undertaken in good faith, which were in the best interest of plaintiff and which were conducted with a view to obtaining for plaintiff a long range jet which would be suitable for operation on both its domestic and international routes.

Deposition of Rummel (pp. 890-92)
Testimony of Rummel (Tr. 1399, 1417-19, 1938-39)
Running Record of Negotiations with Convair (DX 11)

3. The jet negotiations between TWA, Toolco and Convair initially were for a jet aircraft known as the Model 18. These negotiations reached an advanced stage before they were terminated by Convair in September, 1955.

Deposition of Rummel (p. 131)
Memorandum from W. E. Beall to W. M. Allen and others, dated September 23, 1955 (DX 168)

4. Following the collapse of the Model 18 negotiations, plaintiff and Toolco continued to negotiate in good faith with Convair for the development and production by it of two other design proposals, the Model 19 and the Model 20, also especially suitable for operation on both the domestic and international routes of plaintiff, until these

proposals were vetoed by the Board of Directors of General Dynamics in November, 1955.

Deposition of Rummel (pp. 131, 892-97)
Testimony of Rummel (Tr. 455-56, 1417-19), 1938-39)

5. Defendants' negotiations with Convair in 1955 did not restrain interstate trade and commerce in the furnishing of jet aircraft to air carriers.

6. Boeing's plans for the B-100 series of commercial jet aircraft were only in a pre-design stage in February, 1955, and they did not progress to a point where serious contract negotiations could take place until June, 1955.

Testimony of Rummel (Tr. 1461)
Testimony of Connelly (Tr. 3261, 3263-64, 3328-31)

7. After June 23 and 24, 1955, when Boeing offered the bulk of its early delivery positions for the B-100 series to Pan Am, American and United, while making no offer to plaintiff, it was impossible for Toolco to obtain equality in early deliveries of B-131 jet aircraft with Pan Am and American.

Letter from W. E. Allen to Pan Am, dated June 23, 1955 (DX 96)
Letter from J. B. Connelly to American, dated June 24, 1955 (DX 97)
Letter from J. B. Connelly to United, dated June 24, 1955 (DX 98)
TWA Memorandum to the Special Master, p. 19
Testimony of Connelly (Tr. 3308)

8. When the rejection of the Convair Model 20 proposal became known in November 1955, Toolco and TWA acted promptly to procure from Boeing delivery commitments for 8 B-131 jet aircraft which Boeing continued to hold

firm as of December 23, 1955 and which were confirmed by a letter agreement of January 6, 1956.

Testimony of Rummel (Tr. 1938-39, 2011-14)
Deposition of Rummel (p. 897)
Memorandum from R. L. Bell to E. C. Wells, dated December 23, 1955 (DX 103)
Letter from J. B. Connelly to Toolco, dated January 6, 1956 (DX 47)

9. The order for 8 B-131 jet aircraft was expanded in subsequent negotiations to include 15 such aircraft with a substantial improvement over the deliveries promised in the January 1956 letter agreement.

DX 47, *supra*, Objection #8
Supplemental Agreement #3, dated January 10, 1957, to March 2, 1956 contract between Boeing and Toolco (DX 66)

10. Plaintiff instituted jet service on its domestic routes in March, 1959, ahead of its largest competitor, United, and of every other domestic trunk carrier except American, a bigger airline, which it lagged by only two months in start of jet service and equalled in the amount of jet service provided in 1959 relative to its size.

1959 United Annual Report (TWA 184)
1959 TWA Annual Report (TWA 92)
C.A.B. Form 41 Reports, Schedules B-7 (DX 358 B and C for id.)
Percent of domestic jets assigned to service (DX 341)

11. If Toolco, instead of ordering B-131 jet aircraft for use on plaintiff's domestic routes had ordered DC-8 jet aircraft from Douglas, the only United States aircraft manufacturer other than Boeing to offer a long-range jet aircraft in 1955, plaintiff would have received such jet

aircraft substantially later than the B-131 jet aircraft which Toolco in fact ordered for it from Boeing.

Article from American Aviation, dated October 24, 1955 (DX 28)
1959 Pan Am Annual Report (TWA 128)
Sworn statement of Rummel (TWA 2, Annex D)

12. Boeing did not develop until December 1955 the intercontinental version of the B-707, known as the B-331 in plaintiff's configuration, to a sufficient extent for contract negotiations to begin with respect thereto.

Memorandum from R. L. Bell to W. E. Beall, dated November 2, 1955 (DX 102)
Testimony of Connelly (Tr. 3093, 3106, 3153, 3365)

13. Toolco commenced negotiations with Boeing for B-331 jet aircraft at about the same time as Pan Am but was unable to obtain delivery positions equal to those which Boeing offered to Pan Am.

Testimony of Rummel (Tr. 2011-13, 2016)
Testimony of Connelly (Tr. 3153)

14. The delivery positions contained in Toolco's formal contract of March 19, 1956 for 18 B-331 jets were substantially better than the positions offered by Boeing in December, 1955.

Memorandum from R. L. Bell to E. C. Wells, dated December 23, 1955 (DX 103)
Contract between Boeing and Toolco, dated March 19, 1956 (DX 67)

15. In 1960 plaintiff's International Division flew a greater percentage of transatlantic seats relative to Pan Am than in any year since 1954 and earned a higher operating profit than Pan Am.

1965 C.A.B. Handbook, pp. 309, 317
Simat Report (DX 271B, p. E-5)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

16. If Toolco had ordered the intercontinental version of the DC-8 jet aircraft from Douglas, it would have received such aircraft substantially later than the B-331 jet aircraft Toolco in fact ordered for it from Boeing.

Article from American Aviation, dated October 24, 1955 (DX 28)
1959 Pan Am Annual Report (TWA 128)
Sworn statement of Rummel (TWA 2, Annex D)

17. Plaintiff has not shown that, in the absence of any exercise of control by defendants with respect to its procurement of jet aircraft, it would have ordered jet aircraft in 1955 from Boeing rather than from Douglas.

Article from American Aviation, dated September 12, 1955 (DX 26)
Article from American Aviation, dated November 7, 1955 (DX 31)
Memorandum from E. C. Wells to W. E. Beall, dated July 24, 1956 (DX 105)
1958 Eastern Annual Report (DX 312, p. 4)
1959 United Annual Report (TWA 184, p. 6)
1965 C.A.B. Handbook, p. 507
Testimony of Rummel (Tr. 715, 1263-64, 1975-76, 3104)

Receipt of Additional B-331 and CV-880 Jet Aircraft

18. Early in 1959 Toolco determined that it was advisable for plaintiff to reduce its planned jet fleet from 63 to 45 aircraft on the ground that the smaller fleet would be sufficient for plaintiff's needs and better suited to its financial abilities.

Testimony of Rummel (Tr. 575-63, 2122-23)

19. Thomas, the president of plaintiff, and other senior officers of plaintiff were in favor of such a reduced fleet and did not oppose it.

Deposition of Cocke (DX 364 for id., pp. 1008-09)
Testimony of Rummel (Tr. 766-67, 769, 775-76, 1186, 2143-44, 2147)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968

20. Coverdale and Colpitts ("C and C"), a firm of consulting engineers, was requested to review plaintiff's financial projections for 1961 based on a fleet of 45 jet aircraft and advised that the types and numbers proposed would be adequate for a sound and economic operation.

Letter from Coverdale & Colpitts to Charles S. Thomas, dated May 6, 1959 (DX 64)

21. In the spring of 1959 plaintiff was in a poor financial condition, having experienced net losses in 1957 and 1958.

1957 and 1958 TWA Annual Reports (TWA 90; TWA 91)

22. It was not unusual for an airline to cut back on its initial jet orders.

Supplemental Agreement #5, dated July 28, 1958, to March 1, 1956 contract between Boeing and American (DX 85)
American Form 41 Reports, Schedules B-2, 2d and 3rd qtrs. 1961
Southern Transcontinental Service Case (Docket #7984, Tr. 11179)
1958 Eastern Annual Report (DX 312, p. 18)

23. Plaintiff has not shown that the officers or directors of plaintiff were dominated by defendants, that they did not exercise an informed and independent judgment with respect to the procurement and financing of plaintiff's equipment as well as with respect to other phases of plaintiff's business or that they were derelict in performing the obligations and responsibilities of their office.

See Part I(A), Objection #21 and citations in support thereof

24. Rummel was a middle echelon executive whose field of competence was the engineering and economic aspects of aircraft performance and who had no power of decision

with respect to what equipment should be procured by plaintiff.

Testimony of Rummel (Tr. 276, 515-17, 575, 543, 545-53, 595-98, 722-24, 762, 822-24, 1136-37, 1352-53, 1863, 1879, 1921-22, 2124-27, 2766-67, 3008-09)

25. The decision in 1959 to reduce the size of plaintiff's initial jet fleet was not in restraint of interstate trade or commerce in the supply of jet aircraft to air carriers.

See Part II(A), Objections ##18-22 and citations in support thereof

26. Toolco's proposal to offer to assign six surplus B-331 jet aircraft to Pan Am, subject to Boeing's consent, was made with the concurrence of Thomas and was ratified by a unanimous vote of plaintiff's Board of Directors.

Contract between Boeing and Toolco, dated March 19, 1956 (DX 67, Article 21)
TWA Board Minutes, dated June 26, 1959 (DX 54)

27. The decision to assign six surplus B-331 jet aircraft to Pan Am was not in restraint of interstate trade and commerce in the supply of jet aircraft to air carriers.

See Part II(A), Objections ##18-22, 26 and citations in support thereof

28. Plaintiff has not shown that, in the absence of any exercise of control by defendants with respect to its procurement of jet aircraft, it would have ordered as many as 63 jet aircraft or that, if it had done so, it would not have reduced the initial order as being in excess of its needs and financial capabilities.

See Part II(A), Objections ##18-22 and citations in support thereof

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

29. Plaintiff has not shown that, in the absence of financial assistance from Toolco, it could have financed an initial jet fleet of 63 aircraft or any number of aircraft.

Report, pp. 255-57, 263-64.
Testimony of Woodfin (DX 270, Part II, pp. 37-38).

29A. Plaintiff has not shown that Toolco had the financial ability either to accept delivery of any of the jet aircraft it ordered for plaintiff at any earlier dates than those in which such aircraft were in fact delivered to plaintiff or to pay for any greater number of such aircraft than the number which were in fact delivered to plaintiff in 1959 and 1960.

Early Receipt of CV-880 Jet Aircraft

30. The failure of Convair to meet its delivery commitments for CV-880 jet aircraft, as specified in its original contract with Toolco and in Amendment No. 4 thereto, was the result of numerous factors, such as engineering changes, the arrival of parts and manpower problems, for which defendants were not responsible.

Testimony of Rummel (Tr. 2820-25, 2844-49)
Call Sheets of Rummel (TWA 22)
Memorandum from R. K. Rourke to Rummel, dated January 15, 1960 (DX 116)
Memorandum from J. W. Bew to E. E. Canady, dated December 18, 1959 (DX 122)
Memorandum from N. R. Parmet to R. K. Rourke dated January 13, 1960 (DX 124)
Memorandum from R. K. Rourke to Rummel, dated January 22, 1960 (DX 125)
Memorandum from Rummel to C. S. Thomas, dated February 8, 1960 (DX 217)
Memorandum from R. K. Rourke to D. Digges, dated April 17, 1960 (DX 128)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

TWX from J. W. Bew to R. K. Rourke, dated May 27, 1960 (DX 130)
Telegram from J. W. Bew to Rummel, dated February 16, 1961 (DX 137)
Memorandum from R. K. Rourke to Rummel, dated March 1, 1961 (DX 138)

31. Deficiencies in Convair's production of the CV-880, resulting in substantial additional delays, persisted after its resumption of production in January, 1961.

TWA Fleet Requirements, 1961-1970, dated March 1, 1961 (DX 62, p. V-9)
Telegram from J. W. Bew to Rummel, dated February 16, 1961 (DX 137)
Memorandum from R. K. Rourke to Rummel, dated March 1, 1961 (DX 128)
Letter from R. C. Loomis to R. K. Rourke, dated July 11, 1961 (DX 142)
Memorandum from R. K. Rourke to Rummel, dated August 2, 1961 (DX 143)

32. Plaintiff has not shown that defendants were responsible for Convair's delay in the delivery of the CV-880 jet aircraft to plaintiff.

See Part II(A), Objections ##30-31 and citations in support thereof
Plaintiff's Reply Memorandum dated September 24, 1965, pp. 22-23

33. Plaintiff has not shown that defendants' administration of Toolco's contract with Convair unreasonably restrained interstate trade or commerce in the supply of jet aircraft to air carriers.

The Special Master clearly erred in making the following findings for which there is no evidentiary basis in the record or which are clearly against the weight of the evidence:

Earlier Receipt of Boeing Jet Aircraft

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

34. It was clearly erroneous to find that in or about October, 1955 defendants caused TWA to forego making any arrangements for the acquisition of any jet-powered aircraft. (Report, p. 45)

See Part II(A), Objections ## 2-4, 6-8 and citations in support thereof

35. It was clearly erroneous to find that TWA was prevented from obtaining jet-powered aircraft during the years 1959, 1960 and the first half of 1961. (Report, p. 45)

C.A.B. TWA Form 41 Reports, Schedules B-7, 1959-2d qtr., 1961

36. It was clearly erroneous to find, without more, that in 1955 aircraft manufacturers including Boeing and Douglas had prepared plans and drawings for the manufacture by themselves of jet-powered aircraft intended for commercial use. (Report, p. 46)

Article from American Aviation, dated September 12, 1955 (DX 26)

Article from American Aviation, dated November 7, 1955 (DX 31)

1965 C.A.B. Handbook, p. 507

Testimony of Rummel (Tr. 715, 1263-64, 1461, 1975-76, 3104)

Running Record of Negotiation with Convair (DX 11)

Report, pp. 219, 260

B.—We object to this finding, although literally true, because standing alone it conveys a materially untrue impression of the readiness of Boeing and Douglas to enter into the production of commercial jets. The same comment applies to other objections made to statements "without more," which may or may not be literally true standing alone.)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

37. It was clearly erroneous to find that during the last six months of 1955 TWA and Toolco did not engage in negotiations reasonably calculated to preserve TWA's competitive position in the industry for early deliveries of jet aircraft (Report, p. 48)

See Part II(A), Objections ## 2-4, 6-8, 12-13 and citations in support thereof
Testimony of Rummel (Tr. 1399, 1418)
Deposition of Rummel (p. 892)

38. It was clearly erroneous to find, by implication, that Toolco's early demand for priority in delivery positions of Boeing jets was an abnormal demand or caused negotiations with Boeing to be broken off. (Report, p. 48)

Memorandum from Rummel to John A. Collings, dated January 12, 1955 (DX 10)
Testimony of Rummel (Tr. 1431)

39. It was clearly erroneous to state that the complaint alleges that defendants "prevented TWA from entering into negotiations with Boeing". (Report, p. 49)

40. It was clearly erroneous to find that defendants prevented TWA from entering into negotiations with Boeing. (Report, p. 49)

See Part II(A), Objections ## 2-4, 6-8, 12-13, 37 and citations in support thereof.

41. It was clearly erroneous to find that Toolco failed seriously to negotiate with manufacturers during the latter half of 1955. (Report, p. 49)

See Part II(A), Objections ## 2-4, 6-8, 12-13, 37 and citations in support thereof.

42. It was clearly erroneous to find that Toolco acted contrary to TWA's demonstrable competitive needs in nego-

tiating with manufacturers during the latter half of 1955. (Report, p. 49)

See Part II(A), Objections ## 2-4, 6-8, 12-13, 37 and citations in support thereof.

43. It was clearly erroneous to find that Toolco's conduct of negotiations with aircraft manufacturers in the latter half of 1955 resulted in keeping TWA from ever getting as favorable delivery positions for long range jets as those obtained by TWA's principal competitors in the years in question. (Report, p. 49)

See Part II(A), Objections ## 10, 15 and citations in support thereof.

44. It was clearly erroneous to find that Hughes finally authorized negotiations with Boeing for acquisition of jets, presumably for TWA, in late December 1955. (Report, p. 50)

Testimony of Rummel (Tr. 2011-14)

45. It was clearly erroneous to find, without more, that a protective order for 8 delivery positions for Toolco for B-131s was secured from Boeing on January 6, 1956. (Report, p. 50)

Memorandum from R. L. Bell to E. C. Wells, dated December 23, 1955 (DX 103)
Testimony of Rummel (Tr. 2011-14)

46. It was clearly erroneous to find, without more, that a contract for 18 B-331s was entered into on March 19, 1956. (Report, p. 50)

See Part II(A), Objections ## 12-14 and citations in support thereof.

47. It was clearly erroneous to find, without more, that the delivery dates for the Boeing jets were later than those

obtained by the plaintiff's chief competitors. (Report, p. 50)

See Part II(A), Objections ## 10, 15 and citations in support thereof.

48. It was clearly erroneous to find, without qualification, that Toolco retained the power to make a later decision as to the ultimate use and destination of the Boeing jets. (Report, p. 50)

Contract between Boeing and Toolco, dated March 2, 1956 (DX 66, Article 21)
Contract between Boeing and Toolco, dated March 19, 1956 (DX 67, Article 21)

49. It was clearly erroneous to find that the delivery dates of the 18 B-331s ordered by Toolco for plaintiff would have been advanced by making timely orders. (Report, p. 52)

See Part II(A), Objections ## 12-14, 37 and citations in support thereof.

50. It was clearly erroneous to find, without more, that Rummel's testimony was corroborated in many significant aspects by the testimony of Connelly. (Report, p. 53)

E.g., Testimony of Connelly (Tr. 3140, 3339-40)
vis-a-vis Sworn statement of Rummel (TWA 2, p. 10)

51. It was clearly erroneous to find, without qualification, that Connelly participated in and was generally familiar with the negotiations between Boeing and Pan Am, between Boeing and American and between Boeing and Toolco as well as other air carriers. (Report, p. 53)

Testimony of Connelly (Tr. 3283-85, 3294-3304)

52. It was clearly erroneous to find that Boeing would have afforded TWA substantial equality in early delivery

positions with Pan Am and American under any conditions realistically imaginable. (Report, p. 54)

See Part II(A), Objections ## 2-4, 6-8, 12-13, 37 and citations in support thereof.

53. It was clearly erroneous to find, without more, that Connelly testified that the "Statement of Improvement of Delivery Positions" prepared by Rummel was a reasonable estimate of the improvement in delivery positions which TWA would have obtained. (Report, p. 54)

E.g., Testimony of Connelly (Tr. 3083-84, 3088)

54. It was clearly erroneous to find that the Connelly testimony was not seriously controverted, if by "Connelly testimony" is meant his direct testimony. (Report, p. 55)

55. It was clearly erroneous to find that Rummel was chief procurement officer for the plaintiff at the time of the initial jet orders. (Report, p. 56)

See Part II(A), Objection #24 and citations in support thereof.

56. It was clearly erroneous to find that the hypothetical jet fleet and reconstructed delivery dates constitute a proper basis for computing damages. (Report, p. 56)

Receipt of Additional B-331 and CV-880 Jet Aircraft

57. It was clearly erroneous to find that the management of TWA was "Hughes-dominated". (Report, pp. 33, 45, 53, 56)

See Part I(A), Objection #21 and citations in support thereof.

58. It was clearly erroneous to find that the numbers of B-331s and B-131s finally fixed upon were based upon discussions between Rummel and Hughes as to the proper

number of Boeing aircraft for plaintiff's foreseeable needs for long range jets. (Report, p. 50)

Memorandum from E. C. Wells to W. E. Beall, dated July 24, 1956 (DX 105, p. 2)
Testimony of Rummel (Tr. 689-90, 823-25, 1305-10, 2008-09)

59. It was clearly erroneous to find that Hughes caused Toolco to enter into a contract with Convair for thirty CV-880 jet aircraft in April 1956. (Report, pp. 50, 101, 112)

Testimony of Rummel (Tr. 515-17, 2096-2100)
TWA Staff Engineering Report, dated April 19, 1956 (DX 65)

60. It was clearly erroneous to find, without more, that Toolco retained the power to make a later decision as to whether the CV-880 jet aircraft would go to TWA. (Report, p. 50)

Contract between Convair and Toolco, dated September 10, 1956 (DX 68, Article 16)

61. It was clearly erroneous to state that the complaint alleged Toolco's having prevented delivery to TWA of CV-880 aircraft other than those which were leased to Northeast with the acquiescence of TWA. (Report, p. 51)

62. It was clearly erroneous to find that the Connelly testimony reinforced the allegations of the complaint in respect of the inadequacy of the plaintiff's long range jet fleet. (Report, p. 55)

63. It was clearly erroneous to find that Rummel was the chief procurement officer for the plaintiff at the time of the reduction in the jet fleet initially ordered for plaintiff. (Report, p. 56)

See Part II(A), Objection #24 and citations in support thereof.

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

64. It was clearly erroneous to find that Toolco refused throughout the period 1956 to 1960 to assign to plaintiff the rights to acquire CV-880 jet aircraft. (Report, p. 101)

65. It was clearly erroneous to find that the selection of CV-880 jets by Toolco for medium range operations was based on Rummel's recommendation. (Report, p. 101)
Testimony of Rummel (Tr. 515-17, 2096-2100)

66. It was clearly erroneous to find, without more, that three aircraft leased by Convair to Northeast were aircraft which Toolco had previously assigned to plaintiff on May 9, 1960. (Report, p. 113)

TWA Motion in Docket 1182, filed December 22, 1960 (DX 322 for id.)
Testimony of Rummel (Tr. 2129-30)

67. It was clearly erroneous to find that Toolco had had negotiations with Capital Airlines about selling six to ten CV-880s in January 1959. (Report, p. 113)

68. It was clearly erroneous to find, without more, that Rummel protested about the cutback in the Convair fleet as did other TWA officials. (Report, p. 113)

See Part II(A), Objections ##18-25 and citations in support thereof

69. It was clearly erroneous to find that Hughes summarily dismissed TWA's objections to the cutback in the Convair fleet. (Report, p. 113)

See Part II(A), Objections ##18-25 and citations in support thereof

Earlier Receipt of CV-880 Jet Aircraft

70. It was clearly erroneous to find, without more, that defendants required Convair to make certain changes in the design of Model 880 aircraft on order by Toolco, but pre-

vented TWA from arranging with Convair for certain design modifications which were desired by TWA and which would not have interferred with the scheduled dates of delivery. (Report, pp. 100-101)

Testimony of Rummel (Tr. 308, 314-17, 432-36, 438-40, 443-44, 1538, 2786)

71. It was clearly erroneous to find, without more, that Hughes (who is not a "defendant" as stated) assumed personal control of all matters connected with Convair deliveries that no one else in TWA was permitted to become involved on matters of delivery. (Report, p. 102)

See Part II(A), Objection ##30-31 and citations in support thereof
Sworn statement of Rummel (TWA 2, pp. 3-4)
Testimony of Rummel (Tr. 307-24, 326, 384, 432-36, 438-40, 443-44, 1142-43, 1538)
Contract between Convair and Toolco, dated September 10, 1956 (DX 68, Letter Agreement (e) and Change Orders)

72. It was clearly erroneous to find, without more, that Convair tendered approximately seven or eight completed aircraft in the summer of 1960. (Report, pp. 103, 109)

Testimony of Rummel (Tr. 1125-27, 2756, 2760-65, 2844-49)

73. It was clearly erroneous to state that the complaint alleges that defendants commencing about May, 1960 prevented deliveries of Convair jets from being made and caused substantial delays in deliveries. (Report, p. 109)

74. It was clearly erroneous to find that Convair was able to offer deliveries to plaintiff in May, 1960 (apart from

the one CV-880 delivered to it in May) or that defendants prevented such deliveries from being made or caused substantial delays in deliveries. (Report, p. 109)

See Part II(A), Objection ## 30-31, 70-73 and citations in support thereof

B. Erroneous Conclusions of Law

1. The Special Master erred in holding that the order of default relieved plaintiff from the burden of establishing by a preponderance of the evidence that the damages claimed by it were proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint. (Report, pp. 34-38)

2. The Special Master erred in holding that, because of the default, defendants have the burden of disproving that the damages claimed by plaintiff were proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint. (Report, p. 49)

3. The Special Master erred in holding that the standards of proof sustained in *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946), are applicable to a determination as to whether plaintiff in this case has established by a preponderance of the evidence that the damages it claims were proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint.

4. The Special Master erred in holding that the delivery to plaintiff of fifteen Boeing B-131 jet aircraft and twelve Boeing B-331 jet aircraft at dates later than plaintiff now claims the same aircraft would have been delivered if ordered earlier was proximately caused by conduct of de-

fendants in violation of the antitrust laws as alleged in the complaint. (Report, pp. 48-50)

5. The Special Master erred in holding that the delivery to plaintiff of twelve instead of eighteen B-331 jet aircraft and of twenty instead of thirty CV-880 jet aircraft was proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint. (Report, pp. 33, 56, 112-13)

6. The Special Master erred in holding that the delivery to plaintiff of twenty CV-880 jet aircraft at dates later than the dates specified in Amendment No. 4 to the Toolco-Convair contract was proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint. (Report, pp. 108-109)

7. The Special Master erred in holding that defendants are liable for plaintiff's failure to receive 63 Boeing and Convair jet aircraft on the dates he has determined without proof that, but for defendants' conduct in violation of the antitrust laws as alleged, plaintiff would have ordered and taken delivery of such aircraft of the types, in the numbers and at the dates now claimed by plaintiff.

8. The Special Master erred in holding that defendants are liable for plaintiff's failure to receive 63 Boeing and Convair jet aircraft without proof that plaintiff was financially able to order and pay for such a fleet. (Report, p. 263)

9. The Special Master erred in holding that the actions taken and opinions held by plaintiff's chief executive and other senior officers and directors of plaintiff were imma-

terial to the question whether plaintiff would and could have ordered and taken delivery of a fleet of 63 jet aircraft of the types in the numbers and at the dates now claimed by plaintiff. (Report, p. 33)

10. The Special Master erred in receiving into evidence, over objection, hearsay testimony by Rummel respecting the authority of Burgess and Thomas, both presidents of plaintiff, in the field of equipment procurement. (Testimony of Rummel, Tr. 1515-17, 1521)

11. The Special Master erred in relying upon evidence of a settlement of claims between Convair and Toolco as a basis for his determination that defendants were responsible for delays by Convair in delivery of CV-880 jet aircraft to plaintiff. (Report, pp. 103, 109)

12. The Special Master erred in basing findings of fact upon allegations of the complaint without reference to undisputed evidence in the record which contradicted such allegations.

13. The Special Master erred in basing findings of fact on the direct testimony of Rummel and Connelly without reference to testimony by Rummel and Connelly on cross-examination or to evidence contained in TWA and Boeing documents which contradicted such direct testimony.

14. The Special Master erred in basing findings of fact on opinion testimony of Rummel and Connelly which had no factual support in the record or which related to subject matters on which such witnesses were not qualified to give expert testimony.

Defendants' Objections to the Report of the Special Master dated November 1, 1968.

III. Determinations Relating to Plaintiff's Claim that it was Injured by Leasing Jet Aircraft from Toolco.

A. Clearly Erroneous Findings of Fact.

The Special Master clearly erred, on the undisputed facts of record or of which he had judicial knowledge, in failing to make the following findings which are relevant and material to a determination as to whether plaintiff was injured by leasing fifteen B-131 and four B-331 jet aircraft in 1959 and 1960 from Toolco as a proximate result of conduct of defendants in violation of the antitrust laws as alleged in the complaint:

1. In 1959 and 1960 Toolco leased to plaintiff on a day-to-day basis pending the consummation of permanent financing and in order to permit plaintiff to take immediate delivery thereof upon completion by Boeing, 15 B-131 and four B-331 jet aircraft.

TWA Motions in Dkt. 1182 dated January 29, 1959; March 13, 1959; June 26, 1959; September 22, 1959; November 6, 1959 (DX 322 for id.)

CAB Orders No. E-13542 (February 26, 1959); No. E-13873 (May 15, 1959); No. E-14169 (July 1, 1959); No. E-14504 (September 30, 1959); No. E-14877 (January 29, 1960) (DX 322 for id.)

2. All of said leases and all extensions thereof were approved by the CAB, as required under the terms of the Control Orders, upon applications filed by plaintiff and signed by Thomas, the president and a director of plaintiff, Leslie, the financial vice president and a director of plaintiff or Taylor, plaintiff's vice president for government relations.

Defendants' Objections to the Report of the Special Master dated November 1, 1968.

TWA Motions in Dkt. 1182, dated January 29, 1959; March 13, 1959; June 26, 1959; September 22, 1959; November 6, 1959 (DX 322 for id.)
CAB Orders No. E-13542 (February 26, 1959); No. E-13873 (May 15, 1959); No. E-14169 (July 1, 1959); No. E-14504 (September 30, 1959); No. E-14877 (January 29, 1960) (DX 322 for id.)

3. The leases did not contain, and the applications for approval did not disclose, any condition, agreement or understanding that plaintiff would not purchase or lease aircraft from any other potential supplier thereof.

TWA Motions in Dkt. 1182, dated January 29, 1959; March 13, 1959; June 26, 1959; September 22, 1959; November 6, 1959 (DX 322 for id.)
CAB Orders No. E-13542 (February 26, 1959); No. E-13873 (May 15, 1959); No. E-14169 (July 1, 1959); No. E-14504 (September 30, 1959); No. E-14877 (January 29, 1960) (DX 322 for id.)

4. There is no evidence that the rentals under the leases were unreasonably high.

C.A.B. TWA Form 41 Reports, Schedules B-2, 1st Qtr. 1960, 4th Qtr. 1961

5. Except for the rentals paid on the first B-131 until May 1959, Toolco received no payment of rent on any of the leased aircraft until the consummation of the financing on December 30, 1960. 1959 TWA Annual Report (TWA 92, p. 7)

6. There is no testimony by any of plaintiff's witnesses that plaintiff would or could have purchased rather than leased such aircraft in 1959 and 1960 but for conduct by defendants in violation of the antitrust laws as alleged in the complaint.

Defendants' Objections to the Report of the Special Master dated November 1, 1968.

The Special Master clearly erred in making the following findings for which there is no evidentiary basis in the record of which are clearly against the weight of the evidence:

7. It was clearly erroneous to find that the aircraft leased to TWA by Toolco during the period 1959 to 1960 were the first and only jet-powered aircraft made available to TWA by the defendants during the years 1955 to 1960. (Report, p. 169)

Concession of counsel contained in TWA Memorandum to the Special Master, p. 220 and fn.

8. It was clearly erroneous to find that such leases were given on a continuing condition, agreement and understanding that TWA would not purchase or lease aircraft from any other potential supplier thereof. (Report, p. 169)

See Part III(A), Objection #3 and citations in support thereof.

9. It was clearly erroneous to find that plaintiff's experts contended that the defendants forced TWA to lease these jet aircraft from Toolco instead of permitting it to own them. (Report, p. 169)

Testimony of Wemple (Tr. 5038-40, 5047-49)

10. It was clearly erroneous to find that plaintiff's experts contended that the result of the leasing was that TWA had to pay far more to have the use of these aircraft than it would have paid if it had originally bought the aircraft itself. (Report, p. 169)

Testimony of Wemple (Tr. 5048-49, 5052-53, 5071)

11. It was clearly erroneous to find that Toolco not only profited through the receipt of rental payments but also by

taking depreciation on an accelerated basis, creating a tax gain for which it claimed capital gains treatment upon ultimate sale. (Report, p. 169)

(N.B.—We refer to this as a finding by the Special Master although it is stated as a contention by plaintiff, since the Master appears to consider it relevant to his determination that defendants are liable for the leasing.)

B. Erroneous Conclusions of Law

1. The Special Master erred in holding that plaintiff's leasing of fifteen B-131 and four B-331 jet aircraft from Toolco in 1959 and 1960 was proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint. (Report, pp. 180-82)

2. The Special Master erred in holding that paragraph 10(h) of the complaint and other general allegations in the complaint provide a sufficient basis to cover antitrust damages resulting from leasing rather than owning aircraft. (Report, pp. 180-81)

3. The Special Master erred in holding that plaintiff is entitled to recover damages in antitrust representing the claimed excess cost of leasing over ownership of aircraft the leasing of which had been approved by the CAB and thereby acquired the immunities conferred by Section 414 of the Federal Aviation Act. (49 U.S.C. § 1384)

4. The Special Master erred in holding that defendants had the burden of proving that lease arrangements were superior to ownership or that TWA was unwilling or incapable of purchasing jets during 1959-1960. (Report, p. 182)

Defendants' Objections to the Report of the Special Master dated November 1, 1968.

5. The Special Master erred in using the interest cost of capital rather than the appropriate overall cost of capital determined by the CAB to be 10.25%, in computing plaintiff's claim of damages from leasing rather than owning jet aircraft. (Report, pp. 183-84)

IV. Determinations Relating to Amount of Plaintiff's Claim for Lost Operating Profits

A. Clearly Erroneous Findings of Fact—International Division

The Special Master clearly erred in failing to make the following findings with respect to plaintiff's claim that it was damaged in the period 1959-1963 by reason of its failure to receive 18 Boeing B-331 jet aircraft on certain dates set forth in the opinion of Rummel (Annex D to TWA Ex. 2):

1. Plaintiff has failed to establish by a preponderance of the evidence that the operation of the added jet equipment assumed by its expert witness, Wemple, in the period 1959-1963 would have increased the net operating profits, after depreciation, of its International Division over such period.

2. Plaintiff has failed to establish by a preponderance of the evidence that, if it had added the transatlantic jet flights assumed by Wemple in the period 1959-1963, Pan Am would have operated fewer transatlantic jet flights than it in fact operated in 1959 and 1960 or that Pan Am in 1961-1963 and the foreign flag carriers in 1960-1963 would not have responded by operating additional jet flights.

Simat Report (DX 271B, pp. E-4-E-8, E-14-E-16; Ex. E-A, E-B)

Testimony of Simat (Tr. 8436-43, 8463-67A, 8476-79, 8485-87)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

3. Plaintiff has failed to establish by a preponderance of the evidence that its operation of the added jet equipment assumed by Wemple in the period 1959-1963 would have increased its transportation revenues from the operation of international charter flights.

Simat Report (DX 271B, pp. E-23-E-25, E-40-E-45)
Testimony of Wemple (Tr. 5804-09, 5862-64)

4. Plaintiff has failed to establish by a preponderance of the evidence that its operation of the added jet equipment assumed by Wemple in the period 1959-1963 would have increased its transportation revenues from flights operated beyond the gateway.

Simat Report (DX 271B, pp. E-23-E-39)
Testimony of Wemple (Tr. 5494-96, 5774-76, 5783-84, 5408, 5809)

5. There is no evidence in the record that, if plaintiff had received B-331 aircraft at the earlier dates assumed by plaintiff it would have leased any such aircraft to Northeast Airlines in October and November, 1959, thereby earning additional net incidental revenues of $200,000.

Coverdale Report (TWA 4C(1), p. 49)
Testimony of Wemple (Tr. 5112-15, 5135-40)

The Special Master clearly erred in making the following findings for which there is no evidentiary basis in the record or which are clearly against the weight of the evidence.

6. The Special Master clearly erred in finding that plaintiff's operation of the added jet equipment assumed by its expert witness, Wemple, in the period 1959-1963 would have increased the total transportation revenues of its International Division by $89.3 million. (Report, pp. 58-75, 78-79)

See Part IV(A), Objections ##2-4 and citations in support thereof.

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

7. The Special Master clearly erred in finding that the assumed additions to the number of transatlantic flights operated by plaintiff in such period would have taken place without any increase in the number of transatlantic flights operated by Pan Am or foreign flag carriers. (Report, pp. 60-72, 74-75, 79)

See Part IV(A), Objection #2 and citations in support thereof

a. It was clearly erroneous to find that it was the opinion of defendants' expert witness, Simat, that Coverdale's estimate that TWA could increase its share of available transatlantic seats was erroneous. (Report, p. 67)

Simat Report (DX 271A, pp. IV-73-79; DX 271B, pp. E-2-E-3, E-16-E-18)

b. It was clearly erroneous to find, by implication, that Simat's opinion as to the probable competitive response of Pan Am was based in any degree upon the retention by Pan Am of piston seats which were historically retired in 1960 or any later year. (Report, pp. 68, 69-70)

Simat Report (DX 271B, pp. E-10-E-12, E-14-E-16)

c. It was clearly erroneous to find that there was a severe worldwide shortage of jet equipment through 1960 such as to make Simat's opinion unrealistic with respect to the response that would have been made by plaintiff's transatlantic competitors in 1959-1960. (Report, p. 69)

Simat Report (DX 271B, pp. E-8-E-12, E-14-E-16; Exs. E-A, E-B)

Testimony of Simat (Tr. 8436-46, 8463-67A, 8476-79, 8485-89, 8755-57)

Coverdale Report (TWA 4C(1), p. 25)

Testimony of Wemple (Tr. 5164-65, 5216, 5527-28, 5535-36)

d. It was clearly erroneous to find that the equipment assumptions for TWA used by Wemple would have resulted in the use of two fewer jets by U.S. air carriers on transatlantic routes in 1959-1960 and ruled out any probability of competitive response from foreign air lines. (Report, p. 69)

Simat Report (DX 271B, pp. E-8-E-19)
Testimony of Wemple (Tr. 5575-79, 5593-5601)

e. It was clearly erroneous to find that there was no "historical pattern" of response by competitors to additional TWA transatlantic service. (Report, p. 70)

Simat Report (DX 271B, pp. E-4-E-6)

f. It was clearly erroneous to find that in 1960 TWA historically increased its percent of transatlantic seats vis-a-vis Pan Am without competitive response. (Report, p. 70)

Simat Report (DX 271B, pp. E-5-E-6)

g. It was clearly erroneous to find that Pan Am would not have been in an equipment position in 1959 and 1960 to operate the added transatlantic jet flights estimated by Simat as its minimum response to the assumed addition of transatlantic jet flights by plaintiff. (Report, p. 72)

Simat Report (DX 271B, pp. E-8-E-9, E-14, Ex. E-A)

h. It was clearly erroneous to find that foreign flag carriers were not in an equipment position in 1960 to operate the added transatlantic jet flights estimated by Simat as their minimum response to the assumed addition of transatlantic jet flights by plaintiff. (Report, p. 72)

Simat Report (DX 271B, p. E-14, Ex. B)

i. It was clearly erroneous to find that TWA's comparative shortage of jet equipment in 1961 caused it rapidly to lose its market position. (Report, p. 74)

j. It was clearly erroneous to find that TWA's foreign competitors would have weakened their competitive positions on other routes in 1961-1963 if they added the transatlantic jet flights estimated by Simat as their minimum response to the assumed addition of transatlantic jet flights by plaintiff. (Report, p. 75)

Simat Report (DX 271B, p. E-14)

8. The Special Master clearly erred in finding that plaintiff's operation of the added jet equipment assumed by Wemple would have increased its beyond-the-gateway and charter service passengers and revenues in proportion to the increase in its scheduled transatlantic passengers and revenues. (Report, pp. 72-75, 79)

Simat Report (DX 271B, pp. E-23-E-45)
Testimony of Wemple (Tr. 5217, 5494-96, 5499, 5733-36, 5774-75)

9. The Special Master clearly erred in finding that the added costs of operation of plaintiff's International Division in the period 1959-1963, based on Wemple's assumed added equipment and estimated added traffic, would have been no greater than $66.9 million. (Report, pp. 75-77, 79; Schedule facing p. 58)

Simat Report (DX 271B, Part G)

a. It was clearly erroneous to find that Simat's cost estimates, if recomputed on the basis of Wemple's estimates of added traffic, would be at least as low as Wemple's cost estimates. (Report, pp. 77, 79)

Simat Report (DX 271B, Part G)

b. It was clearly erroneous to find that Wemple's estimates as to operating cost should be accepted on the basis that his estimates as to traffic and revenues were accepted. (Report, pp. 77, 79)
Simat Report (DX 271B, Part G)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

B. Clearly Erroneous Findings of Fact—Domestic Division

The Special Master clearly erred in failing to make the following findings with respect to plaintiff's claim that it was damaged in the period 1959-1963 by reason of its failure to receive 15 Boeing B-131 and 18 Boeing B-331 jet aircraft on certain dates set forth in the opinion of Rummel (Annex D to TWA Ex. 2) and to receive 30 Convair 880 jet aircraft on the delivery dates set forth in Amendment No. 4 to the Toolco-Convair contract:

1. There is no evidence that if plaintiff had received 15 Boeing B-131, 18 Boeing B-331 and 30 Convair CV-880 jet aircraft on the dates assumed, it would still have leased four Boeing 720B jet aircraft in 1961 and 1962 or acquired 18 Boeing 131B jet aircraft in 1963.

Coverdale Report (TWA 4C(1), pp. 2-3)
Testimony of Wemple (Tr. 4766-67)

2. Plaintiff has failed to establish by a preponderance of the evidence that the operation of the added jet equipment assumed by its expert witness, Wemple, in the period 1959-1963 would have increased the net operating profits, after depreciation, of its Domestic Division over such period.

Simat Report (DX 359A, Part II)

3. Plaintiff has failed to establish by a preponderance of the evidence that it could have sold added jet capacity at the same average rate at which it sold the jet capacity it did operate with any type of jet equipment in any year of the period.

Simat Reports (DX 271B, Part C; DX 359A, pp. II-20-II-32)

4. In the 1959-1963 period the unprecedented expansion of domestic trunk airline capacity resulting from the introduction of jet equipment in the face of a nearly static demand for air travel produced a situation of acute overcapacity which alarmed the

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

C.A.B. Form 41 Reports, Schedules B-43, 1958-1963 Annual On-Line Passengers Between New York and Los Angeles Carried By American, TWA, and United, 1959 to 1963 (DX 367)
UAL-TWA-AAL, Combined Transcontinental Non-Stop Scheduled Frequencies Per Week—August 1958-1963 (DX 368)
1965 C.A.B. Handbook, pp. 130, 132, 144, 470
Transcontinental Passengers, 1959-1963 (TWA 450, revised)

5. As plaintiff and other airlines added jet capacity in the 1959-1963 period, the average load factors at which they operated jet capacity steadily declined until sometime in 1963.

Simat Reports (DX 271B, Part C; DX 359A, pp. II-20-II-32)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

The Special Master clearly erred in making the following findings for which there is no evidentiary basis in the record or which are clearly against the weight of the evidence:

6. The Special Master clearly erred in finding that plaintiff's operation of the added jet equipment assumed by its expert witness, Wemple, in the period 1959-1963 would have increased the total transportation revenues of its Domestic Division by $133.7 million. (Report, p. 141, table facing p. 82)
   Simat Reports (DX 271B, Parts C and D; DX 359A, Part II)

7. The Special Master clearly erred in finding that TWA historically lagged behind its chief domestic competitors in acquiring jets in the years 1959-1963. (Report, pp. 80, 140)
   Percent of domestic jets assigned to service (DX 341)
   TWA's share of Big Three jets assigned to service (DX 342)
   Simat Report (DX 271B, pp. C-17, C-23)

8. The Special Master clearly erred in finding that TWA's shortage of jet equipment in 1959-1963 had a significantly adverse effect on its competitive position. (Report, p. 140)
   Report, p. 307
   Simat Reports (DX 271B, pp. C-17, C-23; DX 359A, Part II)
   Report of TWA System General Manager (DX 254)

9. The Special Master clearly erred in finding that the historical average annual load factor of the same or similar type of aircraft is a proper measure to be used in estimating the added traffic which would have been obtained by TWA from the operation of additional aircraft in any year of the 1959-1963 period. (Report, p. 125)
   See Part IV(B) Objections ## 3-5 and citations in support thereof.

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

a. It was clearly erroneous to find that the use of the average annual load factor is reasonable as applied to the equipment assumptions of the posited hypothetical TWA jet fleet. (Report, pp. 125-126)

Domestic available seat miles operated: TWA, UAL and AAL (TWA 444)

Coverdale Report (TWA 4C(1), pp. 28, 43, 54-55, 66-67)

Comparison of assumed jet seat miles added with historical jet seat miles flown (DX 379)

Testimony of Wemple (Tr. 10765-66)

b. It was clearly erroneous to find that the industry average load factors for the years in question confirm the reasonableness of the Coverdale computations. (Report, pp. 126-127)

Simat Report (DX 271B, Part C)

c. It was clearly erroneous to find that the addition of nearly two billion revenue passenger miles to TWA's domestic traffic from 1959 through 1962, as estimated by Wemple, could have come from TWA's competitors. (Report, pp. 131-132)

Coverdale Report (TWA 4C(4), Exs. B and C)

Testimony of Simat (Tr. 8152-58, 9045-54)

Availability of jets to American Airlines, actual vs. reconstructed (DX 339)

Daily flight segments scheduled with jet aircraft (DX 340)

d. It was clearly erroneous to find that customer dissatisfaction with inadequate TWA equipment is a key element which supports Wemple's use of the average load factor. (Report, pp. 132-133)

10. The Special Master clearly erred in finding that the marginal load factor, used by defendants' expert, Simat, to estimate the increase or decrease in revenue passenger miles that would have resulted from the assumed additions of jet operations and deletions of piston operations, is inappropriate to measure such increase or decrease. (Report, p. 127)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

a. It was clearly erroneous to find that the marginal load factor failed to take into account the diversion of passengers from competitors. (Report, pp. 127, 133)
Testimony of Simat (Tr. 8204-10, 8239-41, 8358-60)

b. It was clearly erroneous to find that, under the applicable assumptions, competitors of TWA would not have had as great a quantity of jets as they had historically. (Report, pp. 127, 132)
Availability of jets to American Airlines, actual vs. reconstructed (DX 339)
Testimony of Simat (Tr. 9045-47)

c. It was clearly erroneous to find that the mathematical result of using the marginal load factor varies widely from the estimate of what in fact would have occurred. (Report, p. 128)

d. It was clearly erroneous to find that the loss of over 3 million passengers to TWA from 1959 through 1963 as the result of adding jet flights and deleting piston flights was unrealistic. (Report, p. 128)
Report, pp. 132, 138
Testimony of Simat (Tr. 7996-8004, 8037-39, 8045, 8065-69, 10036-38, 10040-46)
Testimony of Eichner (Tr. 10357-58)

e. It was clearly erroneous to find that the replacement of pistons with jets could not have resulted in a loss of traffic and revenues to TWA. (Report, pp. 111-12)
Report, pp. 132, 138
Testimony of Simat (Tr. 7996-8004, 8037-39, 8045, 8065-69, 10036-38, 10040-46)
Testimony of Eichner (Tr. 10357-58)

f. It was clearly erroneous to find that the use of the marginal load factor with respect to replaced piston flights was a fundamentally unsound approach. (Report, pp. 130-131)
Simat Report (DX 271B, Part C)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

11. The Special Master clearly erred in finding that the factor of annual average stage length of TWA, as used by Coverdale, adequately takes into consideration the various changes in stage lengths accompanying the introduction of jets. (Report, pp. 133-134)

Simat Reports (DX 271B, Part A; DX 359A, Part II-B)

12. The Special Master clearly erred in finding that the Coverdale Report is reasonable in using the actual annual average yield per passenger in computing the dollar yield estimates for assumed added passengers. (Report, p. 134) Simat Report (DX 271B, Part D)

a. It was clearly erroneous to find that the Simat estimates fail to take into consideration adequately the jet fare surcharges and the varying fare structures in operation for various periods and classes of travel. (Report, p. 134)

Simat Report (DX 271B, Part D)

Relationship between first class and tourist passengers for jets and pistons, TWA, 1959-1963 (DX 376)

Use of historical first class and tourist mix relationships for jets and pistons in Wemple's yield calculations (DX 377)

Testimony of Simat (Tr. 8269-73, 10020-27, 10029-33)

13. The Special Master clearly erred in finding that the added costs of operation of plaintiff's Domestic Division in the period 1959-1963 based on Wemple's assumed added traffic and revenues, would have been no greater than $104.4 million. (Report, p. 141, table facing p. 82)

Simat Report (DX 271B, Parts F and G)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

C. Clearly Erroneous Findings of Fact—Added Costs of B-331 Operation

1. The Special Master clearly erred in failing to find that, if plaintiff had received six additional B-331 jet aircraft in 1959 and 1960 and therefore had not leased five fanjet B-331B jet aircraft in 1962 and 1963, as assumed by Wemple, it would have incurred added costs of approximately $16.1 million by reason of operating five B-331s instead of five B-331Bs after 1963 until the expiration of the B-331B leases.

Report, pp. 55, 60
Simat Report (DX 271A, Part VIII)
Coverdale Report (TWA 4C(1), p. 12)
Testimony of Simat (Tr. 8818-19)

D. Clearly Erroneous Findings of Fact—Plaintiff's Duty to Mitigate Damages

1. The Special Master clearly erred in failing to find that in 1961 Toolco offered to sell to plaintiff four CV-880 jet aircraft, constituting four of the CV-880s which plaintiff now claims it should have received, and that plaintiff did not accept such offer.

TWA Fleet Requirements 1961-1970 (DX 62, pp. V-4, V-10)

Testimony of Rummel (Tr. 2351-52, 2368-69, 2399-400, 2420)

[This page intentionally left blank]

fendants' Objections to the Report of the Special Master, dated November 1, 1968.

a. It was clearly erroneous to find that the marginal load factor failed to take into account the diversion of passengers from competitors. (Report, pp. 127, 133)
Testimony of Simat (Tr. 8204-10, 8239-41, 8358-60)

b. It was clearly erroneous to find that, under the applicable assumptions, competitors of TWA would not have had as consideration the various changes in stage lengths accompanying the introduction of jets. (Report, pp. 133-134)
Simat Reports (DX 271B, Part A; DX 359A, Part II-B)

12. The Special Master clearly erred in finding that the Coverdale Report is reasonable in using the actual annual average yield per passenger in computing the dollar yield estimates for assumed added passengers. (Report, p. 134) Simat Report (DX 271B, Part D)

a. It was clearly erroneous to find that the Simat estimates fail to take into consideration adequately the jet fare surcharges and the varying fare structures in operation for various periods and classes of travel. (Report, p. 134)
Simat Report (DX 271B, Part D)
Relationship between first class and tourist passengers for jets and pistons, TWA, 1959-1963 (DX 376)
Use of historical first class and tourist mix relationships for jets and pistons in Wemple's yield calculations (DX 377)
Testimony of Simat (Tr. 8269-73, 10020-27, 10029-33)

13. The Special Master clearly erred in finding that the added costs of operation of plaintiff's Domestic Division in the period 1959-1963 based on

Wemple's assumed added traffic and revenues, would have been no greater than $104.4 million. (Report, p. 141, table facing p. 82)
Simat Report (DX 271B, Parts F and G)

C. Clearly Erroneous Findings of Fact—Added Costs of B-331 Operation

1. The Special Master clearly erred in failing to find that, if plaintiff had received six additional B-331 jet aircraft in 1959 and 1960 and therefore had not leased five fanjet B-331B jet aircraft in 1962 and 1963, as assumed by Wemple, it would have incurred added costs of approximately $16.1 million by reason of operating five B-331s instead of five B-331Bs after 1963 until the expiration of the B-331B leases.

Memorandum from Rummel to Thomas, dated June 3, 1960 (DX 56)
Telegram from J. W. Bew to Rummel, dated February 27, 1961 (DX 72)
Letter from Tillinghast to R. Holliday, dated June 16, 1961 (DX 78, p. 4)
TWA Board Minutes, dated June 21, 1961 (DX 40, pp. 2-5)
Testimony of Rummel (Tr. 2236-37, 2249-51, 2254, 2257-58, 2366-70, 2391-92, 2399-400, 2405-08, 2411-12, 2414, 2420)

3. The Special Master clearly erred in finding that the purchase by plaintiff in 1961 of four CV-880s from Toolco would not have been feasible as a business matter. (Report, pp. 146-147)

E. Erroneous Conclusions of Law

1. The Special Master erred in holding that, because of the order of default, defendants have the burden of disproving the amount of damages claimed by plaintiff as a result of its claimed receipt of an inadequate and late jet fleet. (Report, p. 140)

2. The Special Master erred in holding that the standards of proof sustained in *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946), are applicable to a determination

whether plaintiff in this case has established by a preponderance of the evidence that it would have obtained added operating profits in the amount estimated by its expert witness, Wemple. (Report, p. 140)

3. The Special Master erred in basing findings of fact on opinion testimony of Wemple which is arbitrary and without factual support in the record.

4. The Special Master erred in basing findings of fact upon data and tabulations of data which were not introduced in evidence by either party and were not the subject of expert testimony or cross-examination. (Report, pp. 71, 80, 134-140)

5. The Special Master erred in basing findings of fact upon his own opinion with respect to matters which are properly the subject of expert testimony and as to which no expert testimony was introduced by either party. (Report, pp. 71, 80, 134-140)

6. The Special Master erred in basing findings of fact upon a dictum in a CAB opinion which was not based upon any investigation by the CAB or upon any evidence introduced in a hearing before the CAB. (Report, pp. 111-112)

7. The Special Master erred in holding that the increase in cost after 1963 of operating five B-331 jet aircraft, which plaintiff assumes it would have acquired as a basis for estimating its lost operating profits, over the cost to plaintiff of operating an equivalent number of B-331B jet aircraft, which plaintiff in fact acquired but assumes it would not have acquired, does not constitute a proper deduction from plaintiff's estimate of lost operating profits. (Report, pp. 145, 146)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

8. The Special Master erred in holding that plaintiff does not have the burden of establishing that it fulfilled its duty to mitigate damages or that it was relieved of its duty to mitigate damages by reason of controversies with Toolco or the policy of the voting trustees to favor Boeing planes over Convair. (Report, pp. 146-147)

V. Determination Relating To Plaintiff's Claim That Its Business Was Disrupted

The Special Master clearly erred, on the undisputed facts of record, in failing to make the following findings which are relevant and material to a determination as to whether payment of salaries to captains and flight engineers while they were idle prior to the delivery of the Convair 880s and payment of the purported costs of refresher training courses conducted prior to delivery of the 880s were proximately caused by conduct of defendants in violation of the antitrust laws as alleged in the complaint:

1. The claims for business disruption are based on late deliveries of Convair 880 jet aircraft for which defendants were not responsible and which were not the proximate result of any alleged antitrust violation.

See Part II(A), Objections ## 30-33, 75-78 and citations in support thereof.

2. Plaintiff has failed to establish that, as a result of delays in delivery of Convair 880 jet aircraft, it paid any salaries it would not have paid or incurred any other expenses it would not have incurred if such aircraft had been delivered on the dates set forth in Amendment No. 4 to the Toolco-Convair contract.

3. Plaintiff was not damaged by reason of the amounts paid to maintenance instructors for reaching refresher courses since the instructors were on

salary and would have been paid regardless of whether the classes were held.

Sworn statement of Walstrom (TWA 9, p. 5)
Testimony of Walstrom (Tr. 6573)

4. Plaintiff is not entitled to recover wages it paid to many captains and flight engineers for attending refresher courses while they were purportedly idle, in addition to wages paid them while they were idle during the same period.

Testimony of Rowe (Tr. 6631)
Sworn statement of Rowe (TWA 8, Annex A)
Defendants' Brief to Special Master, p. 300 fn.

5. Plaintiff was not damaged by reason of costs allocated by it to the use of its own simulator and transition training plane since such costs would have been incurred regardless of whether the simulator and plane were used for refresher training.

Sworn statement of Rowe (TWA 8, Annex B, n. 6)
Analysis of simulator and transition costs, dated June, 1960 (DX 269)

6. Plaintiff was not damaged by reason of salaries paid to captains, first officers and flight engineers for taking refresher training which was held before or only shortly after June 15, 1960 when TWA would have commenced revenue service with the 880s if the planes had been delivered pursuant to Amendment No. 4 to the Toolco-Convair contract.

Letter of Dudley B. Tenney to the Special Master with enclosures, dated August 30, 1968 (Filed with exhibits, Report, p. 142)
Sworn statement of Rowe (TWA 8, Annex B, Schedule 3)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

VI. Determinations Relating to the Computation of the Amount of the Damage Award

A. Clearly Erroneous Findings of Fact—Cost of Capital

The Special Master clearly erred, on the undisputed facts of record, in failing to make the following findings which are relevant and material to a determination of the increased capital cost which plaintiff would have incurred if it had acquired sixty-three jet aircraft in the manner and on the dates assumed by plaintiff:

1. If plaintiff had ordered for purchase fifteen Boeing B-131, eighteen Boeing B-331 jet and thirty Convair CV-880 jet aircraft and received the Boeing aircraft on the dates set forth in the opinion of Rummel (Annex D to TWA Ex. 2) and the Convair aircraft on the dates scheduled in Amendment No. 4 to the Toolco-Convair contract, it would have paid to the manufacturers thereof, prior to delivery, advance deposits and progress payments amounting to $23.5 million for the B-131 aircraft, $34 million for the B-331 aircraft and $26.3 million for the CV-880 aircraft.

Price Waterhouse Report (TWA 7B(2), pp. 28-29, 35-36, 43-44)

2. The interest cost to plaintiff of the capital needed to make such advance deposits and progress payments would have been not less than $12.3 million, which amount is in addition to the increased cost of capital which would have been incurred by plaintiff after receipt of the aircraft.

Price Waterhouse Report (TWA 7B(2), pp. 30, 37, 45)

3. On acquiring the leased B-131 and B-331 jet aircraft from Toolco in December, 1960, plaintiff paid $11.3 million less for the B-131 aircraft and

$2.4 million less for the B-331 aircraft than it would have paid if it had purchased such aircraft directly from Boeing.

Price Waterhouse Report (TWA 7B(2), pp. 30, 37)

The Special Master clearly erred in making the following findings for which there is no evidentiary basis in the record or which are clearly against the weight of the evidence.

4. It was clearly erroneous to find that it would involve elaborate calculations and speculative assumptions, not required in recognizing the historical item of accrued interest on deposits for the twenty CV-880 aircraft, to make provision for funds for advance deposits and progress payments on plaintiff's assumed aircraft purchases. (Report, p. 148)

5. It was clearly erroneous to add Toolco's historical interest cost of $4.1 million on advance deposits for twenty CV-880 aircraft to plaintiff's capital base for the purpose of computing its increased cost of capital, instead of including such amount as part of such increased cost. (Report, p. 155)

6. It was clearly erroneous to exclude capital expenditures for rotable parts, expendable parts and construction work in progress in determining the increased capital cost of the assumed earlier receipt of the fifteen B-131 jet aircraft. (Report, p. 154)

Price Waterhouse Report (TWA 7B(2), pp. 31-33)

7. It was clearly erroneous to exclude capital expenditures for spare engines, rotable parts, other flight equipment, expendable parts and construction work in progress in determining the increased capital cost of the assumed earlier receipt of CV-880 aircraft. (Report, p. 155)

Price Waterhouse Report (TWA 7B(2), pp. 45-49)

8. It was clearly erroneous to compute the increased interest cost of owning the leased B-131 and B-331 jet aircraft only for the years 1959 and 1960. (Report, pp. 184-85)

Defendants' Objections to the Report of the Special Master, dated November 1, 1968.

B. Clearly Erroneous Findings of Fact—Use of TWA Ex. 50

1. The Special Master clearly erred in finding that the principles of combination and adjustment employed by plaintiff's expert witness, Biegler, in reconstructing financial data relating to plaintiff, for the period September 30, 1955—December 31, 1963 in accordance with plaintiff's instructions, as summarized in TWA Ex. 50, as amended, provide a proper basis for adding $12.4 million (before trebling) to the Master's damage award. (Report, pp. 321-322)

Price Waterhouse Report (TWA 7B(1) pp. 1-7; TWA 7B(2), Section V, and Section VI, Parts E, F, H and J)
Price Waterhouse depreciation schedule (TWA 7D)
Coverdale Report (TWA 4C(1), p. 73)
Price Waterhouse summary of its Report (TWA 50)
Testimony of Biegler (Tr. 6315-19, 6321, 6369, 6373, 6390-92, 6409-11, 6405, 6470-75, 6478-81)

C. Erroneous Conclusions of Law

1. The Special Master erred in using the interest cost of capital, rather than the appropriate overall cost of capital determined by the CAB to be 10.25% in computing plaintiff's claim of damages based on estimated loss of profits as a result of its claimed receipt of an inadequate and late jet fleet. (Report, pp. 155-156)

2. The Special Master erred in holding that the interest cost of capital which plaintiff would have incurred in making advance deposits and progress payments on its assumed purchases of jet aircraft should not be deducted

from the estimated increase in its operating profits in computing any damages to which it may be entitled by reason of its claim for lost operating profits. (Report, p. 148)

3. The Special Master erred in holding that plaintiff is entitled to recover damages by reason of retroactive changes in accounting procedures instituted by it after the commencement of this action and at the end of the period for which it claims damages. (Report, pp. 321-322)

WHEREFORE, defendants Hughes Tool Company and Raymond M. Holliday respectfully pray that their objections to the Report of the Special Master be by this Court sustained, that the portions of the Report to which those objections pertain and the Special Master's award of damages to plaintiff in the amount of $137,611,435.95 be rejected pursuant to Rule 53(e)(II) of the Federal Rules of Civil Procedure and that judgment be entered herein for defendants on all of plaintiff's claims for damage.

Opinion and Order, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

[Doc. 519]

[CAPTION]

METZNER, District Judge.

The special master, Herbert Brownell, Esq., has submitted his report awarding plaintiff $137,611,435.95 as damages after trebling as provided in § 4 of the Clayton Act, 15 U.S.C. § 15. The matter had been referred to him for assessment of damages following the entry of a default judgment imposed as a sanction for failure of Howard R. Hughes to appear for deposition. Trans World Airlines, Inc. *v.* Hughes, 32 F.R.D. 604 (S.D.N.Y. 1963). In the ensuing discussion, plaintiff will be referred to as TWA and defendants Howard R. Hughes and Hughes Tool Company as Hughes and Toolco, respectively.

Both parties have filed objections to the report. The defendants move to confirm those portions of the report which are favorable to them and move to reject those portions which are adverse to their position. If their contentions are correct, TWA is not entitled to any damages. TWA objects to the report on the ground that the amount awarded is inadequate. The maximum figure for which it contends is $510 million plus prejudgment or moratory interest of over $175 million. The respective contentions of the parties will be discussed below.

The history of this litigation, in which TWA sought damages for claimed antitrust violations, shows that it has been long and complex. It was originally instituted on June 30, 1961. On August 31, 1961, the case was assigned to me for

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

all purposes pursuant to Rule 2 of the General Rules of this court. Since then it has been the subject of many pretrial rulings, opinions and appeals. The sufficiency of the complaint was upheld in an opinion reported in 214 F.Supp. 106 (S.D.N.Y.1963). In that opinion this court also ruled adversely to defendants' contention that the acts complained of were exempt from the antitrust laws by virtue of certain orders of the Civil Aeronautics Board. After the court was informed that Hughes would refuse to appear for examination, it granted TWA's application for a default judgment. 32 F.R.D., *supra*. The Court of Appeals affirmed the rulings found in 214 F.Supp., *supra*, but refused to pass upon the propriety of the entry of the default judgment. 332 F.2d 602 (2d Cir. 1964). On March 8, 1965, the Supreme Court dismissed writs of certiorari as improvidently granted. 380 U.S. 248, 249, 85 S.Ct. 934, 13 L.Ed.2d 817, 818. The special master and the court then made preliminary rulings as to the effect of the default judgment on the damage hearings. 38 F.R.D. 499 (S.D.N.Y.1965).[1]

[1] Despite these rulings defendants moved to compel TWA to come forward with evidence to preclude the finding of a fact which in effect would remove the basis of TWA's claim. In a memorandum opinion dated January 4, 1966, denying the motion, the court said:

> "A 7-inch stack of affidavits, briefs and supporting documents has been submitted in connection with this motion. After reading them and listening to defendant's extensive argument, one wonders why the case was never defended on the merits, if all that defendant contends for is true. At this late date, after the complaint has been sustained and a default judgment entered, with appeals to the Court of Appeals and a writ of certiorari dismissed by the Supreme Court, defendant now, in effect, seeks summary judgment in its favor. It asks that plaintiff come forward to negative a fact which defendant asserts as true. The shoe is on the other foot. The plaintiff has a judgment in its favor and the only limitation thereon has been spelled out in the order of the Special Master dated July 30, 1965 and the order of this court dated November 16, 1965. Together they outline the procedures to be followed before the Special Master, where the matter is properly pending. The court cannot conceive of any further reason for delay in proceeding before the Special Master until the hearings are completed."

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

The hearings before the special master commenced on May 2, 1966. Some 11,000 pages of testimony were taken from expert witnesses in the fields of economics, engineering, finance and accounting. Over 800 exhibits containing 60,000 pages were admitted in evidence. The special master thereafter rendered a 323-page report. A hearing was held on the objections of the parties to the report. They submitted over 1,300 pages of briefs and memoranda, including a 62-page listing by defendants of 216 specific objections to the report.

At page 12 of his report, the special master states, "Despite prior rulings in the case, this [effect of the default] has been the subject of continuing disagreement between the parties in the damage hearings." I thought that this issue had been clearly disposed of in the preliminary report of the original special master, dated July 30, 1965, and in this court's opinion in 38 F.R.D. 499.

As stated in that opinion at page 501:

> "Liability is not an issue for the Special Master except in a very limited sense. The sufficiency of the complaint has already been established by the denial of defendant's motion to dismiss. 214 F.Supp. 106 (S.D.N.Y. 1963), aff'd, 332 F.2d 602 (2d Cir. 1964), writ of cert. dismissed, 380 U.S. 248, 85 S.Ct. 934, 13 L.Ed.2d 817 (1965). By virtue of the default the defendant has admitted the truth of the well-pleaded allegations of the complaint. Thomson v. Wooster, 114 U.S. 104, 5 S.Ct. 788, 29 L.Ed. 105 (1885)."

In the present report, the special master has referred to another case, Harshman v. Knox County, 122 U.S. 306, 7 S.Ct. 1171, 30 L.Ed. 1152 (1887), which on its facts is even stronger than Thomson v. Wooster, *supra*. Without going

into the details of that case it is sufficient to quote the Court's language at page 317, 7 S.Ct. at pages 1175-1176:

> "In the absence of a denial, the fact as stated in the petition of the plaintiff is confessed by the default, and stands as an admission on the record, of its truth by the defendant."

In the hearings before the special master, TWA did not have to present any evidence to support the well-pleaded allegations of the complaint, and defendants may not offer evidence to controvert such allegations. To the extent that they did, it will be disregarded. That opportunity was forfeited by defendants as a result of the default.

Defendants may show, however, that an allegation is not well pleaded, but only in very narrow, exceptional circumstances. The *Thomson* and *Harshman* cases clearly support this rule. For example, an allegation made indefinite or erroneous by other allegations in the same complaint is not a well-pleaded allegation. Other examples, as detailed in 38 F.R.D. at 501, are allegations which are contrary to facts of which the court will take judicial notice, or which are not susceptible of proof by legitimate evidence, or which are contrary to uncontroverted material in the file of the case. That opinion went on to say:

> "However, it may be shown by plaintiff, in the context of this case, that some matters of which the court may take judicial notice should not be so noticed. See McCormick, Evidence § 330 (1954). Where file material is involved, if the plaintiff did not have full opportunity to meet or controvert such material, then it should not be used to nullify the allegation. If evidence merely tends to show that an allegation is not true, the allegation must be taken as true in this default. Finally, the plaintiff is entitled to the bene-

fit of all reasonable inferences from the evidence tendered.

"Attempts by defendant to escape the effects of its default *should be strictly circumscribed.* It should not be afforded an opportunity to litigate what has already been deemed admitted in law. *In the absence of an exceedingly strong showing* that an allegation is untrue *under the rules set forth above,* the allegation stands as admitted." 38 F.R.D. at 501 (emphasis added)...

This quoted language had in mind the impact of the failure of Hughes to appear for deposition. His default stymied TWA in the acquisition and presentation of evidence in support of its claim. As the Court of Appeals said (332 F.2d at 614):

"We think it clear beyond any question, in light of all the circumstances here presented, that the deposition of Hughes was necessary to all aspects of this litigation * * *."

And again at page 615:

"Hughes' deposition was absolutely essential to the proper conduct of the litigation."

Defendants claim that there are allegations in the complaint which are contrary to facts of which the court will take judicial notice. They particularly refer to that portion of the third paragraph of the complaint which alleges that Toolco was engaged

"since in or about 1939 in the development, manufacture and acquisition of aircraft and related equipment from the manufacturers thereof in various states and in the sale and lease of such aircraft to air carriers in various other states for use in interstate and foreign commerce."

They request that judicial notice be taken of the fact that Toolco never "manufactured" or engaged "in the sale and lease" of aircraft. I cannot take judicial notice of these matters because they are not indisputably true.

The question whether judicial notice can be taken of facts which are not indisputable has been the subject of disagreement among scholars. Wigmore thought that notice should not be limited to indisputable facts. He took the position that the taking of judicial notice of a fact merely relieved the offeror of more formal proof. However, this did not prevent his opponent from disputing the fact by offering contrary evidence. 9 Wigmore, Evidence § 2567 (3d ed. 1940). See also Thayer, Preliminary Treatise on Evidence 308-309 (1898); Ohio Bell Telephone Co. v. Public Utilities Comm'n of Ohio, 301 U.S. 292, 301-302, 57 S.Ct. 724, 81 L.Ed. 1093 (1937); United States v. Aluminum Co. of America, 148 F.2d 416, 445-446 (2d Cir. 1945). The more recent thinking is that only indisputable facts such as matters of common knowledge and matters capable of certain verification will be judicially noticed. When noticed such facts are binding on the trier of the facts. Morgan, The Law of Evidence, 1941-1945, 59 Harv.L.Rev. 481, 482-87 (1946); McCormick, Evidence § 330 (1954); McNaughton, Judicial Notice, 14 Vand.L.Rev. 779 (1961); Alvary v. United States, 302 F.2d 790, 794 (2d Cir. 1962).

I do not have to resolve the debate among scholars concerning the taking of judicial notice during trial. It is clear to me that after a default only indisputable facts should be noticed to contradict allegations of the complaint. Otherwise a preliminary hearing would be necessary to afford plaintiff a chance to rebut factual material which a defendant claims should be judicially noticed. See the *Ohio Bell* and *Alcoa* cases, *supra*. In effect it would permit a defendant to litigate facts which are foreclosed by a default under the *Thomson* and *Harshman* cases, *supra*.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

In determining indisputability, the courts will consider "the nature of the subject, the issue involved, and the apparent justice of the case." McCormick, Evidence § 330, at 709 (1954). Each of these factors counts against noticing the proposition offered by defendants. First, the subject of the proposition is not scientific, historical, geographic or statistical matter of the kind courts are most willing to notice. Instead it is a garden variety proposition about who did what, when and where. Second, the facts which defendants wish judicially noticed in this litigaton would be relevant to the central issue of liability under the antitrust laws. The more critical an issue is to a case, the more reluctant courts should be to determine it by taking judicial notice. Third, the apparent justice of the case in the posture of a default based upon wilful refusal to appear for deposition requires me to resolve all doubts against defendants.

The defendants are urging that certain facts are indisputable because they appear in orders of the CAB and material in the CAB files. While judicial notice may be taken of the existence and contents of such material, it does not follow that the court will take judicial notice of the truth or accuracy of the contents. Stasiukevich *v.* Nicolls, 168 F.2d 474, 479 (1st Cir. 1948). In that case the court found that "the findings are merely evidence of the facts asserted," and went on to state that "of course, the other party may introduce evidence tending to prove the contrary of the facts asserted in the official report." Since a finding is merely evidence and is rebuttable, it cannot be considered indisputable. As to material in the CAB files, it stands on even weaker footing, since it has not been subject to any sort of examination of an adversary nature.

Defendants argue that TWA has failed to establish that it received late or inadequate deliveries of jet aircraft as a proximate result of the conduct of the defendants in viola-

tion of the antitrust laws. They assert that the claim "is defective for the further reason that the plaintiff has failed to establish by a preponderance of the evidence that, but for defendants' conduct, it would and could have accomplished the results now asserted."

It has been said of "proximate cause" that:

> "There is perhaps nothing in the entire field of law which has called forth more disagreement, or upon which the opinions are in such a welter of confusion * * * Much of this confusion is due to the fact that no one problem is involved, but a number of different problems, which are not distinguished clearly * * *." Prosser, Law of Torts 240 (3d ed. 1964).

The question of proximate cause involved in this case arises out of a distinction between the *fact* of damage and the *amount* of damage. The Supreme Court explained this distinction recently in Zenith Radio Corp. *v.* Hazeltine Research, Inc., 395 U.S. 100, 114 n. 9, 89 S.Ct. 1562, 1571, 23 L.Ed. 2d 129 (1969):

> "Zenith's burden of proving the fact of damage under § 4 of the Clayton Act is satisfied by its proof of *some* damage flowing from the unlawful conspiracy; inquiry beyond this minimum point goes only to the amount and the fact of damage."

Basically defendants seek to deny that they caused *any* injury to TWA, i.e., to deny the *fact* of damages. The fact of damages, however, is an element of liability. The complaint alleges that the defendants committed certain acts which caused injury to TWA. The allegations are admitted by the default and the fact of injury is thereby established. The only question remaining is the amount of damages defendants should pay TWA.

When we come to the computation of the amount of damages in an antitrust case, we look to the rules enunciated in

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

Bigelow v. RKO Radio Pictures, Inc., 327 U.S. 251, 66 S.Ct. 574, 90 L.Ed. 652 (1946). Those rules are that the trier of the facts must use the most precise proof available, that even where a defendant by his own wrong has prevented a more precise computation, the award may not be based on speculation or guesswork, and that the award must be predicated on a just and reasonable estimate of the damage, based on relevant data.

Finally, the report must be reviewed in the light of the strong presumption in favor of the findings of fact made by the special master. They are to be accepted unless clearly erroneous. Fed.R. Civ.P. 53(e) (2); Anderson v. Mt. Clemens Pottery Co., 328 U.S. 680, 689, 66 S. Ct. 1187, 90 L.Ed. 1515 (1946); United States v. S. Volpe & Co., 359 F.2d 132, 134 (1st Cir. 1966); E. I. du Pont de Nemours & Co. v. Purofied Down Prods. Corp., 176 F.Supp. 688, 691 (S.D.N.Y. 1959). This rule is the same as Rule 52(a), which is applicable to findings of fact made by the trial court in a non-jury case. Such a finding is clearly erroneous only where "the reviewing court on the entire evidence is left with the definite and firm conviction that a mistake has been committed." United States v. United States Gypsum Co., 333 U.S. 364, 395, 68 S.Ct. 525, 542, 92 L.Ed. 746 (1948).

The complexity of the proof in this case is attested to by the nature of the testimony proffered by the parties. Intricate questions of engineering, finance and economics were involved.[2] They were reviewed and resolved with painstaking care by a special master of extremely high com-

2. An example of the complexities of the proof may be found in the following quotation from the report (page 94) which relates to testimony affecting only one aspect of an item of damage:

"The above formula for the B-331's was determined by a method commonly recognized by statistical experts for determining relationships between two variables, and known as regression analysis or as the method of least squares (Tr. 7805-6). As an example, by plotting on graph paper aircraft hours operated (independent variable) and an amount of operating ex-

petence. Especially apt here is the language of the court in Badenhausen v. Guaranty Trust Co., 145 F.2d 40, 53 (4th Cir. 1944), cert. denied, 323 U.S. 797, 65 S.Ct. 440, 89 L.Ed. 636 (1945), referring to the effect to be given to the findings of a special master who prepared a plan of railroad reorganization:

> "Especially imperative is the rule when, as here, the master has lived with the case for four years, has patiently studied the complex questions involved and has listened with painstaking care in extended hearings to the arguments and proposals of all the parties who desired to be heard."

To the same effect, see Santa Cruz Oil Corp. v. Allbright-Nell Co., 115 F.2d 604 (7th Cir. 1940).

Bearing these considerations in mind, I will first pass upon the specific objections by the defendants to the report of the special master.

---

penses (dependent variable) for several airlines, one can connect the dots on the graph with a straight line which represents an average relationship between the points. There are various standards for placing the straight lines, but the method of least squares fits the line to the various observations (dots) so as to reduce the squares of the deviations (differences) to a minimum. It produces a line showing the average of the various lines that might be fitted to the observations. If one squares the deviations and divides by the number of observations, one gets the standard error of estimate; and, given a normal distribution of errors, 68% of the observations should fall within one standard of error and 95% of the observations should fall within two standard errors. Relationships based on fewer observations tend to be more untrustworthy, and results showing a large proportion of observations outside the standard error of estimate likewise tend to be untrustworthy unless validated by independent means.

"No claim was made by Simat that regression analysis was anything more than a statistical method useful in testing the validity of assumptions made by non-mathematical observations and raw data and conclusions based thereupon. Nevertheless Simat was of the opinion that the statistics produced by regression analysis under the assumptions made in his report confirmed his expert opinion as to the financial results that would have been obtained under the relevant equipment assumptions."

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

DEFENDANTS' OBJECTIONS TO THE REPORT OF THE SPECIAL MASTER

I. DETERMINATIONS RELATING TO DEFENDANTS' ALLEGED ANTITRUST VIOLATIONS

A. FACTS WHICH DEFENDANTS CLAIM SHOULD HAVE BEEN FOUND.

Objections 1-3 and 13. The suggested findings as to CAB approval are irrelevant to the proceedings and were so adjudged by this court on defendants' motion to dismiss (214 F.Supp. 106), which determination was affirmed by the Court of Appeals (332 F.2d 602) when it said at page 610:

> "Nor do we find any merit in the defendants' alternative contention that the Civil Aeronautics Board, in approving Toolco's acquisition of control over TWA and certain specific transactions thereafter, immunized the defendants from the operation of the antitrust laws as to all the ramifications of these transactions."

Objections 4 with 11 subdivisions. These are suggested findings based on a suggested finding that Toolco never manufactured or supplied commercial transport aircraft to United States air carriers in competition with manufacturers and suppliers of such aircraft. First, the defendants by their default admit that they did engage in such activity. Second, the suggested findings do not necessarily clearly negative liability when all the allegations of the complaint are read together. Third, there is sufficient in the record on this default to justify the refusal of the special master to so find. In this regard, reference is made to the placing of orders by Toolco for Convair 880s built to the specifications of Capital Airlines, the placing of orders for Convair

990s built to the specifications of American Airlines, the sale of Boeing 331s to Pan American and the leasing of Convair 880s to Northeast Airlines.

Objections 5-8. The suggested findings that during the period covered by the complaint Hughes did everything to explore the source of supply jets in the best interests of TWA fly directly in the face of the alleged wrongdoing by the defendants which is admitted by the default. Additionally the record contains evidence to the effect that Hughes was not acting solely in the best interests of TWA in the development of the Model 18 by Convair.

Objections 9, 9a, 9b and 10. These are suggested findings that defendants did not engage in financing the acquisition of aircraft in competition with insurance companies, commercial banks or other lending institutions and that TWA obtained such financing from various airplane manufacturers and banks. I fail to see their relevancy in view of the charges contained in the complaint which are, in effect, that defendants dictated to TWA the methods and means of financing the acquisition of aircraft. See paragraphs 10(g), 23, 24, 26, 27 and 28 of the complaint.

Objections 11 and 12. These are suggested findings that Atlas never manufactured or developed aircraft and submitted a proposal pursuant to an agreement with Toolco for merger of Northeast Airlines and TWA which was reported as being fair. The default admits the allegations of the complaint regarding the conspiracy and that the proposed merger was advantageous to the defendants and disadvantageous to TWA. Further, as regards TWA reports favorable to the merger, the domination and control of TWA by Hughes must be taken into consideration in evaluating such reports.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

B. FINDINGS CLAIMED TO BE CLEARLY ERRONEOUS.

Objections 14, 15 and 17 to the findings that the activity by Toolco constituted "engaging in" the development and manufacture of aircraft by Toolco. The record is sufficient to sustain these findings.

Objection 16 to the finding that Toolco was engaging in this activity when TWA should have been arranging for purchases from other suppliers. This finding is sustained by paragraphs 16, 17, 24, 25 and 26 of the complaint.

Objections 18, 19 and 20 to the findings regarding the purchase of Pratt & Whitney engines, Toolco's trading on its delivery positions as to jets and Toolco's refusal to assign to TWA its rights to acquire jets. These objections are predicated on an assumption that the findings were made after a contested trial following full pretrial discovery procedures. Obviously it is not open to defendant to claim, as it does in objection 20, that it disproved the allegations in paragraph 18 of the complaint, or that the engines were purchased for TWA's best interests and were not resold at a profit.

Objection 21 to the finding that TWA's management was dominated by Hughes is clearly frivolous. The finding is not only admitted by the default, but was so found in 32 F.R.D. at 606 and 332 F.2d at 614.

Objection 22 to the finding that the factory representatives were Toolco employees reporting to Rummel as the representative of Toolco is captious. The record shows that Rummel was Toolco's special representative even though he received compensation from TWA. The factory representatives reported to a TWA employee, Rourke, who reported to Rummel. If Rourke had been paid by Toolco, reimbursement would have been made to Toolco by TWA as part of the cost of the aircraft.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

C. Conclusions of Law Claimed to be Erroneous.

Objections 1-12 are directed to conclusions of law made by the special master. His findings of fact have been sustained by the rulings on the objections made above. Paragraphs 9 and 10 of the complaint have been admitted by the default and defendants' judicial notice argument has been rejected. The conclusions of law are further buttressed by the opinion of the Court of Appeals that the specific transactions alleged to have been effected by the defendants state a cause of action under the antitrust laws. 332 F.2d 602, 611. These objections are overruled.

II. Determinations Relating to TWA's Claim That It Received an Inadequate and Late Jet Fleet.

A. Facts Which Defendants Claim Should Have Been Found.

Objections 1, 2, 3 and 4 are suggested findings similar to those in objections 6 and 7 in I A, *supra,* and are similarly disposed of. It is frivolous to claim that this record could possibly sustain a finding that TWA was an independent negotiator.

Objection 5. The suggested finding that defendants' negotiations with Convair in 1955 did not restrain trade takes a mediate fact, meaningless without other mediate facts, and draws a negative conclusion of law out of context.

Objections 6, 7, 8, 9, 11, 12, 13, 14 and 16. These suggested findings are misleading. They state facts which assume that the conditions were not of defendants' doing. The assumption is wrong, since the state of the record on liability shows that defendants' conduct brought about the fact situation, and it is this very conduct which is the basis of TWA's complaint. Furthermore, reliance on achieving

better delivery dates with an increase in orders only buttresses TWA's position that prompt action with its welfare in mind would have achieved even better results.

Objections 10 and 15. These are suggested findings that TWA equalled its domestic competitors in jet service in 1959, and in 1960 flew more transatlantic seats relative to Pan American and earned a higher operating revenue than Pan American. Assuming the suggested findings to be true, they miss the point in issue that defendants' actions prevented even better results from being achieved.

Objection 17. This is a suggested finding that TWA has failed to show that it would have ordered jet aircraft in 1955 from Boeing rather than from Douglas absent the exercise of any control by defendants. The default precludes the necessity of making any such showing.

Objections 18, 19 and 20. The suggested findings that Toolco in 1959 determined that it was advisable to reduce the planned jet fleet and that Thomas and the firm of Coverdale & Colpitts agreed are negatived by the default and are not borne out by the record.

Objection 21. The suggested finding that in the spring of 1959 TWA was in poor financial condition ignores the allegations of paragraphs 4, 10(b), 10(g), 23, 24 and 26 of the complaint regarding Toolco's domination and control of TWA.

Objection 22. The suggested finding that it was not unusual for an airline to cut back initial jet orders covers only part of the relevant fact. The remainder is that such an airline would, and did, at the same time increase orders for other models.

Objection 23. The suggested finding that TWA has failed to show domination by defendants preventing the exercise of independent judgment by the executives of TWA completely ignores the default.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

Objection 24. The suggested finding that Rummel was a middle echelon executive with no power of decision as to what equipment could be purchased by TWA ignores the record, unless it be defendants' contention that the decision as to what equipment could be purchased was lodged in Hughes.

Objections 25 and 33. The suggested findings that the decision to reduce the size of the initial jet fleet and that the administration of the Convair contract by defendants was not in restraint of trade are contrary to the admissions made by the default.

Objection 26. The suggested finding that Thomas and the board of directors of TWA ratified the transfer by Toolco of six of the Boeing 331s to TWA's competitor Pan American overlooks the admitted exercise of control and domination of TWA by Hughes.

Objection 27. The suggested finding that the transfer was not in restraint of trade is contrary to the admissions made by the default.

Objections 28, 29 and 29A. These are suggested findings that TWA has failed to show that absent control by defendants it would have ordered 63 jets, that it could have financed such fleet and obtained earlier delivery dates. The default precludes the necessity of making any such showing.

Objections 30, 31 and 32. These are suggested findings that failure to meet the delivery schedule of the Convair 880s was not defendants' responsibility, that such delay was attributable to Convair, even after January 1961. The suggested findings are contrary to the admissions inherent in the default and to the testimony in the record.

Objection 33. The suggested finding that TWA has failed to show that defendants' administration of the Convair contract unreasonably restrained trade ignores the effect of the default.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

B. Findings Claimed to be Clearly Erroneous.

The objections under this subdivision are numbered 34 through 74. In the main, the findings attacked are just the opposite of what defendants claim the special master should have found as set forth in objections 1 through 33 in II A above.

The findings made by the special master which are referred to in this subdivision are not clearly erroneous. As to objection 56 to the finding that the hypothetical jet fleet and reconstructed delivery dates constitute a proper basis for computing damages, I refer to the discussion of the *Bigelow* case, *supra*. Many of the findings are clearly established by the admissions inherent in the default. Others rely on disputed evidence in the record, but obviously this does not require their rejection under the "clearly erroneous" rule. In addition to these comments for overruling the objections, I refer to specific comments made in ruling on objections 1 through 33 in II A above.

C. Conclusions of Law Claimed to be Erroneous.

Objections 1, 2 and 3 have been disposed of in the discussion of proximate cause and the *Bigelow* case, *supra*. The remaining objections 4 through 14 are directed toward conclusions of law which are amply supported by the findings of fact sustained by the above rulings.

III. Determinations Relating to TWA's Claim That It Was Injured by Leasing Jet Aircraft from Toolco.

A. Facts Which Defendants Claim Should Have Been Found.

Objection 1. The suggested finding that the leases of jets in 1959 and 1960 were made pending consummation of permanent financing disregards the admissions of the allegations in paragraph 20 of the complaint.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

Objections 2 and 3. The suggested findings that the leases were approved by the CAB and did not disclose any restrictions in acquisitions by TWA are subject to the same rulings made on objections 1-3 and 13 in I A above. The leases were between Toolco and its controlled TWA.

Objections 4 and 5. The suggested findings that there is no evidence that the rentals were unreasonably high and that Toolco received no rental until December 30, 1960 are immaterial.

Objection 6. The suggested finding that there is no testimony that TWA would have purchased rather than leased the jets absent the alleged conduct of defendants in violation of the antitrust laws is subject to the same ruling made with regard to objection 17 in II A above.

B. Findings Claimed to be Clearly Erroneous.

Objection 7 to the finding that the leased jets were the first made available to TWA by defendants during the years 1955 to 1960 is overruled because there is no such finding.

Objection 8 to the finding that the leases were made with the understanding that TWA would not lease or purchase jets from other potential suppliers is overruled because of the admission of the factual allegations of paragraph 20 of the complaint.

Objections 9, 10 and 11 refer to statements of contentions by the special master and are not findings.

C. Conclusions of Law Claimed to be Erroneous.

Objections 1 through 5. In view of the rulings and comments on the objections referred to in A and B of this part, the conclusions of law made by the special master, referred to in objections 1 through 4, are correct. Objection 5 to the use of interest cost of capital is more an objection to a finding of fact and is overruled because the finding is not clearly erroneous.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

IV. Determinations Relating to TWA's Claim for Lost Operating Profits.

A. Facts Which Defendants Claim Should Have Been Found With Reference to the International Division.

Objections 1, 2, 3 and 4. These are suggested findings that TWA has failed to prove damage in this category based on assumptions of TWA's expert. They are predicated on finding that the figures of defendants' experts are correct. The refusal to make such findings was not clearly erroneous.

Objection 5 is a suggested finding that there is no evidence in the record to justify an assumption that TWA would have leased Boeing 331s to Northeast in October and November 1959. The assumption made by TWA's expert was justified on the facts as to the time of year and passenger demand.

B. Findings Claimed to be Clearly Erroneous With Reference to the International Division.

Objection 6 is to the finding that there would be an $89.3 million increase in operating revenue. This finding is not clearly erroneous.

Objections 7 through 7j. These objections except 7i are directed to findings as to the "competitive response" which defendants' expert relied on in his computations. The findings are supported by the record and are not clearly erroneous. Objection 7i is to the finding that TWA's comparative shortage of jet equipment caused it to lose its market position. The finding is supported by the record.

Objection 8 is to the finding relating to "beyond-the-gateway and charter service passengers." This finding is supported by the record.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

Objections 9, 9a and 9b. These objections disagree with the special master's findings as to operating costs. The findings are supported by the record.

C. Facts Which Defendants Claim Should Have Been Found With Reference to the Domestic Division.

Objection 1. The suggested finding that there is no evidence that TWA would have leased four Boeing 720Bs or bought 18 Boeing 131Bs would not be a correct finding. The record justifies the opposite finding made by the special master.

Objection 2. The suggested finding that TWA has failed to prove that its net operating profits would have increased is predicated on accepting defendants' evidence. The conflict in the evidence was for the special master to resolve and his contrary finding is supported by the evidence.

Objection 3 is a suggested finding that TWA has failed to prove that its average rate of capacity could have been maintained with an added jet capacity. The suggested finding relies on the testimony of defendants' expert which the special master was entitled to reject.

Objection 4 is a suggested finding that in the 1959-1963 period there was an acute overcapacity which alarmed the CAB as well as the airline industry. The suggested finding does not affect the fact that under proper conditions TWA would have been able at least to maintain its competitive position in relation to other carriers. See chart at page 138 of the report.

Objection 5 is a suggested finding that as airlines added jet capacity in 1959-1963 the load factors steadily declined. The implication of this suggested finding disregards the fact that with an adequate jet fleet TWA's position would have been different. See page 133 of the report.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

D. Findings Claimed to be Clearly Erroneous with Reference to the Domestic Division.

Objections 6 and 13 to the findings as to increased transportation revenues and increased operating costs are overruled. The findings are supported by the record.

Objections 7 and 8 are to the findings as to TWA's shortage of jet equipment. The findings are supported by the record.

Objections 9, 9a and 9b to the findings using the average annual load factor in estimating added traffic are overruled. See comments on the immediately preceding objections 3-5.

Objection 9c. The objection does not encompass the complete finding of the special master.

Objection 9d. The finding objected to is correct in the context used by the special master.

Objections 10, 10a, 10b, 10c, 10d, 10e and 10f. These objections go to findings by the special master in which he refused to accept defendants' testimony as to "marginal load" factor as opposed to accepting TWA's testimony as to "annual average load factor." Here again there is present a conflict of testimony which the special master was justified in resolving as he did. See the findings to which objections 9, 9a and 9b immediately above are directed.

Objection 11 is to the finding that TWA testimony adequately takes into account changes in stage lengths accompanying the introduction of jets. The special master simply resolved the conflicting testimony on this subject and his finding is supported by the record.

Objections 12 and 12a. Here again the objections are predicated on the refusal of the special master to accept the testimony of defendants' expert as opposed to that of TWA's expert. The objections are overruled.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

E. Fact Which Defendants Claim Should Have Been Found with Regard to the Added Cost of Operating the Boeing 331s.

Objection 1. The suggested finding that there would have been increased costs in operating five 331s over the actual cost of operating five 331Bs which were leased is predicated on accepting defendants' testimony. The special master was justified in refusing to do so for the reasons stated in the report.

F. Facts Which Defendants Claim Should Have Been Found with Regard to Mitigation of Damages.

Objections 1 and 2. These are suggested findings that Toolco offered TWA four Convair 880s in 1961 which TWA refused and that TWA could have acquired additional jets in 1961-1963, which it failed to do. The suggested findings completely ignore the existence of the new management of TWA, its problems with defendants at the time, and its business judgment to concentrate on Boeing planes for the best interests of TWA.

G. Finding Claimed to be Clearly Erroneous with Reference to Mitigation of Damages.

Objection 3 to the finding that the purchase of four Convair 880s was not feasible as a business matter is overruled. See comment on the immediately preceding objections 1 and 2.

H. Conclusions of Law Claimed to be Erroneous.

Objection 1. The import of the conclusion as set forth in this objection does not appear in the report.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

Objection 2. The application of the standards of proof set forth in the *Bigelow* case, *supra*, is proper.

Objection 3. The special master was justified in accepting the testimony of TWA's expert.

Objections 4, 5 and 6. The special master acted properly with regard to the matters to which these objections are made.

Objection 7. This objection ties in with objection 1 in E immediately above and is similarly disposed of.

Objection 8. This objection does not correctly reflect the cited page of the report. The conclusion reached by the master there was proper.

V. Determinations Relating to TWA's Claim for Disruption of Its Business.

A. Facts Which Defendants Claim Should Have Been Found.

Objection 1. The suggested finding that the defendants were not responsible for late deliveries of the 880s has been rejected above (II A, objections 30-33).

Objection 2. The suggested finding that TWA was not subject to expenses it would not otherwise have incurred is not sustained by the record.

Objections 3, 4, 5 and 6. These are suggested findings that TWA was not damaged by reason of certain payments made to maintenance instructors and crew members, or costs allocated for use of a simulator and transition training plane. The suggested findings overlook the fact that TWA was paying for enforced idleness and refresher training made necessary by the delays. These are proper items of damage.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

VI. Determinations Relating to the Computation of the Amount of the Damage Award.

A. Facts which defendants claim should have been found.

Objections 1 and 2. The suggested findings relate to a $12.3 million increased cost of capital on advance deposits and progress payments for the reconstructed fleet. The special master explained that to make such findings would "involve elaborate calculations and several speculative assumptions." The suggested findings are not supported by the record.

Objection 3. The suggested finding regarding the cost of purchasing the theretofore leased jets is incomplete and misleading standing alone.

B. Findings claimed to be clearly erroneous.

Objection 4 is to the finding refusing to make provision for increased cost of capital on advanced deposits and progress payments. The finding is merely the opposite of what defendants claim should have been found as detailed in objections 1 and 2 in IV A above. The objection is overruled.

Objection 5 is to the finding which added interest cost on advance deposits for twenty 880s to TWA's capital base. The finding is not clearly erroneous.

Objections 6 and 7 are to the findings excluding capital expenditures for ratable parts, expendable parts and construction work. The findings are not clearly erroneous.

Objection 8 is to the finding limiting to the years 1959 and 1960 the increased interest cost of owning instead of leasing the jets. The special master was justified in making the finding.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

C. Finding Claim To Be Erroneous Regarding the Use of TWA Exhibit 50.

Objection 1 is to the finding that the principles of combination and adjustment used by TWA's expert were proper. The special master was justified in making this finding.

D. Conclusions of Law Claimed To Be Erroneous.

Objection 1 is to the use of the external borrowing rate and is overruled.

Objection 2 relates to objection 4 in VI B above and is overruled.

Objection 3 to the adjustments of TWA's historical financial statements is overruled.

TWA's Objections to the Report of the Special Master

TWA has filed objections to the report on the following grounds:

1. The award as a whole is inadequate.

2. The special master erred in rejecting TWA's comparative profit measure of damages.

3. The award on TWA's claim for losses in operating profits is inadequate.

4. The award on TWA's claim for losses due to leasing jets from Toolco is inadequate.

5. The special master erred in denying damages for losses connected with financing the jet fleet.

6. The special master erred in denying damages for losses due to delay in disposing of the displaced piston aircraft.

7. The special master erred in finding that TWA is not entitled to an award of prejudgment or moratory interest.

I. Inadequacy of Total Award.

The contention that the award as a whole is inadequate is predicated on a claim that it permits the defendants to retain the fruits of their wrongdoing.

Toolco is alleged to have acquired its stock interest in TWA at a cost of $94 million. On May 3, 1966 it sold this stock for a net price of $545.8 million, with a resulting profit of $452 million. After payment of the 25% capital gains tax, the net profit after taxes is calculated at $339 million. I am advised that any judgment for damages in this case is fully deductible from current income for tax purposes. Therefore, on the award recommended by the special master, the ultimate cost to Toolco of paying such award would only be $75 million, leaving Toolco with a net profit of $265 million. TWA claims that Toolco should not be permitted to retain this amount since it violates the theory of unjust enrichment.

The fallacy in the application of this theory to this case is that the profit on the sale of the stock is not attributable to the illegal acts of the defendants. Defendants' control and domination of TWA ended on December 30, 1960. TWA does not seek damages for the period subsequent to 1963 because it claims that by the end of 1963 the ill effects of defendants' control had been eliminated. At that time the stock was selling at about $32 a share compared with $86 a share at the date of sale. Therefore, the high value that the TWA stock reached in 1966 had nothing to do with

the acts of the defendants. There is no dispute that Toolco's acquisition of the controlling interest in TWA was legal. It was the improper exercise of control that is attacked by the complaint. 214 F.Supp. at 109-110. What TWA seeks under this objection is not damages based on unjust enrichment flowing from the acts of the defendants, but rather punishment not within the contemplation of any accepted measure of damages. The cases relied on by TWA (*Bigelow, supra;* Southern Pacific Co. v. Darnell-Taenzer Lumber Co., 245 U.S. 531, 38 S.Ct. 186, 62 L.Ed. 451 (1918); Hanover Shoe, Inc. v. United Shoe Mach. Corp., 392 U.S. 481, 88 S.Ct. 2224, 20 L.Ed.2d 1231 (1968)) are not in point, since they speak of the unfairness of permitting a defendant to retain the profits flowing from his illegal acts.

This objection is overruled.

II. The Comparative Profit Measure of Damages.

TWA claims that the special master erred in not using its comparative profit studies as the measure of damages. One such study showed losses to TWA of approximately $170 million. Another showed losses of $121 million. TWA advanced a second measure of damages based on specifically computed losses claimed to flow from the defendants' conduct. The special master proceeded on this theory, but only awarded $45 million of TWA's claim of $105 million.

The first argument to support the comparative profit measure of damages is related to TWA's claim of unjust enrichment. Since the unjust enrichment theory has been rejected, this argument for the use of comparative profit studies fails.

TWA then argues that the comparative profit study is a proper and standard method of measuring damages without

regard to the amount that it would produce. The special master rejected the comparative profit studies because there was a more precise method of ascertaining damages, which was the method he used. Further, he found that the comparative profit study was based on indefinite allegations of the complaint. The method he used was predicated on more specific allegations of the complaint. TWA's reliance on *Bigelow, supra,* for the use of the comparative profit measure of damages is misplaced. In that case the Court found at page 266 of 327 U.S. at page 580 of 66 S.Ct. that it was proper to use comparative receipts to measure damages because the defendants' "wrongful action had prevented petitioners from making any more precise proof of the amount of the damage."

This objection is overruled.

III. Inadequacy of Award for Losses in Operating Profit.

TWA complains that in determining the "cost of capital" factor in computing operating profit the special master erred in using 6% for 1959 and 6.3% for 1960. If the jet fleet had been available for use by TWA at the times it should have been, TWA would have needed capital at those times to finance the purchase of the jets. The interest paid for borrowing the money would be a cost factor to be added to other operating expenses each year, and would be offset against the expected receipts to determine the operating profits that would be realized if there had been an adequate jet fleet.

The special master first determined the amount of money that had to be available beginning in 1959 to finance the purchases based on the "reconstructed" delivery dates of the aircraft. He then applied TWA's historical external

borrowing rate at those times to arrive at the yearly cost of capital.

TWA contends that it was error to use this rate because its financial condition and the program of financing it followed were the result of the illegal acts of the defendants. It claims that if it had been free of restraint it could have undertaken financing in 1955, and that the maximum cost of borrowing would have been only the 4¾% paid by its competitors in 1955 and 1956 rather than the 6 to 6½% it paid in 1960.

The use of the lower rate for "cost of capital" would increase the operating profits found by the special master for the years in question, and would result in an increase of $4.9 million (before trebling) in the award for this item of damage.

The special master rejected TWA's theory of damage on losses connected with financing the jets (see V below). Included in that loss was a projected cost of capital predicated on what TWA might have done in the area of financing in 1955. In view of this ruling, the rate of interest paid by competitors in 1955-1956 is not the true measuring rod. Rather, the rate paid by competitors in 1959 and 1960 is the more accurate figure. The record shows that it ranged from 5 to 6½%, not significantly different from the 6 and 6.3% rate used by the special master.

This objection is overruled.

IV. Inadequacy of Award for Losses Due to Leasing Jets from Toolco.

TWA seeks an increase of $1.6 million (before trebling) in the award for this item of damage. What has been said in III above applies equally as well to this objection. This objection is overruled.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

V. Refusal to Award Damages for Injuries Alleged to Have Been Suffered in Financing the Jets.

It is the claim of TWA that the illegal acts of defendants with respect to financing the acquisition of jets by TWA caused it damage in the amount of $30 million. The claimed damage is based on the difference in its cost under the program which it was forced to adopt and a plan which it claims an independent TWA would have adopted. TWA offered expert testimony by Drexel Harriman Ripley, Inc., a firm of investment bankers, as to what an independent TWA would have done to provide adequate financing for the jet age. Defendants countered with their expert, Loeb, Rhoades & Co., a firm of investment bankers.

The special master reviewed the conflicting testimony in detail in pages 186 through 264 of his report. TWA claimed it would have undertaken financing operations in May 1955, October 1955 and May 1959. It appears that the latter two financings depended on "the prudence and doability of the May 1955 equity financing."

The special master referred to the standards of the *Bigelow* case (see page 12 of this opinion) and also noted that he was aware that TWA's financial condition in 1955 reflected the influences of Toolco. He then stated (page 258 of the report):

> "However, after careful deliberation, I have determined that TWA has not established that a prudent and competent management of TWA acting independently and free of any control or interference on the part of Toolco would and should have calculated in the spring of 1955 the amount of the financial requirements of TWA for the jet aircraft age. It is also my determination that an independent and prudent TWA management would not have accepted the

recommendation of Drexel Harriman Ripley that TWA sell in May 1955 $55.5 million (net proceeds) in common stock of TWA.

"For me to find to the contrary would in my opinion endow Drexel Harriman Ripley and an independent prudent Board of TWA in 1955 with a prescience, wisdom and perfection of timing that exceeds the natural capacity of the most experienced men acting without the benefit of hindsight."

The special master pointed out that no alternative theory of damages was presented by either TWA or the defendants. After discussing in detail the basis for his findings, the special master concluded that TWA had failed to sustain its burden of proof as to damages claimed to have been suffered as the result of the financing program that it was forced to adopt.

As already indicated, proof as to the amount of damages is unfettered by the effect of the default. The resolution of conflicting testimony is a question for the special master and the clearly erroneous rule is applicable.

This objection is overruled.

VI. Losses on Sales of Used Piston Aircraft.

TWA complains that the special master erred in refusing to award any damages for claimed losses on the sale of piston aircraft. It admits that no other area of damages presented quite such complex questions of computation. The amount of damages it seeks under this item is $2.7 million.

TWA takes the position that when jets were introduced into service pistons were made obsolete. Therefore, any delay in delivery of jets must have caused delay in the disposal of pistons. Since the market price of pistons steadily declined during this period, it is claimed that a loss to TWA resulted.

Opinion #36406, filed December 23, 1969, Adopting and Confirming the Report of the Special Master

Here again the difference must be recognized between the fact of injury which is admitted and the amount of damages which TWA must show flowed from that injury. The special master found that TWA had failed to sustain its burden of proof on this item of damage and detailed his reasons on pages 272 through 295 of his report. I have reviewed those findings and find that they are supported by the record.

This objection is overruled.

VII. Moratory Interest.

TWA has asked to be awarded moratory, or prejudgment, interest on its recovery. This raises the question whether moratory interest is within my power to grant in an antitrust action for treble damages.

The right to interest on a sum recoverable under a federal statute is determined by federal, not local, law. Rodgers v. United States, 332 U.S. 371, 373, 68 S.Ct. 5, 92 L.Ed. 3 (1947); Brooklyn Sav. Bank v. O'Neil, 324 U.S. 697, 715, 65 S.Ct. 895, 89 L.Ed. 1296 (1945). Under federal law interest is not available on sums recovered as penalties. Rodgers v. United States, *supra;* United States v. United Drill & Tool Corp., 87 U.S.App.D.C. 236, 183 F.2d 998, 1000 (1950) (dictum). Some cases have ruled that interest is also unavailable on double or treble damage recoveries in certain circumstances. Brooklyn Sav. Bank v. O'Neil, *supra* (Fair Labor Standards Act); United States v. Globe Remodeling Co., 196 F.Supp. 652, 658 (D.Vt.1961) (False Claims Act).

Relying on *Brooklyn Bank,* Judge Wyzanski denied moratory interest in a treble damage antitrust case. Cape Cod Food Prods., Inc. v. National Cranberry Ass'n, 119 F.Supp. 900, 911 (D.Mass. 1954). He cites an unpublished decision

by Judge Caffey in this district which reaches the same result. A different result is suggested by the rationale of United Mine Workers v. Coronado Coal Co., 258 F. 289, 846-847 (8th Cir. 1919), rev'd on other grounds, 259 U.S. 344, 42 S.Ct. 570, 66 L.Ed. 975, 27 A.L.R. 762 (1922), but that decision came before *Brooklyn Bank* or *Rodgers*.

Interest should not be allowed in antitrust actions where the statute provides for punitive damages. Treble damages compensate a plaintiff handsomely for all his losses, including loss of the use of money rightfully his.

This objection is overruled.

Conclusion

The report of the special master awarding damages in the sum of $137,611,435.95 pursuant to 15 U.S.C. § 15 is confirmed.

So ordered.

[The above opinion also appears at 308 F. Supp. 679.]

Opinion and Order of April 13, 1970 Awarding an Attorney's Fee and Costs

[Doc. 530]

[CAPTION]

METZNER, District Judge.

Plaintiff, Trans World Airlines, Inc., moves for the award of reasonable attorney's fees and costs of suit as the successful party in this antitrust litigation. Clayton Act § 4, 15 U.S.C. § 15. Plaintiff requests counsel fees in the sum of $10,500,000 and costs of suit in the sum of $2,230,602.

This court has already awarded damages in the sum of $137,611,435.95. 308 F.Supp. 679 (S.D.N.Y. Dec. 23, 1969).

The general rule is that the fixing of counsel fees in an antitrust action is within the discretion of the trial court, "reasonably exercised." Montague & Co. v. Lowry, 193 U.S. 38, 48, 24 S.Ct. 307, 48 L.Ed. 608 (1904). The problem of how to exercise this discretion reasonably has been the subject of much discussion. Farmington Dowel Prods. Co. v. Forster Mfg. Co., 297 F.Supp. 924 (D.Me.1969), modified on appeal, 421 F.2d 61 (1st Cir. 1969); Hanover Shoe, Inc. v. United Shoe Mach. Corp., 245 F.Supp. 258, 302 (M.D.Pa. 1965), vacated on other grounds, 377 F.2d 776 (3d Cir. 1967), aff'd in part on other grounds, rev'd in part on other grounds, 392 U.S. 481, 88 S.Ct. 2224, 20 L.Ed.2d 1231 (1968); Noerr Motor Freight, Inc. 1. Eastern R.R. Pres. Conf., 166 F.Supp. 163, 168 (E.D.Pa.1958), aff'd, 273 F.2d 218 (3d Cir. 1959), rev'd on other grounds, 365 U.S. 127, 81 S.Ct. 523, 5 L.Ed.2d 464 (1961). In *Hanover Shoe, supra,* the court detailed what appear to be the generally accepted factors to

be weighed in determining a reasonable attorney's fee. They are:

> "(1) whether plaintiff's counsel had the benefit of a prior judgment or decree in a case brought by the Government,
>
> (2) the standing of counsel at the bar—both counsel receiving the award and opposing counsel,
>
> (3) time and labor spent,
>
> (4) magnitude and complexity of the litigation,
>
> (5) responsibility undertaken,
>
> (6) the amount recovered,
>
> (7) the knowledge the court has of the conferences, arguments that were presented and of work shown by the record to have been done by attorneys for the plaintiff prior to trial,
>
> (8) what it would be reasonable for counsel to charge a victorious plaintiff."

However, these factors are only general guidelines and in the final analysis "The reasonableness of an attorney's fee can only be determined with reference to a particular case." *Noerr, supra,* at 168.

We have here an unprecedented recovery—some 30 times greater than the next highest recoveries on record. In Union Carbide & Carbon Corp. v. Nisley, 300 F.2d 561, 587 (10th Cir. 1961), petition for cert. dismissed per stipulation, Wade v. Union Carbide & Carbon Corp., 371 U.S. 801, 83 S.Ct. 13, 9 L.Ed. 2d 46 (1962), the treble damages were $4,400,000 and in *Hanover Shoe, supra,* at 302, they were $4,239,000. Obviously the fee to be awarded will be unprecedented, but the court will attempt to insulate itself against the impact of the amount requested in determining what a reasonable attorney's fee should be in this case.

Opinion and Order of April 13, 1970 Awarding an Attorney's Fee and Costs

The action was instituted on June 30, 1961. On August 31, 1961 it was assigned to me for all purposes pursuant to rule 2 of the General Rules of this court. The suit was of great magnitude and complexity, and was bitterly contested from its inception. The first phase of the litigation started with defendant Hughes Tool Company conducting deposition proceedings and discovery being made by both parties. Massive sets of interrogatories were served by both parties. The deposition proceedings covered some 80 days of testimony embodied in 13,000 pages of transcript. During this period attempts were made by TWA to serve Howard Hughes so that his deposition might be taken. Toolco engaged in extensive legal maneuverings to forestall the taking of the deposition. Some of those activities are recited in 332 F.2d 602, 611-613 (2d Cir. 1964). Defendant finally moved to dismiss the complaint, which motion was denied, 214 F.Supp. 106 (S.D.N.Y.1963). The culmination of the maneuvering occurred on February 8, 1963 when counsel for Toolco stated that Hughes would not appear for deposition. He referred to "a business decision" not to proceed further with discovery proceedings, but rather to rest on the merits of the positions theretofore taken and seek judicial review thereof. The Court of Appeals said:

> "Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and Toolco seized upon every opportunity to forestall this event. To this end they demanded the production of a multitude of documents by TWA and the additional defendants and secured successive adjournments of the deposition. Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute. It was only at the very eve of the Hughes deposition—after the other liti-

gants had been put to much delay and expense—that the defendants made a 'business decision' to terminate discovery." 332 F.2d at 615.

Twenty-one pretrial hearings were held by this court during this phase of the litigation, resulting in the entry of many orders and opinions after hearing argument and reading papers submitted on contested matters.

The first phase ended, as far as this court was concerned, with the striking of Toolco's answer for failure of Hughes to appear for deposition. A judgment by default was directed to be entered in favor of TWA against Toolco and the counterclaims asserted by Toolco against TWA were dismissed with prejudice. 32 F.R.D. 604 (S.D.N.Y. 1963). Separate appeals were taken by Toolco from these two determinations (214 F. Supp. 106 and 32 F.R.D. 604), and the hearing on the amout of damages to be awarded TWA was stayed pending these appeals. The Court of Appeals did not pass upon the propriety of the entry of the default judgment against Toolco with respect to the complaint. It limited its review and affirmance to the holding that the district court had jurisdiction of the treble damage action and that issuance of certain orders by the CAB did not constitute a defense to the action. 332 F.2d 602. At the same time it sustained the dismissal of the counterclaims with prejudice because of Toolco's failure to produce Hughes for examination and its failure to produce certain papers and documents. Id. at 615. It also affirmed the granting of summary judgment to the plaintiff on the sixth counterclaim. Id. at 616. The Supreme Court granted certiorari in both appeals, 379 U.S. 912, 85 S.Ct. 261, 13 L.Ed.2d 184 (1964), and after hearing oral argument on March 3 and 4, 1965, dismissed the writs of certiorari as improvidently granted, 380 U.S. 248, 249, 85 S.Ct. 934, 13 L.Ed.2d 817 (1965).

Opinion and Order of April 13, 1970 Awarding an Attorney's Fee and Costs

The second phase of the litigation commenced with the hearings on the damage claims before a special master. Preliminarily, some matters of procedure were disposed of, including an appeal to this court from a ruling of the special master (38 F.R.D. 499 (S.D.N.Y. 1965)), a motion by the defendant which in effect asked for summary judgment in its favor. This latter motion was denied on January 4, 1966. The special master thereafter directed that on May 2, 1966 plaintiff submit in written form all of the testimony it proposed to offer as its affirmative case. Plaintiff offered eight witnesses who were cross-examined by the defendant for a period of 50 days. The defendant followed the same procedure of submitting the testimony of its witnesses in written narrative form and offered four witnesses who were cross-examined by plaintiff for a total of 35 days. The testimony covered some 11,000 pages of transcript with over 800 exhibits containing 60,000 pages admitted in evidence. Experts of recognized standing in the fields of economics, engineering, finance and accounting were called by both sides. At the conclusion of the hearings before the special master, some 745 pages of briefs were submitted by the parties. The special master then rendered a 323-page report. Cross-motions addressed to the report were submitted to the court with an additional 600 pages of briefs by the parties in support of their respective positions. The court's opinion on these motions was rendered on December 23, 1969. 308 F.Supp. 679.

In this application, counsel of record have stated that they have spent 64,000 hours on this case since they were retained by plaintiff. I have excluded some 4,000 hours that are credited to persons who worked on the case but who were not members of the bar in the year that the services were rendered. One of these persons is credited with 3300 hours over a three-year period. An additional 1400

hours have been excluded, since they are not within the period for which compensation should be considered. I have also made an adjustment of hours depending on whether, at the time the services were rendered, the person involved was a partner or associate. The result is that the firm is credited with 58,600 hours, of which 20,000 hours are allocable to partners' time and 38,600 hours allocable to associates' time. These hours were all attributable to the problems of this litigation.

One of the factors to be considered in determining a reasonable fee is whether the plaintiff had the benefit of a prior government judgment or decree. Defendant contends that the default judgment in this case gave plaintiff even greater assistance than a prior government judgment would have offered. This is an oversimplification of the problem. The default occurred only after several years of intensive litigation with appeals by defendant all the way up to the Supreme Court. If there had been a prior judgment which would have the prima facie effect afforded by §5(a) of the Clayton Act, 15 U.S.C. § 16(a), this effort might well have been unnecessary.

Despite the default the issue as to the amount of damages was severely contested. There still remained for disposition intricate and complex issues and proof on the question of damages, which are amply reflected in the report of the special master. In addition defendant relitigated the effect of the default and the scope of judicial notice, which had previously been disposed of (38 F.R.D. 499). The length and scope of the damage hearings belie defendant's argument that "So far as that was concerned [absence of a prior judgment] their job was a cinch. The default • • • left only arithmetic to be done by plaintiff's counsel." For example, an expert offered by defendant was cross-examined for 22 days on the basis of a 656-page

report which he had used in putting together his direct written testimony. Subsequently this witness made corrections in his direct testimony which produced 13 volumes of computer printouts. A supplemental report was then filed by defendant for this witness which contained 230 additional pages with more computer printouts and work papers. All of this had to be analyzed and met by plaintiff's expert witness in this one field of inquiry.

We come now to the question whether compensation may be granted for time spent in this lawsuit on matters unconnected with the award of damages. § 4 of the Clayton Act provides that:

> "Any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor * * * and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee." 15 U.S.C. § 15.

Defendant contends that time spend by plaintiff's counsel in seeking to obtain equitable relief may not be considered in determining the amount to be awarded as counsel fee. This is true since the allowance of attorney's fees is incidental to the statutory right to damages. Decorative Stone Co. v. Building Trades Council, 23 F.2d 426 (2d Cir.), cert. denied, 277 U.S. 594, 48 S.Ct. 530, 72 L.Ed. 1005 (1928) (request for an award of counsel fee rejected where only injunctive relief was sought); Ring v. Spina, 84 F.Supp. 403, 408 (S.D.N.Y. 1949), modified sub nom. Ring v. Authors' League of America, Inc., 186 F.2d 637 (2d Cir.), cert. denied, 341 U.S. 935, 71 S.Ct. 854, 95 L.Ed. 1363 (1951), and Alden-Rochelle, Inc. v. ASCAP, 80 F. Supp. 888, 899 (S.D.N.Y.1948) (request rejected where damages and injunction were sought, but plaintiff successful in obtaining only an injunction). In this case, however, the

development of the facts was the same for both grounds of claimed relief, and the hours eliminated would merely be those devoted to spelling out the claim for an injunction and applying therefor to the court. Such time would be minimal in the overall picture, but will be taken into account in fixing the fee.

Defendant also contends that the time spent in defending against the counterclaims may not be considered on this application. Bergjans Farm Dairy Co. v. Sanitary Milk Producers, 241 F.Supp. 476, 489 (E.D.Mo.1965), aff'd, 368 F.2d 679 (8th Cir. 1966). This is certainly true as to the sixth counterclaim on which summary judgment was awarded plaintiff. But here again the amount of time involved on this issue is minimal. As to the other five counterclaims, they were inextricably bound up with the claims of plaintiff. Defendant itself stated that "In effect the facts asserted in the counterclaims constitute affirmative defenses to the allegations of the complaint." These affirmative defenses had to be overcome for plaintiff to succeed on its claim for damages and thus should be considered in making the fee award.

Defendant argues that the award of counsel fee should be limited to the time and effort necessary to prove items of damage sustained and may not include an award for time spent on claimed items of damage which were rejected by the trier of the facts. Union Leader Corp. v. Newspapers of New England, Inc., 218 F.Supp. 490 (D.Mass.1963), vacated on other grounds sub nom. Haverhill Gazette Co. v. Union Leader Corp., 333 F.2d 798, 801 n. 2, motion to recall mandate denied, 333 F.2d 808 (1st Cir.), cert. denied, 379 U.S. 931, 85 S.Ct. 329, 13 L.Ed.2d 343 (1964); *Bergjans Farm Dairy Co., supra;* Osborn v. Sinclair Ref. Co., 207 F.Supp. 856, 864 (D.Md.1962), rev'd on other grounds, 324

F.2d 566 (4th Cir. 1963). These decisions are refinements of the rule set forth in the *Decorative Stone, Ring* and *Alden-Rochelle* cases, *supra*. However, the courts in applying this limitation pointed out that they were concerned with cases where the recovery was small in relation to an asserted large claim. It is interesting to note that in *Union Leader* single damages were $29,442 with an award of counsel fee of $60,000 and in *Osborn* single damages were $325 with an award of $14,000. See also Darden v. Besser, 257 F.2d 285 (6th Cir. 1958), where single damages were $15,000 with an award of $30,000.

In the instant case the award, to say the least, is substantial. The failure of the plaintiff to achieve a recovery of $510,000,000 was not due so much to the failure to prove items of damage as it was to the rejection of its theory of measuring damages. There was a reasonable basis for urging the comparative profits theory (Zenith Radio Corp. v. Hazeltine Research, Inc., 395 U.S. 100, 123, 89 S.Ct. 1562, 23 L.Ed.2d 129 (1969); Bigelow v. RKO Radio Pictures, Inc., 327 U.S. 251, 264, 66 S.Ct. 574, 90 L.Ed. 652 (1946)) even though the court ultimately ruled against plaintiff on this theory.

Consequently, while reassessment must be made of the time and labor spent by plaintiff in these areas of work, this does not require extensive adjustments in the time factor. The court has been closely involved with this case since August 31, 1961 and is in a position to make a proper evaluation without further proof being called for. This is all the more true since, as indicated below, the time factor is not that crucial in a case such as this.

The firms of Cahill, Gordon, Sonnett, Reindel & Ohl, representing the plaintiff, and Donovan, Leisure, Newton & Irvine and Chester C. Davis, representing the defendants, are recognized as able and experienced counsel. In fact,

the Donovan, Leisure firm was counsel for the successful plaintiff in the *Hanover Shoe* case, *supra.* The history of the proceedings attests to the great responsibility undertaken by counsel.

Defendant points out that plaintiff's application claiming 64,000 hours of time spent on this litigation amounts to a request for $164 an hour for all of the services rendered, whether by senior partners, junior partners, senior associates or junior associates. It then refers to computations made by it of awards in other cases, translated into terms of hourly rates. The requested fee, if it is to be based on a "mix" rate of $164 an hour, could be excessive even in the City of New York. I would estimate that a "mix" rate of $75 an hour would be charged by outstanding, experienced law firms in this city. However, attributing substantial weight to an hourly rate is unfair in a case such as this where success and complexity of issues are such important factors. In *Hanover Shoe, supra,* where the treble damages of $4,239,000 were about the highest heretofore obtained, the court pointed out that it arrived at the fee award of $650,000 on bases other than hours spent by counsel. Consequently, the computation of hourly rates in that case had little meaning.

Similarly, a fee based on a percentage of recovery is not a satisfactory test for this case, although it appears to have been the sole one used in the *Union Carbide* case, *supra,* where the court held that "an allowance of 15 percent of the amount recovered • • • would be reasonable." 300 F.2d at 587. A percentage fee gives undue weight to the size of the recovery. In cases with small recoveries, it completely ignores professional skill and the complexity of the work involved, and could result in an insufficient award for services rendered. See *Union Leader, supra,* 218 F. Supp. at 493; *Noerr, supra,* 166 F.Supp. at 170. Conversely,

where the recovery is extraordinarily high, it could result in an excessive award.

Finally, we come to the eighth factor, which has been framed by two judges as the ultimate test to be applied: that is, a fee which in the judgment of the trial court "would be reasonable for counsel to charge a victorious plaintiff. The rate is the free market price, the figure which a willing, successful client would pay a willing, successful lawyer." Cape Cod Foods Prods., Inc. v. National Cranberry Ass'n, 119 F.Supp. 242, 244 (D. Mass. 1954); *Farmington Dowel, supra,* 297 F.Supp. at 926. On the other hand, this test has been characterized as the outer limits of recovery *Noerr, supra,* 166 F. Supp. at 170.

It seems to me that the major factors bearing on the fixing of attorneys' fees in antitrust cases are the complexity of the problems presented, the skill of counsel, and the measure of success achieved by counsel. The other factors are subsidiary to these and may be helpful in evaluating them, but neither separately nor collectively do these other factors constitute the basis for fixing the fee.

In measuring the success of counsel, only single damages should be considered, since that is the amount produced through the efforts of counsel. Trebling is a penalty imposed by law and automatically attaches to the damages found. Twentieth Century-Fox Film Corp. v. Brookside Theatre Corp., 194 F.2d 846, 859 (8th Cir.), cert. denied, 343 U.S. 942, 72 S.Ct. 1035, 96 L. Ed. 1348 (1952); Milwaukee Towne Corp. v. Loew's, Inc., 190 F.2d 561, 571 (7th Cir. 1951), cert. denied, 342 U.S. 909, 72 S.Ct. 303, 96 L.Ed. 680 (1952). Consequently, the referable recovery here is $45,870,478.

As stated at the outset, the problem of how to reasonably exercise the court's discretion is a difficult one and in the final analysis it can only be resolved with reference to a

particular case. A point is reached where the amount of plaintiff's recovery is unrelated to services of counsel. The large amounts involved do not add to the complexity of the problems, increase the responsibilities of counsel or require greater capabilities of counsel.

After carefully reviewing the entire matter and giving effect to the adjustments discussed above, it is my considered judgment that reasonable attorney's fee in this case is $7,500,000.

Plaintiff requests $2,230,602 as "the cost of suit" allowable by § 4 of the Clayton Act. It concedes that, aside from attorney's fees, no case has ever gone beyond "taxable costs" which are awarded in any case to a successful party. 28 U.S.C. § 1920; Fed.R.Civ.P. 54(d). Similar requests by successful plaintiffs in private antitrust suits to be awarded their "reasonably incurred expenses of litigation" have been uniformly rejected. *Farmington Dowel, supra,* 297 F.Supp. at 930. This request is accordingly denied.

Alternatively, plaintiff requests $396,596.43 as taxable costs. Included in this sum is $28,342.63 claimed for services in connection with attempts to serve Hughes. These charges are based on payments to lawyers and private investigators in several parts of this country and Mexico City. To the extent that these payments are allocable to attempts to serve a summons on Hughes as a defendant in this action, they clearly are not taxable costs against Toolco. They also are not taxable for that portion of the services involved in attempting to serve a witness subpoena on Hughes. § 1920 provides for taxation of fees of witnesses, not the expense of searching out the witness. On the record it is clear that Hughes and Toolco were one and the same, and therefore service of notice to take deposition would have sufficed for plaintiff's purposes. Consequently, this item is disallowed.

Opinion and Order of April 13, 1970 Awarding an Attorney's Fee and Costs

The sum of $19,145.20 for printing costs in the Court of Appeals and the Supreme Court is not taxable, nor are the costs applicable to printing more than 50 copies of the other documents.

As to the transcript of damage hearings, plaintiff may only tax its share of the cost of transcript furnished to the special master plus three additional copies.

Finally, plaintiff has again requested moratory interest to run from the date of the report of the special master. I rejected this plea in my opinion disposing of the motions addressed to the report of the special master. I see no reason to change that disposition in which I said:

> "Interest should not be allowed in antitrust actions where the statute provides for punitive damages. Treble damages compensate a plaintiff handsomely for all his losses, including loss of the use of money rightfully his." 308 F.Supp. at 696.

Judgment shall be entered accordingly. So ordered.

[The above opinion also appears at 312 F.Supp. 478.]

Judgment Entered April 14, 1970

[Doc. 531]

[CAPTION] 61 Civ. 2324

This action came on for hearing before the Court, the Honorable Charles M. Metzner, District Judge, presiding, and the issues having been duly heard, and the Court having rendered its decisions of December 23, 1969 and April 13, 1970, and having directed the entry of judgment thereon,

It is hereby Ordered and Adjudged

That the plaintiff Trans World Airlines, Inc. recover of the defendants Hughes Tool Company and Raymond M. Holliday, jointly and severally, the sums of $137,611,435.95 as damages, $7,500,000.00 as a reasonable attorneys' fee, and $336,705.12 as costs, for a total amount of $145,448,141.07, together with interest thereon at the rate of 6% as provided by law.

Dated at New York, New York, this 14th day of April, 1970.

MOTION TO DISMISS THE COMPLAINT

SIRS:

PLEASE TAKE NOTICE that, upon the summons and complaint herein, the annexed affidavits of Raymond M. Holliday and Chester C. Davis, and all the proceedings had herein, the undersigned will move this Court at a stated term thereof for the hearing of motions to be held at the United States Court House, Foley Square, New York, New York, Room 506, on the 29th day of August, 1961 at 10:00 o'clock in the forenoon of that day or as soon thereafter as counsel can be heard, for an order pursuant to Rules 12(b) and 56(b) of the Federal Rules of Civil Procedure dismissing the complaint herein and each of the claims for relief alleged in said complaint, and for judgment in favor of the defendant Hughes Tool Company, on the grounds that said complaint and each of the claims for relief alleged in said complaint fails to state a claim upon which relief can be granted, that this Court lacks jurisdiction over the subject matter of the action and over the subject matter of each of said alleged claims for relief, that there is no genuine issue as to any material fact and

that defendant Hughes Tool Company is entitled to judgment as a matter of law.

Dated: New York, N. Y.
August 8, 1961.

Yours, etc.,

CHESTER C. DAVIS,
Attorney for Defendant
Hughes Tool Company
120 Broadway,
New York 5, N. Y.

To:

CAHILL, GORDON, REINDEL & OHL,
Attorneys for Plaintiff
Trans World Airlines, Inc.,
80 Pine Street,
New York 5, N. Y.

District Court Order, August 14, 1961

[408]

[CAPTION] 61 Civil 2324

MEMORANDUM

The motion of defendant Hughes Tool Company is hereby granted as follows: the taking of depositions pursuant to the plaintiff's notices served on August 1, 1961 shall be, and hereby are, stayed until defendant Hughes Tool Company shall have completed the taking of depositions pursuant to the notices which said defendant served on August 3, 1961.

By force of the understanding of counsel and Judge Dimock's order of July 7, 1961, the August 3, 1961 notices of said defendant are deemed to have been made between July 7, 1961 and July 20, 1961. On the other hand, by force of said understanding and order, plaintiff's August 1, 1961 notices are deemed to have been made after July 20, 1961, because said notices of plaintiff without leave of court would be permitted under F.R.C.P. Rule 26(a) only after [409] July 20, 1961.

Consequently, said defendant has priority in the taking of depositions under the general rule that, in the absence of some special and good reason, pre-trial examinations should proceed in the order in which they are demanded.

The dispositive issue is whether the record before the Court evidences special circumstances warranting a departure by this Court, in its discretion, from the general rule.

The Court has concluded that the plaintiff has not made such a showing. The Court will adhere to the general rule. So ordered.

As this memorandum-decision constitutes an order, no settlement is necessary.

/s/ WILLIAM B. HERLANDS

Transcript of Pretrial Hearing, September 6, 1961

[Doc. 47]

[CAPTION] 61 Civ. 2324

Before: Hon. CHARLES M. METZNER, District Judge.

New York, September 6, 1961, 11:00 a.m.

[APPEARANCES]

• • •

[2] The Court: What is this all about? I got the matter referred to me for all purposes, so who wants to start?

Mr. Sonnett: My name is Sonnett, your Honor, counsel for plaintiff. I take it that Mr. Davis is principal counsel for Hughes Tool.

I take it that our problem today is to ask your Honor to lay out a schedule for us covering pending motions and deposition schedules.

The Court: What motions are pending?

Mr. Sonnett: There is a motion by the plaintiff for production of documents, and there is a motion by defendant to dismiss and for summary judgment, both motions were directed by Judge Ryan to be stayed pending the assignment of the case to your Honor and pending this meeting with your Honor.

The Court: I assume that I would have to pass on the motion to dismiss and for summary judgment before anything else, unless you see some different procedure I should follow.

Mr. Sonnett: Whatever procedure is agreeable to your Honor.

The Court: You are more familiar with the case than I am at this stage of the proceeding, so I [3] will be guiding actually at this point.

Transcript of Pretrial Hearing, September 6, 1961

Mr. Davis: Your Honor, I have prepared a memorandum which outlines the proceedings had to date so far and which may be helpful to your Honor in following the position of the defendant Tool Company. If I may hand this to your Honor, I think it may be helpful.

Actually, there is one other thing which is pending, and from the defendant Tool Company's point of view it is important, as we see it, that we schedule as promptly as possible the commencement of the taking of depositions in accordance with the decision made by Judge Herlands in this matter, in which he has established the priority of the defendant to commence the taking of depositions.

In connection with the motion to dismiss, which was filed by the defendant on August 9th, the most important matter now pending is awaiting the opposition papers to be filed by the plaintiff, because as soon as we get those opposing affidavits, which presumably will disclose or delineate the factual contentions underlying the broad allegations of this complaint, the sooner we will be in a position to intelligently discuss the scope of the issues which will [4] have to be tried in so far as that complaint is concerned; but to start at the beginning, perhaps I should first describe what this case is all about.

This is an action that was commenced by TWA, or, I should say perhaps, [those] now in control of TWA, on June 30th of this year. It is a complaint which alleges violation of the antitrust laws and seeks damages in excess of $100 million and other injunctive relief, temporary injunction, and so forth.

Since both TWA and the defendant Hughes Tool Company—we will refer to Hughes Tool Company as Toolco—are both Delaware corporations, the jurisdiction of this court rests solely upon the allegations of the violation of the antitrust laws.

Transcript of Pretrial Hearing, September 6, 1961

To identify the parties somewhat, TWA, as your Honor undoubtedly knows, is one of the leading air lines of this country. Toolco is primarily engaged in the manufacture and sale of equipment in the oil well drilling industry. Toolco has not at any time been engaged in the manufacture of commercial flight equipment and, as it appears from the affidavit of Mr. Holliday, which was filed in support of the motion to dismiss, the only activities of the Tool Company with respect to the sale or lease of aircraft to commercial [5] air lines with a minor exception have arisen from the efforts made in the past by the Tool Company to assist TWA in its acquisition of aircraft equipment and the financing of such acquisitions.

Now, the Toolco is the owner of more than 78 per cent of TWA, of the capital stock of TWA. This stock, however, is presently held in a voting trust. It is a voting trust which was insisted upon by certain lending institutions in connection with what is referred to as the December, 1960, financing; it is an agreement, I believe, dated December 1, 1960, which became effective December 31, 1960, so that the Tool Company since December 31, 1960, while it continues to be the owner of 78 per cent of the outstanding stock of TWA, has not had any voting control over TWA.

To understand a little bit some of the issues I will advert to in a moment, I should pause at this point to explain this control situation of TWA which exists at the present time.

Under the voting trust, which the lending institutions required in connection with this December, 1960, financing, a majority of the notes issued by TWA at that time, in the aggregate of some $145 million—

[6] Mr. Cook: $165 million.

Mr. Davis: —the holder of the majority of those notes has the power, under the terms of the voting trust, to the

Irving Trust as the notes agent, to remove—first of all, to appoint or remove, or appoint as successors to, a majority of the voting trustees. At the present time the Equitable and the Metropolitan Insurance Companies, as the holders of the majority of those notes under the terms of the voting trust, through the Irving Trust Company as notes agent, have the absolute power to remove the majority of the voting trustees without cause—this is specifically so provided for—and to select and appoint successors.

The voting trustees are Mr. Breech, Mr. Olds, who were appointed by the lending institutions, and Mr. Holliday, who is an officer of the Tool Company and a representative of the Tool Company and a voting trustee.

The bylaws of TWA provide that the holders of the majority of the stock may remove any of the directors of TWA without cause and elect their successors; and, of course, 78 per cent of the stock, when put into this voting trust, the effect that we have [7] of these lending institutions through these voting trustees since December 31, 1960, have been, as a matter of legal power—though the extent it has been exercised may be in dispute, I don't know— in absolute power and control of TWA.

Mr. Hughes, who was named as a defendant but who has not been served, is the sole owner of the Tool Company, of the Hughes Tool Company, referred to as Toolco.

Mr. Holliday is an officer and director of the Toolco.

Neither Mr. Hughes nor Mr. Holliday have been served with process, although they are named as defendants.

The Tool Company acquired its controlling interest in ownership in TWA beginning some time prior to 1942. At the end of 1942, I believe it is, the Tool Company had acquired approximately 45 per cent of the outstanding stock

of TWA. This acquisition of the controlling interest, practical controlling interest, in TWA was subject to and approved by an order of the Civil Aeronautics Board, the CAB, under Section 408 of what is now known as the Federal Aviation Act of 1958, with a comparable section in [8] the Civil Aeronautics Act of 1938 when it was originally passed. That order which found it was consistent with the public interest is to be found—referring to my memorandum—in 6 CAB 153. That was a decision by the CAB in 1944.

I should say at this point that one of the conditions imposed by that order was that no transaction, no commercial transaction, between the Tool Company and TWA could take place which exceeded $200 per item or which in the aggregate exceeded $10,000 without further CAB approval. Then in 1950 the CAB was confronted with the question as to whether or not a further acquisition of stock by the Tool Company, raising its interests in TWA from the 45 per cent to approximately 78 per cent, a little in excess of 78 per cent, required further approval by the CAB. For the acquisition of control by the Tool Company of TWA and the issue then before the Board, as recognized by the decision, was that while under the 1944 decision the Tool Company, as a practical matter, had control of TWA, having 45 per cent of the outstanding stock, the situation developed that the Tool Company, with 78 per cent of the stock, could control and exercise control over TWA without soliciting proxies of minority [9] stockholders, in effect without the aid or assistance of any other owners of TWA, and the Board held that that change in situation required a further determination by the CAB under 408 of the Act, and in 9 CAB 381 and 12 CAB 192 we find the Board again approving this acquisition of further

control by the Tool Company over TWA, subject to the same limitation, that every transaction between the Tool Company and TWA involving $200 per transaction or aggregating over $10,000 was subject to CAB approval.

As your Honor knows, there is an exemption from the application of the antitrust laws which is to be found in the Federal Aviation Act itself, Section 414—I refer to it in this memorandum—and in Section 7 itself of the Clayton Act, when the acquisition of control of an air line is the result of a CAB order approving the transaction after consideration by the CAB of the public interest involved, and in Section 414 of the Federal Aviation Act you find a clear-cut statutory exemption from the application of the antitrust laws required by or necessitated by any order of the CAB.

The complaint, which I am about to describe, does not advert in any way, shape or form to [10] the CAB approvals, and there is no allegation which negates the existence of that exemption; we are left in the dark. I think it is fair to assume that counsel for TWA is going to assert a contention of some kind that some transaction or activities took place which are not covered by these CAB orders, because I think it is perfectly clear, so far as the Tool Company is concerned, every transaction relating to any of the matters referred to in the complaint, that is, with respect to flight equipment or the financing of flight equipment, was submitted to the CAB and approved by the CAB and, interestingly enough, those applications were prepared by and submitted to the CAB by TWA—by TWA.

Let me disgress for a moment and point out that although we are still the 78 per cent owner, when we recently made a formal request, in regard to this motion to dismiss, to TWA's counsel to furnish us with the files of

TWA relating to these applications for approvals and approvals to be obtained from the CAB, that request was denied on the ground at the time that Judge Herlands had not yet come down with a decision as to our priority in discovery proceeding. Since that time, of course, Judge Herlands has come [11] down with his decision establishing our priority in the commencement of the taking of depositions.

This complaint, as I indicated before, was filed on June 30, 1961. At the time that it was filed, the plaintiff obtained an order sealing the complaint. The Tool Company did not know and the record did not disclose the reasons or the grounds for sealing the complaint, but that is what took place. At the same time the plaintiff obtained an order to show cause, originally returnable July 11th, for the purpose of the taking of the deposition of Mr. Hughes, or, rather, I should say the way it read was that it was an order to show cause to take the deposition of the Tool Company, by its officer and director, Howard R. Hughes, seven days after the service of the notice. The affidavit in support of that application for granting the plaintiff an opportunity to take a deposition out of turn, so to speak, was that they believed that they needed to get some facts which would enable them to make up their mind as to whether or not they had the basis to seek some kind of a temporary restraining order.

The parties then consented to an order which was entered by this court on July 7th, and the effect of that order was to continue the seal of the [12] complaint and all the papers filed until August 1 and to adjourn or postpone this application for the taking of the deposition of the Tool Company, through Mr. Hughes, until that same date.

There were other portions of that order which became the subject of a decision by Judge Herlands, and I will refer to them when I come to that decision.

Transcript of Pretrial Hearing, September 6, 1961

I think it is fair to say that it is a well-known, general fact that Mr. Hughes personally is or has been in the past reluctant to make public appearances and has preferred to have the business of the Tool Company operated by other officers of the Tool Company who consummate whatever transactions appear to be in the best interest of the Tool Company.

The complaint itself contains three claims for relief.

The first claim for relief, which covers a period from 1939 to date, alleges violations by the defendants of Sections 1 and 2 of the Sherman Act and Sections 3 and 7 of the Clayton Act. These alleged violations of the antitrust laws seem to be or can be classified into four categories.

It is claimed that the defendant Tool [13] Company at various times in and after 1939 acquired the common stock of TWA in an amount which presently aggregates more than 78 per cent; that the defendant Tool Company foreclosed a potential supplier from furnishing jet powered aircraft to TWA and sought to establish TWA as a captive market for aircraft which were purchased by Toolco and furnished by the Tool Company to TWA; that the defendants dictated the financing arrangements with respect to the acquisition of aircraft by TWA, and that the defendants and Atlas Corporation proposed a merger of Northeast Airlines with TWA upon terms allegedly advantageous to defendant and disadvantageous to TWA. Atlas is named as a co-conspirator in this complaint but is not named as a defendant. Atlas Corporation owned a controlling interest in Northeast Airlines.

The second claim for relief in the complaint relates to the same violation of the antitrust laws and to the same acts which are alleged, to the extent to which they are alleged in the first claim for relief, except it speaks only for the period from December, 1960, to date. That is the

period from which TWA passed into the control of certain other persons.

[14] Quite frankly, at this point it is a little difficult for the Tool Company to understand what it is that the second claim for relief has added as a cause of action to what is contained in the first claim for relief.

The third claim for relief appears to be predicated upon the same alleged acts as the second, but it characterized such acts as being a malicious and wilful interference with the business of TWA, and presumably seeks relief upon general principles of law and equity in respect of the application of the antitrust laws. I assume that the theory there is that, if the jurisdiction of this court has been established by the allegation of the first and second claims for relief, pendant jurisdiction would apply to the third claim for relief.

In view of the fact that it cannot be disputed that the acquisition and control of TWA by the Tool Company was approved by the CAB, and such approval exempts such acquisition from the application of the antitrust laws, and once it is realized that the Tool Company, with the approval of the CAB, became the owner of 78 per cent or better of TWA, it becomes a little difficult to understand how the Tool Company [15] conspired with TWA or did anything with respect to TWA other than exercise the control which normally follows a 78 per cent ownership. When you add to that the fact that every transaction between the Tool Company and TWA was specifically approved by the CAB, it is easier to understand why the Tool Company feels that it is necessary to commence some convenient but early date for the taking of the deposition of TWA and others to develop the facts which presumably underlie these various very serious charges.

Transcript of Pretrial Hearing, September 6, 1961

The proceedings that have been had to date are as follows:

On August 1 the application for the taking of the deposition of Tool Company, through Mr. Hughes, was heard by Judge Murphy, and Judge Murphy decided that matter on the merits and denied that application.

On the same date that the matter was being heard by Judge Murphy, that is, on August 1, TWA served the Tool Company with new notices for the taking of depositions of the Tool Company through six other named officers, and at the same time also served a notice for the taking of the deposition of Mr. Hughes as a witness. This was served on us on August 1. On August 3rd, the defendant Tool Company for the [16] first time served its notices for the taking of the deposition of TWA, by certain named officers; of Dillon, Read, who were the investment house who promoted and brought about this 1960 financing; the Irving Trust Company, the notes agent; and the Metropolitan and the Equitable, who are the holders of the majority of those notes and are in control of TWA; and also Charles Thomas, who had been president of TWA up until the middle of 1960 and who was the last president of TWA prior to the acquisition and control of TWA by these lending institutions.

To understand the motion that subsequently was made by the Tool Company to stay the notices served by TWA on August 1 until after the completion of the taking of the deposition by the Tool Company, which came on to be heard by Judge Herlands, it is necessary to refer to the order of July 7th, which was entered by this court upon the consent of counsel between the parties and pursuant to an understanding which had been reached between counsel for TWA and myself.

I have set forth that order on page 11 of this memorandum, but basically what happened was this, Judge: The parties decided to try to maintain the status quo between July 7th and August 1st. The [17] Tool Company recognized that normally a defendant is entitled under the Rules to serve a notice to take depositions within the first 20 days after the commencement of an action, whereas a plaintiff may not commence the taking of the deposition of the defendant, unless he should pose special or unusual circumstances. The parties wanted to maintain the status quo until August 1 so that the order that was submitted to the Court on July 7th and which was entered by the Court had the effect of providing that notice of depositions served after August 1 and before August 20th were to be deemed to have been filed or opposed, as the case may be, within 20 days after the commencement of the action.

However, because of the wording that was actually employed by the parties, the effect of it was, as Judge Herlands pointed out, to say that anything done between August 1 and August 20 was to be deemed to have been done after July 7 and before July 19.

Before Judge Herlands the plaintiff renewed its effort to establish special and unusual circumstances so as to entitle them to take the deposition of the defendant Tool Company, and particularly and the only effort that they pressed was that of taking the deposition of Mr. Hughes before giving the de-[18]fendants an opportunity of taking the deposition of the plaintiff and finding out what the actual facts are which underlie the allegations of this complaint.

Judge Herlands, in the course of the argument, asked both parties to submit proposed schedules for the taking of depositions, and this was done. The plaintiff submitted an alternating schedule commencing with their side to take

the deposition of Mr. Hughes first, and then they gave us an opportunity to take the deposition, and they submitted that kind of a proposal of alternating schedule.

We submitted a memorandum pursuant to their request, where we pointed out that we had made a motion to dismiss the complaint or a motion for summary judgment. It is a motion made under Rule 12(b) and Rule 56(b). And we felt that a response to that motion to dismiss would have the effect of delineating the issues raised by the plaintiff, the issues of fact outlined in the complaint.

Judge Herlands, in his decision, in effect rejected both the suggestions that were submitted by counsel and held that the taking of depositions by the plaintiff pursuant to the notice that they had served should be stayed until the defendant Tool Company [19] shall have completed the taking of depositions pursuant to the notices which said defendant served on August 3, 1961, and the memorandum of the decision constituting an order of the Court. Judge Herlands found that by force of this understanding of counsel in the order of July 7, 1961, the notices which had been served by the defendant Tool Company should be deemed to have been served prior to plaintiff's notices, and he said that the positive issue was whether the record before the Court evidenced special circumstances warranting a departure by this Court in his discretion from the general rule, and he held that "the plaintiff has not made such a showing. The Court will adhere to the general rule. So ordered."

Following this decision by Judge Herlands, which came down on August 14, 1961, the Tool Company on August 18 served some additional notices for the taking of the depositions of certain additional financial institutions that had been involved in the December financing as part of the

group now in control of TWA, and it also served notice of the taking of the depositions of the voting trustees named by those lending institutions, and also served a notice for the [20] taking of the deposition of the Boeing Company, and the relevancy of the Boeing Company will become apparent in just a moment, your Honor.

The practice followed by counsel for the defendant Tool Company, your Honor, was to serve notice for taking depositions and then to serve subpoenas duces tecum for the production of documents on the return day of the notice of taking depositions. We believe that such a procedure is not only permitted under the Rules but that it avoids the necessity of burdening the court's calendar by making a motion under Rule 34. When we follow that practice, the person is served with a subpoena and will produce documents as soon as he reasonably can do so and we will have an opportunity to examine those documents in order to expedite the actual taking of depositions; we examine the documents and arrive at a mutually agreeable date for the actual taking of the deposition after the documents have been examined.

We are quite cognizant of the fact that a similar result may be obtained by a proceeding by motion under Rule 34. That is a practice that we followed subsequent to Judge Herland's decision.

I should have indicated that prior to [21] Judge Herlands' decision, immediately following our motion to dismiss, we wrote a letter to counsel for TWA requesting documents relating to the approvals by CAB. I have annexed as an exhibit to this memorandum our letter dated August 10, 1961, and the reply we received on August 11, 1961, by Mr. Sonnett. The interesting part of that reply, your Honor, is the last sentence of the second paragraph,

which in effect says that they did not believe that they would be in a position to make documents relevant to the subject matter of the motion to dismiss available to us. One of the reasons given was the pendency of the decision by Judge Herlands.

At the same time, after the decision by Judge Herlands, counsel for TWA, and notwithstanding Judge Herlands' decision, which I think makes it perfectly clear that defendant Tool Company was to have priority in discovery proceedings, made a motion under Rule 34 for the production of documents by the Tool Company. I believe it is well established in this court that once priority for the taking of depositions has been established for one side, that the other side may not, until completion of discovery proceedings which priority affords to the one party, try to require the [22] production of documents by the other party. This motion is one which Mr. Sonnett referred to a moment ago as being pending. It calls for the production of documents as soon as possible and not later than some date in October.

We have not yet had an opportunity to file papers in opposition to that motion. Quite apart from the fact that it is premature by reason of certain documents called for, and so far as that motion is concerned and a schedule is concerned, any time convenient to the Court and the parties, the motion may be made returnable at any time so long as we have been allowed to submit some papers in opposition. As far as I can see, there is no urgency for hearing that motion or deciding it.

The next thing that took place, your Honor, was an application by counsel for TWA under Rule 2(b) of the general Rules of this court, and this was made on August 17th, immediately following the decision by Judge Herlands. This brings us up to date in so far as the proceedings had in this matter so far.

Transcript of Pretrial Hearing, September 6, 1961

Now, what are the matters that are pending? Before going into the question of depositions, there is one thing which I would like to stress on behalf of the [23] Tool Company is that quite apart from the priority which Judge Herlands' decision has established, it should be recognized that Judge Herlands' decision also recognized that discovery proceedings by the Tool Company should commence independently of the motion to dismiss. I make it clear that we deliberately noticed the taking of the deposition of TWA to commence on August 23rd, and we noticed our motion to dismiss returnable on August 29th, and that was a fact that was clearly and forcibly brought to the attention of Judge Herlands in our memorandum submitted pursuant to a suggestion to submit a proposed scheduling of the taking of depositions.

We did that, your Honor, with a specific purpose in mind. We believe that it is important to the Tool Company that we commence the taking of depositions as soon as it can be reasonably arranged, having in mind whatever work may be required, although, as I point out, I don't believe there will be any burden upon either TWA or its counsel to commence with the taking of depositions fairly promptly.

The need of the Tool Company for the commencement of the taking of depositions, I have attempted to set out commencing at page 17 of this memorandum [24] submitted to your Honor, and it may require some explanation by me, and, of course, I will be very happy to expand on what we point out there.

I should point out that we have not yet, that is, the Tool Company has not yet, filed its our answer to the complaint, and I think it only fair to state that when we file an answer, we will have to assert some counterclaims against TWA and others. We have the problem of both compulsory counterclaims and permissive counterclaims. What I have

done beginning at page 17 is to indicate the seriousness of the counterclaims or claims that the Tool Company must consider asserting in this action.

I think it only fair also to point out that when this complaint was unsealed, there was a great deal of publicity with respect to the commencement of this action by TWA against its owner, Tool Company, and it is to be anticipated that the answer to be filed by the Tool Company and any claims which may be asserted by the Tool Company are likely to receive widespread public interest, and it seems to the Tool Company that we ought to be fairly sure of our facts before asserting such claims.

Now, we recognize, of course, under the [25] Rules it is not necessary to proceed in that manner, but we believe in this situation it is important for us to proceed in this manner. The reason I am emphasizing that, your Honor, is to point out that the taking of the deposition and the commencement of the taking of depositions in this matter is not related to the existence or the lack of existence, or whatever you may decide with respect to the motion to dismiss. It seems to me the procedures we ought to follow with relation to this motion to dismiss should be discussed and decided by your Honor after we have received the opposing papers.

Now, we filed our motion and our supporting affidavits on August 9. I am quite confident that counsel for TWA is prepared to file opposing affidavits immediately. I am sure that most of the facts they want to set forth must have been considered before they prepared the complaint, and I am sure they will have no difficulty in stating whatever facts they have which support the allegations of this complaint. Once we see what those are, we will be in a position of determining what issues exist in so far as the complaint is concerned.

Transcript of Pretrial Hearing, September 6, 1961

I will be surprised if counsel for TWA [26] does not raise some facts which will require, or some issues which will require, clarification through the normal process of oral depositions.

I made a reference to the fact that the complaint charged with one of the antitrust laws was the fact that the Company proposed or negotiated a proposed merger between Northeast and TWA. I want to point out in that connection that that proposed merger was one which by its terms was subject to CAB approval. By its terms it was also subject to approval by a majority of the minority stockholders of TWA, and because the Atlas Corporation is an investment company, it also was subject to a finding by the Securities and Exchange Commission that the transaction did not involve any overreaching and was fair.

However, the contentions in this complaint relating to Northeast and Atlas have some corollary repercussions. The Tool Company also has a substantial investment in Northeast. It advanced to Northeast in May of 1960 over $9 million.

Northeast Airlines is presently involved in a proceeding before the CAB involving obtaining a permanent authorization of its New York-Florida route. It is encountering, as was to be anticipated, some [27] rather strong and, may I say, perhaps bitter opposition on the part of some competing airlines, and there is no question that those competing airlines are capitalizing right now and will continue to capitalize on the allegations of this complaint that Northeast was involved in an alleged conspiracy to violate the antitrust laws. The seriousness of that contention, your Honor, is that, if there be any basis for contending a violation of the antitrust laws, it necessarily must mean either that some secret transaction took place, of which I assure your Honor that the Tool Company is wholly unaware,

which required CAB approval and for which CAB approval was not obtained, or somehow or other the facts submitted to the CAB by TWA, whose files we do not have access to, even though we own 78 per cent of TWA, are the basis for a contention that the approval of the CAB is to be disregarded, vitiated in some manner undisclosed to us.

The allegations of this complaint require, so far as the Tool Company is concerned, that we proceed as promptly as we possibly can for developing the facts, the facts that justified these allegations, and in the last section of this memorandum we have submitted we have suggested a schedule as to pending matters. It [28] is roughly in—my associate, Mr. Cox, has just reminded me that I forgot to mention one very important point for the commencement of the taking of depositions, and that is that the Tool Company is very much concerned to consider the possibility of it seeking some special equitable relief in connection with the so-called Boeing transaction and its financing. Since this is one of the matters alleged in the complaint as wilful and malicious conduct on the part of the Tool Company on the assumption that the Tool Company, notwithstanding 78 per cent ownership of TWA, was seeking to hurt TWA, the situation is the following:

Since December 31, 1960, the persons in control of TWA decided to commit TWA for the acquisition of some Boeing jet aircraft at a cost of some $180 million. At the same time they rejected the possibility of acquiring some 13 Convair jet aircraft which had been ordered by the Tool Company pursuant to the usual past practice of ordering aircraft for TWA when TWA was not itself in a position to order itself or finance, and in order to assure prompt delivery it had been the practice of the Tool Company to order the aircraft and subsequently make them available to TWA. In order to finance this $180 million of jet aircraft, it was

dis-[29]closed in a registration statement, which became effective in May of 1961, that TWA was about to commit itself or had committed itself or intended to commit itself to borrow some $147 million from the same lending institutions who are in control of TWA. At one time I believe it involved the addition of one additional insurance company, Prudential, and I was told it withdrew leaving the identical lending institutions.

In any event, it appeared that TWA intended to negotiate with those lending institutions the borrowing of some $147 million toward this $180 million obligation that we were going to incur with Boeing. At the same time it was disclosed that one of the terms and conditions of that borrowing was that in the event the voting trust would terminate for any reason, that is, the voting trust that was imposed upon the Tool Company, and the circumstances, which is another story, relating to the $165 million borrowing, the same lending institutions were insisting apparently on terms and conditions that an additional $147 [million] long-term debt would immediately mature and become due and payable by TWA should the voting trust terminate for any reason.

The voting trust, by its terms, terminates [30] at any time that the money borrowed at the time it was created is refunded or the lending institution repaid. It is true that they impose a 22 per cent penalty on the Tool Company if the Tool Company tries to repay it, but they have a right to repay it. It was the position of the Tool Company therefore that this proposed new financing, which appeared to us to involve self-dealing, or at least terms, lending terms, which are not competitive, also involved the possibility that as a practical matter these lending institutions were about to lend money under terms which would have the effect of

continuing this voting trust for a period longer than originally intended.

TWA refused to furnish to the Tool Company any information with respect to those negotiations. It even refused to furnish that to Mr. Holliday.

We have read in the newspaper recently that some financing was consummated by TWA; the newspaper account merely said that the lending institutions involved were not identified, and we do not know what the terms and conditions of that financing are and whether or not any of those objectionable terms and conditions I referred to in fact exist today.

Obviously, there may be some equitable [31] relief that we may seek, and before we are, of course, in a position of taking such steps, we must obtain the facts, which we propose to do by commencing discovery proceedings as soon as possible.

I suggest a general schedule, your Honor. We believe that TWA should promptly serve its papers in opposition to Tool Company's motion to dismiss. Presumably TWA's counsel, already having made a detailed investigation of the facts prior to the filing of the complaint on June 30, 1961, is prepared to respond to said motion which he made on August 9th. I think it is to be expected that such response will have the effect to delineate the factual issues underlying the allegations of the complaint. Then it seems to me, your Honor, that we ought to fix an early date for the production by TWA of the documents we have called for by our subpoena served on TWA on August 16th.

It seems to me that those documents should be readily available for production inasmuch as presumably they have been gathered by special counsel for TWA in connection with their investigation which resulted in the commencement of this action.

Then it seems to me that we ought to agree [32] upon the earliest possible convenient date for the commencement of the taking of depositions by the Tool Company and we propose [to] commence by taking the deposition of TWA.

Then it seems to me, your Honor, that is one of the matters which has been held in abeyance pending a referral of this matter to your Honor. We have been interrupted as a result of TWA's application to Chief Judge Ryan with the completion of the service of subpoenas duces tecum on persons whose depositions are to be taken as witnesses. They are as witnesses at the moment; some of them are potential cross defendants.

I submit that it would be helpful to permit us to proceed promptly to serve those subpoenas duces tecum so that the person served may have as much time as possible to respond to the subpoena and so that we will not waste any time when we are ready to take their oral depositions.

Plaintiff's motion for the production of documents under Rule 34, as I previously indicated, may be set down for hearing at any time that is convenient to your Honor and counsel for the plaintiff. I don't believe that there is any urgency for the determination [33] of that matter, but if counsel for TWA feels that there is, we will be prepared to oppose that on any reasonable notice.

Then it seems to me that after we have received the papers in opposition to the motion to dismiss, then we will be ready to give consideration to an appropriate date for a hearing on the motion to dismiss, if that course of action appears to be the one that might be the most productive for an early disposition of the issues involved in this case. It took an awful long time to describe this, your Honor, but I hope it has been helpful.

The Court: Mr. Sonnett?

Transcript of Pretrial Hearing, September 6, 1961

Mr. Sonnett: Your Honor, with reference to the specific program suggested by counsel on page 22 of his memorandum, as your Honor knows, Judge Ryan agreed that, despite the heavy burdens on your Honor and other judges in this court, this was a typical big case that needed to be administered by one judge, and I think in the interests of saving the Court's time and in the interests of the parties—we are happy to be before you as the judge who will supervise the pretrial and will try the case—I don't think your Honor wants to hear from me about the merits of any of these problems [34] until such time as the record is ready for presentation to your Honor.

On the specific program I can be in a position to serve the opposing affidavits on the motion to dismiss and for summary judgment by next Wednesday. We have had some problems at TWA recently. I think all will recognize that it has been rather extraordinary; it has been a little difficult to get to the chief executives to finalize the affidavits, but we can serve and file the opposing affidavits and our brief on Wednesday next.

As for step two suggested by counsel, production of documents by TWA, we are prepared to start producing for inspection tomorrow morning, and counsel may proceed with inspection of the documents, which are very voluminous, called for by the subpoena duces tecum.

On the question of how long it will take us to complete a search for documents and for counsel to inspect them, we have some practical problems. I think one of the problems is whether counsel wants us to produce copies of, for example, printed contracts that I am sure Tool Company already has. We have problems about whether counsel really wants to see the contract [35] files of particular planes. One file alone is about eight feet, change orders in

design and so forth, but their subpoena, while broad, we haven't objected and we will produce whatever it is in fact they want. We have a special office set up at TWA's offices, and counsel can send anyone he desires tomorrow morning at 10 o'clock and he can inspect and choose, or whatever he wishes to do. We have a practical problem about files of TWA located at Kansas City, which is the operations base and headquarters of TWA. Once counsel for Hughes Tool has looked at what we have in New York and has told us whether he wants us to produce, for example, these printed documents that they already have, it may be that what they ought to do is go out and look at them there, or, if they really want us to do it, we can bring them here.

Mr. Davis: There will be no problem.

Mr. Sonnett: They are very voluminous, that is my point, Judge. I will estimate that it will take counsel for Hughes Tool Company probably a minimum of two weeks to look at the documents that TWA will have here and at Kansas City. My best estimate is that as to the documents yet to be searched for in Kansas City, we will need probably three to four weeks. We have a [36] crew of six working on the document problem, so I would say, Judge, that it would take, for us to be in a position to say that we think we have fully complied with the subpoena duces tecum, perhaps we can shave it some with a crew of six—that would be my guess—a month.

Counsel can help to the extent that, having had a preliminary look at what we have at TWA, if he will then say, "Now, there are certain areas that you needn't bother producing," like the printed documents that they have, and so on, we would cut that job down and maybe get it done in two weeks.

As for the step three suggested by counsel, the taking of depositions, let me say before leaving documents that we

most strongly recommend to your Honor that there be a production of documents by both sides before any depositions commence, because I think if there is, we will find that the length and scope of the depositions to be taken in due course by both sides will be very much narrowed. Otherwise, we are going to have a very real problem, I think, in the taking of depositions.

Hughes Tool has noticed, I think it is, 21 sets of depositions; for example, the top two men in [37] the insurance company and the banks and so on. The number of individuals involved in their notice, I am not sure, but I would say it is 30 people, or thereabouts. I think that if your Honor were to direct at the outset of this case that we get the documents under control before we start depositions, I think we are going to have a net saving of time on the part of everybody, particularly, I think, the outside people, banks, insurance companies, Boeing Aircraft, who, after all, are only witnesses.

So our request is that your Honor pass upon whatever the disputed items of our motion to produce may be. I don't know how much counsel will concede that we ought to have, but when we got up the motion to produce, we took the same items that he had in his subpoena duces tecum, we added some necessary references to the Tool Company and we added only one really new item, and that is the income tax returns of Hughes Tool for reasons which I suppose bear on this conspiracy which we will argue at length before your Honor because I am sure they will not give us the right to see that.

I would think if counsel would indicate to us the items that he would concede that we have a right to [38] see and indicate the ones that he wants to dispute and your Honor were to dispose of that document problem, because it does

take time, I don't think it is in the interest of everybody to have the whole deposition thing start before we have the documents controlled. I think if we could get the documents out of the way in the next two or three weeks, with production by us and by them, and then turn to the depositions, adhering to the schedule which Judge Herlands has established, we are not suggesting any deviation from that, and then argue this motion to dismiss at whatever time your Honor desires to hear it, we will be prepared to argue it on the present record after depositions are taken, or whatever time it is convenient to the Court.

My only point on depositions is that, if counsel is going to want depositions to use in connection with his motion for summary judgment and to dismiss, I think we are going to need some too, because what we are complaining of in this complaint isn't anything that was authorized or required approval by the CAB. Counsel's argument is quite beside the point. There is no act alleged in our complaint that was authorized or required or approved by the CAB. [39] In due course your Honor will consider that and determine the question, but if he is going to want depositions to use on the motion for summary judgment, it seems to me that we ought to have a chance to show the other side of the coin, namely, the things that happened.

The Court: That is certainly in line with decisions of the Court of Appeals in this circuit.

Mr. Sonnett: So I would say, your Honor, one way or the other, if he wants to argue it on the present record, fine. If he wants depositions, we ought to have the record made so you can decide it on the basis of an adequate record.

The Court: How about 3: Tool Company should commence taking the deposition of TWA 10 days after the date

fixed for the production of documents; you have no objection to that?

Mr. Sonnett: None whatsoever, your Honor. It is just a matter of administering the document problem.

The Court: What about 4: Service of subpoenas which were interrupted?

Mr. Sonnett: I think this has to do really with the convenience of these 30-odd people who were noticed as witnesses, these being banks and insurance [40] companies, aircraft companies scattered all over the country. I would think that as a matter of not interrupting any more than necessary—

The Court: I don't see how 4 is a problem, Mr. Davis.

Mr. Davis: It is not, your Honor. I just mentioned it because, as things now stand, we had an understanding that we suspended the service of those pending a reference of this case to your Honor, and I just wanted to point out that it is a matter pending in the sense that we ought to have an understanding that from this date forward we are free to resume the service of those subpoenas, and, so far as the convenience of the parties is concerned, of course we will cooperate in every way possible to fix dates, or whatever date that was originally fixed, or some date convenient for those concerned.

The Court: Have you coupled the motion for summary judgment and the motion to dismiss?

Mr. Davis: Yes, your Honor.

The Court: It would seem to me that in view of our decisions here in this circuit, your opponent should have the opportunity of depositions before your motion is passed upon.

[41] Mr. Davis: No objection. So far as the motion to dismiss is concerned and the motion for summary judgment,

the only suggestion we made is that after we receive these answering affidavits next Wednesday, and I quite agree, perhaps the thing should be postponed for a determination until the parties are ready to have it heard on whatever documents he needs or we need. I have no objection to that.

The Court: I am just saying at this writing, pursuant to the cases in our Court of Appeals you would be in a very bad position to win your motion; plaintiff merely saying, "I haven't had an opportunity to take depositions," and automatically your motion would be denied.

Mr. Davis: That is why I have suggested the commencement of the taking of depositions should be independent of and not related to this motion to dismiss.

The Court: I don't know how you are going to set that up. If the Court decides the motion to dismiss is really a summary judgment, you are back in the other box again.

Mr. Davis: That is why I suggested, your Honor—

[42] The Court: Suppose we do this: You say plaintiff's motion for production under Rule 34 for documents should be set down for a hearing at any time which is convenient to the Court after you have had an opportunity to submit papers in opposition.

Let's take that one first. What time do you want to submit your papers?

Mr. Davis: Well, I think if we had a week's time to submit papers in opposition—

The Court: Take any time you want. Today is the 6th. September 13th.

Mr. Silverman: With the holidays Monday and Tuesday, your Honor, I think maybe we had better postpone it a little more.

Transcript of Pretrial Hearing, September 6, 1961

The Court: Let's put it over to Monday, because I have to go to the Judicial Conference. Do you want to have argument a week from Monday on this motion?

Mr. Sonnett: I would like to see their opposition papers a day in advance of argument.

The Court: We can set it down for argument a week from Monday, that is the 18th. Could you have your papers in Mr. Sonnett's hands by Friday morning at 10 o'clock?

[43] Mr. Davis: Sure.

The Court: That gives you eight or nine days.

The gentleman sitting on your right doesn't seem enthusiastic.

Mr. Silverman: One can hardly be enthusiastic about a lot of work, but we will get it out.

The Court: You might as well get started on the right foot and have everything in.

Mr. Silverman: I shouldn't think there will be any difficulty about that.

The Court: September 15th, 10 a.m., for service of papers; all right?

Mr. Sonnett: Yes, sir.

The Court: I think that should be the first step, and at that time I will be prepared to rule on your item 3 as to whether the production of documents by Toolco should proceed abreast of their taking of depositions. In the meantime you can commence, as I understand it from Mr. Sonnett, the examination of documents which have already been collated, and by September 13th—or do you want to make that the 18th also, Mr. Sonnett; give you to September 18th to serve your papers in opposition?

[44] Mr. Sonnett: I would prefer it, Judge for the reasons that I have indicated.

The Court: Make it September 18th.

Transcript of Pretrial Hearing, September 6, 1961

Mr. Davis: May I make a suggestion on that, your Honor? It seems to me that our opposition and the effectiveness of considering the issue as to the scope of the documents they are requesting of the Tool Company on their motion 34 will be greatly assisted once we see what it is they are claiming as the underlying facts of the complaint. The problem we now have, your Honor, is that we have a 38-page complaint, but after your Honor has had an opportunity to look at it, you will find it tells you very little other than conclusions.

The Court: That is shorter than the one I have in the minority stockholders case in DuPont, on the same problem of General Motors, exercising its 21 per cent interest.

Mr. Davis: That is why I am suggesting, your Honor, that once we have, even though we may not dispose of the motion for summary judgment—once we have these answering affidavits, which at least set forth the factual contention, it is almost answering a bill of particulars, it is going to give them an [45] opportunity to tell us for the first time what we have been doing that has not been approved by the CAB.

The Court: And you would therefore be able to narrow your request for documents.

Mr. Davis: Conceivably, except we have the problem of the counterclaim, as I indicated before, but certainly it would permit us to understand the reasonableness of their request for income tax returns.

That is the thing we are primarily opposed to. The rest of the stuff we are not opposed to. That is really what the thing is going to come down to. That is what is basically the justification for their trying to probe into that, and I assume it is not for the purpose of embarrassing the Tool

Company or Mr. Hughes, and the reasonableness of that, your Honor, will become—we can focus on it once we or after we have received these papers in opposition, so I would suggest, whatever the dates are, the fact is, I was thinking, when I was suggesting it, I wondered if I could spend some time with my family and children before September 20th, but what I would suggest, however, is that a consideration on our opposition to their [46] request for documents, apart from the fact that it is premature, as we contend, will be greatly facilitated and the issue sharpened if we have received at least a week or 10 days before whatever it is that they are going to lay out for us as being the factual foundation of their complaint, and then we will see what the reasonableness of what they want is.

Mr. Sonnett: May I suggest, Judge, that what counsel is saying has nothing to do with our rights for production of documents. I think your Honor will look at the complaint, the allegations of the complaint, and determine whether we are asking for documents which are relevant to the general subject matter and whether we have good cause. I am prepared to argue the matter of the income tax returns at your Honor's convenience, to submit the authorities and the reasoning.

Our point about the tax returns is that we think that a principal motivation of Hughes Tool for becoming a supplier of aircraft, which it became, was because Hughes Tool had some problems. It threw off so many millions of dollars a year and Howard Hughes was saved from paying; if they paid it out in dividends, he would pay 92 per cent. What they deliberately did [47] was to create matters of convenience for the Tool Company and this led to a lot of the things that they did with the captive TWA.

I will be prepared at your Honor's convenience to submit the cases. I don't think these affidavits we are going to submit really have anything to do with the question of whether our motion to produce is well founded, nor the allegations of the complaint.

The Court: Let's make the same date, September 18th, for the motion to dismiss and on the motion for production of documents. Serwe your papers on Friday.

Mr. Silverman: Was your Honor making September 18th the date for argument of the motion to dismiss?

Mr. Davis: No, the motion for production of documents.

Mr. Silverman: The Court, I think, was suggesting the argument of the motion to dismiss on the 18th.

Mr. Davis: No, your Honor, I don't think we would be ready to argue the motion to dismiss on the 18th.

[48] The Court: Is this the one that was on my calendar on August 22nd?

Mr. Davis: August 29th was the first return day, I believe.

Mr. Sonnett: It was either this motion to produce or the other one, I am not sure, Judge.

Mr. Davis: No, the motion for summary judgment was first made returnable August 29th. I am quite confident that is right.

Mr. Sonnett: But at that point, your Honor, we were going to apply for an adjournment and extension of time because, your Honor, I strongly believe that what your Honor indicated a little earlier, and that is the determination of this motion to dismiss or motion for summary judgment in whole or in part—

The Court: I will reserve the motion indefinitely. The motion to dismiss may be able to be disposed of on what you have submitted. If, on the other hand, what comes in

I have to consider as a motion for summary judgment under Rule 12, I cannot put it over, but I cannot tell until I see the papers.

Mr. Davis: That's right. I want to say quite frankly I thought I made it clear in my opening remarks, we are not prepared to permit this to [49] be dismissed until we have decided what counterclaims we want. I would rather withdraw it if it is going to cause any confusion.

It seems to me the motion to dismiss the complaint is a motion which was warranted based upon the affidavits we filed in support of it. I think we ought to find out what it is that the plaintiff claims as a basis for their complaint, and after we see that, then I think we will be—conceivably we will be willing to say all right, if that is your position, there is a pure question of law involved. I don't anticipate that, your Honor, and I would be less than frank with your Honor if I didn't say that. When I see the opposing papers on the weekend before September 18th, I will withdraw the motion and renew it when we are ready to establish the fact.

I am sorry if I spoke this late on the thing. I thought your Honor was still addressing yourself to—

The Court: I was trying to bring them both in together.

Mr. Davis: No, I think the motion for the production of documents by the Tool Company is a motion which we believe is premature based upon the [50] firmly established precedents of this court, and I think it is up to TWA to show some overwhelming reason why they need those documents.

The Court: I would conceive it is to cross examine the witnesses whom you have subpoenaed on their depositions of them. This is a perfectly valid reason for looking at them.

Mr. Davis: I think we may come to that point, your Honor.

The Court: Let's do it this way: I think perhaps that you can hold off your motion to dismiss at the present writing and let's go on to the production of documents and keep the schedule, and that is September 10th—

Mr. Silverman: 15th, I think you said, sir.

The Court: —September 15th at 10 a.m.

Mr. Silverman: For opposing papers on the Rule 34 motion.

The Court: That is right. We will argue it on September 18th at 10:30. I don't know the courtroom yet. We will have to find out.

All right.

Mr. Sonnett: Yes. May I, your Honor, I have a commitment to Judge Cashin in a cartel case [51] and I don't know the date, but if I am not able to be available, my partner, Paul Williams, can do it for me.

The Court: There is a holiday that week, too, isn't there, Wednesday?

Mr. Silverman: I think the 11th, 12th and 20th are Jewish holidays.

Mr. Davis: I have no objection to putting it over past the 20th. In fact, I would like it.

Mr. Sonnett: I am sure you would like to put it off forever, but we have to get on with the case.

The Court: There is an earnest plea for progress in the case.

Mr. Sonnett: I am in favor of that, Judge. We are desperately anxious to get this case tried. I hope we can do it.

Mr. Davis: We will cooperate in that respect.

The Court: How about the 21st, if you have no serious objection?

Mr. Sonnett: No.

Mr. Davis: Since Mr. Williams has just appeared for the first time today, we can put it over [52] when you are available.

Mr. Williams: This is not the first time I appeared in this case.

Mr. Sonnett: Mr. Williams appeared when we filed the case. He wouldn't be with me on the case, but he is taking some of the load. But as to the dates, the 21st is all right with me.

The Court: Are you sure of that holiday date, the 20th, Wednesday?

Mr. Silverman: I am almost sure.

The Court: Make it Thursday, September 21st, and you can file your papers then by Monday, the 18th. That will give you three working days.

Mr. Sonnett: Thank you, Judge.

The Court: September 18th for the service of papers. All right.

Mr. Sonnett: Thank you.

Mr. Davis: We will delay the commencement of depositions until after the 21st date.

The Court: Yes.

Mr. Silverman: And the motion to dismiss is held off?

The Court: Held in abeyance.

Mr. Davis: Thank you, your Honor.

Pretrial Order, September 7, 1961

[Doc. 44]

[CAPTION] 61 Civ. 2324

ORDER

A pretrial conference was held in this cause on September 6, 1961, wherein the following proceedings were had.

I.

The following counsel were present representing the plaintiff:

CAHILL, GORDON, REINDEL & OHL, Esqs.,
JOHN F. SONNETT, Esq.,
PAUL WILLIAMS, Esq. and
CORYDON B. DUNHAM, Esq.,
Of Counsel.

The following counsel were present representing defendants:

CHESTER C. DAVIS, Esq.,
Attorney for Hughes Tool Company,
RAYMOND COOK, Esq.,
PETER M. FISHBEIN, Esq.,
MAXWELL COX, Esq.,
JAY H. TOPKIS, Esq. and
SAMUEL J. SILVERMAN, Esq.,
Of Counsel.

II.

Plaintiff TWA has already gathered some of the documents called for by the subpoena duces tecum served on TWA on August 16, 1961 by defendant Hughes Tool Co. TWA shall continue gathering the material called for by this subpoena duces tecum and shall complete compliance with the subpoena by Friday, October 13, 1961. Defendant Hughes Tool Co. may commence the inspection and copying of said documents on September 7, 1961.

III.

Plaintiff's motion pursuant to F.R.C.P. 34 shall be argued on September 21, 1961 at 10:30 a.m. in chambers. Defendant Hughes Tool Co. shall serve and file its papers in opposition prior to 10 a.m. on September 18, 1961.

IV.

The question as to when defendant Hughes Tool Co. shall commence taking depositions and when it shall comply with any order entered on plaintiff's motion pursuant to F.R.C.P. 34 will be argued in conjunction with said motion.

V.

The motion by defendant Hughes Tool Co. to dismiss the complaint pursuant to F.R.C.P. 12 and for summary judgment pursuant to F.R.C.P. 56 shall be held in abeyance. Said defendant shall notify the Court when it desires the motions to be heard. A date will then be fixed for the serving and filing of papers in opposition and argument on the motions.

VI.

The service of subpoenas by defendant Hughes Tool Co. may continue.

So ORDERED.

Dated: New York, N. Y.
September 7, 1961.

/s/ CHARLES M. METZNER
U.S.D.J.

Transcript of Pretrial Hearing, October 2, 1961

[Doc. 48]

[CAPTION] 61 Civ. 2324

Before: HON. CHARLES M. METZNER, District Judge.
New York, October 2, 1961, 10:30 a.m.

[APPEARANCES]

• • •

[2] Mr. Sonnett: Good morning, your Honor. I do not know whether the Court had an opportunity to read our reply papers which, unfortunately, I ground out over the weekend and could not serve and file until this morning.

The Court: I did not.

Mr. Sonnett: Your Honor will find that we have submitted two memos of law. I would like to explain why two, briefly. One is our reply memorandum in connection with the motion for production, which is the pending matter before your Honor. The second is a brief with respect to the defendant Tool Co.'s claimed defenses.

The reason for the second brief, may it please the Court, is that Tool Co. suggests from time to time in its papers that it has some defense to the complaint here. It hasn't yet tendered that defense for decision. The motion to dismiss, as your Honor will recall, is pending, and we don't have an answer yet in the case, but the repeated suggestion of this alleged defense of exemption, it seemed to me, required us to set forth in a brief what our position is as

plaintiff. We have done that in the brief with respect to defendant Tool Co.'s claimed defenses. [3] I hope your Honor will find it of some assistance in understanding the plaintiff's theory of the case.

In so far as the motion for production is concerned, your Honor, the opposing papers, as I read them, concede our right to the production of all documents which we seek except financial records and income tax returns, and the opposing papers take the position that the time of production should be deferred until after the Tool Co. has completed its scheduled depositions.

Our position is that the papers should be produced promptly, all of them, including the financial records and tax returns, and that they should be produced prior to the commencement of the depositions.

I think the basic ground of distinction in this case from some of those, in fact I think all of those, relied on by the Tool Co. is that we have a total of something over 25, I think, witnesses to be examined by the Tool Company. Four are TWA executives. Over 20 are outside witnesses. The subject matter of the examination of all of the outside witnesses will be directly connected with the matter of financing of aircraft, with the motives, purposes, intent of the Tool Company in doing what it did do and how [4] it did it.

Our cross-examination of these witnesses cannot be successfully done or completed until we have the Tool Company documents. We are not seeking to interfere with their priority of deposition. Rather, we are trying to make the depositions shorter and more meaningful when they occur.

So I submit, your Honor, on the basis of the allegations of the complaint, on the basis of the needs in this case for administration, the fact that we are about to commence an extensive program of depositions, that the time to get rid of the document problems is now. We shall be confronted with very real, practical problems otherwise.

The 25-odd witnesses are to be examined in New York, in California, in Pennsylvania and in the State of Washington. If we are going to be running into—and I suspect we will unless this Court takes action to prevent it—controversies about document problems on the one hand, necessitating an appeal back to this Court or perhaps to other courts, the problem will be compounded. If we are going to be in a position as plaintiff where our cross-examination of these witnesses will have to be [5] reserved at least in large part until we see the Tool Company documents, it just means an additional burden on 20 outside witnesses and on the parties and, I might add, I think on the Court as well.

As for the financial records, including tax returns, your Honor will note on examination of the complaint that we charge that the specific motivation of the defendants was to so dominate and control TWA as to achieve the maximum benefit for the defendants themselves. This was and is a case of a deliberately calculated purchase for control by the Hughes Tool Co. which assumed the role of supplier of aircraft and which dictated the times and places and terms on which TWA could get the aircraft it needed. It is that which is at the heart of our case.

We believe that the financial records of the Tool Company, including their tax returns, will establish that the

specific motivation for doing things the way they did do them, with the result, I believe, of a clear violation of the antitrust laws, was a tax motivation. We submit, your Honor, that the cases which we have cited in our reply memorandum are directly authoritative on the matter of tax [6] returns in a case such as this, and I refer particularly to the cases cited at pages 8 and 9 of our reply memorandum.

I think, your Honor, that outlines our position. I have nothing further at this time. I would like a few minutes in reply, though, if necessary.

The Court: Mr. Davis.

Mr. Davis: Your Honor, this is the third time that TWA in one way or another has attempted to embarrass the Tool Company by trying to do something out of turn.

The first time was when they filed this complaint under seal and at the same time obtained an order to show cause to take the deposition of Mr. Hughes within seven days after the filing of that complaint. That attempt failed before Judge Murphy.

The second time that they tried to again find some reason for embarrassing the Tool Company was when they tried to commence taking depositions before giving the defendant Tool Company an opportunity to find out what it is that they are really claiming. That attempt failed before Judge Herlands when he decided that the defendant was entitled to priority. [7] It is perfectly clear, and counsel for TWA knows, that once priority has been established under Rule 26, it establishes the priority for discovery under Rule 24.

The issue, therefore, is what is the special circumstance here, if any, to justify the plaintiff, who presumably knows what he is suing about, to have access to the records. The first statement Mr. Sonnett makes is that we concede that what they seek is relevant. That is not true. What we have said is that we have no objection to that portion of the request for documents that they have made which they have justified only by saying: the defendant asked for these documents, so we are going to ask for the same things in reverse; and we have said: you can have all the documents we have when your turn comes.

The only thing we are really objecting to in so far as the production of documents is concerned is the financial statements of the Tool Company and its income tax returns, and I would like to address myself to that for a moment, if I may.

TWA well knows the sensitivity that the Tool Company has had over the years to public [8] disclosure not of the kind of financial statements we normally think about, in the form of annual reports, which most corporates normally make available to their stockholders. TWA knows and the persons in control of TWA know, because that includes lending institutions who have obtained, on a confidential basis in connection with some other transactions, detailed information about the Hughes Tool Company, that our financial statements contain a lot of detailed information which would hurt us to disclose. Therefore they find it extremely important to obtain them.

Motivation. Motivation about control: It is admitted that we acquired control of TWA and that TWA became a

subsidiary of the Tool Company. It is admitted that this was done with the approval of CAB, whatever the reasons. So we controlled TWA. It is admitted.

What is the motivation as to why we acquired control of TWA? Was there a tax reason why we were willing to come to the assistance of TWA when we did it at the time we did it, which permitted CAB to approve our acquisition for control of TWA? What relevant intent does that have under the antitrust laws? None, absolutely none.

[9] This is quite apart from the fact that the only tax intent which is referred to in the moving papers is a so-called desire on the part of the Tool Company to avoid the consequences of an unnecessary accumulation of funds. Well, I don't know of anything unusual about people not wanting to pay any more taxes than they have to, to be sure. But it isn't even true. On the face of it it isn't true.

It is perfectly well known that once TWA became a subsidiary of the Tool Company the cash requirements of TWA, as well as the cash requirements of the Tool Company and all its other enterprises, were pertinent issues for this tax question, and therefore it makes absolutely no difference whether TWA was financed one way or another, whether we did it by committing our credit to acquire equipment and subsequently made it available to TWA or whether we did it in some other way, absolutely irrelevant.

I submit, your Honor, that TWA knows that and that there is absolutely no justification which has been shown whatever for attempting to embarrass the Tool Company. The Tool Company is defending itself against what? Against a 38-page complaint [10] that states a lot of con-

clusions. I can make the allegations of that complaint by looking at any form book. But when we asked TWA to specify just exactly what it is that they claim we have done which is outside the scope of the CAB orders, there is a dead silence.

As to the underlying issues, I want to refer to this although it is a sort of digression because I think it is pertinent to what we are here for today because it was mentioned in your Honor's pretrial order. We attempted to bring out what are the real underlying issues here by bringing on a motion to dismiss with an affidavit in support of our motion. We could have proceeded in other ways, perhaps, but that is the way we decided to proceed. That was done so as to give TWA an opportunity to respond with opposing affidavits which would presumably state facts, not counsel's educated wording of the complaint, facts in an affidavit.

Presumably TWA is claiming that we have done something contrary to the approval of CAB, which was obtained. But what we have done contrary to the approval of CAB is to remain a deep, dark secret. [11] At least today we don't know. And it is difficult to address one's self to the relevancy of the needs of TWA to prosecute this action which they have commenced, presumably based upon some facts they know, since we cannot find those facts out.

That is one of the reasons why we believe the normal rules of this court should prevail here. We are the defendants. We have obtained priority in the taking of depositions. We want to pursue the taking of depositions and find out what the facts are that the plaintiff knows, not

what counsel argues. Then we will have something tangible before us.

In the memorandum that was served on us today reference is made to the number of lawyer hours that would be involved in what has already taken place, in the production of documents, in the possibility of making this a very, very big case. It is true that a great many lawyer hours have been spent since the last time we were before your Honor and TWA presumably has been producing documents by the carload. We have been told by counsel for TWA that all the documents we have requested will be furnished to us on or before October 13th but that they will have to [12] determine the order in which that material is made available to us.

Do you know what has been made available to us, your Honor, to date? We have had some men in Kansas City because we were told that is where the documents were, and there we get reams of files that give us all the detailed changes and specifications of all the aircraft ever acquired by TWA from the beginning of time. Every time a screw was changed, we get all the specifications, reams of files. When we say we would like to get the files which constitute the applications to CAB for approval of what we have done, "We'll provide everything in good time."

You see, your Honor, the peculiar situation is that when the Tool Company was in control of TWA the applications for approval that were submitted were prepared by TWA and its general counsel, and the Tool Company does not have those files. Those were done by a subsidiary.

Comes the beginning of this year 1961 and some persons acquired control of TWA under circumstances which will

be the basis of a great deal more by way of answer and counterclaim, we suddenly find ourselves without any files whatever. When we wrote a [13] letter before this discovery proceeding was started, we were told that access to those files would be made available to us in due course in connection with discovery proceedings.

Mr. Cox calls to my attention that we have seen CAB applications. I was not referring to the bare application itself. I was referring to the files which contain the information we submitted to the CAB.

When we asked for the files which related to the financing and the proposed financing which is taking place, we were furnished with the printed documents, but the files which disclose what negotiations took place, who insisted on the provision referred to in Mr. Holliday's affidavit, which is an obvious effort to perpetuate those in control beyond the term of the original arrangement of December, 1960, that is not yet available for us.

I submit, your Honor, if counsel for TWA anticipates a great many lawyer hours in the production of documents for discovery proceedings, a great deal of that, to be sure, will be within their control, and we are not complaining about what has been taking place. The arrangement is that on or before October 13 we are supposed to have all those files, and we [14] will wait patiently until October 13, and presumably they are entitled to produce their files in whatever order they want to.

But I don't think that your Honor should get the impression that, since it was ruled that we were to have an opportunity to really commence the examination of TWA's files, we have made any progress to date in that connection. We have made very little, if any, progress, and, as I say, this has been solely within the control of TWA.

Transcript of Pretrial Hearing, October 2, 1961

Your Honor, I don't see that I can advance the proceedings very much by repeating what basically appears in Mr. Holliday's affidavit. I am fully conscious of the fact that on this kind of case the normal tendency is: well, they are asking for relevant documents. Let them have it. What harm does it do?

I urge your Honor to consider the very serious harm that the Tool Company will suffer if these people are going to have access, in a public matter, to those detailed financial reports which are never made available. The problem confronting us, your Honor, is that we happen to be a corporation which is owned by one man. As a result of that we do not prepare, we cannot respond to a request for, financial [15] statements of the kind or nature that most other corporations prepare, which just gives a generalized picture of what is taking place. The only thing we have in our files is statements which are prepared for the various operating heads.

In fact, within the Tool Company there is such sensitivity about the disclosure of the details of the operation of some of those divisions that even within the company an officer in charge of a particular division does not have access to the detailed financial information of another division.

So that the income tax returns contain very detailed information with respect to the operation of the business that, as the affidavit of Mr. Holliday points out, would seriously injure the company if that were to become public.

It is true that, when dealing with these lending institutions, we have at their request prepared financial statements which were furnished to them on a confidential basis. Included in those lending institutions is the Irving Trust

Company. Irving Trust Company is one of the lending institutions now in control of TWA. What they have done with the information they received on a confidential basis [16] we are not in a position to say, of course, but the affidavit of Mr. Holliday indicates that there is some concern that maybe some of that information has been misused. If so, of course we have no means for redress. But we are very sensitive against making that information generally available.

In so far as the time when TWA should have access to whatever they are entitled to obtain, there is no question that we have no objection, although we don't concede the relevancy, to giving them all the documents that they ask for, whether relevant or not relevant, with the exception of those financial statements and income tax returns. But it is perfectly obvious also that we cannot be doing two things at once. We cannot be searching our files, our records to respond to the request of TWA which they admit copied ours. Presumably, if the defendant wants to know something about this matter, the plaintiff may ask for exactly the same information. They made no effort whatever to limit, for the purpose of immediate production, the kind of documents they feel they have to have right away, just the same broad thing. In fact, they say: all this we are asking for because the defendant [17] asked for it, just that bluntly.

It is perfectly apparent, your Honor, that, if we are going to make progress here—and we are the ones who want to make progress here; we want to make progress here because we believe there is a complaint on file here which is absolutely unsupportable and we want to get the facts out and we want to be in a position to dismiss this

complaint, to stop this entire proceeding. We believe that it can be done without a trial. But, your Honor, a great deal depends on what contentions are made as to the facts, and the only way we know of is to go out and get them.

Therefore we want to start taking depositions as soon as possible. We want these people to produce the documents we have called for and permit us to start the taking of depositions without interference. Then, if, for reasons which I do not anticipate, things bog down through no fault at all of the parties, it seems to me that plaintiff can renew its application to this Court for such relief at that time as they need.

But my plea, your Honor, is that we want to start taking the depositions of TWA and start [18] finding out what it is they are really claiming we have done, and we don't want to be interfered with in that process by having to divert our attention to the production of documents they call for. After we have taken some depositions and know really, on the basis of discussing openly, what the facts are, then we can consider what it is that TWA really needs for the purpose of prosecuting this action.

Before I close, I would like to introduce—perhaps I should have done this before I presented my argument—Mr. Raymond A. Cook of the Houston firm of Andrews, Kurth, Campbell & Jones who is here with me, and I would like to move his admission for the purpose of this case.

The Court: We are very glad to have you here.

Mr. Sonnett: I am happy to have the frank concession, your Honor, that Hughes controls TWA "and so what" because that concession saved us a lot of waste motion in proving what I think is pretty obvious anyway.

The fact is that he did control TWA up until December of 1960. The fact is that aside from [19] Tillinghast, the new president of TWA, the people of TWA whose depositions he wants to take are people who were working for TWA at a time when every significant decision of TWA was imposed on it by Hughes and people who reported directly or indirectly to Hughes.

The pose that they are completely in the dark is absurd on its face. They dominated, controlled and ran this airline and ran it into the ground prior to December of 1960, so much so that when, in order to raise funds to buy jets which were vital to its existence, TWA could not get the money except from Hughes primarily or from the banks and lending institutions, the banks and lending institutions said they wouldn't put up the $167,000,000, I think, of their money and their depositors' money and their policyholders' money until there was a voting trust which would take control of this airline away from the man who had ruined the airline, to wit, Howard Hughes.

The voting trust was signed with the authority of Hughes. He accepted, in December of 1960, the hard fact that under his control the airline was about to go into bankruptcy. So he accepted the voting trust.

[20] There were three voting trustees appointed, all distinguished men: One, a defendant here, a Hughes Tool man named Holliday; another, Ernest R. Breech, former chairman of the Ford Motor Company; the third, Irving M. Olds, former chairman of U. S. Steel.

The voting trust agreement is a long, carefully drawn, carefully worked out document which was examined, cross-examined and looked at over a microscope by Hughes' counsel, and on the eve of the airline going under, in De-

cember, 1960, he finally, at the eleventh hour, signed or caused the signing of the voting trust agreement.

The voting trustees put in a new board of directors. I am not going to dwell on the board except to note with regret in one sense that one of its distinguished members, John McCone, former chairman of the Atomic Energy Commission, has just been appointed as head of the Central Intelligence Agency. That is the caliber of the new board. This isn't a board that has been running this thing out of some back room in Beverly Hills, like Hughes was running it. This is a responsible board of directors of excellent businessmen. That board picked a new [21] president who has been trying to run the airline.

The airline was pretty sick, indeed, in December of 1960, and it has gone through a very, very difficult economic period, as have all airlines, but this one was very sick to begin with in December of 1960. And, as Hughes Tool Company has recently been informed, the financial situation confronting this airline is very perilous today. A new program was announced for the procurement of Caravelle planes. It looks as though that program will have to be called off. The airline is still suffering from the strangulation that Hughes has imposed on it in the exercise of his control, keeping it so weak in terms of equity that it couldn't stand on its own feet without his helping hand, indeed, the helping hand that took it and led it and forced it to go where he wanted it to go.

Your Honor, we have made our position quite clear in the complaint. We have also spelled it out, I think, very lucidly in our brief with respect to their claimed defenses. Now I urge your Honor, in the interest of keeping the airline going and in the interest of the minority stock-

holders, to take action which will make it possible to try this case as early [22] as possible because I think what is motivating them is that, if they can avoid an early trial, they may be able to avoid any trial at all. I think that is what they are up to.

The Court: Everybody seems to want an early trial. Everybody wants depositions and papers and documents. We can try it tomorrow, you know, if you want to.

Mr. Sonnett: May I suggest to your Honor that, if counsel is agreeable, I am prepared to go ahead.

Are you agreeable, counsel?

Mr. Davis: Certainly. To start trial in this case?

Mr. Sonnett: Yes.

Mr. Davis: Certainly. Bring Mr. Tillinghast in.

Mr. Sonnett: If your Honor will fix a date, we will start the trial any date suitable to your Honor.

The Court: He said "Bring Mr. Tillinghast in."

What did you mean by that?

Mr. Davis: Mr. Tillinghast is the person whose deposition we have been trying to take for some [23] time, your Honor. Currently he is the president of TWA. As your Honor knows, an answer has not yet been put in—

The Court: We have pending two motions, too, which you held in abeyance for summary judgment to dismiss the complaint.

Mr. Davis: That's right, your Honor. That is what I adverted to a moment ago. As your Honor will recall, the last time, which was the first time we appeared, the question of this motion to dismiss came up. We believe that this case can be decided, in so far as the complaint is concerned, on admitted facts. However, and we are prepared to proceed with that motion to dismiss, in all candor I

must say that when I see what the answering affidavits are, and I presuppose that Mr. Sonnett will serve us with answering affidavits which will raise issues of fact, if that takes place, then we will be able to decide whether or not we are ready to proceed with a motion to dismiss and summary judgment.

The thing which Mr. Sonnett overlooks, of course, is the counterclaims we have. If we are going to stay in this court, we have some very serious [24] problems relating to TWA and the persons who acquired control of TWA.

Mr. Sonnett referred very briefly to what took place in December, 1960 on this financing and creation of the voting trust. I don't feel I should go into that until I am prepared to submit the facts formally, but it is a real serious problem. There is a very serious problem involved in connection with this very recent financing that Mr. Sonnett referred to, because we have a situation here where the lending institutions, whether they like it or not, acquired control of TWA. They acquired complete control of the voting trustees who, in turn, completely control the board of directors.

We have no objection to the board of directors, your Honor, but those same lending institutions very recently negotiated with TWA, whom they control, and therefore I call that self-dealing, a new debt arrangement for an additional $147,000,000. That is in addition to the $167,000,000 or $165,000,000 that was arranged in 1960 which produced this voting trust. If you look at the provisions as quoted in the affidavit of Mr. Holliday, the lending institutions, who were in control, who were dealing with themselves, [25] put in some provisions obviously designed to perpetuate or continue their control of TWA.

Your Honor, there is something very peculiar there. They imposed a 22 per cent penalty on the Hughes Tool Company if the Tool Company pays them off. I don't know why. They provided in this new financing that the new $147,000,000 long term debt accelerates or matures all at once if this voting trust should terminate, lawfully terminate, or if Mr. Hughes should acquire all these outstanding notes.

I don't know what power these lending institutions think they have to impose those kind of terms on a business whether or not it is in need of funds.

In the allegation of this complaint of antitrust violation there is a little bit of: if I do it first maybe I will stop them from doing it to me. But, if there has been anybody who has been capturing the market for financing the whole phase, it isn't the Hughes Tool Company. The Hughes Tool Company has no objection to other people financing it, and the record is perfectly clear when you look at what has happened to it throughout the years. It isn't the Tool Company who is insisting on [26] financing TWA. It appears at the moment that the persons who have acquired control of TWA would like to keep that control.

Mr. Tillinghast, as the president, makes a contract, negotiates with someone, I don't know who, which contains provisions as to the annuity he is to receive should the voting trust terminate.

We own 78 per cent of the stock, yet we have no right to vote a single share of it, and there is a management who is not responsible to anybody. The lending institutions say: We have elected a fine board and we want to wash our hands of it. All we want to do is deal with new owners. That is all we want to do.

The management of TWA that is in there now has no ownership responsibility, has no responsibility to ownership whatever. It is a very interesting situation, and all of it will be brought out when we file our answer and counterclaims.

It is well known and appreciated by TWA and by some of the people of TWA that Hughes Tool Company is not one that seeks lawsuits, and the first question before us is to delineate the issues underlying the complaint, and the way to do that, your [27] Honor, is either to require them to submit affidavits setting forth the facts which they claim exist or give us an opportunity to take depositions so we can find out what the facts are. Somebody made a decision to file this complaint. Somebody must know what the facts are that they are complaining of, and that is the plaintiff, and there is nothing unusual about that.

What we want to do is to proceed with the taking of depositions of the plaintiff, and we have argued this question twice now, your Honor, both before Judge Murphy and before Judge Herlands, and this is the third time it is coming up.

The Court: One thing that bothers me, Mr. Davis, on this motion, and I haven't read the briefs, obviously, is this: Isn't the plaintiff entitled to these documents, without the substantive questions of the tax return and the financial statements, to adequately prepare for your deposition?

Mr. Davis: I assume they will have ample opportunity to prepare for the taking of depositions of the Tool Company. All I am saying is that—

The Court: No. To prepare for the [28] depositions that you are going to take of TWA. They are going to

have a right to cross-examine those witnesses, and those documents may be important.

Mr. Davis: I assume that TWA, the plaintiff, is fully prepared to answer questions with respect to the complaint. I take it that all the documents they need as to the facts that they claim are relevant to this issue were considered before the complaint was filed.

The Court: Well, there may be a lot of other documents in existence which they have heard of or think exist but which they never saw, and that happens in all these cases.

Mr. Davis: Let me point out that that is true in every case, and I respectfully submit, your Honor, that somebody has to start, and once somebody—

The Court: The only question I have here is whether they are entitled to the production of documents from you before you start the oral depositions of the witnesses on your motion against them. That is the only question I have.

Mr. Davis: You mean in taking the deposition of the plaintiff?

The Court: That is the only question I [29] seem to have. If I am mistaken, I would like to be told where.

Mr. Davis: If we eliminate the question of the financial statements and the tax returns—

The Court: No, you cannot eliminate that. That is something I still have to determine. I haven't said whether I will allow them or not. But, whatever documents they are entitled to, isn't the question whether they should have them before you start taking your oral depositions?

Mr. Davis: Your Honor, that is what I meant to suggest in my other presentation. In so far as the time in which we are supposed to produce documents to help them

to cross-examine whatever witnesses they want, may I suggest that is a matter which can be decided after we have completed taking the depositions of the plaintiff. At that time I think we may be in a position to know whether or not we are going to proceed by summary judgment or not.

I would be very frank to say, your Honor, that after we have taken the deposition of the plaintiff and before we start taking the deposition of witnesses, if your Honor feels that the plaintiff needs documents that we have, even though they have [30] described them by saying "Give us whatever we have asked of you," which is all right with me, we will take the time off and produce those documents.

The Court: Mr. Sonnett?

Mr. Sonnett: May it please the Court, on the question of the trial date which I think strikes at the heart—

The Court: We have passed that facetious remark.

Mr. Sonnett: I think your Honor put his finger on what the heart of the problem is. May I say that unless this case is set for trial and goes to trial early in the year, I think there are grave questions as to whether there will be any trial at all. I am prepared to submit, your Honor, if counsel is agreeable, a statement off the record which will emphasize the imperative need for an early trial, and I assert to your Honor it is imperative. So that I would apply to your Honor now to fix January 2nd as the date for trial of this case—

The Court: That is the date I fixed in the minority stockholders suit against duPont. I know they are not going to meet it, but—

Mr. Sonnett: We can meet it, provided [31] your Honor imposes the control—

The Court: In fact, I made it January 2nd of last year and they didn't meet it.

Mr. Sonnett: We will meet it in this one because we will be forced to meet it, your Honor. We will be forced to because we have no choice. With the strong hand of the Court on the pretrial, we can be ready, all of us.

He talks about wanting depositions. Fine. I would like to make one thing very clear. As counsel for TWA, I haven't any concern, really, about what he does or doesn't do in his problems with the banks and the insurance companies. If he is able to demonstrate that the obligations of these banks to their depositors and the obligations of the insurance companies to their policyholders were not the reason why the banks and the insurance companies insisted on the voting trust, as apparently they did, if he is able to persuade the Court that maybe even the CAB in its December order, when they said they would approve the voting trust but they want to make it clear that there would have to be a searching inquiry before they will ever let Hughes get control of this airline, searching in terms of the public interest—[32] if all of that is to be disregarded and Hughes is going to be able to tie this case up, in what is a diversion, in some collateral problem he may have, then I say to your Honor that there may not be anything left of this case except perhaps in the extreme case of it being advanced by a trustee in bankruptcy against Hughes.

Hughes is notorious for delay. He delayed all during 1960 in stepping up to the plate on financing, and TWA was hurt and hurt badly, as the CAB noted in its December order. This is not just my assertion. This is an assertion by the Civil Aeronautics Board based on what it knew about what Hughes had done here.

I say to your Honor that there is a pressing need, in the interest of the airline with which I am concerned, to

go forward with the case, and whatever problems Hughes may have with the banks and insurance companies are their problems; they are not TWA's.

Counsel can hardly be serious in saying that the corporation, of which Hughes has the beneficial interest of over 78 per cent, was doing something—the corporation, which is the plaintiff here—which would warrant any counterclaim by him against the corporation. The only thing the corporation did [33] that hasn't pleased him is that it filed this lawsuit, and we intend, if we can, to see that it is tried.

I don't think there is any way of bringing this case to a head and of preventing the kind of stalling tactics that will occur that may make the lawsuit moot unless your Honor imposes a very strong hand on the pretrial, and the only way I think that that can be effectively done is to set a trial date, and then we are all going to have to meet it. And the depositions are not going to go on for weeks or months. They are going to be taken in a business-like way and done, and they will be done much more quickly if we have the documents in advance.

That is all I have.

The Court: Mr. Davis, do you want to say something?

Mr. Davis: I don't think it is necessary for me to say anything more than I have already said. I gather Mr. Sonnett is not asking the Court to put in an anticipatory limitation on a deposition which has not yet commenced. I think we can dispose of whatever problems occur in the so-called firmly-handled depositions after they have started or after [34] we see what kind of information we get.

The Court: I have an expression of opinion from both counsel that you are anxious for an early trial. Conse-

quently the Court will be guided by that in either case. But I am not prepared to fix a trial date now, Mr. Sonnett, because I am not sure of my own schedule. I know I have a private antitrust suit starting on December 6th. Whether I can then engage in another long trial depends on the Chief Judge of the Court, as to whether he wants me to give up my regular assignment through January and February to take this on. I am perfectly willing to do so. Whether I try this or some other case makes no difference to me. But that is a question of administration.

All right.

Pretrial Order, December 18, 1961

[Doc. 354]

[CAPTION] 61 Civ. 2324

ORDER

Plaintiff having brought on a motion, pursuant to Rule 34, Federal Rules of Civil Procedure, for the production and inspection of documents and argument having been had thereon on October 2, 1961, and plaintiff having appeared in support of said motion by CAHILL, GORDON, REINDEL & OHL, Esqs. (John F. Sonnett, Esq. and Paul W. Williams, Esq., of counsel) and defendant Hughes Tool Company having appeared in opposition thereto by CHESTER C. DAVIS, Esq., Paul, Weiss, Rifkind, Wharton & Garrison, Esqs. (Jay H. Topkis, Esq., of counsel) and Andrews, Kurth, Campbell & Jones, Esqs. (Raymond A. Cook, Esq., of counsel), and due deliberation having been had thereon, and the court having rendered its decision in a Memorandum Opinion dated December 5, 1961, it is hereby

ORDERED, that:

1. Plaintiff's Motion for an Order, pursuant to Rule 34 of the Federal Rules of Civil Procedure, directing the production and permitting the inspection and copying of documents, papers, books, letters and other material in the possession, custody and/or control of defendant Hughes Tool Company as designated in the schedule annexed to said Motion, is granted.

2. The depositions heretofore scheduled by defendant Hughes Tool Company under its notices are hereby

rescheduled to commence on January 5, 1962 in the order and sequence noticed and the depositions heretofore scheduled by plaintiff under its notices are hereby rescheduled to commence on April 3, 1962 in the order and sequence noticed.

3. The production of writings and other material by defendant Hughes Tool Company pursuant to this order shall be made on March 15, 1962.

4. Pursuant to the provisions of Rule 30(b) of the Federal Rules of Civil Procedure, all income tax returns and financial statements of defendant Hughes Tool Company produced pursuant to this Order for inspection and copying shall not, without further order of this court, be disclosed publicly by plaintiff or its counsel except in connection with the preparation, pretrial proceedings and trial of this action or any other action or proceeding in which any of the parties herein are participants.

Toolco's Notice of Motion, February 15, 1962

[Doc. 66]

[CAPTION] 61 Civ. 2324

NOTICE OF MOTION
BEFORE THE SPECIAL MASTER

SIRS:

PLEASE TAKE NOTICE that upon the annexed affidavit of Chester C. Davis, sworn to the 15th day of February, 1962, defendant Hughes Tool Company will move before J. Lee Rankin, Esq., the Special Master herein, (1) for a ruling that, pursuant to Rule 26, Fed. R. Civ. P., the deposition of plaintiff, Trans World Airlines, Inc., be concluded prior to the commencement of any other depositions noticed by Toolco or by any other party and (2) that the Special Master determine whether the deposition of plaintiff be suspended until a reasonable time has elapsed for the service of the additional defendants and for their appearance in the discovery proceedings.

Dated: New York, N. Y.
February 15, 1962.

Yours, etc.,

CHESTER C. DAVIS, ESQ.
Attorney for Defendant
Hughes Tool Company
120 Broadway
New York 5, N. Y.

IN THE UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK
61 Civ. 2324

TRANS WORLD AIRLINES, INC., Plaintiff,

vs.

HOWARD R. HUGHES, HUGHES TOOL CO. and RAYMOND M. HOLLIDAY, Defendants.

Transcript of Proceedings—New York, February 23, 1962

Before: Hon. Charles M. Metzner, District Judge.

APPEARANCES:

Cahill, Gordon, Reindel & Ohl, Esqs., Attorneys for Plaintiff; John F. Sonnett, Esq., Dudley B. Tenney, Esq., and Marshall Cox, Esq., of Counsel.

Chester C. Davis, Esq., Attorney for Defendant Hughes Tool Co., Chester C. Davis, Esq., and Maxwell E. Cox, Esq., of Counsel.

Cravath, Swaine & Moore, Esqs., Bruce Bromley, Esq., [fol. 1026] and Winthrop, Stimson, Putnam & Roberts,

Esqs., Peter W. Kaminer, Esq., and Silas M. R. Giddings, Esq., and Ben-Fleming Sessel, Esq., and Chadbourne, Parke, Whiteside & Wolff, Esqs., Edward Nealer, Esq., and Dunnington, Bartholow & Miller, Esqs., Charles L. Stewart, Esq., of Counsel, Attorneys for Additional Defendants.

ARGUMENT ON SCHEDULE OF DEPOSITIONS
RE ADDITIONAL DEFENDANTS

Mr. Bromley: May it please the Court, my name is Bruce Bromley. My firm is Cravath, Swaine & Moore. We represent four of the nine additional defendants which about ten days ago were brought into this action by way of the assertion of alleged counterclaims.

Four of the nine additional defendants represented by me are Metropolitan Life Insurance Company, the Equitable Life Assurance Society of the United States, James F. Oates, Jr., the president of Equitable, and Harry C. Hagerty, the vice-chairman and board of directors of Metropolitan.

There is before you, brought on by notice, a motion on our part which is by way of an appeal from a ruling or [fol. 1027] rulings of the Special Master. The motion seeks an order and direction from your Honor that the schedule of depositions which your Honor set by order of February 7th be revised and that the additional defendants be granted priority of discovery after the defendant Tool Co. shall have completed its discovery of TWA, and to that extent the schedule be interrupted so we additional defendants can discover the basis of the counterclaims after Tool Co. shall have discovered the basis for the complaint against it, and then, and not till then, shall the rest of the discovery by way of deposition go forward.

On February 13th, which was just a week after your Honor set the schedule in the main action, Tool Co. served upon us a 62-page alleged counterclaim and answer.

In that document six so-called counterclaims were pleaded, and nine additional defendants were added to the action. As I say, this was just a week after you had set up the schedule in the main action.

Five of those counterclaims concerned the additional defendants. Only one of them is a real counterclaim against [fol. 1028] TWA, and that is the sixth one for unpaid interest, so alleged.

But the other five claims are really independent claims, and TWA is joined merely, I submit, as a device in order to label these claims as counterclaims, because no relief is sought against TWA of any substantial nature, although the claims demand against the additional defendants more than half a billion dollars in damages, in addition to certain injunctions. ..

Within hours after these counterclaims were filed, Tool Co. through Mr. Davis, Hughes Tool Company, instituted efforts before the Special Master to subject all these additional defendants and the counterclaims to the three established schedule of depositions which your Honor had set up before any of these claims against the additional defendants had been asserted.

I say to your Honor at the outset your schedule obviously was set up in an entirely different lawsuit than the one which now confronts us and is before you. In spite of our best efforts with the Special Master he has refused to grant us what we believe to be adequate relief, and he has ruled [fol. 1029] that before any of us additional defendants can have any discovery of any kind by way of depositions from Tool Co. relating to the counterclaims Tool Co. may examine not only TWA as to the basis of its complaint against Tool Co., but also examine in aid of Tool Company's defenses to that complaint, examine all other witnesses and parties, and also may examine the additional defendants.

He has also indicated that Tool Co. may examine not only as to the basis of the plaintiff's claim against Tool Co., but also the additional defendants on the counterclaims.

That ruling, we submit, is wrong because it denies the additional defendants seasonable opportunity to develop from Tool Co. the person asserting the counterclaims against the defendants the basis of those claims, the real issues, and denies us the opportunity to define and delimit them in seasonable time so that we may, if we are so ad-

vised and the basis appears, move to dismiss some or all of them.

The ruling denies us that seasonable opportunity so to protect ourselves because many, so many of the facts which are relevant to the complaint and the defenses thereto, [fol. 1030] are equally relevant to the claims made against the additional defendants.

Had these so-called counterclaims been asserted against the nine additional defendants in a separate action, as they should have been, these defendants would, of course, have been accorded priority of discovery as to their basis in just the same manner that you accorded Mr. Davis, and his defendant client, Tool Co., priority.

The Court: Judge Herlands did that; I didn't.

Mr. Bromley: I am sorry, you are correct. Just as Judge Herlands did.

The Court: He gave them priority. I didn't give them priority.

Mr. Bromley: They got that priority.

The Court: They have it.

Mr. Bromley: They got it, and Mr. Davis asserts that is proper action, and normal procedure is always to give the defendant priority, except in this situation.

But Tool Co. has now become a plaintiff against us additional defendants, and I think the law in conventional counterclaim situations is clear that while the defendant [fol. 1031] in an action can have a limited priority to discover the basis of the claims against him, the next proper step is also for the plaintiff, who becomes a defendant on the counterclaims, to have the next priority with respect to those counterclaims. That is what has been denied us, because the Special Master, looking at your schedule, the names, the dates, has embarked upon a program which may take months, perhaps years, to complete that schedule, because it is completely broken apart.

We now have nearly two thousand pages of one TWA witness alone, and although under your schedule we are all due to be in California on the 20th to take the deposition of a witness, one Thomas—

The Court: Didn't he agree to come to New York? I suggested that he be brought to New York at the time I had the prior conference.

Mr. Sonnett: He did, your Honor, subject to certain mechanical arrangements about transportation, and so on.

The Court: All right.

Mr. Sonnett: As the record stands, I think that he is prepared to come to New York, and so is the Bank of [fol. 1032] America, provided they have arrangements made for their transportation expenses and counsel fees and reasonable notice.

The Court: Thank you, Mr. Sonnett.

Mr. Bromley: My only point is I don't care where the deposition is taken, the fact is the schedule has been completely disrupted because the Special Master says, "The dates don't mean anything; I am going to accord Tool Co. full and complete opportunity without regard to the dates that you set to exhaust its discovery against TWA."

It looks to me, although Mr. Davis refuses to make any estimate, that having really only scratched the surface on one witness that before he comes to the end of the trail on all the TWA witnesses alone it will be months away.

Now, if they are after, he can go down this whole schedule while we sit back unable to find out under proper discovery procedure what the issues between us on the counterclaims really are, and what the basis of those claims are. It is impossible for us to follow this schedule and adequately protect our clients.

I submit that it is of the greatest importance that we [fol. 1033] learn as soon as possible, without interference with his right of discovery against the plaintiff, the basis, the limitations, and the facts underlying his claim against us, and when that shall have been done it is then time enough for both of us to complete discovery with everybody else.

I want to make it perfectly clear that I have no quarrel with Tool Co., Mr. Davis', right to discover against TWA's complaint and to examine all of the witnesses. I wish the Special Master would make him get down to work and do it a little more promptly, but I have no desire to interfere with that. All I wanted to do is to take my place next in line so that I can start somewhere near even with him when we come to proceed to the host of other witnesses who will follow.

I must say that what Mr. Davis has done appears to me to be a very clever device indeed having gotten you to sign an order giving him complete priority in an action, and having that order signed, sealed and delivered, he then serves this massive claim against nine additional parties, and insists that the schedule which your Honor set—and he has persuaded the Master to follow it—be adhered to [fol. 1034] without regard to the rights of the additional parties to exercise their traditional and normal right of discovery as soon as it is practicable. And surely it is practicable for us to exercise that right of discovery as soon as he shall have developed all of the basis of the three causes of action asserted against him in the TWA complaint.

So, I say that the ruling of the Special Master is an abuse of discretion because of the great prejudice to the additional defendants involved in his decision.

I would like to take just a moment further more to point out, because I think it bears on this, what I said at the outset. That these five claims against the additional defendants are dressed up as counterclaims when they are not counterclaims at all, and obviously done to enable Mr. Davis to hang on to the priority order which Judge Berlands gave him, and to the schedule which your Honor gave him.

I want to take just a minute to look at the second counterclaim. It asserts on behalf of defendant Tool Co. the claim that additional defendants Equitable and Metropolitan have acquired control of TWA in violation of the Federal Avia- [fol. 1035] tion Act. But it seeks no relief against TWA. All it seeks is that my defendants be ordered to terminate the voting trust which exists under the financing of all the Tool Co. stock in TWA deposited in that voting trust.

Now, sure, in words the counterclaim says, "We ask the Court to order the TWA recognize any court order which may terminate the voting trust."

Surely, no one in his right mind would say that you need a court order to TWA to cause it to obey another court order. That is a transparent device to make it appear as though this was a counterclaim.

That goes right down through the whole list. In the next counterclaim, where they seek to recover $135 million against the additional defendants, they don't ask any damages against TWA, they don't ask any relief against TWA, except that if the Court orders the termination of the voting trust once more TWA shall recognize that order.

Now, why do I mention that? I think we ought to move to dismiss all these counterclaims, except the sixth one, which is a real counterclaim. I hope TWA will do so, and [fol. 1036] in our notice of motion we say we intend to at a day to be fixed by your Honor. But the importance of it today is that here they have a wide open opportunity to develop all the facts that they want to with respect to their claims while we must sit back in ignorance of that information which the rules are designed to accord us by way of discovery of claims asserted against us, or any other person who is in the posture of a defendant. I say that is wrong, and I say that is an abuse of discretion.

I would like to illustrate again, if I can, just how we will be prejudiced with a precise example about Mr. Thomas, of whom we have spoken.

Mr. Thomas used to be the president of TWA. He left in July, 1960. It is alleged in the counterclaim that the additional defendants procured Mr. Thomas' resignation as part of a conspiracy to enable them to insist upon a voting trust of the Hughes stock in TWA. My position is that my clients had nothing to do with procuring the resignation of Thomas, and I believe that it in fact was forced by Hughes, who after a long and bitter negotiation with Thomas booted him out of TWA. But if I have to go ahead [fol. 1037] with Thomas, either in California or in New York, when his term comes under your Honor's schedule, I have got to do that without having had any discovery as to what the Hughes claim is with respect to the charge which involves Thomas asserted in the counterclaims.

I apprehend that lacking that discovery if I get it much later on I shall have to request, move, that Thomas be produced again.

The Court: I would think that is what is going to happen, Judge Bromley.

Mr. Bromley: Yes. Now, what a waste of time, effort and money that is.

The Court: What do your friends on your left say?

Mr. Sonnett: I would like to be heard, your Honor. When the additional—

The Court: We assume you will be heard, Mr. Sonnett. I am sorry, I just wanted to tell Judge Bromley something which I am sure he knows, that you have been at the bit since last July, eight months ago, to start, and now he has come in and wants you to wait some more. I assume he understands the effect of his request.

[fol. 1038] Mr. Sonnett: Well, I will have partial opposition to his motion to present in due course, your Honor.

Mr. Bromley: You remind me of defendants in a negligence case. The plaintiff can just sit still, you know.

I only want a little interruption. I don't want to disrupt his plan. I agree he ought to be able to go ahead just as fast as he can, but I do not see how anybody can possibly object to all of us, who have had very little connection with this litigation, being given an opportunity to discover on what basis in the world we are sought to be held liable for half a billion dollars before we undertake to cross-examine, before we undertake the task of posing proper objections, to this vast parade of witnesses. That strikes me as being very fair, and I don't believe Mr. Sonnett will really oppose that once he understands the limited nature of my request.

That confusion to which you spoke, in answer to my suggestion, will follow every witness if this piecemeal approach is permitted.

I mean by that to say that if we have no discovery of the [fol. 1039] claims against us, and Mr. Davis goes ahead on the counterclaims with everybody else, then Mr. Thomas is only one of a large number who we will have to come back and examine again, and I submit that that is a waste of the judicial processes of this Court, and an undue burden on the defendants, and an unnecessary expense.

We were just served with a memorandum from Mr. Davis, and I want to call your Honor's attention to one statement in it, because I think it supports my assertion

that he has done all this with malice aforethought and with a cleverly designed purpose, and so far as the Special Master is concerned he seems to be getting away with it.

On page 15 of his answering memorandum he says:

> "Cases which hold that absent special circumstances priority of discovery shall be based upon who first serves a notice of deposition express a general rule, but in the instant case Tool Co. served its notice to take the depositions of the additional defendants as witnesses many months ago."

[fol. 1040] I think that discloses what he is up to. Before we were concerned with the litigation, or had any standing in it, he served notices to take our depositions. Then when we come into it as additional defendants he says, "Ah, I have priority because, indeed, I served you with a notice many months ago."

I think that discloses his scheme, and I think he should be stopped in order to accord us what the law so frequently and so clearly says the normal rule is, to enable the defendant, as soon as possible, to discover the basis of the claims against him.

As I understand it, Mr. Kaminer from Winthrop & Stimson is here for Irving Trust Company, and Mr. Sessel, and desires to add something with respect to his position.

The Court: Mr. Kaminer.

Mr. Kaminer: Thank you very much, your Honor.

May it please your Honor, I represent temporarily the Irving Trust Company, together with Mr. Sessel and Mr. Giddings.

I say "temporarily" because we were just served and I was the only partner who had a few days available.

[fol. 1041] I was not present at any of the hearings before the Special Master. We were served very recently with this half a billion dollar counterclaim. I want to say if I should make any mistake about facts it isn't intentional. This is all I have been able to learn in the three days that I have had since I got Judge Bromley's motion.

I want to ask for the same relief that Judge Bromley does. I have not even formerly appeared herein, but I have

with me a notice of appearance, I have with me a paper which I ask your Honor's leave to serve, and that is a paper requesting exactly the same kind of relief that Judge Bromley does, and adopting his memorandum as mine. In other words, there is nothing new in the paper which Mr. Davis has not seen, just so that I have formal standing here to be before your Honor, and also a notice to take the deposition which Judge Bromley has already served.

I don't want to take the time now to interrupt your Honor while I serve these papers. If your Honor prefers—

The Court: You may go ahead.

[fol. 1042] Mr. Kaminer: I want your Honor to consider the situation my clients are in, and their counsel. It is true that your Honor made an order setting forth in what order certain witnesses should be examined and certain depositions taken, but that order was made at a time when we were not sued. We had no standing to be heard, we were not here, we could not have been.

Now, then, the next thing we get is this enormous counterclaim, and I only want to say this. I have spent a lot of time reading it. These are several counterclaims. The sixth one is the only counterclaim which can be said to be one in truth and in fact, and that is only asserted against TWA. Everything else either the relief sought is in favor of TWA, or TWA is brought in by some stringpulling.

Now, we will have time, and we will make a motion, as Judge Bromley pointed out, to say that these counterclaims should be dismissed, and that is the first thing we need time for. They should be dismissed because no matter how liberal the rules are upon analysis it will be seen that they had nothing whatever to do with the complaint and the counterclaims.

[fol. 1043] I can tell it to you in one sentence. The claim says—I am very new to this, so if I make mistakes forgive me—the claim says under the domination, stewardship, whatever you want to call it, of Mr. Howard Hughes and the Tool Company TWA was hurt by a violation of various laws. The counterclaim says under the domination, under the subsequent domination and control or stewardship of their lending institutions TWA and Tool Company were hurt some more.

That is a different story. It is no answer to the complaint to say later on some other people hurt you.

Now, imagine what kind of morass we are getting into. I am a great believer of consolidation for trial in all kinds of things, but there is nothing here to be consolidated. There are two separate and distinct claims. The Special Master, as I have read in the record, has said this.

It may be there should be priority with respect to the claim of the complaint, and then maybe there should be priority to the additional defendants. He immediately recognized—and he is a very distinguished man and saw that [fol. 1044] clearly—that there will be an area where no one knows where those different priorities well lie because of arguments of counsel which will go on for ages. This will not expedite this case. This will all result in a morass.

Therefore, I say to your Honor that in accordance with the request of Judge Bromley, in which I fully join in every particular and without any exceptions, we be accorded the traditional right to examine first, that that should be granted, and we should also be given time, and your Honor should fix the time, when papers should be served and you will hear a motion to dismiss these counterclaims subject to their being brought in a separate action.

I think there are a lot of games being played here. I am all new to this, and I am just reading papers, as I did all day yesterday. I think the game is that Mr. Hughes doesn't like to be examined, and that is why we have all these very devious schemes of serving notice for examination of witnesses, getting an order setting forth a schedule, and then all of a sudden these witnesses become defendants in a half million-dollar suit.

The Court: Half a billion-dollar.

[fol. 1045] Mr. Kaminer: Your Honor is so right. Thank you.

The Court: I am impressed, Mr. Kaminer. I have got to admit that.

Mr. Kaminer: I am scared, your Honor. These figures are a little more than I am used to.

In addition to that, while there is a partner of mine who is not in the city and has not been since the counterclaim

was served who knows something about these facts, certain aspects of it, he has never been in court on this.

There is supposed to be production of documents in four places simultaneously. We have got to find out from our clients, we people who have not been to court before, what the facts are. We have got to prepare and elicit those facts and the basis of the counterclaim first from the one asserting it—i.e., the nominal defendant, really the plaintiff. So, I say to you I am not here appealing from the Special Master's ruling because I asked him for no relief. I am applying to you to modify your own order in view of these new developments, because the Special Master is bound by your order. I believe what he did he did because he [fol. 1046] thought your order compelled him to.

Your Honor had set down the schedule, and he thought that he should not deviate therefrom. That is my view, but I don't know the background.

I think your Honor ought to immediately consider, without interruption of the examination of TWA with which we are really not terribly concerned, modifying the priority question and setting down a time when we in any event should argue the dismissal motion, which will be brought.

Your Honor also ought to, I believe, consider that we are not dealing just as far as this priority question is concerned with sporting rules of the game. As far as we in my firm are concerned we have to find out what this is about. We do not know what this is about, and the rights of our clients are very much at stake.

We get a notice from Mr. Davis—that is, our clients did—and we didn't appear then so he couldn't send it to us, so I am not criticising him—that these depositions are going on, and are going to go on according to this schedule. I have never been in a lawsuit, and I doubt whether your Honor has while your Honor was still in practice, where [fol. 1047] within a few days you find yourself expected to examine, cross-examine, where all the others have had months to know all the documents involved. It is just an impossibility.

I am not asking for favors as counsel. I am saying my client's rights cannot be protected.

Thank you very much, your Honor.

The Court: All right.

Mr. Stewart: My name is Charles L. Stewart, of Dunnington, Bartholow & Miller, appearing for Dillon-Reed & Company.

If your Honor please, the field has been pretty well covered by Judge Bromley and Mr. Kaminer, and if I may I would like to follow the same procedure that Mr. Kaminer has suggested and serve my motion later and adopt the brief of Cravath, Swaine & Moore.

Your Honor, we received this case from our clients late Monday afternoon. Prior to that time we had no opportunity to sit down with them, we didn't even know about the case other than what we had read in the newspapers. They handed over a series of papers which proved to be 60 pages of counterclaims seeking damages against Dillon-Reed in the amount of $400 million. Even though the [fol. 1048] counterclaims may eventually be shown to be completely baseless the issues are complex and they are very involved.

Yesterday I got a copy of the complaint, and although I have not had an opportunity to study it I agree with Mr. Kaminer that we probably should move to dismiss for improper joinder. But we do need time, your Honor, to make these motions addressed to the counterclaims.

Whether or not the joinder is proper we may even have to request your Honor allow us to take the deposition of the Hughes Tool Company before we can serve a reply on this case. In order to understand some of the facts that Hughes Tool Company bases its counterclaims on.

We came into this case, your Honor, some eight months after it had started. We came into it finding our client was scheduled to have its deposition taken two weeks away, on March 8th.

I join Mr. Kaminer and Judge Bromley in saying there is something very peculiar in this business of only six days elapsing between the time of the order and the time that these counterclaims are served. Both counterclaims must have been in the works for months.

The Court: I am surprised they got them out so fast.

[fol. 1049] I thought they were going to wait until they finished examining your clients. Everybody knew it was coming, Mr. Stewart.

Mr. Stewart: We didn't, this I assure you, your Honor. We did not.

The Court: Go ahead.

Mr. Stewart: I would like to suggest, your Honor, that they should not be allowed by this ruse of getting a schedule of examinations, examining us noticing us as witnesses in this case, knowing that we were going to be aided as party defendants on these counterclaims, to get priority of examination. I suggest to your Honor that that would prejudice our position irreparably.

I realize that counsel can't be in two places at once, and that your Honor having appointed a Special Master in this case may feel that the examination of TWA ought to be continued. If that is the case, your Honor, may I suggest, as did Mr. Kaminer and Judge Bromley, that after that examination is completed that Dillon-Reed have priority of examination of the Hughes Tool Company.

As Mr. Kaminer suggested, there apparently have been a lot of games going on in this proceeding about which [fol. 1050] at this point we know nothing, but it seems very, very strange to me that Howard Hughes, if he is the leading force behind all of these events, can manage to throw up enough of a smokescreen in which he can persuade this Court, or any of the parties here, that he should not be examined. If he has all the facts and all the background I suggest to your Honor that he is the one who can clear up all of this.

I also don't understand how he can come in and say that you can't get an examination of me because I am an eccentric in California, whereas you are just business men in New York City.

If your Honor please, we ask that we be granted additional time to make our motions addressed to the counterclaims, and that your Honor grant us priority in the discovery of the Tool Company.

Thank you.

The Court: Anybody else?

Transcript of Pretrial Hearing, February 23, 1962

Mr. Neaher: My name is Edward Neaher, of Chadbourne, Parke, Whiteside & Wolff. I appear here as a pinchhitter for my partner Ralph Ray, who was to be here, but unfortunately had a critical illness of a member of his family at [fol. 1051] home and couldn't make it.

I am somewhat under the same difficulty as Mr. Kaminer in that I have had the benefit of a very quick look at the pleadings and the papers served by Judge Bromley.

The Court: Who do you represent?

Mr. Neaher: I am sorry, I meant to make mention of that. I represent Charles T. Tillinghast, Jr.

I saw enough in these papers, however, to indicate that it would be very advisable for us, on behalf of Mr. Tillinghast, to join in Judge Bromley's motion and adopt his brief, and I therefore request permission to serve a similar motion as Mr. Kaminer requested.

I don't think I can add much, except I don't think Mr. Davis would claim that an order granting priority in the examination of TWA should be construed as an order granting priority as against Mr. Tillinghast in his individual capacity as a defendant named in these counterclaims. It would certainly seem to us that as an individual defendant he ought to have the advice of counsel and an opportunity to study the claims made against him before [fol. 1052] he would be subjected to continued examination not as a representative of TWA but as one personally liable with other defendants for a staggering amount of money.

That is all I have to say, your Honor.

The Court: All right, Mr. Neaher.

Mr. Sonnett.

Mr. Sonnett: Yes, your Honor.

I said to your Honor earlier that I had a partial opposition to the position expressed by Judge Bromley, and that opposition also, which is only partial, applies to the position expressed by counsel for the other additional defendants.

I might add that I also anticipate that what I have to say will be in total opposition to what Mr. Davis will say to your Honor.

The Court: Why should this day be different than any other one?

Mr. Sonnett: I will try to, and I will, I believe, be brief, your Honor.

I have served no papers because I, too, thought that it was an informal pretrial conference under the general order, but I do not believe there are any papers I need to submit to make the point which I hope your Honor will [fol. 1053] consider and will grant.

Going back, quite rightly as your Honor did, to the history of the case, June 30th of last year, your Honor will recall that we applied before Judge Murphy for an order allowing us to examine Hughes within the 20 days on the ground of special circumstances. The special circumstances we then apprehended were that unless restrained Hughes would continue the malicious and very harmful efforts that were being made to disrupt a contract between TWA and Boeing for the supply of substantial numbers of planes in order that Hughes could try to succeed in his effort to ram down TWA's throat some 990 Convairs which Hughes was committed to buy to the tune of some $80 million.

When the captive customer wasn't any longer captive, he decided to subdue it and make it a captive once again, despite the voting trust, despite the independent board of directors, despite the new management, despite the fact that the Boeing contract was signed up and was to be carried out, and despite the technical judgment of TWA's [fol. 1054] technical people that they wanted the Boeing planes.

I might add that the history of the 990 program, as reported widely since, indicates how wise TWA was. It is an abysmal failure.

Now, because we wanted to put a stop to the Hughes efforts to sabotage the Boeing contract we made an application brought on by order to show cause to examine Hughes within the 20 days. By the time we got that argued on August 1st, Hughes had backed off, and he wasn't quite so vigorous with his efforts.

When Hughes realized on August 1st, which is the time we went before Judge Murphy, that he couldn't succeed in sabotaging the Boeing contract, and that his efforts to settle the litigation were not successful, and that it was going to proceed in open court, and the complaint was un-

run the risk at that stage of further efforts to sabotage the Boeing arrangement. We think that our lawsuit had a very healthy deterrent effect.

The next time we got into a problem of priority of depositions was because in furtherance of the efforts to settle the case, and by arrangement between counsel, we agreed [fol. 1055] on a stipulation which said that we will treat everybody as if they had proceeded in timely fashion under the rules so that the time that will elapse during the settlement talks will not prejudice anybody. And on the basis of that stipulation when the matter came before Judge Herlands ultimately with respect to some of the notices which Hughes Tool Company had served—they had only served some, not all that are on the list—Judge Herlands said, "In view of that stipulation I think I am bound to apply the normal priority rules, and so I am going to let them have priority as to their notices dated August 3rd," which again I say to your Honor are only a part of the notices that he ruled on.

When the matter came to your Honor, your Honor accepted it as it then stood, and quite rightly so, and at that time I, too, accepted it, feeling bound by the orders to which I have referred on the subject of priority.

However, I submit to your Honor—and this is my opposition to the application made by the additional defendants—I submit that as a matter of law and under well-settled law [fol. 1056] in this district, the record before you now establishes certain circumstances which warrant TWA in taking the deposition of Hughes immediately upon completion of the Tillinghast deposition.

Accordingly, our application is to terminate the Tillinghast deposition by Tuesday. In that connection I should point out to your Honor that your Honor's order contemplated about a week for four TWA witnesses. I should further say that that was the period of time initially selected by Hughes Tool Company on the basis of which they got their priorities.

Further, if they had proceeded to examine properly those depositions could have been completed in a week. But what happened was that although Mr. Davis told your Honor in chambers that he couldn't put an answer in, and he

couldn't make up his mind about these counterclaims until he had at least examined the four TWA people, and therefore your Honor directed that he would not have to put his answer in until he had examined the four TWA people, he suddenly found himself able, suddenly, quickly, out of the blue, to file the answer and so-called counterclaims before the Tillinghast deposition was even halfway through. [fol. 1057] A very skillful tactical move, but hardly in accordance with the representations made to this Court.

Why the rush about filing the counterclaims? Well, it is perfectly simple, I think, what he is up to. The effort here is to create a diversion in TWA's case, to slow that case down to a walk, to strangle, just as he strangled TWA in years past, as we have charged.

And now, by creating a procedural morass he hopes to bog down this case, and bog it down for good.

I am sure meanwhile he hopes he will get some pat on the back from the Civil Aeronautics Board for being willing to put some money into Northeast, and maybe get a whitewash that way. I don't know what he is up to. But I know one thing for sure, and it is obvious from this record, that what he is trying to do is prevent the TWA case from being progressed as it could be speedily and come to trial, as I hope it can.

The Tillinghast deposition, had it been taken on the issues raised by the complaint and the answering portion of the answer, could have been done easily in a day and a half to two days. Tillinghast became president of TWA [fol. 1058] in the spring of 1961. The complaint was filed on June 30, 1961. He has been examined in great detail about everything that happened before he became president up to the time he became president, while he was president, and that about 90 per cent of the deposition has had to do with things that happened after he became president and after the lawsuit was filed, all examination clearly designed to try and find some support for these so-called counterclaims.

So what counsel has done—and I submit this as to TWA, and I am not concerned about the additional defendants, they can take care of themselves—but as to TWA if the answer and counterclaim had been before your Honor when

you made your last order I believe you would have relied on the decisions in this district that say that when a plaintiff is confronted with a counterclaim this rule about defendant's priority of discovery does not apply because the assertion of the counterclaim against the plaintiff is a special circumstance under the decisions in this district, as I read them.

Therefore, I say as matters stand today on the record [fol. 1059] before your Honor there are special circumstances, and, therefore, I say having had two weeks of Tillinghast when he could have done it in two days, that we should be allowed to proceed with discovery against Hughes Tool Company, and I think that the only practicable solution to the administration of the case is to provide some series or program of alternating depositions along that line.

I would be very happy to have the additional defendants out of this case, and that isn't because I have reached a judgment as to whether there is any merit or not in anything Davis says about the additional defendants. I can say that on the basis of everything I have seen to date I see no basis for the assertion of the so-called counterclaims, certainly not against TWA. They are strictly phonies. The only counterclaim that seeks anything from TWA which might be called a counterclaim truly is the $170-odd thousand from TWA, and this is on the theory that he is entitled to double interest on some obligation of TWA's.

I am prepared to submit that matter on the papers to your Honor for a ruling, and if he is right we will pay the judgment within 24 hours. That has nothing to do [fol. 1060] with the rest of this mish-mash that he has come up with as a counterclaim. It is purely a question of construction of some documents.

TWA doesn't think he is entitled to the extra $76,000 in interest. He says he is. But other than that all he is doing is he is saying that since December of 1960, when the voting trust went into effect, this big conspiracy to take control of TWA away from Hughes and give it to the banks and the insurance companies has been in existence. If every word of that were true, if every single word

of it were true, it would not be a defense to any aspect of TWA's cause of action as alleged in this complaint. It is apples and oranges.

As a matter of fact, he has been kind enough to serve a derivative suit for TWA against these additional defendants so that TWA would get $115 million from Mr. Davis' client, and if he is right—I doubt that he is, from what I know to date, but if he is right we will get another $135 million from these additional defendants.

I would not protest TWA getting $280 million, but I don't want to have my lawsuit for TWA, which is what [fol. 1061] I am concerned with, ground to a halt and brought to a halt by the tactics that he is using. If he wants to sue them, he can sue them in some other case, not in my case.

In any event, if they are going to stay in the case, it seems to me that the whole posture of the case before your Honor has changed, and that your Honor should apply a rule of alternating depositions relying on the decisions in this district so that TWA should start with Hughes next week, when Tillinghast is through. That is, I believe, the only fair construction of the cases on a record like the one before you.

The Court: You say that the rule in this district is that where the defendant has served a counterclaim he loses his priority of deposition in so far as the counterclaims are concerned, and that the plaintiff made them proceed?

Mr. Sonnett: Yes, your Honor. There are decisions—

The Court: I don't know whether I should tell you this, but your firm submitted a brief just the opposite to me the other day.

Mr. Sonnett: Not in a case like this.

[fol. 1062] The Court: Paramount v. De Laurentis.

Mr. Sonnett: I don't know who wrote that brief, but let me say I have read Bromley's brief, and I say—

The Court: I don't know who wrote that brief. I read it yesterday, and I decided it. Maybe you ought to read the Law Journal.

Mr. Sonnett: In this case, it is hard even to read the morning papers.

On the basis of Bromley's brief you have this transparent attempt to make counterclaims against TWA. I say this is radically different from the other. On the state of this record I believe TWA is entitled to a fair chance for its discovery because the record has been radically changed and changed by action of the Hughes Tool Company alone, and was done at a time months or at least a month ahead of the time they said to you they would be ready to do it, and because Tillinghast has been examined for two weeks when a proper examination should be two days.

The Court: All right.

Mr. Sonnett: I hope I have made myself clear that I do not think that these additional defendants who were chal-
[fol. 1063] lenged with doing something wrong from December 1960 to date belong in my case where I charge Hughes with violations of law which are very serious from 1939 to June of 1960. It is a case of apples and oranges, and he is slowing us down desperately in our case, which is all I am concerned with.

The Court: What I would like you to do is submit a short memorandum of law on this question of priorities. I am sure you don't want me to rely on the one I read yesterday in another case.

Mr. Sonnett: I am sure that one is not a situation like this.

The Court: I think it is.

Mr. Sonnett: You mean there were additional defendants?

The Court: No, there were not. Not additional defendants.

Mr. Sonnett: This is what I am relying on. If you take them out of this case, the additional defendants, I am prepared to go forward on the order and the schedule that you last signed. I am quite prepared to do that, because then it is the same case, but if they want to sue us for the $75,000, that's all right.

[fol. 1064] The Court: You will pay them?

Mr. Sonnett: I will pay them if they are entitled to it, and you say so. But while they are in the case—

The Court: Let me have that memorandum in the next couple of days.

Mr. Sonnett: Yes, your Honor.

The Court: Mr. Davis, you have been sort of quiet. But that is not a word of encouragement. I would like to finish by 12.30.

Mr. Davis: I think I will be finished by 12.30, your Honor.

For the record, my name is Chester C. Davis, and I am appearing on behalf of Hughes Tool Company.

I am really surprised at so many eminent counsel seeming to be so disturbed at a procedure which to me appears relatively simple. On this priority of discovery proceedings I think everyone recognizes that it involves a certain amount of discretion to be applied to the various circumstances presented to the Court. I believe there are decisions in this district which indicate that the Courts need not be slaves to the concept that a defendant normally is [fol. 1065] entitled to priority.

The reason for the development of that concept, as everybody recognizes, is under the new rules at the time the plaintiff forms a complaint and under the new rules of pleading he does not say what he is complaining of, and, therefore, the defendant needs to find out what it is that the complaint is all about, and is normally given priority.

I think this is applicable in this situation, also. Everybody recognizes everybody will have a chance to get all these facts they need before there is any judgment entered on whatever contentions are asserted by anyone. No one is going to be deprived of the fairness of justice. It is a question of getting the facts.

I am not going to rely on the general principle, which I am sure is also recognized by everyone here, that since this Court has delegated the discretion as to how these discovery procedures were to be conducted to a Special Master they should normally be left to interfere with the Special Master unless there is a clear abuse of discretion.

I should like to merely present some of the circumstances [fol. 1066] which are here present, and which to my mind clearly support the ruling and the fairness of the rulings made by the Special Master.

Transcript of Pretrial Hearing, February 28, 1963

We have to start with the complaint. A complaint very artfully drawn but as vague and general as one can find, notwithstanding the number of pages which it runs. It doesn't say one single thing as to what it is they're complaining about, except allegedly it is a violation of the antitrust law. It doesn't refer to the CAB orders. All you can glean from it is that somehow or other the Tool Company, while it was in management, or presumably in control of TWA because of its 78 per cent stock ownership, that it used that control in an improper manner in connection with financing and furnishing of equipment, particularly the jet equipment. That comes out of the complaint and conclusions.

Also, some contentions that the Tool Company in 1961 wilfully and maliciously interfered with the business of TWA. Then some reference that a merger to be approved by CAB and the stockholders constituted some conspiracy in violation of the antitrust law. That is all the complaint says.

[fol. 1067] In that connection, may I also point out that there is no question that the defendants Equitable and Metropolitan and Irving are in control of TWA, were in control of TWA when this complaint was prepared and served on the Tool Company. Whether or not they deny exercising their control is a matter of fact to be established, but there is no question they are in charge of TWA today, assuming the 78 per cent stockholding. These people who sit right here.

Now, the complaint says nothing. An effort was made to obtain the deposition of Mr. Hughes out of turn. Judge Murphy denied that. The stipulation that was decided upon has nothing to do with anything except that the parties agreed to delay everything during the month of July so that when everything was resumed the same rules would apply, et cetera.

The question first came on before Judge Herlands at a time when the Tool Company quite properly based upon a completely vague complaint said:

> "We want to find out what it is they are complaining against us, and in order to do that we want to take the

[fol. 1068] deposition of TWA, the Metropolitan, the Equitable, Tillinghast, the list."

There is no question but we had a right to do that. It was bitterly opposed.

Now, on this scheduling—may I interrupt for one moment to point out Judge Herlands, in the course of the argument, said, "Why don't you gentlemen submit your respective proposed schedules."

These notices of deposition, your Honor, were not served or were not noticed in any particular order based upon the facts or circumstances which we had of knowing the best way to develop these facts and defending ourselves. Instead of following the practice in this district, including the one followed by Mr. Sonnett, of having all depositions returnable the same date and the same place as his were, one in California and one in New York the same day, we indicated we were prepared to take the deposition of one party and a week after the completion of that deposition to commence the next one, as a general scheme of what we were prepared to do. We were the ones who wanted to move expeditiously.

That complaint hurt the Tool Company before the CAB. [fol. 1069] The CAB is investigating the charges of this complaint on an entirely unrelated transaction. We were the ones interested in finding out the facts which supported this complaint.

Mr. Sonnett submitted to Judge Herlands a proposed schedule where he would start with Mr. Hughes, then we would take them on alternating schedules. We submitted a memorandum where we said the only schedule we submit is that we are permitted to take and discover the facts of all the people who we have noticed, and then TWA may discover from us.

Judge Herlands denied to adopt either schedule submitted to him, and the decision clearly stated the defendant was supposed to have priority as then noticed.

This proposition of people not knowing is the surprising thing. Notices and subpoenas duces tecum were served on the Equitable and Metropolitan and Dillon-Reed as of Sep-

tember. Judge Ryan thought it was going to be a big case, and should be assigned to one judge for all purposes, so Judge Ryan said, "Until I assign it to a judge for all purposes I am going to hold up everything." That stopped us [fol. 1070] from completing the service of subpoenas and it suspended the return date of those notices.

These gentlemen then took the position, legally quite correct, that they did not have to respond to these subpoenas duces tecum until the return date of the notices. Meanwhile, sure, they must have done something to gather the documents. Perhaps not through the particular individual counsel here present. Since last September. But they took the position, which they had a right to, of not giving us anything until the return date of the deposition.

Obviously, the purpose of getting documents is to enable an expeditious deposition, whoever it may be that has to be examined orally. In any event, everybody is in accord that Judge Herlands decided in this case that the Tool Company was to have priority in the depositions which had been noticed, and we have not changed that. We haven't added to it. We haven't added a single individual or party to it. It is the same people.

I do not believe everybody is construing what the Special Master has been doing as something which he feels bound to do not to deviate from the order or the time of the sched- [fol. 1071] ule which is annexed to your Honor's order. He has construed that order, I think, the way it was intended, and certainly in accordance with what it says—namely, that the Tool Company is to proceed expeditiously and as much as possible maintain a scheduled time and keep going.

The Special Master did indicate at an appropriate time he will undertake a showing of good cause for an alteration of the order of taking those depositions. After all, the responsibility is upon counsel for the Tool Company to develop the facts in its defense.

Now, knowing that the contention of the Tool Company was that these parties had acted together in what we claim to be an improper and unlawful manner to acquire control of TWA, we did put informally those persons on notice that while they were being noticed for their deposition as witnesses to protect themselves because we had in mind the

possibility that the same facts which constitute a defense to this complaint might very well also constitute the basis for futher additional relief.

[fol. 1072] Mr. Kaminer, I believe, is in error when he says that this answer and the counterclaim merely say that TWA has been injured further and more than the alleged injury that TWA is asserting against the Tool Company. That answer, your Honor, sets forth facts in considerable detail which, if true, constitute a defense.

If TWA was deprived of equipment, if the financing of TWA injured TWA, as is claimed in the complaint and we can show that that was the result of the course of conduct, or a conspiracy, or a monopoly, by these other persons, if only on the issue of damages as to did we cause the injury or did they, the same set of facts, plus the addition of the prayer for relief, might very well also constitute a basis for additional relief.

Whether we call it counterclaims, or affirmative defenses, is not particularly important. We have alleged facts in our answer. It is wrong, it is specific. I do not believe that Judge Bromley really means it when he says "We don't know what we are defending against."

I submit, your Honor, that the answer that we have served is about as detailed a pleading as has been filed in [fol. 1073] this court for some time.

Your Honor is fully aware of the fact that counsel for TWA was pressing us for putting in an answer as soon as possible, and your Honor indicated that even though we have a motion to dismiss this complaint pending which has not come into issue for a number of reasons that it seemed the time was approaching when an answer ought to be put in, and I expressed in chambers at that time my concern that these witnesses that had been noticed perhaps should know the nature of the claim that we were asserting.

Had we filed to serve those papers as promptly as we could, I could have understood a sense of unfairness or injustice to require these persons to be deposed to produce these documents which will condemn them and yet be in the dark as to the nature of the claim that the Tool Company intended to assert against them, and derivatively on behalf of TWA, because today there is only one person who is

really interested in TWA and that is the 78 per cent stockholder. The others don't have any interest in TWA except possibly to maintain the captive market for financing, or [fol. 1074] for something else.

All that has happened is that we have told these same witnesses, the same persons, who have testified to exactly the same thing, that will produce exactly the same documents, we have put them on a formal notice as to what the nature of our contention is. Why that creates any sense of unfairness, injustice, or depriving anybody of any rights I simply do not understand.

Mr. Sonnett said—I presume he is representing TWA and should be interested in this derivative action—he says, "Go ahead, but start it in another action."

Suppose we had done that on the same facts. We would still be taking the depositions of these parties, obtaining the same documents. Should we move to consolidate for trial afterwards?

They say, "Ah, yes, but had that been done they would have had an opportunity to take the deposition of the Tool Company first."

I have no question in my mind if that had been the mechanical posture of the case that we would have been before your Honor and said, "Your Honor, obviously we can't be [fol. 1075] in two places at once. We are engaged in taking the deposition pursuant to the action commenced by this complaint. We are pursuing it without delay."

And they will have to wait their turn. That is all we are talking about.

Now, quite apart from the fact that the answer is quite detailed, as distinguished from the complaint, detailed in facts, we must also bear in mind the contention of the answer of the Tool Company which is a defense as well as establishing, we believe, the basis for affirmative relief—that there is a conspiracy, certainly concerted action among these various defendants. These are not bare, naked allegations.

The deposition taken to date, the documents obtained to date, establish a course of conduct which unquestionably requires an inquiry.

May I suggest, your Honor, where do they think they are going to find out their misdeeds, in our files, through our people, or in their files? Where are the facts to be found as to whether or not there has been an unlawful course of conduct on the part of these additional parties? Through the [fol. 1076] Tool Company or through their own files and through their own witnesses? That is what they want to avoid. I understand why they want to avoid it.

There would have been technically the basis of making such a contention if the answer we had filed had been one as bare of facts as the complaint is. We took great pains to avoid that charge.

Judge Bromley has indicated or referred to a Mr. Thomas as an example where he believed that he is being prejudiced if the deposition of Mr. Thomas should take place before he has had an opportunity to examine the Tool Company, and he said because the answer that we filed contends and asserts facts to support the contention that Mr. Oates and Mr. Hagerty, also someone at Dillon-Reed, had conversation with Mr. Thomas which we contend encouraged Mr. Thomas to leave TWA in 1960.

We have to find some place to find facts. He is as a good a place as any.

The other is to go into an examination of Mr. Oates, Mr. Hagerty, and Dillon-Reed. These are the two places to find them. We can't answer that question. I don't see anything [fol. 1077] difficult about it.

I might as well say on this point, while on the subject of Mr. Thomas, it might be a good idea perhaps to take the deposition of some of these—or to change the order in which the deposition is being taken. I do have in mind making an application to the Special Master at an appropriate time that I believe I have the basis for now for changing the particular order of the depositions to be taken because I believe that the order of your Honor, with respect to taking these depositions, was that we were to keep at it without wasting time because I believe the responsibility for an orderly development of the facts is on counsel, and wholly on counsel.

Certainly, it is not the responsibility of opposing counsel to develop or establish the order in which the defendant is

to develop the facts in order to defend himself, and we are defending ourselves.

So I respectfully submit, your Honor, if I may add one more point, that your Honor may not be fully aware unless you have had an opportunity to read this rather lengthy [fol. 1078] answer.

The Court: Nobody has taken the trouble to give me a copy. I read about it in the newspaper. That's how I know what is going on in this lawsuit.

Mr. Davis: It has been filed, I believe, your Honor.

The Court: It hasn't come upstairs. I signed an order for you this week, Miss Lea, but you didn't leave a copy with me.

Miss Lea: Yes, I did. I left an extra copy in chambers.

The Court: I will go look for it.

Mr. Davis: I apologize if we have not, and will see it is done immediately.

You will note in there that there is a contention that we assert quite seriously that the very commencement of this action by TWA was intended in furtherance of these other objectives.

Mr. Sonnett: Where do you say that in this answer? Point it out. That is a misstatement.

The Court: Let Mr. Davis finish his argument.

[fol. 1079] Mr. Davis: I submit that no matter which way you look at this the answer always comes out to the same place. We responded to an action commenced by TWA. TWA is in control of the same people. We obtain a priority, we are in the process of taking deposition. We ought to have an opportunity to complete the development of the facts.

The incidental fact that these same individuals who were noticed for their deposition covered by the decision by Judge Herlands now have been put on notice that they should defend themselves and protect themselves, I do not think puts them in a worse position, it puts them in a better position than they were in before we named them. If they want or need more time for replies, I am sure they will get more time to put in a reply. I think they may have difficulty in replying, because our answer is so detailed it

is going to be difficult for them to reply to the facts alleged there in the manner in which I know they want to answer.

The Court: Have you considered the limitation of the deposition of these parties to matters raised solely by the [fol. 1080] complaint and not in counterclaims?

Mr. Davis: The Special Master raised the question should I get into an area that does not appear to be addressed to a defense to the complaint then a question may arise. We believe that we can establish that without any difficulty, and will establish it to the Special Master's satisfaction. I am confident that all or substantially all of the depositions that we will engage will relate to defenses to the complaint, construed broadly to be sure, since the complaint is very broad.

Now, should we reach the posture where it may be said that a certain amount of this inquiry appears to have more bearing on establishing a cause of action against these additional defendants rather than establishing the basis for defense, bearing in mind all the time if they can prove they did it, we didn't do it, we have a practical question there. Should we at that point stop for the purpose of starting the process all over again in order to give them what, this so-called priority?

[fol. 1081] The Court: It is a variable right, isn't it, Mr. Davis?

Mr. Davis: It is when you don't know what you are charged with.

The Court: You fought for it.

Mr. Davis: I did, your Honor, and I was successful, may I submit, primarily because the complaint was so barren of any information, any factual conclusions.

I respectfully submit, your Honor, that you can read that complaint, and I will use it as a guide in the future, I think it is an extremely well-drawn complaint, but I defy anybody to figure out what it is that the Hughes Tool Company was suppose to have done, but from the conclusions, to justify the complaint. You can look at it from beginning to end, you will find something in one of the briefs submitted in one of these pretrial conferences, but you cannot find the factual contention which presumably must exist if the complaint is any good at all that what took place was not

within the contemplation of the CAB order which approved every transaction involving more than $200 between the Tool Company and TWA, and if those transactions were approved by the CAB the antitrust laws are not applicable, [fol. 1082] and that is the only basis of jurisdiction of this Court.

You can look at that complaint from beginning to end, and I defy anyone to be in a position to defend themselves or to know what it is that they are talking about, and the briefs that have been submitted in one of those pretrial conferences had bold assertions that everything was being done for some purpose or motive, allegedly unlawful, but what is it that we are supposed to have done that was not covered by a CAB order? That does not appear on the face of the complaint.

What it is that constituted this wilful and malicious interference in the business—

The Court: We will leave that for motions of summary judgment which you are threatened with.

Mr. Davis: That is not entirely out of the ball park, either.

The Court: I didn't knock it out of the ball park. I said we agreed about six months ago you couldn't move for a summary judgment just on the complaint, and that under the decisions of our Court of Appeals you have to practically wait until all deposition proceedings were completed [fol. 1083] before the Court thinks it is proper to entertain a motion for summary judgment. I didn't foreclose you, I just said we will get to that discussion later on.

Mr. Davis: I appreciate that, your Honor, and I think we all agree it is a difficult motion to support and, therefore, one that should not be made hastily.

I do think that there is a technical deficiency in the complaint in the respect that it does not allege a violation of CAB orders. I think we also have the question of primary jurisdiction involved.

The Court: Make that for a separate application on papers.

Judge Bromley, what time do you want for your motions?

Mr. Bromley: Ten days, your Honor.

The Court: You can have as much time as you want because the depositions are going to continue.

Mr. Bromley: Ten days.

The Court: All right. You fix any day you want with counsel, and arrange for exchange of papers, and notify my [fol. 1084] chambers, and we will have a hearing.

Mr. Davis: The only thing I may request in that, your Honor, I am sure Judge Bromley wouldn't object to it, and that is to give me an adequate amount of time to answer after receiving his papers, particularly since the Special Master is keeping my nose to the grindstone a little bit and I do need some consideration on time to reply.

Mr. Bromley: You will never have time enough to give a good answer. I will give you all the time you want, though.

Mr. Davis: Thank you, Judge.

Your Honor, do you want that reference Mr. Sonnett asked about?

The Court: No.

Mr. Browley: I must deny, if it please your Honor, that my clients control TWA. Their sole power is to appoint voting trustees.

Now, although the counterclaim is a very long and voluminous document it is so distorted, confused and inaccurate that the need to clarify it by discovery is far greater than is Mr. Davis' need against a notice form of pleading which the rules allow such as this complaint is, so the wealth [fol. 1085] of detail that he has put in his counterclaim as contrasted with the bare bones of the complaint only adds to our burden, it doesn't lessen it, because we have to sift out all the inaccuracies, distortions, and omissions by discovery in order even to be able to answer the charges.

The Court: May I suggest this. I understand Mr. Kaminer and Mr. Stewart and Mr. Neaher—I suggest that you arrange a date for a hearing allowing sufficient time for the preparation and service of your papers, and preparation and service of the answering papers by defendant, and if you want time to reply, and just check with my chambers as soon as you have a date fixed just to make sure that I set it aside and am free.

Mr. Sonnett, you are going to give me a memorandum on the decisions in this district on priority?

Mr. Sonnett: As applied to this case; yes, your Honor. And may I simply invite your Honor's attention to the fact that in the second paragraph of his opinion and order of August 14, 1961, Judge Herlands specifically referred to the understanding of counsel.

[fol. 1086] The Court: Mr. Sonnett, we have gone through this every time we sit down. We go back to the interpretation of what happened before Judge Herlands. We have gone past that. We have an order set. You have a Special Master who, in my opinion, is one of the ablest lawyers in the United States, presiding over your deposition proceedings. We have an order set, and we should go on instead of having to go back to decide what was said before Judge Herlands.

Mr. Sonnett: I believe that is so, and I hope will be so, and that is why I urge you to put in the order as you should have originally, making it an alternating program.

Mr. Bromley: Does your Honor—we have a memorandum of law which we have filed and which I assumed you have.

The Court: I received it this morning. I have a memorandum from you, and I received one from Mr. Davis this morning, also.

Can I have yours on Monday, Mr. Sonnett?

Mr. Sonnett: Yes, your Honor.

The Court: It shouldn't be too difficult.

Mr. Sonnett: No, it will not be difficult.

[fol. 1087] Mr. Kaminer: May I hand up our bare bone papers just for the record? There is one thing which concerns me, and I am not sure, perhaps I misunderstood your Honor.

Did you—

The Court: First, Mr. Neaher, did you have any papers you wanted to submit, or do you want to rely on the record?

Mr. Neaher: I would like to rely on the record, but still reserve the right to submit a formal notice of motion.

Mr. Kaminer: Your Honor said depositions are going to go on. Are we considered from now on bound by them? I don't know what you mean.

The Court: I would assume you have to complete Mr. Tillinghast, you have two or three other TWA witnesses.

Mr. Sonnett: Tillinghast has had about ten days, and counsel has declined as yet to give an estimate of when he will be through.

The Court: I don't have a copy of the schedule before me, but I don't think anybody is involved who are related to the defendants.

Is Mr. Thomas—no, Mr. Thomas is now an individual, is [fol. 1088] he not?

Mr. Sonnett: The difficulty, your Honor, is that the subject matter of the Tillinghast examination, which has extended far beyond what it could have been, a day or two, is the so-called counterclaim approach that Mr. Davis has now invoked into the case, so that unless—if he is allowed to go on examining in aid of his counterclaims, and at his present rate—

The Court: Has the Special Master made any ruling as to the scope of the depositions?

Mr. Sonnett: The Special Master has raised this very point and suggested this is something that counsel should consider, and then said something to the effect, "Well, it might be rather difficult to administer," and I think there is something to that point, but I think that it is clear because I argued to him this very point. I have said to him, in all good faith, the deposition of Tillinghast could have been completed in two days, because he is a witness in the first six months of 1961, that is all he knows anything about. But instead of that we have had extensive day after day after day about events post-filing of the complaint designed [fol. 1089] to establish this so-called conspiracy which in its very inception is supposed to have started in September, 1960, and our complaint covers 1939 through the period to June 30, 1961, so we have had nothing by way of what is really involved in the case except the last six months of it.

The Court: When the schedule of witnesses, Mr. Kaminer, or Judge Bromley, or Mr. Stewart, or Mr. Neaher, is so arranged that one of your clients has been scheduled, then I suggest you make application to the Special Master, or to me, rather to the Special Master, because he is com-

pletely competent to handle the problem, but I want these depositions to continue as much as possible. I want to get this case moving and disposed of.

Mr. Kaminer: Here is what I was going to suggest as a practical matter to avoid making an awful lot of applications to your Honor and to the Special Master. While your Honor is considering this question of priority and modification of that order, and your Honor will have to consider the motions to dismiss the joinder, we certainly do not object to the depositions going on as far as TWA witnesses are concerned, but we want to be assured, first of all, that [fol. 1090] there will be substantial time in which we can prepare our witnesses and go over all the facts and learn about all these documents, and I think your Honor only can indicate that now because that seems to me—

The Court: Well, I think you have a copy of the order, and I don't have a copy of it.

Mr. Kaminer: One of my witnesses is scheduled for March 1st, which is next week.

The Court: You have Charles Thomas, you have Bank of America, Bankers Trust, Morgan Guaranty Trust, the Mellon Bank. Up to that point you have no witness whose employer has become a party, right?

Mr. Kaminer: That's correct, your Honor.

The Court: I will have this decision out next week.

Mr. Davis: Your Honor, may I say that I do expect to make an application to the Special Master with respect to this order. I can't, of course, make any representation to the likely result, but that may help or give Mr. Kaminer a different basis for making an application.

The Court: Let's proceed until we are actually faced with the problem.

[fol. 1091] Mr. Kaminer: Very well, your Honor.

(Whereupon, at 12.40 o'clock p.m. the proceeding was concluded.)

Reporter's Certificate to foregoing transcript (omitted in printing).

A-2176

Opinion and Order of Special Master J. Lee Rankin, April 17, 1962

[Doc. 217]

[CAPTION] 61 Civ. 2324

[APPEARANCES]

• • •

This matter was presented to the Special Master with extended argument and numerous briefs, all of which have been carefully considered. The issues now to be determined by the Special Master are the purpose and extent of the attorney and client privilege, whether such a privilege protects communications of an attorney while he is acting as a business agent on behalf of the client and how the privilege may be waived when it is recognized that certain evidence is privileged except for the fact that a waiver under the law [4362] has occurred.

Determination of these questions is now to be made as applied to certain documentary evidence in the custody, control or possession of the Hughes Tool Company claimed to be privileged because it involves communications between defendant and one or more of its several outside attorneys. Once determined in this proceeding, however, the principles of law as to when there is a privileged communication between attorney and client which precludes the production of documentary evidence subject to such privilege, and the manner in which the privilege can be and is waived shall apply to other parties to the litigation.

The facts concerning the various communications between the Hughes Tool Company and its outside counsel which the Tool Company now claims is privileged and further

asserts that it is not required to produce for examination by the other parties to the litigation because of the attorney and client relationship, are not complicated. However, there are several aspects of the problem by reason of records in the hands of outside [4363] attorneys as well as those in the possession of the Tool Company that make the case and the several evidentiary questions in issue, materially different.

First, Raymond Cook, one of the principal outside attorneys for the Tool Company for the period after 1955, has advised the Court that he may well have to be a witness in this proceeding and has already filed a lengthy affidavit sworn to as of November 22nd, 1961, in a proceeding now being heard before the Civil Aeronautics Board in what is called Tool Company—Northeast Control Case, Doc. No. 11620. A copy of that affidavit is attached to the affidavit of Thomas D. Barr, one of the attorneys for the additional defendants, Equitable Life Assurance Society of the United States, Metropolitan Life Insurance Company, James F. Oates, Jr., and Harry C. Hagerty, and sworn to as of March 26th, 1962, and filed in this proceeding. The Cook affidavit consists of 40 paragraphs with a number of subparagraphs and is 22 pages long. It will not be necessary to go into the detail of the affidavit of Mr. Cook at this time, but we shall refer to it so that it [4364] may be examined at length by those who care to do so. I shall call attention to various parts of it later in this Opinion. It is apparent from the affidavit that although Mr. Cook was and is an attorney, he was stating information that came to him in connection with the financial business affairs of the Tool Company for an indeterminate period of years. He was also relating at length what he considered to be the facts concerning

many matters and transactions in which the Tool Company was involved during the period described in the affidavit.

It is incumbent upon the Special Master to examine this affidavit with care to determine what portion of Mr. Cook's activities might have been privileged because of the attorney and client relationship if no waiver had occurred. It also has been necessary to decide what part of what he did involved acting as an ordinary agent, or as a business agent on behalf of the client, and would not be properly within the privilege of attorney and client. We needed to ascertain the extent of the waiver that occurred by reason of the Tool Company authorizing the filing of the [4365] affidavit in question and its advising the Court that Mr. Cook was to be a witness in this case regarding a number of the important issues.

Determining the question at hand, it is also necessary to consider the affidavit of Raymond M. Holliday, Vice President, Secretary and Chief Financial Officer of the Tool Company which was sworn to on November 22nd, 1961, and filed in the same proceeding before the Civil Aeronautics Board, referred to above. In his affidavit, Mr. Holliday adopts the affidavit of Mr. Cook which I have referred to, both as to the facts and the conclusions. However, he adds additional assertions as to the facts in issue in this case.

In paragraph No. 4 of the Holliday affidavit, Mr. Holliday says: "It is inconceivable that Tool Co. which has an equity interest in excess of one hundred and forty million dollars in TWA, including debts in an amount in excess of eighty million dollars, would maliciously and willfully interfere with TWA's business. It has not done so. Rather it has acted on the advice of counsel to take steps which its counsel

advised were required to protect its equitable rights arising from [4366] its ownership in TWA." As indicated hereinafter, the Holliday affidavit and particularly paragraph No. 4 thereof has an important bearing upon the waiver question.

In the answer which the Hughes Tool Co. filed in this proceeding in the paragraph numbered 40, it said: "All of the activities of Tool Co. alleged in the complaint with respect to the period subsequent to 1960 were taken on the advice of counsel for Tool Co. solely for the purpose of protecting Tool Co.'s interest as beneficiary under said voting trust and as equitable owner of more than seventy-eight per cent of the stock of TWA." This portion of the answer affects the question of whether any attorney and client privilege which might otherwise exist with regard to the period after 1960 has been waived.

The record shows that the named defendant Howard R. Hughes, who has not yet been served in this action, was not an officer or director of the Tool Company after the end of the year 1960. It has also been stated on the record a number of times and apparently is accepted by all of the parties that Mr. Hughes is the sole stockholder [4367] of the Hughes Tool Company. There is no showing that after the close of 1960 Mr. Hughes was authorized to act on behalf of the corporation in any capacity other than as its stockholder. There are numerous communications in question between Mr. Hughes and various outside counsel for the period starting with 1961, from the beginning of the year, and at least up to the time shortly before this litigation was instituted.

The affidavit of Mr. Cook is much too long to try to set it forth in detail in this opinion. However, a careful con-

sideration of its purpose and what it purports to present as well as the various subjects delineated will be of help in the consideration of our problem.

It should be observed that Mr. Cook said that he was familiar with the "facts and circumstances" which he set forth and that he participated as counsel for the Tool Company in TWA's jet equipment program and the financing thereof from their inception. He then discussed what he referred to as "facts known to me." Paragraphs 17 through 33 deserve careful consideration as to the subject matter concerning which Mr. Cook said he was [4368] presenting facts on behalf of the Tool Company.

Some of the specific subjects covered were: the recognition by the Tool Company that if TWA were to maintain its competitive position it would require a fleet of jet aircraft as soon as its principal competitors; advice that the Tool Company received from investment bankers and the necessity for TWA to have additional equitable capital in order for permanent financing to be accomplished. He then referred to discussions with Equitable concerning its requirements for the permanent financing for TWA and the fact that the Tool Company was not satisfied with these discussions. Further, there is the development of the plan for permanent financing through a leasing arrangement and the Tool Company's belief that TWA would be in a position independently to finance its jet equipment program.

He then referred to the Tool Company's negotiations with Irving and its agreement to support the Dillon Read plan. There is a reference to advice by Irving through Sessel and the Tool Company's decision not to seek or negotiate any interest rate until after Irving had formed

[4369] a banking group. It is stated that representations were made to the Tool Company by Sessel and the Tool Company protested with respect to these representations, and when it was informed about interest rates, agreed to the interest rates but did not know that Irving had refused to permit other banks to participate in the plan. Mr. Cook also referred to Dillon, Read's advice to the Tool Company as to the interest rates. He made a statement concerning the lenders' commitment to the Dillon, Read plan and the Tool Company's guarantee agreement. He discussed the problem concerning Thomas's compensation and advice that the Tool Company gave to the lenders, as well as the various alternative suggestions for Thomas's successor and the fact that the Tool Company regarded the lenders' reliance upon Thomas's resignation in making their demands concerning management, as merely the use of an excuse to accomplish their objectives.

The affidavit then described the Tool Company's agreement to the financing plan in March 1960; advice that it received on August 1, 1960, from the lenders that they would insist on [4370] a voting trust; and finally that the Tool Company did agree in March 1960 to place its stock in a voting trust although it was unwilling to so agree under certain conditions. Then he referred to the Tool Company position as to demands made by the lenders and its request to Irving to develop an alternate plan. He asserted Irving's representation to the Tool Company concerning its inability to develop such an alternate plan and its refusal to permit participation by other banks, although this was unknown to the Tool Company.

Other paragraphs of the affidavit described the ability of Irving to apply economic pressure on the Tool Company

and Irving's presentation to it, of the bank plan. He related the Tool Company's doubts about General Dynamics' ability to participate in the plan, how those doubts were confirmed and the protests that were made to Irving. Then he went into the Tool Company's presentation to Irving of its own plan, the bank meeting of October 6, 1960, and finally the Tool Company's accession to Irving's demand on certain conditions.

[4371] The affidavit related how the first time that demand was made upon the Tool Company by the Metropolitan Life Insurance Company that the Tool Company's right to terminate the voting trust be subject to a penalty and that the Tool Company promptly submitted to the Equitable an alternate proposal and Irving then refused to participate in the alternate plan. He stated that after this both Equitable and the Metropolitan indicated their willingness to reinstate the Dillon, Read plan provided the Tool Company met the additional demands and Irving made a similar proposal to the Tool Company.

Mr. Cook then described how the Tool Company endeavored to negotiate a reduction of the premium after it received the October 19th letters and finally made an oral agreement to accept the lenders' demand subject to the understanding with Irving that it be submitted back to the Board of Directors, and Mr. Sessel's account of that understanding which Mr. Cook claims were incorrect. Thereafter, the Tool Company proceeded to cancel its commitment.

He related that the Tool Company made a further effort to develop a new plan for financing [4372] and upon failure of that, the 1960 financing was consummated.

Mr. Cook then developed the position that the Metropolitan and Equitable acquired and maintained control of the business and affairs of TWA, the Tool Company's expectations on the interest rate, and finally the lenders' demand that the Tool Company turn over control of TWA to them upon terms calculated to perpetuate the control that they had achieved.

Upon a consideration of the detail of the affidavit, it is apparent that it purports to be based on information which Mr. Cook received as counsel of the Tool Company. It is also obvious that it deals with that company's state of mind, position, attitudes and agreements with third parties as well as representations which he stated such third parties made, concerning the matters described in the affidavit. In many respects the affidavit parallels the allegations in the answer and counterclaims.

[4373] The applicable law involves a variety of legal principles. First, it should be recalled that this is not an action which depends upon diversity of citizenship for the Federal Court to have jurisdiction. The right to recover treble damages and obtain an injunction for violation of the Antitrust Laws is one that is created by the Federal Statute and did not exist at common law. See United States vs. Addyston Pipe and Street Company, 85 Fed. 271, 6th Cir. 1898; Standard Oil Company of New Jersey vs. United States, 221 US 1, 1911; and Apex Hosiery Company vs. Leader, 310 US 469, 1940. For this reason we do not have the problems relating to the distinction between substantive procedural statutes and rules of law, which must be dealt with in diversity cases under Erie vs. Tompkins, 304 US 64. However, even in a diversity case,

Opinion and Order of Special Master
J. Lee Rankin, April 17, 1962

Federal Courts have held that they are not precluded from deciding that a statutory privilege need not be allowed. Monarch Insurance Company of Ohio vs. Spack, 281 Fed. 2nd 401, 5th Cir. (1960) and Humphries vs. Pennsylvania Railroad Company, 14 F.R.D. 177 US District Court, N.E. Ohio E.D. (1953) where it is said: "The con- [4374] clusion is sound that Federal Courts are warranted to view the problems pertaining to the attorney-client privilege in the light of the law of the Federal Court rather than the law of the State where the litigation occurs." Professor Moore has taken substantially the same position in his work at 2 Moore's Federal Practice, First Ed. 2641.

A symposium on "The Lawyer-Client Privilege": Its Application to Corporations, The Role of Ethics, and Its Possible Curtailment, reported in the Northwestern University Law Review Vol. 56 May and June 1961, No. 2 at pages 235 to 262 presents a careful statement of the basis for the attorney-client privilege as it exists in the law. There it is said: "There is, perhaps, no principle of law which exists on a sounder basis, or which is supported by a more uniform chain of adjudication, than that which holds all information acquired by an attorney from his client, touching matters that come within the ordinary scope of professional employment, as privileged communications."

This symposium recognized that the purpose of [4375] the rule was to encourage the placing of full confidence in the attorney without fear of the disclosure of the secrets entrusted. It found that there were certain required conditions if documents or testimony were to come within the rule. They are:

(1) that a professional relationship be established between the client and its legal advisor;

(2) that the communication must be confidential and not made simultaneously to third parties or be intended to be communicated to third parties;

(3) the communication must be relevant to the advice sought and

(4) the circumstances must indicate that it was intended to be confidential and

(5) the privilege does not encompass information gleaned from sources other than the client or his authorized agent even though acquired by the attorney in the course of professional employment.

The attorney-client privilege covers the action of the attorney as legal advisor. It does [4376] not extend to communications between directors, officers, or agents of different corporations, or to negotiations between such corporations which are made or conducted by men who happen to be members of the bar. Nor does it extend to communications made by a client to his attorney with the understanding that the information is to be imparted to a third party.

The privilege does extend to communications to or from lawyers where the documents were prepared to solicit or give an opinion, on law or legal services and such parts of them are privileged as contained or have opinions based on information furnished by an officer or employee of the corporation in confidence and without the presence of third persons. Radio Corporation of America vs. Rauland Corporation 18 F.R.D. 440, U.S. District Court N.D.

Illinois, E.D. (1955) and United States vs. United Shoe Machinery Corporation 80 F. Supp. 357, United States District Court D. Massachusetts (1950).

As stated by Judge Irving R. Kaufman while a District Judge in Commercio E. Industria Cont. vs. Dresser Industries, 19 F.R.D. 513, U.S. District [4377] Court S.D. New York, (1956) "The privilege should certainly not be extended to communications between an attorney and his client pertaining to the attorney's negotiations with a third party over terms and details of business transactions." In applying this principle to the facts before him, Judge Kaufman further said, "While Mr. Schwartz is a reputable lawyer, of many years standing, due to the exigencies of the situation—the client being in Brazil and the parties to be negotiated with being in the New York area—he was called upon to perform the proper, practicable and convenient task of acting as the clients' alter ego in these business transactions. In this age of high finance and international commercial transactions more and more are lawyers called upon because of their integrity and business acumen to assist clients in their business dealings. Judge Levet previously rejected plaintiff's contention that the attorney-client privilege was applicable to this situation when he denied an application to vacate a notice by the defendant Dresser to examine Mr. Schwartz (citing the authority). For the reasons stated earlier I fully concur with Judge Levet's conclusion."

[4378] When it is found that the relationship between the attorney and the client meets all of the other requirements and does not involve action as a business negotiator or a present disclosure or contemplated future communica-

tion to third persons there remains the further question of whether or not there has occurred a waiver either in specific terms or by implication. Professor Wigmore in his treatise on evidence examines the question of waiver, in a number of its aspects.

In Section 2327 of the 1961 Edition at page 634, he asks the question, "What constitutes waiver by implication?" He then answers: "Judicial decision gives no clear answer to this question. In deciding it, regard must be had to the double elements that are predicated in every waiver, that is, not only the element of implied intention, but also the element of fairness and consistency. A privileged person would seldom be found to waive, if his intention not to abandon could alone control the situation. There is always the objective consideration that when his conduct touches a certain point of disclosure, fairness requires that his privilege shall cease whether he intended [4379] that result or not. He cannot be allowed, after disclosing as much as he pleases, to withhold the remainder. He may elect to withhold or disclose, but after a certain point his election must remain final.

"(2) The client's offer of the attorney's testimony in the cause at large is not a waiver so far as the attorney's knowledge has been acquired casually as an ordinary witness but otherwise it is a waiver for, considering that the attorney ought in general not to be used as a witness (Section 1911 supra), the client ought to be discouraged from utilizing his attorney in double and inconsistent capacities, and if he has seen fit to furnish him knowledge as a witness, he should deny himself the right to invoke the attorney's function as an advisor.

"(3) The client's offer of his own testimony as to specific facts about which he has happened to communicate with the attorney is not a waiver, for the same reason as in paragraph (1) supra. But his offer of the attorney's testimony as to such specific facts is a waiver for the same reason as in paragraph (1) supra.

[4380] "(4) The client's offer of his own or the attorney's testimony as to a specific communication to the attorney is a waiver as to all other communications to the attorney on the same matter. This is so because the privilege of secret consultation is intended only as an incidental means of defense, and not as an independent means of attack, and to use it in the latter character is to abandon it in the former.

"(5) The client's offer of his own or the attorney's testimony as to part of any communication to the attorney is a waiver as to the whole of that communication on the analogy of the principle of completeness, (citing Section 2113 supra).

In Section 2328 of the same treatise, Professor Wigmore deals with waiver at a former trial. He says under waiver by joint clients, agents, assignees, "(1) A waiver at one stage of the trial should be final for all further stages, and a waiver at a first trial should suffice as a waiver at a later trial since there is no longer any reason for preserving secrecy."

These principles have been followed in this [4381] District in a number of decisions. Knaust Bros. vs. Goldsclagg, D.C.S.D.N.Y. 1939, 34 Federal Supp. 87; Munzer vs. Swedish-American Line, D.C.S.D.N.Y. (1940) 35 F. Supp. 493; and Wild vs. Payson (1946) 7 F.R.D. 495, 500.

Opinion and Order of Special Master
J. Lee Rankin, April 17, 1962

Wigmore's position as to the proposition that the privilege is not divisible has also been applied a number of times in this District. It is stated in the case of In re Associated Gas & Electric Co., 59 F. Supp. 743, D.C.S.D. N.Y. (1944), in the following terms: "The petitioners having waived as to some of the letters relating to a specific subject open the door to all the privileged correspondence between it and its attorney on that specific subject. The Court cites for that proposition Hunt vs. Blackburn, 128 U.S. 464; White vs. Thacker, 5 Cir., 78 F. 862; Western Union Telegraph Co. vs. Baltimore & Ohio Tel. Co., D.C. 26F.55; Kunglig, Jarnvagsstyrelsen vs. Dexter and Carpenter, 2 Cir. 32 F. 2nd 195; and People ex rel. Brownell vs. Higgins, 96 Misc. 485, 160 N.Y.S. 721. To like effect see United States vs. Pellier, 255 F. 2nd 441, 2 Cir. (1958) and cases cited therein.

Furthermore, once the waiver is made as [4382] Professor Wigmore says, it is general and it cannot be made special so as to be limited to a particular purpose or a particular person. See People vs. Bloom, 85 N.E. 824. The reasoning supporting this principle is developed at some length in the case of McKinney vs. Grand Street P.P. and S. R. Co., 10 N.E. 544 where the Court said: "It is claimed by the appellant that the ban of secrecy having once been removed by the patient and the information having lawfully been made public the right to object further thereto had not been conferred. There seems much reason in this claim. The patient cannot use this privilege both as a sword and a shield,—to waive when it inures to your advantage and wield when it does not—after the publication, no further injury can be inflicted upon

the rights and interests which the statute was intended to protect, and there is no further reason for its enforcement. The nature of the information is of such a character that when it is once divulged in legal proceedings, it cannot be again hidden or concealed. It is then open to the consideration of the entire public, and the privilege of forbidding its repetition is not conferred by the [4383] statute. The consent, having been once given and acted upon, cannot be recalled, and the patient can never be restored to the condition which, from motives of public policy, requires suppression of such information."

There seems to be no question but what it is the duty of the Court to examine the documents if there is a genuine dispute as to whether the privilege is applicable and determine the question. See Ellis-Foster Co. vs. Union Carbide & Carbon Corp., 159 F. Supp. 917B (D.N.J. 1958); International Min. and Chemical Corp. vs. Golding-Keene Co., 162 F. Supp. 137 (W.D.N.Y. 1958); Zenith Radio Corp. vs. Radio Corporation of America, 121 F. Supp. 792 (W.D. Del. 1954); Bruun vs. Hanson, 30 F. Supp. 602 (W.D. Idaho 1939); Radio Corporation of America vs. Rauland Corp. 18 F.R.D. 444 (N.D. Ill. 1955).

It also appears to be well established that the burden of proving that any communication is privileged is upon the person who asserts the privilege. Humphries vs. Pennsylvania Railroad Co., 14 F.R.D. 177, (U.S.D.C. N.D. Ohio 1953), where it is said: "It is indisputable that one who claims a privilege has the burden of establishing affirma-
[4384] tively that the matters for which he claims the privilege fall within its coverage." See also Mowell vs. Van Buren, 77 Hun 569 (3rd Dept. 1894); Banker's Money

Order Ass'n. vs. Nachod, 120 App. Div. 732 (1st Dept. 1907); Matter of Morrell, 154 Misc. 356 (Surr. Kings Co. 1935).

Applying these principles to the facts in the case we find that Mr. Howard R. Hughes had no official position as an officer or director with the Tool Company after the close of 1960. He was only its sole stockholder. The Tool Company has advised us by letter dated April 16, 1962, that there is such a community of interest between that company and Howard Hughes, that it produced all relevant files maintained by Mr. Hughes. It is also apparent from a number of the documents produced for examination by the Special Master that Mr. Hughes was active on behalf of the Tool Company, both before January 1, 1961 and thereafter.

The affidavit of Mr. Cook and other portions of the record show quite clearly that in many of the activities by Mr. Cook on behalf of the Tool Company he was acting as a business agent and not merely as a legal advisor. It also establishes [4385] that in his activities as a business agent he obtained information from a number of third parties and presumably communicated it to the Tool Company.

He also appears to have passed on to third parties information, positions, attitudes and claims of the Tool Company concerning numerous specific matters. Wherever Mr. Cook's actions or those of Mr. Davis or Mr. Bautzer would fit into the categories just described, and they were acting as business agents and not merely as lawyers or were expected to communicate information to third parties or receive information from third persons to be com-

munication to the Tool Company, all of such communication and information and the full scope of it would not b privileged because it does not come within the basic require ments to qualify for the privilege.

An additional question is raised as to whether the motion of the parties in this proceeding under Rule 34 which hav been sustained include documents in the hands of the partie outside counsel. The records, memoranda, writings an similar documents are described in the motions as those "i the [4386] possession, custody or control of Hughes To Company, (Toolco hereinafter referred to as Hughes To Company, and any concern or persons associated at an time with Hughes Tool Company, including its sole stoc holder)." It would appear that such documents an writings in the hands of outside counsel of the Tool Co pany while not in the Tool Company's possession or custo would be within its control.

Several New York cases dealing with discovery und New York statutes and not under the Federal Rules Civil Procedure so hold. They are LeFever vs. Lefkowit 178 N.Y. Supp. 2nd 172; In re Buono's Will, 179 N.Y. Sup 2nd 717 and Duncan vs. Hammond, 190 N.Y. Supp. 2 1018. These cases hold that the attorney is but the age of the client and it is sufficient that one person have in h possession, or in the possession of his agent or attorney otherwise under his control a paper which relates to t merits of the action. They also recognize that the attorn may have papers which are his own and distinct from tho of the client and connected with the preparation of t case. Such papers although not work papers belong to t attorney [4387] as his own and not as the agent or rep

sentative of the client and therefore not subject to the control of the client.

An example of this was a request for the typewriter that was used in preparing a will and all of the copies of writings prepared on that typewriter after the date the will was prepared—the Court held that the typewriter and such other writings were not under the control of the client and the client had no right to them and they were not producible since they were a part of the equipment and materials used by the attorney in the conduct of his office as an attorney.

[4388] It may be that in this case there are writings and documents prepared by outside counsel concerning matters that they were working on for the Tool Company that were either legal memoranda or factual memoranda that the Tool Company would have no right to demand as being within its control, or belonging to it, and in fact there may even be memoranda that the Tool Company did not expect to be made of various conversations or communications. Such writings would be outside the scope of the motions in this action.

Conclusions

Apart from the consideration of waivers the following conclusions are indicated:

1. Any party asserting the attorney-client privilege has the burden of proving the existence of that privilege as to particular documents, writings or testimony.

2. All parties under their Rule 34 motions are entitled to the production of any documents that deal with facts

learned [4389] by counsel for the opposing party, from third parties, or sources other than the client, such as reports of conversations and negotiations with anyone not an officer, agent or employee of the client.

3. All parties are entitled under such motions to the production of any documents which were prepared by counsel when such counsel to the clients' knowledge was acting as its business agent in negotiating transactions or contracts.

4. The parties are entitled under their motions to the production of any documents which show on their face that there was no privilege by reason of the fact that the discussions in question were held or the legal advice given in the presence of third parties and to all documents dealing with matters as to which the client had knowledge that there was a waiver of the privilege by reason of communication of matters related thereto to third parties.

[4390] Concerning waivers, a party waives the privilege when it fails to assert its existence, or where it produces a portion of the subject matter by the testimony of counsel in affidavit or other form. Once having put a part of the subject in issue the privilege is waived so that the entire matter may be fully developed.

Where a party puts in issue by its pleadings, the advice of counsel and its right to rely on such advice, the privilege is waived as to all advice on the matter so placed in issue, including the basis for such advice, both legal and factual.

Opinion and Order of Special Master J. Lee Rankin, April 17, 1962

ORDER

It is therefore adjudged and ordered that all parties to this litigation shall produce in response to the Rule 34 motions filed against them herein, all documents in their possession, custody or under their control, and in their hands or the hands of their agents or attorneys which come within each and all of the categories and classifications described under conclusions in the [4391] foregoing memorandum opinion.

Should any party have questions as to whether particular documents or writings come within the terms of this order for production, the Special Master will examine and rule upon such cases upon their being presented to him.

Dated April 17, 1962, signed by J. Lee Rankin, Special Master.

• • • • •

[4401] I will sustain the motions to propound and have answered the limited interrogatories about the location of Mr. Howard R. Hughes. In so doing I want to make it very clear that this interference with the right of the Tool Company to proceed with its discovery is not a precedent for any other such interference, but is granted in recognition, in the first place, that much of the documentary evidence that the Special Master has ruled is not privileged and must be produced by the Tool Company with relation to its outside counsel, demonstrates a very active participation by Mr. Hughes on behalf of the Tool Company, and it is not realistic to assume from such materials that there were not common interests between the Tool Company and Mr. Hughes throughout the period involved in this litiga-

tion—a common interest which went beyond that of the ordinary stockholder, and involved many important business decisions.

I am unwilling to preside as Special Master and permit the day to come when the [4402] parties would be entitled to take the deposition of Mr. Hughes, and then be unable to do so because they have been unable to locate him.

Furthermore, I am unwilling to sit here and allow what is brought to my attention, a large expense to be incurred, which will be damaging to TWA as well as the Tool Company, and all other stockholders of TWA, which expense would be incurred very largely or entirely for the purpose of trying to find out where Mr. Hughes is.

As far as I am concerned, if there is a cheaper or cheap way to acquire that knowledge, and make Mr. Hughes available to discharge his responsibilities concerning this litigation, the parties are entitled to it.

IN THE UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

Civil Action No. 61-2324

TRANS WORLD AIRLINES, INC., Plaintiff,

—against—

HOWARD R. HUGHES, HUGHES TOOL COMPANY, and RAYMOND M. HOLLIDAY, Defendants,

—and—

THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES, et al., Additional Defendants on Counterclaims.

INTERROGATORY PROPOUNDED BY PLAINTIFF TRANS WORLD AIRLINES, INC.—Filed May 4, 1962

Now comes plaintiff Trans World Airlines, Inc., and hereby propounds to defendant Hughes Tool Company (herein Toolco) the following interrogatory pursuant to the orders of the Special Master, dated April 17 and April 30, 1962, and under Rule 33 of the Federal Rules of Civil Procedure to be answered under oath within fifteen (15) days from the date of service hereof by an officer of Toolco.

Interrogatory

1. State whether any officer, director or attorney of Toolco has any knowledge, information or belief as to:

(a) Where Mr. Howard R. Hughes (herein Hughes) has been during the last 30 days prior to the date hereof;

[fol. 1213] (b) Where hughes is at the present time;

(c) Where Hughes will or presently intends to be during the period from the date hereof until July 1, 1962.

2. If the answer to any of the parts of question 1 above is in the affirmative, state

(a) As to 1(a) above, where Hughes has been during the last 30 days prior to the date hereof, giving sufficient information to have enabled one, not otherwise having knowledge of such facts, to have served process upon Hughes, including but not limited to the street address, including city, county, state and country, and including the exact location at such street address, such as room number and location;

(b) As to 1(b) above, where Hughes is at the present time, giving sufficient information to enable one, not otherwise having knowledge of such facts, to serve process upon Hughes, including but not limited to his street address, including city, county, state and country, and including the exact location at such street address, such as room number and location; and

(c) As to 1(c) above, where Hughes will or presently intends to be during the period from the date hereof until July 1, 1962, giving sufficient information to enable one, not otherwise having knowledge of such facts, to serve process upon Hughes, including but not limited to the street address, including city, county, state and country, and including the exact location at such street address, such as room number and location.

[fol. 1214] 3. If the answer to any of the parts of question 1 above are in the negative, state the extent to which inquiry has been made to support the negative reply.

Interrogatory by TWA to Toolco, May 4, 1962

4. State whether Nadine Henley, Kay Glenn, F. William Gay, John Holmes, Michael Conrad, Robert Marsh, Sam Barber, Grant G. Horr, Joel L. Boyce and Robert Maheu, employees of or consultants to Toolco, have any knowledge, information or belief as to:

(a) Where Hughes has been during the last 30 days prior to the date hereof;

(b) Where Hughes is at the present time; and

(c) Where Hughes will or presently intends to be during the period from the date hereof until July 1, 1962.

5. If the answer to any of the parts of question 4 above is in the affirmative, state

(a) As to 4(a) above, where Hughes has been during the last 30 days prior to the date hereof, giving sufficient information to have enabled one, not otherwise having knowledge of such facts, to have served process upon Hughes, including but not limited to the street address, including city, county, state and country, and including the exact location at such street address, such as room number and location;

(b) As to 4(b) above, where Hughes is at the present time, giving sufficient information to enable one, not otherwise having knowledge of such facts, to serve process upon Hughes, including but not limited to his [fol. 1215] street address, including city, county, state and country, and including the exact location at such street address, such as room number and location; and

Interrogatory by TWA to Toolco, May 4, 1963

(c) As to 4(c) above, where Hughes will or presently intends to be during the period from the date hereof until July 1, 1962, giving sufficient information to enable one, not otherwise having knowledge of such facts, to serve process upon Hughes, including but not limited to his street address, including city, county, state and country, and including the exact location at such street address, such as room number and location.

6. If the answer to any of the parts of question 4 above are in the negative, state the extent to which inquiry has been made to support the negative reply.

7. State whether any of Toolco's employees, agents, and/or representatives, including but not limited to those persons employed by Toolco in Los Angeles, specifically at 7000 Romaine Street and 915 N. Highland Avenue, who, during the year preceding the date hereof, have performed services of a personal nature or otherwise directly for Hughes, have any knowledge, information or belief as to:

(a) Where Hughes has been during the last 30 days prior to the date hereof;

(b) Where Hughes is at the present time;

(c) Where Hughes will or presently intends to be during the period from the date hereof until July 1, 1962.

[fol. 1216] 8. If the answer to any of the parts of question 7 above is in the affirmative, state

(a) As to 7(a) above, where Hughes has been during the last 30 days prior to the date hereof, giving suffi-

cient information to have enabled one, not otherwise having knowledge of such facts, to have served process upon Hughes, including but not limited to the street address, including city, county, state and country, and including the exact location at such street address, such as room number and location;

(b) As to 7(b) above, where Hughes is at the present time, giving sufficient information to enable one, not otherwise having knowledge of such facts, to serve process upon Hughes, including but not limited to his street address, including city, county, state and country and including the exact location at such street address, such as room number and location; and

(c) As to 7(c) above, where Hughes will or presently intends to be during the period from the date hereof until July 1, 1962, giving sufficient information to enable one, not otherwise having knowledge of such facts, to serve process upon Hughes, including but not limited to his street address, including city, county, state and country, and including the exact location at such street address, such as room number and location.

9. If the answer to any of the parts of question 7 above are in the negative, state the extent to which inquiry has been made to support the negative reply.

[fol. 1217] 10. State the name of every person who participated in the preparation of the answers to the foregoing questions.

Cahill, Gordon, Reindel & Ohl, Attorneys for Plaintiff, Trans World Airlines, Inc., Office and P. O. Address, 80 Pine Street, New York 5, New York.

Interrogatory by TWA to Toolco, May 4, 1962

[Doc. 96]

[CAPTION] 61 Civ. 2324

Before: Hon. CHARLES M. METZNER, District Judge.

New York, May 17, 1962, 10 a.m.

[APPEARANCES]

• • •

[2] The Clerk: Trans World Airlines, Incorporated v. Howard R. Hughes, Hughes Tool Company, and Raymond M. Holliday, defendants and The Equitable Life Assurance Society of the United States, et al., additional defendants on counterclaims.

The Court: I don't have the TWA papers. Did you file them downstairs?

Mr. Sonnett: We submitted a very brief memorandum this morning, your Honor.

The Court: All right.

Mr. Sonnett: And TWA is resting on the main briefs submitted by Mr. Kaminer.

The Court: All right. Miss Lea.

Miss Lea: May it please the Court, may I first explain, your Honor, that up until this morning Mr. Davis intended to be here and at the very last minute found he could not. We apologize for his not being able to attend, and I am telling you this in kind of an anticipatory apology for my argument, as well, which might be a trifle disjointed under the circumstances.

The Court: You don't need any apology.

Miss Lea: The Tool Company is here seeking review of the Special Master's ruling primarily in so [3] far as said ruling is determined to have been a waiver of any attorney-

client privilege which Toolco would otherwise be entitled to assert.

The Special Master was given an opportunity to review to some extent the documents with respect to which Toolco claimed privilege, and having reviewed them stated on the record in so far as he could determine from the documents themselves they weren't communications between attorney and client and communications which did contain legal advice and but for a waiver would be communications which would be subject to a claim of privilege and not producible.

Following some argument and the submission of memoranda on behalf of the various parties, the Special Master determined that Toolco had waived its privilege with respect to some of the communications between attorney and client by reason of the fact that an affidavit had been filed by Raymond Cook in a Civil Aeronautics Board proceeding, and that by reason of the fact that Toolco had pleaded as one of its defenses advice of counsel.

The question, it seems to me, when boiled down is really a very simple one. Waiver requires two elements. It requires a disclosure and it [4] requires a disclosure of communications otherwise privileged on occasion, and we think that in part, at least in this case, the determination of each of these elements requires inquiry into the facts surrounding waiver and into the facts surrounding the creation and existence of the privileged communication itself, and that on the basis of the record that the Special Master had before him at best there is no basis at all for a finding that a waiver had in fact taken place of any communications—any communications otherwise privileged.

Now, in so far as the Special Master found and the opposing parties urged that the affidavit submitted by Mr. Cook

to the Civil Aeronautics Board constitutes a waiver, our position is this:

A reading of the affidavit, a reading even of those paragraphs which have been quoted by the defense, Irving Trust and Sessel, the memorandum submitted to your Honor indicate that the information which Mr. Cook supplied in the affidavit to the CAB and the statements which he made to the CAB was information and statements which came to him as, in effect, a witness to the events which had transpired, that is, that Mr. Cook observed events, participated in trans-[5]actions, and by reason of his observations and participation was able to execute an affidavit which related the facts involved therein.

Such a relation of facts is relation of material which is not privileged. The attorney, or any individual who observes facts and participates in events is on some occasions required, or at least in a position to state those facts and repeat those facts without there being any waiver of any kind. There can't be any waiver unless there is a privileged communication to the extent that he himself observes it and does not relate facts, or does not relate information which came to him from his client by way of a privileged communication. There is no privilege and there is no waiver.

This is a situation which applies to Mr. Cook's affidavit. The examples are quoted here in defendant Irving's and Sessel's brief, which indicate this, and I would just like to advert to them very briefly.

They begin on page 15, your Honor, and the quotes go on for several pages. Starting on page 15, paragraph 17—and I will briefly go to those portions which are underlined and which opposing [6] parties apparently think are most supporting of their point of view—they have here underlined from paragraph 17:

Transcript of Pretrial Hearing, May 17, 1962

"Accordingly Toolco and TWA did not seek to negotiate any interest rate until after Irving had formed the banking group,"

and then go on to say, underlining paragraph 18:

"When Toolco protested, notwithstanding the representations made to it by Sessel, no opportunity had been given to TWA to negotiate."

We can go on and on here, and it is apparent from a reading of all of these that these are objective, let me call them, facts, observable by Mr. Cook in the course of whatever it was that he was doing, which information did not necessarily come, and there is no indication from the face of the affidavit itself that this information did come to him in the course of privileged communications from a client.

These are things which he saw happening and these are things which he learned otherwise, say, as far as the face of the affidavit indicates than by communications from the client.

If this is so, then this information is not privileged. If the information is not privileged, [7] then the statement cannot be a waiver of any privilege.

The whole affidavit itself, I believe, is attached to our moving papers, and going through it even single paragraph by single paragraph fails to disclose one instance in which the affidavit itself recites or indicates, or in any manner tends to show that the information which Mr. Cook has put down therein is information which he got from the client in the course of a confidential communication.

That is our position with respect to the affidavit itself, except that I would say that to the extent that any of the opposing parties believe that they can show that any other statements contained in the affidavit were not statements

learned by Mr. Cook in the objective fashion as distinguished by way of communications from the client himself, that such facts, or that a determination of such facts at the appropriate time may indicate that a waiver has occurred.

This is not our position. We don't believe that any such facts exist, that they could show them, but our position is that if, assuming arguendo such facts do exist, they must be shown and they must be placed on the record before there can be any proper [8] finding that a waiver has, in fact, occurred.

This has not been done. There is nothing in the record, except argument of counsel and memoranda, and this is an insufficient basis and it is certainly no factual basis upon which to find that a waiver has occured with respect to the statements found in the Cook affidavit.

With respect to the second major point of contention which we have here, and that is on the pleading of advice of counsel, the Special Master determined that by virtue of the fact that Toolco [in] its answer had set up a partial defense to some of the allegations of the complaint, that the actions which it had taken, which were alleged to have been willful and malicious interference with TWA's business, were taken on advice of counsel, whatever those actions were, and they have not been determined yet.

The complaint was general. Mr. Tillinghast has testified with respect to some letters which he states constituted this willful and malicious interference, and if that is all that TWA claims we have one situation. What more they claim, we don't at this moment know.

However, the Special Master determined that [9] merely by virtue of pleading this, putting it in our answer, we have waived the attorney-client privilege with respect to such materials.

Again, we think that this was error. We think it was error because the ruling failed to take into account one of the two essential elements of waiver, which is that there must be a disclosure of the confidential communication. Merely saying that you relied upon advice of counsel without saying what the advice of counsel is, is not a waiver. It is not a disclosure of any privileged communication. Until you have had that disclosure, you are not entitled to assume that there has been a waiver and you are not entitled to look at documents otherwise privileged.

Now, the fact that having set this up as a defense, Toolco may be required at some point, at some appropriate point to disclose what it is it is relying on of advice of counsel and may say that relying on merely a statement of counsel in and of itself is a disclosure of communications sufficient to waive the privilege. We don't believe it is. Whatever we may be required to do at a later point, will happen then.

[10] We are talking as of then, and the waiver as of today, we submit, has not occurred by reason of the pleading in the complaint itself.

This advice of counsel, aside from the problems with it that I have already indicated, become somewhat more complicated by the fact that what the advice was, what the client relied upon, what the scope of the defense itself is are again much as in the case of the affidavit questions, which require determinations of fact and which require inquiry into facts. Without knowing the underlying circumstances one can't say, one can't determine the breadth of the disclosure, assuming that a disclosure has, in fact, taken place, or the breadth of the waiver.

Again, we submit, that the Special Master was in error in determining on the basis of no facts at all, but merely on the basis of the pleading itself, that—and he has found a

very broad waiver of the attorney-client privilege on the basis of this pleading.

In summary, it is Tooleo's position that at this point there is no basis in the record upon which a finding of waiver can be predicated.

It is further our position that neither the [11] Cook affidavit nor the pleading itself is any waiver of the attorney-client privilege.

We respectfully request that your Honor reverse the ruling of the Special Master in this respect.

The Court: Mr. Kaminer.

Mr. Kaminer: May it please your Honor, I have been selected by my colleagues to save your Honor's time and to present the argument to you so there won't be so much duplication.

My first point is that the appeal is, of course, entirely untimely. I don't know whether your Honor had a chance yet of reading our memorandum. I am merely asking this because I don't want to bore you by repeating too much.

The Court: You go on and make your argument.

Mr. Kaminer: I will, sir.

In the first place, the Special Master set a time, which he then extended, for ruling, which was the appeal had to be noticed—a notice of appeal had to be filed by April 27th. This was the extended time.

On that day, my learned opponent sent a letter to him interpreting the opinion of the dis-[12]tinguished Special Master as being academic shadow-boxing and said, "Of course, this is all very well, but we don't have to produce anything."

That is the import of the letter and it is in this memorandum which we handed to your Honor.

The Special Master writes back on the next business day and says, "This is not so at all." There is more correspond-

ence, and the Special Master specifically said, "I will not make a new order to extend the time to file a notice of appeal," and indeed, he said, "I will not regard you in default for not complying with giving these documents over right away until such time as Judge Metzner shall determine either that the time for an appeal has expired, or that the order should be sustained," et cetera.

The Court: Let's assume that we are dealing with the substance now and not the question of whether—

Mr. Kaminer: I will come to it right away, your Honor. What has happened here in this case—and I am not saying this against my very charming opponent who is arguing here today. I didn't expect to have to confront her. I rather expected to con-[13]front Mr. Davis.

The Court: Oh, I don't think Miss Lea is going to rest on her charm to defeat your argument and put you in an unfavorable position.

Mr. Kaminer: What I have to say is no reflection on her. That's what I want to say.

Miss Lea: Thank you.

Mr. Kaminer: We have been getting the worst runaround which I believe this Court has ever heard of. Arguments have been made over and over and over again, the same arguments, and now we are still here and haven't got the documents to which we are entitled.

Miss Lea has cut the subject a little shorter than it is and the distinguished Special Master's opinion is a little broader than what you heard about.

Now, here we have Mr. Cook, who is an outside lawyer from Texas, whom your Honor has seen, who, as his own affidavit and the other affidavits in the binder show, has acted as the negotiator all the way through.

That is a method of Mr. Hughes. He sends lawyers and then later on we are told, "Oh, well, these [14] were lawyers, too bad, it's privileged."

The law is very well conscious of that kind of thing. There are two principles of law firmly established; one, if a lawyer is a negotiator, no privilege.

My friends have cited something in their brief, but they don't always like to cite the full, relevant parts that they heard, which, of course, is human and quite understandable, but the fact of the matter is that in the very article which they cite as saying that the burden hasn't been overcome, it is said that where it is shown that the lawyer has acted as a negotiator there is no privilege and the Master has so found and the basis for his finding are the facts in the Cook affidavit and various other facts to which I will refer.

Now, as far as waiver is concerned, waiver comes about in a variety of ways, and once it is made it cannot be recalled.

A waiver occurred here, first, when Mr. Cook filed this affidavit, which is a part of this record here, having been made so by other affidavits, and in which he disclosed not just what he learned from third parties—there have been read just a few [15] of the excerpts—but the state of mind of the Tool Company, what they concluded, that they decided they wouldn't negotiate this, that they decided they would do that.

Now, all that could have come only from the Tool Company, or Mr. Hughes, which is the same thing, the alleged client, and the affidavit says the facts herein came to me as counsel.

Now, his own affidavit says that. He can't go back on that. The Special Master pointed that out in his opinion.

You are told that the Special Master in view of the documents said on the record that they didn't seem to him to—

I forgot what Miss Lea said—to be anything but—to contain any factual communications.

Well, first of all, the fact is that the important papers have never been shown to him, as far as I know, because after that statement by the Master, the Master inquired whether all the files of the Cook firm and Mr. Bautzer had been shown, and I know of no fact that they have been shown, but that is utterly immaterial.

Whether they have all been shown to him or [16] not, the fact of the matter is that the Cook affidavit clearly sets forth facts, A, which show that Cook was the negotiator so there was no privilege anyway.

The law has said and the Master has cited to you in your brief that if a client uses a lawyer not in the proper way for which a lawyer should be used, that is, to give legal advice, but as a negotiator there is no privilege and we have cited you a lot of cases.

The fact is also, as the Master has set forth with abundant quotes, that where you call a witness in whatever form and proffer—and that witness is a lawyer and you proffer that witness' testimony, that is the end because the law does not favor that kind of thing.

You have seen, no doubt, the quotations from Wigmore, and the cases supporting it.

Now you are told that, of course, this waiver in the answer about legal advice doesn't mean anything because the legal advice isn't disclosed.

Well, there are two very interesting cases on this subject, both in New York. The first one is Smith v. Bentley and the pleading said that the defendant had paid a portion of the royalties in [17] question to another defendant upon the advice of his counsel that he was legally entitled thereto.

That's just exactly what is disclosed here, that all the actions of the Tool Company with respect to the matter alleged in the complaint were taken upon advice of counsel.

In another case by Judge Learned Hand—it was quite an interesting case. It is called United States v. Cotter—this occurred: It was a criminal case and the defense suggested that they had employed counsel to advise them when they had been investigated and that, therefore, the lawyer would not have countenanced any ill will. Mind you, they did not say what the lawyer said.

The prosecution, in addressing the jury, suggested that if this was the case, the defendants should have called the lawyer and that the prosecution couldn't have done so because the communications would have been privileged.

The Court of Appeals said that all the defense arguments were no good and then quoted that the defendants might, however, have made an even better argument. They might have added that their own argument about counsel was itself an [18] abandonment of any privilege, whether it had originally existed or not.

Now, the record is full of waivers. You cannot do your business by lawyers and then hide behind alleged privilege. You are to use lawyers as counsel, but when you put them on the stand, when you plead their advice, that is the end of privilege.

And an interesting thing is that throughout this case there has been an enormous reluctance to comply with one of the most fundamental questions, namely, that if you are claiming privilege and withhold an otherwise relevant document—your Honor understands there is no question here of relevancy; these are documents called for by the orders. This is not a case your Honor recently decided; this is a case of whether or not they are privileged—when you claim

privilege and it is challenged, you have got to submit it to the Court.

Some documents were submitted. Now, in this very brief again, which they submit to your Honor today, we are told that there is not enough to make it necessary to submit them.

I think it is on page 5. The Master has said, one, there has been a complete waiver of anything, [19] of the subject matter which Mr. Cook described in his affidavit. We have summarized what the subject matters are, but you will find they are identical to 99 per cent of the allegations of the counterclaims.

And they state what Tool Company did and why it did it and how could that have come from third parties, their state of mind. And that is what the Master pointed to.

You have a pleading which says we relied on advice of counsel in doing the acts which the complaint complains of here, and, of course, as the Master pointed out in one of the letters which he had to write because his, I thought, very clear and learned opinion was not clear to my learned friends, he said, "You have to produce everything written since 1960 which is relevant," and anything which was before counsel—and this is what we are really talking about—they write letters attacking, let's say—to give a good example and a very relevant one—the voting trust.

Of course, when you do that and say, "We did this on advice on counsel," then everything which was before counsel and formed his advice comes in.

I remember two cases in point which I cited on the record before the Special Master. We didn't [20] put them in our brief, just by oversight. I will try to get it out fast. But they were dramatic.

In one case a lawyer's advice was pleaded as a defense. That opened the door to any other advice which the client had received on the subject matter and it turned out to the great chagrin of the party that he had first consulted the lawyer who said, "You can't do this."

Then he consulted a lawyer who said, "All right," so he pleaded that second lawyer's advice. You cannot have a partial waiver.

And I was in a case where a special master—a hearing examiner, a judicial officer of the Federal Government—held this—it was also very dramatic when it happened—and that case is American Cyanamid, Docket No. 7211 before the Federal Trade Commission.

There a letter had been written to the Attorney General of the United States in 1955 by counsel saying that the client had been advised that a certain patent was invalid.

Many years later, an antitrust proceeding was instituted and it was ruled that that letter opened the door to all communications with counsel on this question of the validity of the patent.

[21] Of course, you cannot waive partially. That would be a wonderful thing and there are a lot of cases which tell you and point out graphically how unjust it would be if you could just disclose that much.

Now, my friends say the time hasn't come. Well, we have been at it for a long time. Your Honor has been at it longer than we additional defendants.

The time had come to produce these documents on March 15th. That was when the time had come under the orders of the Court and of the Special Master, but we are told we have to take testimony when we have the sworn affidavit in the record which says that the man who made it learned the facts as counsel—we quoted that portion—and which shows

the state of mind of the company; when we have a pleading in the case, when we have additional affidavits which are also in the binder, filed in this very case, and, in addition to all of that, we have another affidavit of which you haven't been told a thing. That is the affidavit of Mr. Holliday, an officer of the Tool Company.

Before I go into that, let me suggest to your Honor that it has been stipulated that the Cook affidavit, of which we have been talking, which was filed [22] in Washington—that its filing was authorized by the Tool Company, no question about that, but it was not filed by itself. It was filed together with another affidavit by Mr. Holliday, and Mr. Holliday says, among other things, that the Cook affidavit describes all the events accurately which happened before a certain period of time, so that is the client himself.

Holliday is an officer, as your Honor by now knows, of the Tool Company.

And then it says that the Tool Company has acted on the advice of counsel to take steps which its counsel advised were required to protect its interests with respect to subsequent period of time.

Then it shows that Toolco, through its counsel—never mind, your Honor, what I talked about using counsel as businessman—through its counsel and upon his advice did a certain thing.

You have got to take these two affidavits together, as the Master did.

Now, I don't believe that there can be any question—I conclude, if I may, with that, your Honor—that the Master was right when he said, "I have ruled and told you what documents I consider as waived and what kind of documents were never published [23] at all," such as when a lawyer acts as negotiator, such as a lawyer learning facts from third parties, and the like.

Now, "You submit those, produce them forthwith, and any documents as to which you have questions—submit them to me and I will rule."

We have cited pretty ancient and pretty recent authority to your Honor to show there is no doubt that he was right, that it is not the province of counsel to determine what is privileged, but that of the Court.

In one fairly recent case the Court appointed a Special Master for that very purpose if the parties couldn't agree to it.

Now, we have got here a Special Master so there can be no question about it. I don't think that I have to waste your Honor's time any more. I think it is so clear, A, that the appeal is untimely, and, B, that the Master was, if I may so, as right as rain, but I think I will cease and desist.

Mr. Sonnett: May I have several minutes, your Honor?

The Court: Certainly.

Mr. Sonnett: I think the point about the [24] appeal being not timely is far from having a technical point when your Honor considers—

The Court: I am going to go to the merits, Mr. Sonnett; forget about this question.

Mr. Sonnett: Yes, your Honor.

May I suggest while I normally wouldn't advocate a technical point, this particular matter of privilege was argued five times before the Master over a period of several months.

The matter has had very lengthy consideration, and while I do not suggest that your Honor should take a technical position, I think that the fact that it was argued five times and a very careful and learned opinion was written and that the Master extended the time to appeal and that the appeal was two weeks after the date and that the argument before your Honor was adjourned to today so Mr. Davis could be

here, and he is not here, all of these, I think, being matters of record, should be considered in determining how much faith really there is on the part of Hughes Tool Company in this so-called appeal.

Now, I will be very brief. I think Mr. Kaminer's argument in brief covers the matter generally, [25] but there is one aspect in particular that I would like to emphasize.

Your Honor will find in the brief submitted by Mr. Kaminer a reference on page 22 to an affidavit of August 8, 1961, signed by Chester C. Davis, in which he stated—and I quote in part—"All of the acts alleged in the complaint to have been done in and after 1960 were done upon my advice as counsel for Toolco."

In the answer—I think it is in paragraph 40—the allegation is made:

> "All of the acts alleged to have occurred since 1960 were done upon advice of counsel."

If your Honor will look in due course—I don't suggest taking the time now—at the allegations of the complaint, and in particular those relating to the year 1961, your Honor will find, among other things, that it is charged there that assertions were made as to legal positions during 1961, positions of Toolco, and that these related to, among other things, the position of Toolco, that it had the right to terminate the voting trust other than in accordance with its terms, and the like.

[26] Now, having asserted in sworn affidavits and in a formal pleading to this Court that every act we allege, including the taking of these positions, every act we allege as having occurred in 1960, was done upon the advice of counsel, we now find characteristically Mr. Davis is backing away from that, because if you look at his affidavit in sup-

port of this appeal in paragraph 14 you find now a disclaimer.

It is said there that Toolco obviously did not intend to set up advice of counsel as a defense to a charge of antitrust violations.

If, however, the allegations in paragraph 40, that is, of the answer, are construed as asserting the defense of advice of counsel, with respect to the antitrust charges—which, incidentally, it does—Toolco requests that it be permitted to amend its answer so as to clearly state the defense which it intended to assert.

In other words, it now appears from the record that they do not take the position that any advice of counsel was or could be a defense to the second antitrust cause of action.

Your Honor will further find on page 8, paragraph 15 of the same Davis affidavit, now before [27] you, a further very interesting statement beginning at the bottom, 7:

> "However, the letters identified as constituting willful and malicious interference were either written by counsel, or on oral advice of counsel, and no written communications exist with respect thereto."

Now, this is very strange. We have an affidavit, we have an answer asserting that every act we allege as having been committed in 1960 was done on advice of counsel, but the closer you get to it, the more difficult it becomes to find any evidence of the advice.

Now, certainly, if this is artful pleading in the affidavit, if what is really being said is that there was advice on the subjects referred to in the written communications, we are clearly entitled to have that advice because the privilege, if any, has been waived both by the affidavit and the answer.

If, in fact, there was any legal advice, well, let's not waste time in a further effort to conceal that fact. Let's know what we are doing; but I don't think that the Tool Company can have it both ways.

[28] They can't assert that there was legal advice and that that's the reason these acts occurred by way of concession and avoidance and now suggest that perhaps there wasn't any.

Perhaps counsel himself did this—perhaps—and maybe this is what they are suggesting—these weren't the acts of the Tool Company, but the assertions made were made in the name of the Tool Company.

Now, it just seems to me, your Honor, when you consider that you granted our motion to produce in December of last year, that the production was to have occurred in March, that we have been at this privilege problem five times before the Special Master, arguments ad nauseam, briefs ad nauseam, that the Special Master worked on this at great length. He issued a very careful opinion.

Only two of the conclusions he expressed are in any event raised by this so-called notice of appeal.

As your Honor will see from the small brief we submitted today, it seems to me that what we need is for the Court to dispose of this once and for all and let's get at the documents showing this advice, if, indeed, there are any, or let's establish that [29] there aren't any.

Thank you, your Honor.

The Court: Miss Lea.

Oh, I am sorry.

Mr. Barr: If your Honor please, my name is Barr from Cravath, Swaine & Moore. I don't want to say anything more about the legal problems involved. I think Mr. Kaminer covered them more than adequately.

Transcript of Pretrial Hearing, May 17, 1962

Your Honor, this problem has been in this lawsuit since the initial defendants first came into it. Since prior to 1960 the Tool Company has had a policy of conducting almost all of its business negotiations through three attorneys:

Mr. Raymond Cook, Mr. Gregson Bautzer and lately Mr. Chester Davis.

Now, all of those attorneys have at one time or another conferred, negotiated to bargain with my clients and with the clients of every other attorney in this room regarding the agreement or failure to agree about the subject matter of this lawsuit. These are the people who dealt on behalf of the Tool Company.

Now, the Special Master quite properly ruled that as to those negotiations, the bargaining, [30] the facts and circumstances and the documents are not privileged; there is no privilege involved there and those must be produced.

I take it the Tool Company doesn't now challenge that ruling of the Special Master, but those documents have not been produced, although they have been ordered to be produced by the Special Master.

Then, as to the question of waiver, your Honor, the Tool Company has followed since the beginning of this lawsuit a course of conduct of using the advice of counsel and the information of these attorneys as a sword against the additional defendants because all of these activities which the TWA charges in its complaint the Tool Company has done, they say, "No, our defense is that we didn't do it; the additional defendants did it."

So when they pleaded advice of counsel here and when they use the information that their counsel have gained acting as business advisers, they are using it against us.

Now, there are several other things. You have heard about the Cook affidavit and certainly that is the broadest kind of waiver I have ever seen.

I think what it really was was a preliminary [31] draft of the counterclaims, because many of the paragraphs are absolutely identical with the counterclaims, and much of the other language is also, I think.

That affidavit was filed in another proceeding, it is true, and there has been a nice little record established down in Washington and the examiner has found, and it has been publicized throughout the country, that there was no evidence in that record of any wrongful conduct by Hughes with respect to TWA.

Now, in addition to that, Mr. Cook has announced to the Special Master many times off the record, and it is in the Special Master's opinion, that he will be a witness in this proceeding, and he is not appearing as counsel in this proceeding because he will be a witness.

You heard about the Holliday affidavit, which is also a very broad waiver. Section 40 of the answer, paragraph 40, is also a very broad waiver and again, your Honor, a sword against us.

And the Davis affidavit of August 8, 1961, and Mr. Holliday's affidavit of August 7, 1961, both of those say everything the Tool Company [32] did in and after 1960 they did on advice of counsel.

Now, the Special Master on that aspect, which is really the other part of his ruling here, said, "That on the basis of all of those things I find that there has been a waiver as to the matters contained in those affidavits and the answer," and so on.

Miss Lea has told you that there isn't any waiver in the Cook affidavit because it is all just facts. If that is so, I don't see what problem they have because the Special Master's ruling simply says whatever documents are covered in the subject matter discussed in these affidavits, and so on, must be produced.

Now, he doesn't say Tool [Company] could drive them all over and produce everything immediately. He says, "If you have any problems with any of these documents, bring them to me and I'll rule on them. If you think a document is still privileged, bring it to me and I'll look at it and I will decide."

Further, he says, "If you think a document is not covered by the waiver, bring it to me and I will decide"—but the Tool Company simply refuses to do that.

[33] They come here and tell your Honor that they have been ordered to produce. What they have been ordered to do is produce the things as to which, A, they no longer claim the privilege; B, they no longer believe, or they now understand there has been a waiver, and as to the rest of the documents they are to bring them to the Special Master and show them to him.

Your Honor, Mr. Kaminer has included the order of the Special Master and the opinion in the order. I won't read it to you, but I would like to refer you to page 4388 to 4391, which contains his conclusions and order, and it is very clear from that—

The Court: I have read it.

Mr. Barr: Now, sir, on the basis of the considerable amount of work—and there are over 250 pages of oral argument before the Special Master on this subject—there must be another 250 pages of briefs and affidavits submitted to the Special Master on this subject—the Special Master has read a substantial number of the documents. The documents that he has not yet read he has asked that the Tool Company furnish to him so that he may read [34] them.

Moreover, he has said in his order, "If you have any problems about particular documents, bring them to me and I will rule on them individually," but instead we get this appeal.

Your Honor, I submit, that the appeal is a complete waste of everybody's time.

What they ought to be doing is submitting to the Special Master the documents about which they still have a problem—and nobody knows what they are yet, whether there are any, or how many there are, how many of the documents they are still withholding they are ready to admit should be produced, but it has been two months now, Judge, almost since we have been in this case that we have been trying to get at the facts that these three lawyers, who are going to be the principal witnesses in this case, know about, and I believe we are entitled to have them, sir.

Thank you.

The Court: Miss Lea.

Miss Lea: I really hardly know where to begin in reply, your Honor. There has been so much said that first I really don't understand. I don't [35] know how it goes to the fairly simple issue which I tried to indicate at least we think is before your Honor, and to the extent I do understand, most of it is just plain wrong, a misstatement of the fact as well as law, I think.

The suggestion has been made, I think, that Toolco is somehow remiss in seeking to protect its rights by asking for a review before your Honor rather than producing documents either one by one and claiming the privilege with respect to them and then being confronted with the necessity of taking an appeal to review if we found it required under the circumstances from each document rather than trying to get the situation straightened out at the very beginning, get the whole question of privilege straightened out at this point, which is what we are trying to do.

It seems to me much more reasonable and certainly much more expedient, or expeditious to do it that way rather than to take time doing it in piecemeal fashion.

During the course of the several arguments we have had a lot of stones thrown at us. I suppose we ought to be accustomed to that by now. We ought [36] to be trying to get it fixed at any rate and trying to pick up some of them and indicate what the situation really is.

I think each of the gentlemen who spoke said that Toolco did not make available to the Special Master, as I stated in my argument, all of the documents with respect to which it claimed privilege.

That just isn't so. Mr. Kaminer and Mr. Barr, I think, mentioned the documents reposing in the files of Mr. Bautzer. To the extent that those are not Toolco documents, to the extent that those documents belong to the various law firms and various individuals, a motion directed at Toolco does not require their production and they have not been produced.

I don't see that a party can be or is required to make available or to turn over, or, indeed, is capable of making available things which don't belong to it. To ask us to do it and then to castigate us for not doing it, it seems to me is sheer nonsense.

The remarks which have been made with respect to the general statements concerning the attachment of privilege which was made by the Special Master during the course of his opinion are general statements with [37] which Toolco is in general agreement. It is the application of some of those principles with which we quarrel.

We recognize them when an attorney acts in a non-legal capacity and communicates with his client matters relating to that non-legal capacity, matters which are not otherwise within the confidential relationship, that such matters are not privileged. We understand that. We always have.

The question, however, whether any particular individual at any particular time was acting as a negotiator and solely

as a negotiator and not acting in any manner as attorney with respect to which the privilege would attach is again a question of fact, and Mr. Barr got up and made what he claimed were some statements of fact. If he intends to testify on the subject, that is all very well and good, but let's make sure that what he is doing is testifying as to facts which he claims that he knows and let's do so at the proper time and in the proper place.

Mr. Barr's statements, with all deference to Mr. Barr and the great respect I have for him, are not facts upon which a finding of waiver can be based on the state of this record.

[38] Mr. Kaminer made some comments about waiving the privilege when you offer the testimony of the attorney in evidence, or where you put the attorney on the stand to testify with respect to certain facts.

First of all, with respect to a matter of who is going to be a witness, I do not recall that the Tool Company has ever said that it would call any of its attorneys as witnesses. My understanding of the situation is that there have been occasions that others may be required to call them in and that they may appear as witnesses for that reason. I am not absolutely certain about that. I may be in error.

In any event, it doesn't really make very much difference because until the time that they get on the stand, until the time that they relate or disclose privileged communications, there isn't any waiver. What may happen tomorrow or next week or next month is no basis for saying that today you have waived a privilege which existed up until today because some time you may do something different.

Well, let's wait until something different happens. At that point it may be appropriate to find that a waiver has occurred. It certainly isn't [39] so now.

There were also statements made with respect to Mr. Cook's having stated that he was counsel for Tool Company during a certain period. Learning facts as counsel and learning facts from the client in the form of privileged communications, or confidential communications to which the privilege attaches, are two very different things. The fact that Mr. Cook may have been acting as counsel and may have been told by Mr. Zilch something which affects his activities as counsel does not mean that if he discloses what was told to him by someone unconnected with the client that just because he happens to be the attorney in that instance he has waived the privilege. It is only the communication from the client to the attorney, or conversely, which the privilege affects. Those are not matters which on the face of the Cook affidavit are being disclosed here.

I just don't understand the arguments of counsel in so far as they tend to indicate otherwise. I think your Honor, when he reads the Cook affidavit, will be able to determine that in so doing.

Mr. Kaminer: Your Honor—

Mr. Barr: If your Honor please,—

[40] The Court: I have heard enough.

Mr. Kaminer: May I point one thing out?

I won't repeat a word I said, but I would like your Honor to look at page 4385 of the Special Master's ruling. That is in the binder, sir. I can hand you up another copy. We have it all here.

The Court: You have it here. I have a copy here, have I not?

Mr. Giddings: It is in the square binder, your Honor. Here it is.

The Court: 43—what?

Mr. Kaminer: —85, sir.

Your Honor has just been told that, of course, they haven't produced anything in the hands of outside counsel because they don't have to. Now, here is a ruling by the Special Master which says—has your Honor found it?

The Court: Go ahead.

Mr. Kaminer: (Reading):

> "An additional question is raised as to whether the motions of the parties in this proceeding under Rule 34 which have been sustained include documents in the hands of the parties outside counsel. The records, [41] memoranda, writings and similar documents are described in the motions as those in the possession, custody or control of Hughes Tool Company."

I leave out the parenthesis.

Maybe I should read it:

> "Toolco hereinafter referred to as Hughes Tool Company and any concern or persons associated at any time with Hughes Tool Company, including its sole stockholder. It would appear that such documents and writings in the hands of outside counsel of Tool Company while not in the Tool Company's possession or custody would be within its control"—

and then he cites various cases.

Now, we are told that these papers have not been produced. I haven't even heard this argued, and there it is in black and white, that they have to be and there is an order that they have to be.

The other thing I want to say is about the Cook affidavit, but I think there I best rest on what has been said because your Honor says you have heard enough.

The Court: All right. The only comment I [42] have is that nobody, including the Special Master, cited In re Colton written by Judge Metzner on this problem about six months ago. It is on appeal now before the Court of Appeals.

Mr. Kaminer: Your Honor, we hadn't found it. We certainly would have.

The Court: I said that facetiously. I will write to the Special Master and tell him.

Mr. Kanimer: Has the case been published yet, sir?

The Court: It is in the advance sheets. It is on appeal, though. It was argued. It has been pending now for over a month.

[APPEARANCES]

• • • • •

[4472] The Special Master: I will overrule the motion to strike the answer of Mr. Holliday. I further order and direct that unless Mr. Hughes authorizes his counsel or some other person in writing, in form satisfactory to counsel for TWA and the Special Master, to accept service of a subpoena to appear for the taking of his deposition on or after July 1, 1962, at [4473] such time as it may properly be reached under the orders of the Court, by June 20, 1962, that Hughes Tool Company answer the interrogatories as presented, except as modified by the statements of Mr. Sonnett this morning.

I did not direct that Mr. Holliday personally have to answer the interrogatories, because I interpret the interrogatories as reaching such information as Mr. Holliday has.

Mr. Barr: If this matter is concluded—

The Special Master: I want to make it clear on this record that where I provide that the order will not require the answering of the interrogatories if Mr. Hughes authorizes the acceptance of a subpoena, it is only a subpoena for his appearance for the depositions, and I am not requiring that he authorize the service of process in this case upon himself. I want to make that clear in the record.

TWA's Notice of Motion and Affidavit, June 25, 1962

[Doc. 305]

[CAPTION] 61 Civ. 2324

NOTICE OF MOTION

SIRS:

PLEASE TAKE NOTICE that upon the annexed affidavit of John F. Sonnett and all prior proceedings herein, the undersigned will move before Hon. J. Lee Rankin, Special Master on the 2d day of July, 1962 at 10:00 A.M. or as soon thereafter as counsel can be heard,

(a) For an order pursuant to Rule 30 (d) of the Federal Rules of Civil Procedure terminating the deposition of plaintiff Trans World Airlines, Inc. by its President, Charles C. Tillinghast, Jr. as of July 2, 1962; and

(b) For a further order determining that Rule 4 of the Civil Rules of the United States District Court for the Southern District of New York, effective July 1, 1962 is applicable in the instant case; and

(c) For a further order directing that counsel for all parties shall meet and come to agreement upon the schedule of depositions under said Rule 4 and that should counsel fail to agree on such schedule then

the Special Master, on July 12, 1962 will determine the order of depositions that will be followed.

Dated: New York, New York
June 25, 1962

Yours, etc.,

To:

CHESTER C. DAVIS, Esq.
Counsel for Defendants
Office & P. O. Address
120 Broadway
New York, New York

cc: All Parties

Affidavit of John F. Sonnett, June 25, 1962

[CAPTION]

STATE OF NEW YORK,
COUNTY OF NEW YORK, *ss.*:

JOHN F. SONNETT, being duly sworn, deposes and says:

1. I am a partner of Cahill, Gordon, Reindel & Ohl, Attorneys for plaintiff Trans World Airlines, Inc. ("TWA") and I am familiar with the matters hereinafter set forth.

2. This affidavit is submitted in support of a motion by plaintiff TWA for an order terminating the deposition of TWA by its President, Charles C. Tillinghast, Jr., as of July 2, 1962. In addition, I submit this affidavit in support of plaintiff's motion that the Special Master determine that Rule 4 of the Civil Rules of the United States District Court for the Southern District of New York, effective July 1, 1962, is applicable to the instant case and for an order directing counsel for the parties to agree upon a schedule for the taking of depositions and providing that, failing such agreement, the Special Master will make such determination.

3. The defendant, Hughes Tool Company ("Toolco") commenced taking the deposition of the plaintiff, TWA by Charles C. Tillinghast, Jr. on January 5, 1962. Since that time, the parties have convened for the purpose of taking depositions or for oral argument a total of 27 times and Mr. Tillinghast has been on the witness stand for 17 days.

4. It is clear that the defendants have already had this witness under examination for a sufficient period of time to

gain complete discovery of any relevant information in his possession. However, in addition to the 17 days previously completed, the defendants will have had four more days to question this witness before the return date of this motion to terminate his deposition. If their true purpose is a discovery of the facts, they will have ample opportunity in the next few days to complete their examination into this witness' knowledge. However, I feel constrained to state that up to now the defendants have shown no inclination to complete the deposition of Mr. Tillinghast. Indeed, quite the opposite has been the case. They have consistently used every procedural device available to protract the length of time Mr. Tillinghast must spend on the witness stand. A continuation of these tactics will constitute an unreasonable burden upon both the deponent and the plaintiff while a termination of the deposition will in no way prejudice the rights of the defendants to any discovery of fact useful to the preparation of their case.

5. As to the second branch of plaintiff's motion, it is submitted that the language of Rule 4 clearly indicates that it was promulgated to deal with precisely the situation found in the instant case. The Federal Rules of Civil Procedure require the plaintiff to obtain leave of court before allowing it to file notices of taking depositions where the plaintiff seeks to file such notices within twenty days after the commencement of the action. No such limitation is placed upon the defendant. This has led to the former practice in this district of granting complete priority of discovery to the defendant. In complex litigations a financially strong defendant has thus been allowed to protract his discovery procedures to the point where in some cases years

might pass before the plaintiff would have an opportunity to develop his case.

6. It was to mitigate this often difficult problem that new Rule 4 was promulgated. Effective July 1, 1962, it provides that ". . . neither the service of a notice to take the deposition upon oral examination of party or witness, *nor the pendency of any such deposition,* shall prevent another party . . . from noticing or taking the deposition upon oral examination of party or witness concurrently . . ." (Emphasis supplied). Depositions noticed by counsel for defendants are pending in the instant action, so many of them, indeed, that to judge by the time which defendants have spent so far in taking a single deposition, it is reasonable to expect that there will be such depositions pending or being taken for a long time to come. Under Rule 4, however, TWA is not thereby prevented from "noticing or taking" depositions concurrently. The language of the rule itself, with its emphasis upon pendency, makes it clear that from and after its effective date its provisions are available to litigants in actions already in progress. This is consistent with the general rule that changes in procedural or remedial law are immediately applicable to existing actions or causes of action, and not merely to those which arise in the future. See *Dargel* v. *Henderson,* 200 F.2d 564, 566 (Emergency Court of Appeals, 1952), and cases cited; *Untersinger* v. *United States,* 181 F.2d 953 (2d Cir. 1950). A number of cases to the same effect (and none *contra*) are collected in 46 *Modern Federal Practice Digest,* under the "Statutes, Reg. Number 267(2)", the heading of which is "Statutes relating to remedies and procedure—Application to pending actions and proceedings."

7. The only limitation to be found in the language of Rule 4 is "unless otherwise ordered by the court for good cause shown." It is submitted that in the instant case good cause can be shown for the applicability of the new procedure, and not for its suspension. The former priority practice in this litigation has been a weapon for obstructing its progress. It should be recalled that the defendants had originally scheduled the depositions of four TWA officers to be taken in one week. Now, while the entire litigation has stalled on the taking of a single deposition, numerous other persons who have facts in their possession of paramount significance to the issues herein cannot be called to the witness stand. Apart from the ever present risk of death or some other event which may make such a witness unavailable, the mere passage of time necessarily and inevitably will dim his recollection. The purpose of discovery is to establish facts on which the parties—all of them—can build their cases. If the plaintiff's motions are denied and the delaying tactics of the defendants are allowed to continue, I submit that the plaintiff will be deprived of its substantial rights.

8. I, therefore, respectfully request that the Special Master grant the motions of the plaintiff.

JOHN F. SONNETT

[Jurat omitted]

Affidavit of John R. Hupper, July 2, 1962

[26781]

[CAPTION]

STATE OF NEW YORK,
COUNTY OF NEW YORK, } ss.:

JOHN R. HUPPER, being duly sworn, deposes and says:

1. I am an attorney-at-law and a member of the firm of Cravath, Swaine & Moore, attorneys for the additional defendants The Equitable Life Assurance Society of the United States, Metropolitan Life Insurance Company, James F. Oates, Jr., and Harry C. Hagerty. I am familiar with all the prior proceedings herein since the date of joinder of said additional defendants.

2. I make this affidavit in support of a motion originally made by plaintiff Trans World Airlines, Inc. (TWA) and in which the above-named additional defendants now join, for an order by the Special Master that Rule 4 of the Civil Rules of the United States District Court of the [26782] Southern District of New York, effective July 1, 1962, is applicable to the instant case. I am not concerned with the termination or continuation of the examination of Mr. Tillinghast or that of any other particular witness. I am concerned with the substantial period of time which separates us from the examination of witnesses crucial to our defense and I am very concerned that when our time to examine eventually arrives the witnesses may not be able to testify.

3. Accordingly, I believe that it is vital to the protection of the rights of the additional defendants that discovery proceedings be expedited. By order of February 7, 1962, Judge Charles M. Metzner set forth a schedule of depositions entitling Hughes Tool Company (Toolco) to depose 24 separate individuals in a time period that was to terminate at the end of April. We have now been operating under that order for more than four months and the examination of the first witness is not yet completed. In addition, plaintiff is presently entitled under that order to examine 7 additional individuals. I need not speculate about the substantial period of time which will be required to complete those depositions, under the present schedule. Nevertheless, the additional defendants are not entitled to commence their examinations until those 31 have been completed. I think it is fair to say that the time necessary for completion of those depositions must, under almost any schedule, be measured in years. I do not believe that Judge Metzner contemplated any such prolonged proceeding.

4. It is obvious that the passage of time dims recollection, especially of facts of the magnitude and complexity of those presented by the pleadings in this case. Of more importance, however, is what appears to be a real [26783] possibility that at least two vital witnesses should be examined with some promptness if their testimony is to be perpetuated.

5. It is a matter of general knowledge as well as a matter frequently apparent in these proceedings that Mr. Howard Hughes is difficult to find and that his present whereabouts are unknown. For example, Raymond M. Holliday testified on April 9, 1962, in the *Toolco-Northeast Control*

case (CAB Docket No. 11620) that he had not communicated with Mr. Hughes since October, 1961, and then he had only received a telephone message. (TR. 794-796). Mr. Hughes' testimony is of great importance to the defense of the additional defendants. I have, therefore, been disturbed by the recurrence of rumors and statements in the public press that Mr. Hughes' hearing and general health are deteriorating. (See, *e.g.*, The Wall Street Journal, April 23, 1962, page 1, Newsweek Magazine, May 21, 1962, page 73, The New York Daily Mirror, May 30, 1962, page 10, and The New York Times, June 24, 1962, Section 3, page 1-R). The Wall Street Journal on April 23, 1962, stated that one of the theories advanced for Mr. Hughes' increasing reluctance to appear in public "is that his health is not too vigorous". In a column by Walter Winchell in The New York Daily Mirror on May 30, 1962, the following appeared:

> "*Memos of a Fugitive* from Broadway: Billionaire Howard Hughes ill? Or is it the trouble caused by enemies? (He's down to 125 lbs. Looks like a ghost)"

I cannot, of course, state whether such information is accurate. It is, however, a major concern to me that the most important witness in this case may be unavailable at whatever time in the future the present schedule may permit counsel [26784] for the additional defendants to take depositions.

6. Another witness whose availability seems problematic is Noah Dietrich. I am informed that Mr. Dietrich is now about 73 years old and that he was from 1925

through 1957 Mr. Hughes' chief adviser. An example, of the importance of Mr. Dietrich's testimony is the following excerpt from Fortune Magazine of January, 1959 at page 82:

". . . Dietrich asserts that he did not appreciate how deeply Hughes was committing the tool company's assets until one day in early 1956 he added up the orders for aircraft on which Hughes had obligated the tool company and discovered that they exceeded Hughes's assets.

"The aggregate value of the orders came, as previously noted, to nearly $500 million. Dietrich had known, in a general way, that Hughes was negotiating with a number of aircraft companies for new equipment; Hughes had discussed with him, during their desultory telephone exchanges, the difficulties he was encountering in deciding among the planes that were available. But numbers and costs had never been precisely mentioned. Hughes appears to have settled on the numbers himself, in independent consultation with T. W. A.'s chief engineer, Robert Rummel. The orders were placed with the manufacturers, the tool company was instructed to draw up the necessary contracts, and its lawyer bundled up the commitments and sent them on to Dietrich, who was then occupying the office on Romaine Street, so that he could present them in due course to the tool company's board of directors for ratification.

"It is impossible for an outsider to determine the merits of the situation that thereafter developed, particularly since Hughes has declined to discuss his affairs. Dietrich says he warned Hughes that he

was becoming dangerously overextended, and that the only safe way out was to set about arranging for $300 million worth of long-term financing, either in the form of an offering of T. W. A. bonds, to be guaranteed by the tool company, or a combination of T. W. A. stock and tool-company debentures. Dietrich discussed such a project with the Wall Street house of Merrill Lynch and found that firm willing to undertake the marketing. Hughes brushed the idea aside. . . ."

7. Should either of the above gentlemen become unavailable for any reason, it would seriously and irreparably prejudice the rights of the additional defendants. [26785] That is particularly so since, as Toolco's counsel so frequently asserts, Mr. Hughes did not keep files. Thus, the only evidence available on many issues will be the testimony of Messrs. Hughes and Dietrich.

I believe, therefore, that it is imperative that the additional defendants be permitted to undertake at least some examinations in the reasonably near future. Accordingly, I submit that a sound exercise of discretion by the Special Master dictates the application of the principles embodied in Rule 4 to these proceedings.

(Sworn to by John R. Hupper on July 2, 1962.)

Transcript of Pretrial Hearing, July 12, 1962

[Doc. 107]

[CAPTION] 61 Civ. 2324

Before: Hon. CHARLES M. METZNER, District Judge.
New York, July 12, 1962, 10:30 a.m.

[APPEARANCES]

• • •

[2] The Court: I have here a notice of motion by the defendant Hughes Tool Company to review the rulings of the Special Master regarding interrogatories. In conjunction with those papers I have some correspondence from Mr. Davis, the attorney for Hughes Tool Company, to the Master dated June 11 and the answer of the Master dated June 14, and a letter from the plaintiff, TWA, dated June 22.

Since I have read the moving papers I suggest Mr. Sonnett start off and then Mr. Davis can answer. This is on the motion regarding interrogatories.

Mr. Sonnett: I think the record before the Court probably is sufficient for decision of the question without any extended argument. In terms of the cases cited by Hughes Tool Company I think the letter of the Special Master distinguishes those very effectively and the Court has that letter.

The Court: You rely on him as counsel to you?

Mr. Sonnett: To the Court and all parties and except in respect of the second matter before the Court today where we differ with his conclusions, I think that on the

matter of the interrogatories regarding the location of Mr. Hughes, the Master has exercised very sound discretion. I think there is no showing of [3] burden by Hughes Tool Company that is of any consequence and I think that without the interrogatories—

The Court: I am frankly bothered not by the question of calling upon the defendant to answer these interrogatories while it is conducting the deposition of the plaintiff, but of the scope of the interrogatories. I have just received your brief which is on time because today was your time for filing it and I haven't had a chance to read it. I wonder did you discuss the scope?

Mr. Sonnett: Yes, we have.

The Court: Why don't you tell me something about it?

Mr. Sonnett: The only interrogatory which I think presented a problem on reflection was the interrogatory which I think is No. 7 and we discussed that at the bottom of page 18, beginning at the bottom of page 18 of the memorandum that we served and filed today and your Honor will note that we agreed before the Special Master to amend that interrogatory so as to eliminate what did seem to us on reflection to present a real burden problem.

We did it by inserting the underscored language which appears in the interrogatory as now stated at [4] page 19 of our brief.

The Court: The defendant says some of the people you requested aren't in their employ or are merely consultants. What about that? They certainly can't answer interrogatories as a party as to somebody who may not be in their employ.

Mr. Sonnett: Yes, and I would agree. The difficulty, of course, is the nature of the relationship between some of

these people and Hughes Tool and Hughes is really known only to the people involved and to the Hughes Tool Company and Mr. Hughes.

The Court: You think you are also entitled to consultants?

Mr. Sonnett: No, I do not.

The Court: Whom I assume are independent contractors.

Mr. Sonnett: I do not know and would not so urge if their representation to the Court is those people are consultants, I suppose I am bound by that at this time.

The Court: Now, let us take the $64 question, how can you ask Hughes Tool Company about the whereabouts of Mr. Hughes?

[5] Mr. Sonnett: I think it is proper discovery under Rule 26 and Rule 33 on interrogatories because it relates to the identity and location of a witness, indeed the single most important witness in the entire controversy. If they know I see no reason why they shouldn't supply the answer. I think it is precisely that kind of discovery that that portion of the rule contemplates.

The Court: You are speaking now of Hughes, not as a co-defendant but as a witness either for or against the defendant Hughes Tool Company?

Mr. Sonnett: Yes, your Honor, and I might add while he is named as a defendant, of course we haven't been able as yet to serve him and he hasn't voluntarily appeared and he is a defendant in name only.

The Court: I will hear Mr. Davis.

Mr. Davis: If your Honor please, the vice in the interrogatories which have been served is that it is not seeking information of the tool company. What it does, if you look at Interrogatory No. 1, is to state whether any officer, di-

rector or attorney of the tool company has any knowledge, information or belief. Now that necessarily requires the tool [6] company, if it is going to answer these interrogatories, to in effect carry on some oral deposition of the officers, directors or attorneys.

It requires a further problem, a development by counsel for the Tool company as to whether this knowledge, information or belief is something which has been acquired by these officers, directors or attorneys in connection with their duties or functions as officers, directors or attorneys for the Tool company or in connection with some other capacity, particularly true in the case of attorneys.

We all know that undoubtedly it is true that counsel for the tool company may also have been or is counsel for Mr. Hughes individually and what we intended to raise with the Special Master and urge upon the Court here is that it is not merely the burden of answering the interrogatories addressed to the tool company, does the tool company know something, but this, in order to answer these properly would require the tool company to engage in an investigation of its officers and employees.

The Court: That is true of any inventory which a corporation has to answer. They have to ask the officers and directors and employees what the [7] answers are in order to furnish the answer.

Mr. Davis: May I point out normally the question relates to the affairs of the corporation and therefore normally a corporation knows it has records, it knows where to go and who to ask. It can be bound by an answer because the interrogatory relates to its business, to its affairs, it relates to something the corporation has done and it is a reasonable burden, I submit, in those situations for the

corporation to answer the question with respect to what it has done, as to what business activities it has engaged in.

The vice here is this is not that kind of interrogatory. When we deal with attorneys, of course,—No. 7 and 4 also—4 relates to individual people, whom we point out are not employees of the tool company, who may have been at one time, and others are only outside consultants. An attorney, obviously, falls into neither category or both. He certainly is an independent person and what knowledge or belief he may have—what I think counsel have been doing is confusing, if I may use that word, the use of the interrogatory and the use of the oral depositions under 26.

[8] I respectfully submit that when the time comes, when it is proper for TWA to take a deposition of the tool company, at that time they may ask questions of whoever it wants to of the tool company and discover who has knowledge and information and satisfy themselves about whatever relationship and inquire however they want to inquire into any knowledge or information or belief which they may have. They do intend to take the depositions of the tool company. At that time we will have no objection to their making that kind of inquiry.

The Special Master, we respectfully submit, appears to have been moved in a desire to insure that TWA, when it comes their turn to discover facts, will have an opportunity to inquire of Mr. Hughes and he believes that and I think places a great deal of reliance upon the statements made by counsel for TWA—I am sure accurate statements as far as counsel for TWA knows them. Whether or not the facts or statements are accurate is another question, of course.

I note that in this brief they filed an appendix, a summary of various statements. Presumably TWA has taken the

position that Mr. Hughes is available to them only as a witness unrelated to the tool [9] company and therefore must be served as a witness. Presumably Mr. Hughes is not a resident of the State of New York and counsel well knows, therefore, not subject to the service of process of this Court in this action. They are taking the position that they need to know where Mr. Hughes is in order to serve him with process is what the papers say, presumably serving him as a witness rather than some other kind of process and some other kind of action. I don't know whether the discovery rules are intended to cover that kind of situation really.

The Court: I think it is obvious Mr. Hughes is in a peculiar situation. He is obviously ducking service in this lawsuit.

Mr. Davis: I have a feeling, your Honor, that a great deal of showmanship has been displayed in connection with where is Mr. Hughes. That when the time comes for taking the deposition of the tool company the position of TWA counsel is Mr. Hughes as a former president of the tool company or as a one hundred per cent stockholder of the tool company or some other reason, is required to be produced by the tool company as its managing agent or on some other theory. I would be very much surprised if that isn't what they [10] do really. But nevertheless the question is raised, this important need at this time to be able to serve Mr. Hughes and for Mr. Hughes as an individual, who, after all, does have some individual rights even though he may be a one hundred per cent stockholder of the tool company, they would like to have these interrogatories served. I think the interrogatories have been deliberately framed that way. They don't ask what the tool

company knows and lets the tool company assume the normal responsibility of any corporate defendant in answering the question. They want the tool company to go out and get the knowledge, information and belief of anyone at one time or another that may lead to the service of Mr. Hughes. Look at Interrogatory No. 7.

I don't know what business it is of the tool company as a corporate defendant to go around and find out the knowledge or information of employees who also happen to be personal friends or had rendered personal service to its stockholder. We are supposed to go out and make an inquiry as to what knowledge, information and belief they have. We submit the interrogatories are too broad and improper.

The Court: Mr. Sonnett, on what basis do you demand an interrogatory of the corporate defendant [11] as to whether an attorney employed by it has any knowledge, information or belief?

Mr. Sonnett: The information in the possession of the attorney is under the control of the client necessarily since it is information—

The Court: Under Hickman and Taylor?

Mr. Sonnett: I think information as to the identity or location of a witness which the lawyer has and he has by reason of the fact that he is lawyer for a corporate defendant.

The Court: He may not have it by that reason. He may have it by reason of the fact that he also represents Mr. Hughes personally.

Mr. Sonnett: We don't have that situation. If we did, I would have felt differently. The record is abundantly clear and if there is any doubt I will ask if there is anybody representing Mr. Hughes personally.

The Court: The gentleman from Texas attended some conferences with me whom I am sure represented Mr. Hughes personally.

Mr. Sonnett: He disclaimed that.

The Court: In this lawsuit he may disclaim it, but that doesn't mean he didn't represent him personally [12] in other matters.

Mr. Sonnett: That has not been asserted, your Honor.

The Court: I think that is what you are up against really, aren't you? Mr. Davis, are you an attorney for Mr. Hughes personally?

Mr. Davis: Yes, sir, I have given advice to Mr. Hughes personally. I do not represent him in this action and I have not been authorized to represent him in this action.

The Court: All right. Go on to the next problem that bothers me. Your No. 7 you ask whether any tool company employees, agents and/or representatives who during the year preceding the date hereof have performed services of a personal nature or otherwise directly for Mr. Hughes. How do you sustain that?

You are not asking whether they have done it in relation to the corporate defendant, you are asking the corporation to go and ask their officers, agents and employees whether they did anything personally for Mr. Hughes outside the corporate activities.

Mr. Sonnett: I thought our amendment eliminated the problem which otherwise would exist because we inserted language appearing at page 19 [13] of our memorandum, we inserted the language, "To the knowledge of any of tool company directors or officers."

For example, if tool company's directors or officers know that one of tool company's chauffeurs has been driving a

tool company car to and from a particular address where Mr. Hughes has been staying or is staying or is suspected to stay very shortly, it seems to me that information is not privileged, relating to the identity or location of a witness and they should be required to supply it.

To avoid the problem they would have to go and conduct an investigation as to whether or not any of their employees did personal work for Hughes, we inserted that language which I think takes care of the problem.

The Court: Supposing a director of Hughes Tool Company has done personal work for Mr. Hughes unconnected with the tool company. Do you say by virtue of being a director of the tool company you can ask the tool company this interrogatory to find out from a director what his personal relationships with Mr. Hughes have been?

Mr. Sonnett: Only in respect of the location of Mr. Hughes.

[14] The Court: Let us go on to the next motion.

In this motion the reverse is true. I have read your papers, Mr. Sonnett, and haven't read Mr. Davis's. They have been filed on time but also only this morning pursuant to the direction of the Court, so I suggest Mr. Davis start off.

Mr. Sonnett: Yes, your Honor. I don't want to extend the prior matter but may I say in answer to your prior question certainly if a director of the tool company were on the stand I could ask him where is Mr. Hughes. He would have to tell me no matter how he acquired the information.

The Court: All right, Mr. Davis, application by plaintiff pursuant to Rule 4 of this Court adopted July 1st.

Mr. Davis: Your Honor, I appreciate the fact that since my brief was only filed this morning, this gives me an op-

portunity of describing our position. Peculiarly enough, however, I am a little bit at a loss to understand just exactly what it is that counsel for TWA is seeking to review here. There is no question and no one ever argued and certainly the tool company never argued that the rules of the court which became effective July 1 in 1962, including Rule 4, applies [15] to pending actions. The issue, as I understand, was whether this Rule 4 which became effective July 1 set aside all prior decisions and orders of this Court with respect to the conduct of discovery not only in connection with this case but all cases.

We have annexed to our brief an Appendix A, Mr. Rankin's decisions and the reasons he gave in support of the decision, and if your Honor is not familiar with that I would suggest that—

The Court: I have read it. That is in the moving brief, too, as I recall.

Mr. Davis: I don't know, sir.

The Court: Appendix B of the brief in support of the movant's position, that is the order of the Special Master on July 2, 1962.

Mr. Davis: I will not take the time in reviewing that. The position of the tool company is that the decision of the Special Master should be affirmed for the following reasons:

First, that the Court in this particular case has already carefully considered on more than one occasion the manner in which the discovery proceedings were to be conducted and had entered several orders in that regard. Rule 4 by its very terms applies only in cases where [16] there are no court orders.

Our second position is that as a matter of law the adoption of the court rules, procedural rules, while applicable

to pending actions do not have the effect of setting aside and reversing or modifying or altering prior decisions.

The Court: I think you ought to discuss whether I should exercise my discretion. It is clear in my mind that I have the power. You should only argue the question of whether I should exercise my discretion in granting the plaintiff alternate dates for depositions.

Mr. Davis: I will address myself to that, then. When the new Federal Rules were adopted in 1938 they were construed as to permit a plaintiff to commence an action against a defendant and in effect merely put him on notice that they had a cause of action and eliminated the requirement of specificity in pleadings, the pleading of facts. And the answer given by the Court when defendants complained that this liberal construction was permissible by plaintiff was you will be able to discover the facts in discovery proceedings. It is true that in most cases, certainly in a complaint which charges violation of the antitrust laws and even in a case where there is nothing more than that, a defendant [17] has some idea as to what it is all about. He knows how he has been conducting his business and if there is any indication at all in the complaint of the area of the alleged wrongful activity, a defendant is able, if he really wants to, to defend himself, and when I speak of defending himself I am always including preparing himself before his deposition is taken, before he is asked to testify.

We have an unusual situation here which I have tried to highlight by an appendix which I incorporated in my brief which relates to the CAB orders. This is a situation where we have the specific provisions of the Aviation Act, that the antitrust laws are not applicable. We know as a fact, as a matter of record, that every transaction between the

tool company and TWA involving more than $200 per transaction or $10,000 in one year was specifically reviewed and approved by the CAB. The acquisition of the stock interest of the tool company in TWA was approved by the CAB. In the 1950 further control case which specifically authorized the tool company to increase its holdings in TWA from what was then somewhat below 50 up to 78 per cent, the CAB approved and I have referred to it in my papers, the language used by the Commission, recognizing that in [18] so doing it was permitting the tool company to be in such a position of control as to dominate the policies followed by TWA.

Now I submit, your Honor, that under those circumstances the defendant is entitled to find out what it is that the plaintiff is complaining of before he should be required to be deposed. That basically was the argument that we had before Judge Murphy and Judge Herlands. TWA would say no, we had a special circumstance.

The Court: I understand that now you have been going forward for several months before the Master, who as I understand, was sitting from ten to four, two or three days a week, and it would seem to me by now you ought to know what it is all about.

Mr. Davis: No, your Honor, that is not quite the situation if I may put it that way. It is true we have been seeking to take the deposition of TWA since last August and it is true that it commenced January.

The Court: You started with the Special Master.

Mr. Davis: But there has been starting with the Special Master only 17 days of examination of Mr. [19] Tillinghast, 17 days, that is all we had.

The Court: How much more do you want?

Transcript of Pretrial Hearing, July 12, 1962

Mr. Davis: You ought to look at the 17 days and find out what we have been through in order to try to obtain the facts, what we have covered so far, and that is really revealing. This complaint, as you will recall, while it is primarily based, judicially based on alleged violation of the antitrust laws, there is an allegation that the tool company wilfully and maliciously interfered with the business of TWA apart from the fact that it owned 70 per cent of TWA. That is something alleged to have taken place during the period of 1961, Mr. Tillinghast was the chief executive officer. That is what Mr. Tillinghast was testifying about, and I daresay it is quite revealing to find out the concepts that he used to contend what constituted an alleged malicious interference with the affairs of TWA, the letters, communications that were written by the tool company addressed to TWA, some were addressed to directors and some were to lending institutions.

It was during 1961 that this so-called additional Boeing financing took place. Now, interestingly enough, it was Mr. Tillinghast who decided to commence this action to be sure upon the [20] advice of counsel or others.

It has been my experience that the most fruitful place to discover the facts, the basic facts, is to find the man who presumably has been told everything. I expected Mr. Tillinghast to be in a position, when I covered the portion of the complaint relating to the alleged violation of the antitrust laws, having been the person who made the decision to start the action, to be able to say yes, this we contend, that at such and such a time the tool company did this, that and the other. I don't have any personal knowledge and this is what they claim took place. Where a better place to go than the chief executive officer, the person who presumably received all the reports.

Now, there is no question the Special Master has been sitting on top of these depositions, seeing to it that the time was not wasted and seeing that we pushed along. We have been handicapped to some extent in obtaining documents. I don't start the colloquies but it may take time in answering them. There is no question in my mind Mr. Tillinghast had a conference with Mr. Thomas last May who was the prior president of TWA and presumably the chief executive during the height of this so-called misconduct.

[21] I would ask him what did Mr. Thomas tell you, what inquiries did you make when he was chief executive officer. He did not inquire into that. Any particular reason for not doing that? Yes.

What was it? I was afraid if I asked questions and I got information you would get it out of me. This is in the record. I am not quoting the exact words, but that is the essence of what he said. If the chief executive officer does not want to disclose the facts underlying the complaint, we will have to get it some other way and it takes a little more time, but that doesn't affect the fundamental right that we have to discover in some way or other what it is that TWA is contending before we are required to be subjected to oral deposition in defense of ourselves.

Your Honor by your prior decision has already given in effect concurrent discovery when you required us to produce the documents. We did. You have limited the scope of the discovery that we may engage in and certainly they can't say that they have been expecting to find out from us what it is they are complaining about. They may want to find out what our defenses are but it seems to me before we should [22] be required to go into this area we

ought to have some kind of specifics, something we can address ourselves to. I will go beyond that and, as I indicated in the brief, and I am quite serious, I know it is a hard thing to do, but in the light of the situation of the CAB in the northeast control case where they reviewed the matter as well as the relationship between the tool company and TWA, we expected to be in a position to dispose of this action. But difficult as it is, when we get the facts as your Honor indicated, warned me the first time, you suggested that your inclination would be to give everybody a full discovery.

The Court: Not my inclination, the Court of Appeals of the Second Circuit's inclination.

Mr. Davis: That may be, but every case has a different situation. We have an unusual situation here. Without going into the primary jurisdiction basis of the complaint, you have a very well-drawn complaint but admissions are admissions and once I get some basis, get this thing nailed down as to what it is that they are talking about, I have no hesitation in submitting that I will be in a position and I submit successfully even before the Second Circuit of [23] dismissing this cause of action on the primary jurisdiction if nothing else.

The Court: Not if you have Judge Clark on the bench.

Mr. Davis: Your Honor, I believe that the provisions of the Federal Aviation Act are quite specific, not quite the same at all, and the determination of the CAB, as you will see in our memorandum, is rather impressive, the number of times since 1944, the transactions they approved. The depth they went into. They weren't rubber stamp approvals. If you look at the portion quoted on page 19 of my brief where, before giving approval they say:

Transcript of Pretrial Hearing, July 12, 1962

"... it is not felt that action can be taken on this motion without first obtaining additional information, such as the full history of the airplanes, including copies of the original bills of sale to Hughes Tool Company, a breakdown of the cost elements of each airplane, including the cost of each item of conversion, the amount of depreciation accrued on each airplane, an appraisal of the planes at cost or market value, whichever is lower, by an impartial third party, a statement of the use made of the planes from [24] the date they were purchased to the present date, including total number of flying hours, the total number of hours of use of each engine. It is assumed, of course, that Trans-Continental and Western Air, Inc., have secured all necessary consents and approvals to the proposed purchase required under or by reason of any prior commitments made by the carrier."

The CAB went into every one of these transactions. It isn't a question of their not knowing what they were approving. On page 20:

"... inevitably the controlling company, by virtue of its investment in the acquired carrier, will endeavor to make itself accountable—as indeed the acquirer here under scrutiny had—for the managerial efficiency, the operating economy, and the financial integrity of the controlled carrier. Accordingly, in determining whether or not a particular acquisition should be approved, it is necessary to consider the overall impact of the acquirer's plans and policies with respect to the controlled carrier."

[25] You can look at page 21, the issue before them was giving us control of Northeast and how that was resolved. You bear in mind if we did anything or contemplated an order of the CAB giving us approval, the antitrust laws are not applicable to us and that is the basis of the jurisdiction of this Court.

I don't believe it is necessary to take a lot of time of this Court and spend a lot of money and keep a lot of attorneys busy for the purpose of finding out that there is no foundation or basis or merit in this lawsuit. But I submit in conclusion, your Honor, we have got to contrast on the one hand the rule which says the complaint does not have to disclose so long as it puts you on notice, and a statement of notice permitting a defendant to find out what it is a plaintiff is talking about.

I am fully aware of the many cases, Judge Weinfeld's many cases before the adoption of Rule 4 that under certain circumstances the ends of justice and the expedition of litigation requires some kind of concurrent discovery. But that is true in every case and the Special Master clearly recognized that in a finding where he said even if the question was [26] originally before him he would not find that it would expedite this litigation or serve the ends of justice by having concurrent depositions. So I don't think that is what TWA is really seeking to review. They say they are not seeking to review only to the extent that Rule 4 is to apply.

The Court: Let us ask Mr. Sonnett. You say you don't know what he is seeking.

Mr. Sonnett: We are requesting your Honor to hold that Rule 4 of the Civil Rules of the District Court applies to this case and for a further order pursuant to the provi-

sion of Rule 4 directing that counsel for all parties shall meet and come to agreement upon the schedule of depositions under Rule 4 and in the event counsel should fail to agree on such a schedule, then the Special Master should determine the order of depositions to be followed. That was the Rule 4 aspect of our motion below and the Special Master, I respectfully submit, did not clearly hold one way or the other as to whether Rule 4 applies.

The Court: I think he held that he thought Rule 4 applied but that he wasn't going to use it, which he didn't have to do and which the Court doesn't have to do. I think, as I said to Mr. Davis, the [27] Court has the power to alternate without Rule 4. Obviously I did that in this very litigation in my order. It is inherent in the power of the Court to control the litigation before it. The only question I have is should I exercise the discretion that I have in calling for not a cessation but the interruption from time to time of defendant's examination of the plaintiff to allow the plaintiff to conduct its examination of the defendant. That is the only question I have before me.

Mr. Sonnett: I understood that was the question, and I am about to come to it. My second point is, I think the Special Master declined to exercise his discretion within and in accordance with the policy and purpose of Rule 4. I think that Rule 4 represents a very distinct addition to and a refinement of Rule 30 on motions to terminate or limit or alter depositions in this district.

After all our prior orders were entered, bearing in mind the general rule on first-come first-served, I think when this Court and your Honor issued Rule 4 you were saying it shall be generally the principle that depositions should be concurrent in [28] big cases and that lawyers ought to try to work out a schedule. If they can't, the Court will.

Now as to why that new and I think very definite and wholesome policy should be applied in this case, your Honor will recall that back in February of this year your Honor issued an order in which your Honor laid out a tentative schedule of depositions based on the then existing rule of first-come first-served. Under that schedule of depositions as your Honor envisioned, all depositions would now be completed in this case. The last deposition on that list was supposed to be the deposition of Hughes Tool Company by Mr. Collier and Mr. Wentz but to commence on June 4th of this year. So instead of having completed 26 or whatever it is—I think it is 26 depositions—we have not yet completed the first of the depositions.

Mr. Davis is in error. We have had 23 days of testimony by Mr. Tillinghast. The record is now about 6000 pages. He says he is going to need some more time. We will have about between 25 and 30 days of testimony by the first witness. There is real prejudice involved to TWA if it is held off from commencing its depositions.

[29] The first point is that there are all sorts of public reports that Hughes has not been well. I don't know whether he has got a problem or not but on the present basis, unless we can go to concurrent depositions, we will be held off commencing the deposition of Hughes for at least a year because there is that long list of witnesses, as your Honor will recall, before we get anywhere near Mr. Hughes.

I don't know whether Hughes will be dead or alive six months from now. Nobody else does, but we would be held off quite a while and if the program is followed we will be held off at least another year. We have other witnesses we haven't noticed yet because hopefully we thought

Rule 4 would be applied and directed to sit down with Mr. Davis and work out a schedule of other witnesses to fit them in on some practical workable basis as Rule 4 contemplates lawyers should do.

We have noticed Mr. Dietrich, who for many years was the chief lieutenant of Hughes up until 1957. He was the man who carried out Hughes' general orders and instructions and ran the Hughes empire, no question about it. Dietrich is in his seventies. [30] Like so many others, he parted company with Hughes and he is out in California. I don't know whether Mr. Dietrich is going to be around a year from now and nobody else knows. We have got a lot of very important evidence that we can't get at because of the schedule as it now stands, and where we now have a new rule that says, as I read it, that the Court should approach this kind of problem on the principle of concurrent depositions rather than on the other way around, it seems to me that the interests of TWA and all its stockholders really would be best served if we were given an opportunity to get at this testimony which may disappear forever before we can reach it. It is a publicly owned company in the sense that it has a substantial minority stockholding. It is an important public utility having its problems financially both because of Hughes and the situation in the airline industry generally and it needs to prosecute this case vigorously. Our hands are tied behind our back and I think Rule 4 was intended to prevent that, your Honor.

In terms of the Court's discretion, I think that is all I can say. We can work out as a practical matter, we could work out a program of concurrent [31] depositions. We did it in the old Ferguson case when the Special Master

was there and concurrent depositions were going on quite often and the Master went from one room to another if there was a problem and he ruled and it worked.

We went ahead on that basis there. I see no reason for not permitting the truth which I am certain Hughes himself is best equipped to tell us, the details of how he tried to sabotage the Dillon Read financing plan, his acts to sabotage, and he is the one man who can tell us. The man operates under great secrecy, specializes in trying to conceal. Obviously his testimony is the only way we can get at the full truth here.

The Court: All right.

Mr. Barr: May I be heard very briefly on behalf of Equitable and Metropolitan? We join in the motion directly on the ground of why the Special Master should grant it, and I would like to address myself to that very briefly.

The Court: I think there is something in the papers about that.

Mr. Barr: Yes, Mr. Hupper's affidavit was [32] submitted. My name is Barr. Your Honor, since we, the additional defendants, got in this case back in February, I am reminded of the statement by Winston Churchill that this man is a riddle wrapped on an enigma. He made that statement and it applies to Mr. Hughes, both in the substantive matters alleged against us and the conduct of the discovery of this case. The real problem has been the riddle concerning Mr. Hughes, what he said, where he is, what he is doing. The Special Master on a number of occasions on the record of the deposition has expressed a great concern about the availability of Mr. Hughes; whether or not he will be available when the time comes to depose him.

Indeed, the Special Master on occasion directed that correspondence be directed to Mr. Hughes concerning documents and that he respond in writing. That is something up to this point that has never been done.

Mr. Sonnett has I think indicated on a number of occasions that he made very diligent efforts to locate Mr. Hughes and find his whereabouts and get him into this case as a witness. Indeed, the tool company itself apparently cannot find Mr. Hughes, doesn't know where he is. In that respect, your Honor, I refer you to paragraph 5 of Mr. Hupper's affidavit, [33] some testimony by Mr. Holliday, who seems to be the front man, at least perhaps, a chief executive officer at the present time of the tool company. He testified in April of this year that he has not communicated with Mr. Hughes since October of 1961. There are rumors in the press that Mr. Hughes is ill and also all sorts of rumors floating around, some rumors even suggesting that Mr. Hughes is a myth, he doesn't really exist at all.

If Mr. Hughes is going to be unavailable, if he is not going to testify, come forward in this litigation, then I submit to your Honor that now is the time to find that out and that if the litigation is going to end then, it ought to end now before we take all this time and effort and find out that the principal actor in the proceeding simply is not going to show up. I think that is one special reason why your Honor should apply Rule 4 to these proceedings. Thank you, sir.

The Court: Decision reserved.

Pretrial Order, July 23, 1962

(Memorandum Endorsed on Motion Papers Dated July 18, 1962)

[Doc. 103]

[CAPTION] 61 Civ. 2324

July 23, 1962. After reading the briefs submitted in support of and in opposition to this application for clarification of the order of July 12, 1962, the application is denied. So ordered.

Charles M. Metzner
U.S.D.J.

Pretrial Order, July 24, 1962

(Memorandum Endorsed on Motion Papers Dated May 10, 1962)

[Doc. 93]

[CAPTION] 61 Civ. 2324

Defendant Hughes Tool Company has applied to the court to review the opinion of the Special Master rendered on April 17th, 1962 and the order of the Special Master contained in his letter of May 2d, 1962, as modified by his letter of May 3d, 1962, to the extent that the defendant is required to produce for inspection and copying by adverse parties any privileged communications between attorney and client.

The court has reviewed the opinion of the Special Master which appears in the transcript at pp. 4361-4391 and the letters referred to above. The Special Master has made an exhaustive study of the law applicable to the attorney-client privilege. The court agrees that the law is as stated by the Special Master both as to the privilege and the waiver thereof. The court sustains the ruling of the Special Master as he has applied the law to questions presented to him. If there are any specific documents concerning which the defendant desires specific rulings as to their admissibility, they may be submitted to the Special Master pursuant to the directions appearing at p. 4391 of the transcript

and in the letter of May 2d, 1962, as modified by the letter of May 3d, 1962.

So ordered.

[APPEARANCES]

• • •

[3] The Court: Miss Lea, I will hear your application.

Miss Lea: Thank you. Mr. Davis is not here because he is continuing with conducting the deposition of Mr. Tillinghast, which is under your Honor's order to continue from day to day until we reach the time specified.

Our application this afternoon is really a very simple one, and I am not at all sure why it has occasioned some of the fuss and fury that it has on the part of Mr. Sonnett.

At any rate, it should not present any problem at all. Our motion is a very simple one, brought pursuant to Rule 33, asking that the Court extend and enlarge our time under that rule to answer the interrogatories in the form finally determined upon when your Honor entered your last order on this question. It is the Tool Company's position, I think it is manifest, that neither TWA nor anyone else can be prejudiced in any way by granting us this enlargement of time. We ask it on the basis, partially at least, that the month of August, during which we would otherwise be required to answer, is a month which has been set aside as a time to be free of discovery proceedings. During this month we were to suspend all discovery and to go over until sometime in [4] September. September 4th,

I think, is the date it was to be resumed. In keeping with the special master's ruling that there be such a suspension, he determined that the answers to the counterclaims by the additional defendants, as well as by TWA, could be deferred during that period and would be deferred for a period of thirty days after your Honor's order determining that motion came down, and, in any event, would not be required to be answered before September 30th, which was in apparent recognition of the fact that we were to have at least a part of the summertime free.

A further problem which presents itself in answering the interrogatories before the time that we ask for is that this being summertime and being vacation time, it is reasonable to assume that many of the people from whom inquiry has to be made will not be available during this period, but will be off on their holidays.

To answer the interrogatories is not really a simple matter. Questions directed to a corporation, persons affiliated with a corporation, normally concern themselves with the business of the corporation. In this case, though, we have to make inquiry outside of the scope of the business of the corporation and ask further and additional questions of the persons listed in the [5] interrogatories, and I think it is reasonable to assume that this will take a greater period of time than might otherwise normally be the case.

A further factor which makes it difficult for the Tool Company to answer these interrogatories within a limited period of time is the fact that the officers of the Tool Company are not located in New York, they are located in Houston and in Los Angeles. The inquiries to be made must be made of persons who are not in New York, but

who are at the various places where the Tool Company maintains its offices, and to some extent problems of communication and getting the papers in final form and so on may arise and all this during the period which under the special master's order is to be a free period.

TWA has stated that it requires this information in order to serve a subpoena upon Mr. Hughes for his appearance as a witness on deposition. In view of the fact they do not resume depositions until September 4th and then at that time the Tool Company does have the right to expeditiously proceed with its examinations, I don't think it is very reasonable to assume that TWA would have to serve a subpoena for the appearance of Mr. Hughes in advance of the time the Tool Company is requesting for answering the interrogatories. It is a practical matter [6] to a great extent in getting the answers up and framing them at this time of year.

The Court: How much time do you want?

Miss Lea: We have asked, your Honor, for until September 25th. We picked that date because it is approximately nineteen or twenty days after September 4th, which is the day that we resume, and if we resume then, that will give us a reasonable period of time, I believe, in which to file the answers. If we can have them before, if they can be prepared in the light of all the circumstances, we will certainly file them before that date, but we would like at least until then in which to get these answers ready for filing with the parties in court.

The Court: Is that all?

Miss Lea: Only one further matter. As your Honor might have noticed, we did request that the special master grant us an enlargement of time to September 25th and he

stated his view that the earlier order of the Court precluded him from doing so, that your Honor's July 12th order meant to preclude an application for an enlargement of time under Rule 33.

The Tool Company is of the view that since it has never requested such enlargement and the Court did [7] not expressly or impliedly rule on it, that this question is an open question and that your Honor should determine it and that we have more than fifteen days from, I think it is the 24th or 25th of July, in which to answer the interrogatories.

The Court: Mr. Sonnett?

Mr. Sonnett: I am not quite sure, your Honor, whether I heard Miss Lea's colloquy, but there was some comment about sound and fury.

The Court: We are trying to find out whether we should give the Tool Company until September 25th to answer the interrogatories.

Mr. Sonnett: Yes, your Honor. I must say it always puzzles me that Mr. Davis is exceedingly anxious to take these appeals to your Honor, but he does not show up and sends a very charming lady to do these very difficult jobs.

The Court: I think we agreed at a prior hearing that Miss Lea was not relying on her charms to achieve her ends.

Mr. Sonnett: Her charm is evident; her persuasiveness is not. I hate to have to characterize the opposing affidavit as I am about to in one respect. Putting aside the argument, the representation in the [8] affidavit that there was some arrangement to recess the discovery proceedings so that everybody could have a month off is false. In the record at page 5142 the special master said as follows:

"Mr. Reporter, I will put on the record the arrangement about the vacations during August. We will adjourn beginning August 1st and running through to September 4th so far as any proceedings are concerned before the special master."

That was very deliberately done by the special master and reflected an understanding on his part, and I thought, on the part of all counsel, based on what was said, that we were just suspending the taking of testimony before him and that nothing else in the case was to be suspended in any way. That was the arrangement, and it was quite clear.

I don't know whether your Honor has had an opportunity to read the decision of the special master which is here being appealed, but it appears at 6141 of the record, and I will read briefly what the special master did decide. He said as follows:

"I will deny the application. I construe Judge Metzner's order of July 12, 1962 to [9] contemplate that the answers to the interrogatories will be made in accordance with the rule and that he has already decided how the interrogatories shall be answered as to a certain date when the time shall be computed by his reference in paragraph one of that order, at the bottom of the page.

"Also, treating the matter without regard to Judge Metzner's order, assuming I have the power to act on it, I would deny the application because, as I have indicated before, I think it is most important in this litigation that the information as to the location of Mr. Hughes be furnished to TWA as soon as possible."

He goes on discussing his views in that regard at some length, several pages of the record.
